As a result of the projections that were made in the [fol. 1626] middle of 1940, long before there were shortages and during a period when there were quite adequate supplies and surpluses of supplies, as a result of that effort we did achieve quite a bit of expansion of capacity relatively early in the mobilization period, which if it had been delayed would, I think, never have been achieved, because later on when the shortages became severe, every bit of material which was used to build new capacity to build more material, immediately cut deeper into the military effort. So in the latter stages, it was just necessary to go on on what you had, and not to attempt expansion.

So in that early period it was clear to many of us that under a period of total mobilization we would have very severe shortages of materials, and that obviously came true as the developments emerged, and it was fortunate that we did expand the capacity of steel, aluminum, and others, as we had done, and that stockpiles were built up.

As a war emerged, it was also clear that had even greater expansion of capacity been undertaken, we would have been even better off in terms of total mobilization.

Q. You have used the word "we", and at one point you defined that as including the people with whom you were working in the Bureau of Research and Statistics. Who were those people at that time?

A. I was head of the military and civilian requirements. [fol. 1627] Stacy May was then Director of the Bureau

of Research and Statistics. There was another fellow by the name of Dr. Bassie, who was in charge of supply figures. The three of us pretty much worked as a team, Stacy May and myself and Dr. Bassie, in preparing a number of these memoranda.

Q. You have referred at some length to the situation with respect to steel. What was the situation with respect to copper and aluminum, which were two other metals you mentioned?

A. I don't have the projections at the moment, but as I recollect, our projections on copper and aluminum were indicative of even greater scarcities than in steel, because copper is an item which the military uses in tremendous quantities, especially for ammunition purposes; and aluminum, of course, for an aircraft program which obviously was going to be a substantial and big program.

The problem with copper was that the expansible capacity was not as great as in steel, iron, or aluminum. We urged an all-out expansion of copper facilities, and also the maximization of imports of copper and stockpiling of copper, because it was obvious that in a period of total mobilization copper would be exceedingly short, as of course it turned out to be.

Q. Was anything done during that period to expand the production facilities for aluminum?

[fol. 1628] A. Very substantially. The Government made funds available for the expansion of facilities, and a little later on the principle of accelerated amortization was introduced whereby a company could come in and build a facility and write off that facility in depreciation charges in a period of five years instead of the normal period of 15 to 20 years. It is obvious that when there is an excess profits tax, as we did have, and when tax rates were high, that accelerated amortization is a very attractive incentive and an effective incentive.

Coupled between high priorities for the material needed to build the plants and the accelerated amortization and Government financing, tremendous expansion occurred in aluminum fabricating plants.

Q. Aside from the three factors you mentioned—high priorities, accelerated amortization, and Government financing—were there any other things that were done during that

period to induce expansion of the supply of raw materials?

A. I don't believe there was anything else of significance done in '40 and '41. Those were the most important factors.

Well, there were price incentives, by the way, after price controls became established. There were price differentials granted, which really amounted to a subsidy, price incen- [fol. 1629] tives to new facilities or marginal facilities for coming into the picture.

Q. Were the people in the Bureau of Research and Statistics of the Defense Advisory Commission the only people who were aware, during this period in 1940, that material supplies might be inadequate?

A. I think that the brunt of the conflict was carried in that Bureau, although as the data were developed, many allies came along and joined up. Many of the men who came from business, in the early stages of mobilization I think were rather impressed with these needs at a reasonably early stage. I know we worked with men like William L. Batt, Edward Stettinius, and Averill Harriman in those early periods, and while at first they were somewhat skeptical about these large requirements, I think in reasonable order they came around and supported the expansion. Many of the top Administration officials supported it. Finally, President Roosevelt ordered a ten million ton steel expansion, which was undertaken.

Q. When was that, approximately?

A. That directive came around the end of 1940.

Q. During this period in 1940 that you have been referring to, on the basis of your experience would you say that there was any general realization of the prospective need for controlling the flow of raw materials in the event of mobiliza- [fol. 1630] tion?

A. Yes. I think a recognition of the need for some system of directing the flow of materials came relatively early in the program. I would say also that there was a considerable amount of confusion as to the kind of system for the control of materials which might be needed. The Army-Navy Munitions Board, which had been engaged in some work of planning mobilization, had, as parts of its program, ideas put together on the distribution of materials, nothing too specific, nothing that actually was used in effect later on,

but it was rather clear before the end of 1940 that some system of distributing materials would be essential.

The techniques, as I say, were a bit fuzzy at the beginning, because there were no definite assurances as to how big the military program would be. There were no definite assurances how large the shortages would be. There were no definite assurances as to how rapidly the expansion of capacity would come along. The net result was that during that period there was mainly a concern about getting the materials that the military needed—period. That was just about all in the very early period, a recognition that a system for controlling materials would be needed, but the first concern was to be sure that the military got theirs, and that was about the extent of the first concern.

Q. You referred a moment ago to the Army Navy Muni- [fol. 1631] tions Board. What was that?

A. The Army-Navy Munitions Board was an organization made up of—I don't recall specifically, but I suspect of equal representation of the two separate departments of the Armed Forces, the Navy Department and the War Department, which was assigned the responsibility of mobilization planning. It was assigned the responsibility of assembling requirements, of surveying plants, of developing bills of materials, to estimate the materials needs, to generally prepare a mobilization program for the period of hostilities.

Q. During this period beginning in 1940, was there any change in military requirements?

A. Actually, in retrospect, it is pretty clear now that there really were no sound or solid military requirements when the crisis arose in the middle of 1940, when the President appointed the Defense Advisory Commission. The Army-Navy Munitions Board had some requirements on theoretical bases of given numbers of men in the Armed Forces, but when we pursued these requirements to try to develop realistic figures out of them and to get to the bottom of them, they unfortunately melted pretty rapidly. There just weren't any good requirements figures.

The result was that throughout 1940 and to a considerable degree in 1941, the only requirements that were available were those that were manifested by appropriations. If one [fol. 1632] looks at the appropriations schedule of the Congress in 1940 and 1941, one can readily understand the

difficulties in that period of doing any careful planning, because one week there would be an appropriation of a billion dollars, and then there wouldn't be any appropriation for three weeks, and then there would be four billion, and then a week later six hundred million, and then two weeks later a half billion, and five weeks later four billion. It just seemed to be a completely helter-skelter, make-shift approach. In essence; that is what happened.

As ideas emerged of pushing ahead on certain programs, the Armed Forces would send a budget request to the Budget Bureau and to the President and then to the Congress, and nobody raised too many questions, properly I think at that stage, and fortunately the appropriations came fairly quickly. There was nothing orderly about it, nothing well developed. There were no objectives toward which they were moving.

Q. Do you recall something that was called the Victory Program?

A. Yes, I recall the Victory Program very well. The Victory Program was developed in the latter half of 1941, and it was the title given to the first set of over-all total requirements which precipitated a really total mobilization.

Q. Did you have anything to do with the development of those requirements?

[fol. 1633] A. Yes, I did most of the statistical and analytical work in the development of the Victory Program. The Victory Program was not anything highly precise or based on absolutely precise background. It actually was a set of estimates which President Roosevelt announced shortly after Pearl Harbor in which he set goals for the critical items for 1942 and 1943. He said, "We want 50,000 airplanes in '42, and 100,000 in 1943. We want 4 million tons of merchant shipping in 1942, and 8 million in 1943." I am not quoting the actual figures, but this is just an illustration. "We want 45,000 tanks in 1942 and 75,000 in 1943." He set very specific goals for our total productive effort in 1942 and 1943.

Those goals were based on a set of requirements which were received by the Office of Production Management in 1941, starting in the mid-summer, from the Army, the Navy, the Maritime Commission, and Lend-Lease, which represented the foreign claimants. Out of those total require-

ments, which were not timed, we converted them into strategic materials such as copper, aluminum, and steel. We converted them into dollar figures. We related those requirements to our total estimated supply less essential civilian. We related the dollar figures to our projections of gross national product, and then we prepared for the President these estimates, indicating what we thought could be [fol. 1634] accomplished under an all-out effort in 1942 and 1943. Those figures were the Victory Program.

Q. In formulating the Victory Program, what assumptions did you make with respect to the non-military aspects of our production?

A. In essence, the military program in every concept was an all-out program. Therefore, our assumptions were that the civilian economy had to be and would be reduced to the barest minimum.

For instance, if I may illustrate, we analyzed the experience in other countries as best as we could get the data, and it was our conclusion that no economy had for any period of time ever mobilized more than 50 per cent of its total production for direct military purposes. I think the range was somewhere in between 40 and 50 per cent, or 40 and a little below 50 per cent. That means that in a period of total mobilization, at least half of the total output must go for maintaining the civilian economy and indirect military, such as the essential industries.

When I say "military program" I mean weapons, guns, tanks, ammunition, and food for the Armed Forces, the men in uniform. But the so-called supporting economy, consumption for the working population, the maintenance for basic industries, maintenance and repair—those require at least half the total output.

[fol. 1635] We also tried to develop and actually we did develop—I wouldn't say they were terribly sound at that time—minimal requirements for civilian materials for the civilian economy, because we knew what the total supplies would probably be, we had a projection of supplies, we tried to figure the minimum that could be left for the civilian economy so we could then anticipate how much was available or would be available for military so we could then translate that into these military goals. But certainly the underlying consideration of the Victory Program was an

all-out effort, the counterpart of which means minimizing the civilian program.

Q. In formulating that program, did you give any consideration to the essentiality of civilian industries or non-military activities?

A. Certainly we had to give consideration to degrees of essentiality of end products. It was clear that if the civilian economy were permitted to operate unlimitedly and did operate to an unlimited extent, the military would have relatively little available, because the buying power of the consumers would obviously increase during the war period. There was a question whether taxes would ever take enough buying power away so as to bring total demand away from what was available for civilians. So in essence, we had to make certain assumptions about what had to happen to the civilian economy; and we certainly did assume, without a [fol. 1636] specific schedule of specific items, that the less essential and the non-essential elements in the civilian economy would be drastically curtailed or eliminated.

Q. Am I correct, then, in understanding that you had not applied that thought to any specific industry or industries?

A. No, we did not do it industry by industry. We worked on this Victory Program over a relatively limited period of time. The available data were not too precise, although as early as 1940 we were working on statistics which showed the end use pattern of certain critical materials.

For instance, when we started out, like with copper, we started out saying what was the consumption of copper in the United States in 1939; how much of that went into, say, electricity for the homes.

Some of these data were not available. Some we used estimates; some guesses. How much copper would go to the decorative items, how much would go into certain types of industrial use, how much in that period went into munitions.

So we tried to get a breakdown at the very earliest stages of the end uses toward which each material was being consumed, and the net result was that we were able to make assumptions at a relatively early stage of how deep the cuts would be in the civilian use of these materials.

Q. How did the totals that you had developed through [fol. 1637] this Victory Program compare with existing

Army procurement policies as they had developed up to the end of 1941, say?

A. The requirements in the Victory Program were phenomenally larger than the then existing programs of the Armed Forces, either based on specific projections which they had submitted or on appropriations.

For instance, the size of the aircraft program was away beyond anything the Air Corps had received appropriations for, and away beyond what they had indicated they were going to procure.

Of course, throughout 1941, at least for the first 11 months and 7 days of 1941, there wasn't a war in which the United States was participating, and when the military were asked questions about how much they needed, what their requirements were, they would often say, "Tell us what the strategic consequences are going to be or what the outlook is, and we will in turn then give you requirements based on some assumptions." So they didn't have an all-out basis for setting up this total program of total mobilization.

The Victory Program was submitted to the President, as I recall, just three or four or five days before Pearl Harbor, and by the time it got chewed over in the White House—Lord Beaverbrook was there at the time, I recall, and I think they even stepped up some of our figures a little bit under his enthusiasm. By that time the war was on, Pearl [fol. 1638] Harbor had occurred, and the figures then were accepted readily by the Armed Forces, and the big push started then in production. The President laid down these goals, and the Armed Forces immediately got appropriations, and those objectives were accepted.

Q. After the Victory Program was adopted or announced by the President—I suppose "announced" would be a better phrase—were there any other programming problems that existed with respect to military requirements?

A. Yes, in a sense the Victory Program was the first big step forward in the whole programming task, and from then on the job continued to be quite serious for some time. At this point I would say that our concept of programming then—I would like to be fairly precise in the way I use the word "programming"—our concept of programming related primarily not to how materials were distributed, which I call the distribution of materials, but mainly to laying out

a pattern of demand and supply which bore reasonable relations to each other. That was our thought. When we set up the Victory Program, we had the idea of setting out a group of requirements which would maximize the military production of this country, the United States. In other words what is the biggest amount that could be accomplished? How big goals should be set so that an all-out effort would be made and those goals might also be reached? [fol. 1639] How big a demand should we put forward, was our thought, which would induce the greatest effort and still be within the realms of achievement?

The Victory Program of necessity had to be confined to certain items. You couldn't very well have a program spelling out 500,000 items and going down to every little caliber of shell and every little piece of equipment and every type of radar equipment, and so forth. It had to be in the big lead items. So the Victory Program was principally in aircraft, light, medium and heavy bombers, trainers, fighters, and so forth.

Mr. Barnett: I don't like to interrupt, but as one participating in the purchase of this transcript, I am wondering if this is all material to the issues here. If we are going through each program, we are likely to be here indefinitely, and the transcript will run up to thousands of pages. I don't see where it is material.

The Commissioner: The exigencies of the situation were one of the factors that the War Production Board had before them when this gold order was issued.

Mr. Barnett: It seems to me that it is going beyond the description of that situation, Your Honor. I will submit the objection, which I anticipate will be treated like the other one.

The Commissioner: Overruled.

[fol. 1640] Mr. Barnes: Would you read the last of Mr. Nathan's answer so he can pick it up?

(Thereupon, the last portion of the answer was read by the reporter as follows:

"You couldn't very well have a program spelling out 500,000 items and going down to every little caliber of shell and every little piece of equipment and every type of radar equipment, and so forth. It had to be in the big lead

items. So the Victory Program was principally in aircraft, light, medium and heavy bombers, trainers, fighters, and so forth.")

The Witness: And in the Army and Navy portions, it was also confined only to the lead items. Shortly after the President announced these goals, the military supply arms then came forward with bigger requirements of all the other parts to balance out this program, and as new items came in, their requirements shot away ahead even of the President's goal.

That happened throughout the spring of 1942 at a time when the materials were severely critical. We were then concerned, in the Planning Committee—we had already had the Planning Committee set up—we were then concerned that these goals were too big. So we were then concerned with programming, the programming problem in reverse, that suddenly the requirements of the Armed Forces might [fol. 1641] be bigger than the economy could conceivably achieve, so we still had this programming problem with us.

By Mr. Barnes:

Q. Was it necessary at any point to cut back the military requirements or the military purchasing programs?

A. As a matter of fact, the biggest fight——

Mr. Barnett: Your Honor, can't that be answered "yes" or "no." As I understand, this witness was around 28 or 29 at the time he is testifying about. Is that correct?

The Witness: No, I was 33.

Mr. Barnett: It would appear that these opinions and conclusions of his are just personal to him. The problem presented to us is how we are going to cross-examine on this. I even forget the questions after a time. I ask Your Honor, how can you cross-examine on what he is talking about, at least intelligently?

The Commissioner: Your first question was, Can the question not be answered "yes" or "no." It could be. If an explanation is necessary to expand upon the "yes" or "no" answer, that may be done. If the witness goes beyond the question, then go ahead and make any objection you want to.

Mr. Barnett: He talks too fast. By the time you listen

to him. We have been at it now 50 minutes, and I don't think there have been two long, deep breaths taken by the witness. We are just up to 1940, Your Honor.

[fol. 1642] Mr. Barnes: We are up to 1942. We started in 1940. You are away behind.

Mr. Barnett: That shows you how fast he is talking.

The Commissioner: Let's have that question.

(Thereupon, the question was read by the reporter.)

The Commissioner: I think that can be answered "yes" or "no."

The Witness: Yes.

By Mr. Barnes:

Q. When did that occur, approximately?

A. In the second half of 1942, the military requirements and procurement program was cut back.

Q. What means were used to do that?

A. The War Production Board decided that a re-evaluation of the program was necessary because of its successive content; that it was too large for the available supply of materials, and with great reluctance the Armed Forces did cut back their goals.

Q. What part did you and the Planning Committee play in the studies leading up to this decision?

A. The Planning Committee, of which I was Chairman, carried the work on feasibility.

Q. What do you mean by "feasibility"?

A. Feasibility refers to the setting of goals which are accomplishable, that can be achieved and are feasible. We [fol. 1643] were the only unit in the whole War Production Board which conducted these studies of the feasibility of the goals or objectives.

As the official documents of the War Production Board indicate, it was the work of the Planning Committee which brought on the decisions of the War Production Board that the total goals had to bear some relationship to total supplies, and as a result of our efforts the War Production Board decided that the goals were too big. And, as a matter of fact, it was at the same meeting of the War Production Board on October 6, 1942, that I personally presented the

feasibility program to the Board, and this program was generally accepted; at that same meeting the Gold Order was also adopted by the Board.

Q. Why did you feel that it was important to achieve what I think you described as a reasonable degree of balance between demand and supply in relation to the resources available?

Mr. Rigney: If Your Honor please, I think it would be helpful if the witness would try not to be too discoursive in his answers and, as we have been doing the last few minutes, if Mr. Barnes would put more frequent questions, we then will be able to follow the continuity of the testimony a little easier.

The Commissioner: Yes, I think that is a valid observation.

[fol. 1644] The Witness: May I have the question, sir?

(Thereupon, the pending question was read by the reporter.)

The Witness: We were convinced that if the requirements were far beyond what could be accomplished, then we would end up, that is, the Government, the country, would end up with a lot of components rather than finished items, and a lot of facilities which couldn't be utilized.

If I may illustrate, as I recall, at one time our total civilian requirements, essential minimum civilian requirements, plus the military program, would have required in 1943 about 120 million tons of steel, when the total capacity was only 90 million tons. That obviously would result in chaos.

The Commissioner: When you use the pronoun "we," I wish you would relate it to the people involved. You have heretofore referred to two other individuals, but I thought there might be a possibility of your using it to include additional ones.

The Witness: Yes, Your Honor. As a matter of fact, from January 1942 on, when I use "we," I think I am using it referring to the three members of the Planning Committee of the War Production Board of which I was Chairman. The other two members were Thomas Blaisdell, Jr., and Fred Searls.

By Mr. Rigney:

Q. I ask you, Mr. Nathan, whenever you can, to fix the [fol. 1645] particular time period or month, if you can, as you move from one topic or event to another.

A. Fine.

By Mr. Barnes:

Q. Is that the same Mr. Searls who is President of the Newmont Mines Company?

A. Yes.

Q. Over how long a period of time did this feasibility study continue, Mr. Nathan?

A. From probably February or March 1942, through the end of the year 1942.

Q. Can you take one material or one end product, whichever would be easier, and illustrate for us in general the method you employed in making the studies?

A. The method was pretty much the same for the key materials we used. We used three materials, aluminum, copper and steel. We translated, as best we could, the military requirements into the raw material needs, introduced appropriate lead factors, included then the estimates of essential civilian needs, minimum civilian needs, included also export programs prepared by the Board of Economic Warfare, and then related these requirements to total supply.

Q. You used the phrase "lead factor." What do you mean by that?

A. For instance, in ammunition, the copper must be [fol. 1646] produced a certain number of weeks or months ahead of the time when the actual bullets come out of the ordnance plant, or the aluminum ingot must be made a certain period of time ahead of when the aircraft actually leaves the assembly line in the aircraft plant.

Q. In setting up this program, what was your source of supply figures?

A. The War Production Board itself had a staff in the various industry and commodity divisions and in the Bureau of Research and Statistics, and the staff worked jointly and developed estimates of supply.

Q. Do I understand that this study on the feasibility pro-

gram continued from March to the early part of October 1942?

A. It continued even beyond October. It was presented to the War Production Board on October 6, but the work continued thereafter.

Q. Did you, in connection with that, consult with the military at all?

A. Frequently, on reviewing their requirements, chaing ing requirements.

Q. What was the end result of this study, particularly with respect to expansion of facilities for fabricating military items?

A. Cancellation of many facilfty contracts, some of which even had been under way.

[fol. 1647] Q. What effect did that have on the military procurement programs?

A. It coincided with curtailment of procurement, contract work cutback.

By Mr. Rigney:

Q. When was that, would you say?

A. The last two or three months of 1942. Actually, if I may, coincident with the Planning Committee's work on feasibility there was also a Committee on Facilities, of which I was a member, with a Colonel Phillips of the Army-Navy Munitions Board, and I forget the Commander's name, also from the Army-Navy Munitions Board, and the three of us worked as a committee all during, I would say, from the spring of 1942 on, reviewing whether the facilities program was too big. We were of the opinion, in a report which could be documented from the War Production records, that the facilities program was much too big; that they were just building too many plants that could not be used because there wasn't enough materials. The first cancellation of facilities started in the fall of 1942.

By Mr. Barnes:

Q. Did you, in connection with your study of this feasibility program, give any consideration to the possibility of developing a system for the distribution of materials that would obviate the necessity of bringing supply and demand [fol. 1648] into balance?

The Commissioner: Didn't the witness say that was out of his bailiwick?

The Witness: That is, the feasibility analysis, as such, did not concern itself with the method of distributing materials.

By Mr. Barnes:

Q. I say, did you in connection with making that analysis give any consideration to the possibility of having some system of distribution without the necessity of balancing supply and demand?

A. Yes, and we were convinced in our minds, the Planning Committee, that no system for the distribution of materials could be precise enough and tight enough to work effectively if the total demand were way, way in excess of total supply. In other words, we felt that if total demand were brought down reasonably near total supply, then a system for the distribution of materials would work effectively, but it could not work effectively if demand continued way, way out of line with supply.

Q. Mr. Nathan, I think you stated that in the earlier period you had no concern with the mechanisms worked out for the distribution of materials?

A. In 1940 and '41, that was true, but not in 1942. As a matter of fact, in 1942 I was also Chairman of an ad hoc [fol. 1649] committee in the War Production Board called the Committee for the Control of the Distribution of Materials. I was Chairman of that committee. I don't remember the exact dates, but it lasted for some six months, around March, say, to September of 1942.

Q. Did you, in connection with the work of that committee, give any consideration to the prior experience of the War Production Board and predecessor agencies with respect to the distribution of materials?

A. Yes, we studied every procedure, device and technique that had been adopted.

Q. What were the general concepts and objectives that you found underlying the original priorities program developed by the War Production Board and its predecessor agencies?

A. The first purpose——

Mr. Rigney: Your Honor, I hestiate to interrupt, but it seems to me that that question is objectionable, asking him what concepts were. It is vague. I don't see how it can be answered without operations of the witness' mind apart from the facts.

Mr. Barnes: I would hesitate to put a witness on the stand whose mind wouldn't operate while he was on the stand, Mr. Rigney.

The Commissioner: Sustained.

[fol. 1650] By Mr. Barnes:

Q. Mr. Nathan, will you describe the original priorities program in the War Production Board?

A. The original priorities program was a system of giving ratings, which ratings varied in accordance with the essentiality of the item, with the highest rating for the most urgent items, and lower ratings for the less urgent items.

Q. Can you tell us whether or not, in your opinion, this program was a success?

Mr. Rigney: There again, it is his opinion.

The Commissioner: Sustained.

By Mr. Barnes:

Q. What had been the result of the operation of that program that you just described?

Mr. Rigney: I think the same objection would apply there, Your Honor.

The Commissioner: I am going to let him testify how that program operated. I think if the question were rephrased in that direction, the objection would be removed. I am going to sustain the objection to the question as asked, and suggest to counsel that the question be rephrased.

By Mr. Barnes:

Q. Mr. Nathan, how did that original program that you have just described operate?

[fol. 1651] A. It operated through committees which assigned these various ratings to different categories of items, and in large measure the military items were rated by the

military departments. For instance, aircraft, say, became A-1, and something less essential became A-2, and the like.

Q. In the assignment of these priority ratings, was any consideration given to the relationship between supply and demand of the materials involved?

A. No, sir.

Q. What was the result of that on the operation of the program?

A. The result was that in time, as demand increased relative to supply, the priorities rating system became inoperative, because of the inflation of the ratings.

Q. What do you mean by "inflation of ratings"?

A. If people couldn't get supplies, they protested and got higher ratings. Pretty soon, everybody began to squeeze into the highest rating, and then the rating wasn't of any use.

Q. In addition to this system of assigning priorities, were any other means used to control the flow of materials during the period prior to the middle of 1942, let us say?

A. There were directives. If an individual couldn't get his essential materials through ratings, he came in and asked for a directive, which meant that the OPM, later the [fol. 1652] War Production Board, directed a supplier to supply that individual.

Then there were "M" orders and "L" orders, Conservation and Limitation orders. The "M" orders served both to relate the distribution of materials to the priorities system, to bring the claimants in line with the suppliers, and also to limit the uses of many materials to specific purposes or from specific purposes.

Also, there were the "L" orders or Limitation orders, which denied the availability of these materials for certain designated end purposes.

Q. Were these Limitation orders in general use by the War Production Board during World War II?

A. Very considerably, yes.

Q. What function did they serve?

A. They served to reduce demand for materials.

Q. Do you recall, for example, a Limitation order related to the production of civilian automobiles?

A. Yes, sir.

Q. Can you give us some of the background of that order?

Mr. Rigney: Your Honor, I don't know, but it seems to me that is objectionable. If he wants to interrogate him with respect to the order and ask him specific questions concerning that, that would be the way to proceed, I should [fol. 1653] think.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Mr. Nathan: do you know of a program or plan for the distribution of materials which was called the Controlled Materials Plan?

A. Yes, sir.

Q. When was that introduced?

A. Early in 1943.

Q. How was it developed?

A. It was developed——

Mr. Rigney: Just a minute, Mr. Nathan.

That is again the type of question to which I object, Your Honor, because I think the witness quite properly, in response to that kind of question, absent an objection, would feel that he is entitled to answer it in a narrative and discoursive sort of way which presents the difficulty we have raised before. I wish counsel could avoid that.

Mr. Barnes: Your Honor, there is a very difficult problem here to avoid leading. On a subject of this type, there has to be a certain amount of latitude given to the witness. I will withdraw that question, however, and ask a preliminary question.

By Mr. Barnes:

Q. Did you have anything to do, yourself, with the devel- [fol. 1654] opment of the Controlled Materials Plan?

A. With the background for it, yes.

Q. Through what medium?

A. Through this Committee for the Control of the Flow of Materials, of which I was Chairman.

Q. Will you explain the work of that committee in connection with the control of the flow of materials?

A. This committee worked in the middle of 1942 when it

was clear that the priorities system was falling down and a new system had been proposed called PRP, Production Requirements Plan, which was not very satisfactory. We were trying to work out a plan which seemed to be supported generally for a vertical system of distributing materials, namely, by allocating materials to end uses and letting that allocation system take care of distributing the materials in relation to an end use, rather than distributing it to every user of materials, no matter what the end use was.

If I may illustrate, if you put materials, let us say, into every engine company, you don't know whether those engines are for marine purposes, necessarily, or automobiles, or shore use, or refrigerators. Perhaps that is not a good illustration, but conceivably when you feed in materials to each plant that uses materials, you have no tie-up to the end purpose for which those materials will be used.

So the desired objective was to try to feed the materials [fol. 1655] in in relation to end purposes. In that way, you could really control the use of materials for a designed purpose or designed end use.

We discussed this approach throughout the summer and early fall of 1942. The specific form of the Controlled Materials Plan, which is really a vertical plan and an end-use allocations system, the specifics did not emerge until, I think, October, when Mr. Eberstadt came over from the Army-Navy Munitions Board and set up a separate committee which developed the details of the CMP.

Q. By October, you refer to October 1942?

A. 1942, yes, sir.

Q. Was the Controlled Materials Plan the final mechanism used by the War Production Board for the balance of the war for the distribution of materials?

A. Yes.

By the Commissioner:

Q. All materials?

A. The key materials, actually. The Controlled Materials Plan never did apply to all materials; just to the key materials, the most critical ones.

By Mr. Barnes:

Q. Was it necessary to have Limitation orders under the Controlled Materials Plan or in conjunction with it?

A. Yes, sir.

[fol. 1656] Q. Why?

A. The Controlled Materials Plan, in my judgment, was the best plan for the distribution of materials that was developed. I think that evidence of its applicability and propriety is manifested by the fact that it is used in the present mobilization period also; with slight deviations, that the Controlled Materials Plan is now also being used in the Korean mobilization period. However, effective as it is, it still, in my judgment, would not have worked effectively had the demand been tremendously excessive relative to the supply of materials. I don't think it could have worked very effectively. That is why I think these other orders were necessary along with it.

Q. In the course of the studies made by this committee of the distribution of materials, did you give consideration to the place of Limitation orders in the distribution scheme?

A. Not in that committee, no. We were then concerned exclusively with the techniques for distributing materials.

Q. Do you know whether or not the function of Limitation orders in connection with distribution was given consideration by that committee?

A. Yes, it was discussed very widely in the War Production Board, in many, many meetings, by many groups and individuals, the importance of curtailing demand. As a matter of fact, the key to the proposals of the Planning [fol. 1657] Committee was geared to this whole thought of getting demand somewhere near the relationship with supply, somewhere near the level of supply.

Q. Did the implementation of that work of the Planning Committee have anything to do with the issuance or continuance of Limitation orders?

A. I believe it did. We of the Planning Committee worked very closely with the Chairman of the War Production Board, and we also supported not only the importance of a feasible military program, that is, keeping the military program within the realms of achievability, but also of keeping the civilian requirements down near what was accepted

generally as minimum civilian requirements through the use of "L" orders.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 1658] Mr. Rigney: I am pleased to say, Your Honor, that we have obtained the appendices which were missing to Plaintiffs' Exhibit No. 1, and they are now attached. I submitted them to Mr. Barnes during the recess, and I think the exhibit is now in complete order.

Mr. Barnes: In view of that, I withdraw the motion I made to strike Plaintiffs' Exhibit No. 1.

The Commissioner: Very well.

By Mr. Barnes:

Q. Mr. Nathan, you referred to the controlled materials plan as being the vertical system for the distribution of materials. Would you explain a little bit more fully just what that means and how it operated?

A. There were, first, claimant agencies. For instance, the Army was a claimant agency, the Air Corps a claimant agency, the Marine Corps, the Navy, the Maritime, Lend Lease, the Office of Civilian Supply. They came before a requirements committee and submitted their needs for a given quarter. There was considerable debate as to whether these needs were just, whether they were reasonably related to end purposes. And then these claimant agencies would be allocated given amounts of steel, of aluminum, of copper. Then they would distribute tickets to their suppliers, who were supplying the Armed Forces with contracts, and they, in turn, then would be able to buy materials with these tickets and pass them down.

[fol. 1659] The claimant agencies for the civilian requirements functioned similarly by giving these tickets or claims to people who produced essential civilian items and they passed down, and in that way the materials were claimed in relation to given end programs.

Q. You have used the phrase "civilian requirements" and "essential civilian requirements." What did that include, in general?

A. Well, for instance, essential civilian requirements would include the power industry, the railroads, the telephone and telegraph, clothing industry, food processing industry, even service industries that were essential such as housing in defense areas, service industries such as hotels and restaurants. It included the whole category of the civilian economy which had to continue to operate in order to support the military production program.

Q. In your opinion, could the controlled materials plan or any similar system for the distribution of materials have operated successfully if, for example, there had not been an order prohibiting the manufacture of automobiles?

A. In my opinion, the controlled materials plan would not have operated effectively had there not been limitation orders such as the automobile order.

Q. Why not?

A. The automobile industry we all understand to be a [fol. 1660] very large user of steel and alloys and copper and many other materials. Had there been no direct restriction on the production of automobiles that industry would have come in as a claimant and it would have exerted its utmost pressure, properly, to get as much materials as it could and get the highest priority it could. And as we experienced throughout the World War II period, each industry—and again I say properly—regarded its product as highly essential, for morale purposes, if not for directly supporting the essential operations of the economy. And the pressures become so great for higher priorities, for higher allocations that it is almost impossible to make a distribution of a limited supply when the demand is very, very much in excess of the supply.

I think the priorities system would not have broken down as early as it did had the total requirements been brought down closer to total demand earlier in the war period.

Q. We have used the automobile industry as an example. In your opinion, would the same thing have been true with respect to other industries whose production was curtailed or eliminated during the war?

Mr. Rigney: I think he ought to specify the industry. I object to the generality of the question.

The Commissioner: Read it, please.

(The pending question was read by the reporter.)

The Commissioner: Sustained.

[fol. 1661] Mr. Barnes: I was wondering if I could ask a question in reference to the answer before. The witness has used the word "pressure". I was wondering if we could get an explanation of how he meant that. Does he mean an illegal pressure of some type?

The Commissioner: You may ask him that.

The Witness: Nothing illegal in pressure. For instance, when the automobile curtailment order was being considered, the industry representatives came to Washington and the War Production Board had hearings, and the OPM before the War Production Board. And the industry urged against the curtailment of automobile production on the grounds of essentiality, that workers had to get to the war plants, the farmers had to get to the city, and the workers had to move around. They objected also on the ground that they had sizeable inventories and they wanted to keep producing to run down their inventories of components. They objected also on the grounds that their equipment was not appropriate for war orders and they did not have big war orders, they couldn't convert, that it would create a lot of unemployment and chaos. There is nothing illegitimate about that pressure. And I said, I think, properly, every industry regards its own product as highly essential.

By Mr. Barnett:

Q. In other words, it was an argument on their behalf?

A. A strong argument, that is right.

[fol. 1662] Q. The same as the gold people were arguing on their behalf?

A. That is right.

Q. With a different result?

A. Well, the automobile industry was closed down also, both were closed down.

Mr. Barnett: Well, that is a question.

The Commissioner: You can take that up on cross-examination.

You used another word in reply to a question, Mr. Nathan, and I would like to have you state what you meant when you

used the words "total requirements". I am going to suggest that you read that answer back.

Mr. Rigney: I think he meant to say supply.

The Commissioner: I want you to read the answer that was given.

(Whereupon, the record was read by the reporter as follows:

"The automobile industry we all understand to be a very large user of steel and alloys and copper and many other materials. Had there been no direct restriction on the production of automobiles that industry would have come in as a claimant and it would have exerted its utmost pressure, properly, to get as much materials as it could and get the highest priority it could. And as we experienced throughout the World War II period, each industry—and again [fol. 1663] I say properly—regarded its product as highly essential, for morale purposes, if not for directly supporting the essential operations of the economy. And the pressures become so great for higher priorities for higher allocations that it is almost impossible to make a distribution of a limited supply when the demand is very, very much in excess of the supply.

"I think the priorities system would not have broken down as early as it did had the total requirements been brought down closer to total demand earlier in the war period.")

The Witness: The last word "demand" should really be "supply", in other words, "had total requirements been brought down nearer to total supply".

The Commissioner: All right.

By Mr. Barnes:

Q. Mr. Nathan, referring back to the automotive industry, do you recall what in fact happened to their manufacturing facilities after they were prohibited from manufacturing automobiles?

A. Yes. The automotive industry, when it objected to the limitation order on the production of passenger cars, said that most of its facilities were special purpose tools and special purpose equipment, and could not be used for war

purposes. And they actually found after passenger cars had [fol. 1664] been curtailed that most of its facilities were usable. And there was—again I haven't the reference—a hearing later in the war period when it was indicated that the overwhelming portion of the machinery and the tools of the automobile industry actually was converted to war production.

Q. Would the same situation have prevailed with respect to domestic mechanical refrigerators, had their production been prohibited by the War Production Board as were automobiles?

A. I would say definitely, yes.

Q. Would the same thing have been true with respect to domestic laundry equipment?

Mr. Rigney: I do not quite understand the meaning of the question as put.

The Commissioner: I don't either.

Mr. Rigney: I would like to have it clarified, and that goes for the previous question and answer. When he says "would the same thing" I do not know what he means.

By Mr. Barnes:

Q. Mr. Nathan, we used as an example in our discussion a moment ago, the automobile industry. I am asking you whether your answer would be the same if for the automobile industry we were substituting the manufacturers of domestic mechanical refrigerators.

The Commissioner: For what purposes are you relating to the industry? He just finished testifying about the [fol. 1665] machine tools that were converted. Is it the machine tools in those industries or what?

Mr. Barnes: Would the reporter go back and read the first question I asked after the recess, please?

(Whereupon, the record was read by the reporter as follows:

"In your opinion, could the controlled materials plan or any similar system for the distribution of materials have operated successfully if, for example, there had not been an order prohibiting the manufacture of automobiles?")

Mr. Barnes: I will withdraw the question, and ask:

By Mr. Barnes:

Q. In your opinion, could the controlled materials plan or any similar system for the distribution of materials have operated successfully if there had not been an order prohibiting the manufacture of domestic refrigerators?

A. Certainly less effectively.

Q. Would the difference in this and the automobile industry be one of degree or one of substance?

A. Merely one of degree.

Q. Could the controlled materials plan or any other similar plan for the distribution of materials have operated successfully had there not been an order prohibiting the manufacture of domestic laundry equipment?

A. I would say the same answer, no, but certainly less effectively. Again, it is a matter of degree, how much [fol. 1666] material each one of these products used.

Q. Are you familiar with the fact that there were limitation orders issued by the War Production Board which curtailed or prohibited the manufacture of other end products?

A. Yes. There were limitation orders which included a tremendous variety of consumer-type end products.

Q. In your opinion, could the controlled materials plan or any similar plan for the distribution of materials have operated successfully had it not been for those L limitation orders?

A. I personally believe it could not have worked had it not been for the L orders. I think they were in essence a very important, essential part of the whole distribution system.

By the Commissioner:

Q. Well, now, preference ratings were used at the same time the CMP plan was in operation, were they not?

A. That is right, sir.

Q. Did preference ratings apply to the same materials that the CMP plan covered?

A. They often used them for timing only, but the preference ratings were used mostly for those materials which were not included under CMP. They continued the priority system for the non-controlled materials.

Mr. Barnes: Could I have that question and answer read back, please?

[fol. 1667] (The record was read by the reporter.)

By Mr. Barnes:

Q. Which were the so-called controlled materials, Mr. Nathan?

A. Steel and aluminum and copper were controlled materials.

Q. In what way did the vertical distribution of those, as you have described it, control other critical materials?

A. Well, there are items which use other materials but do not use aluminum, steel and copper, but by and large those items are not of great importance. Almost all the big users of any materials or any alloys will certainly use either copper or aluminum or steel or a combination. So that with controls on those items—and there is a limitation on how much is available of th e key items—of necessity, the demand for the other materials is diminished also.

Q. Mr. Nathan, to your knowledge, was any consideration given in the War Production Board to what has been referred to here as the concentration of production?

A. Yes, sir; quite a bit of attention was given to that question.

Q. To begin with, to be sure we are talking about the same thing, what do you mean by concentration of production?

A. When the production of a given item or of a given industry is severely curtailed to a point where it is not [fol. 1668] economic from the overall point of view or from the individual supplier's point of view to continue this limited production in each plant, then the production might be concentrated in one or two or a limited number of plants, and the rest will not produce at all. That is my understanding of the concept of concentration in this context.

Q. And to your knowledge, what consideration of that problem was given in the War Production Board?

A. It was studied and discussed over an extended period of time, and, as a matter of fact, the Planning Committee itself studied the matter and made recommendations to the War Production Board on this matter.

Q. To what extent, to your knowledge, was concentration of production ever employed during the period of the war?

A. To an insignificant extent. It never really got going and never really was effective.

Q. What was the reason for that, if you know?

A. Well, in my judgment the main reason was the fact that on many items where the matter was considered the production was totally wiped out, after talking about cutting it down to lower levels. Concentration has significance only when production is severely curtailed. When production of a given item is terminated concentration has no significance. I would say that would be the main reason.

The second reason, in my judgment, was the complexity [fol. 1669] of undertaking it in a complicated economy such as ours and the difficulty of trying to work out a system of proper contribution, proper compensation, let us say, among the several producers who would be eliminated.

Q. On this question of distribution of materials, you have described the controlled materials plan and have indicated that you felt that the L orders were necessary in connection with its successful operation. Assuming that we had not had a controlled materials plan but had used some other mechanism for the distribution of materials, is it still your opinion that limitation orders would have been necessary?

Mr. Rigney: I think that is objectionable because of the vagueness of the question, assuming we had used some other plan. It does not give the witness what he needs in order to give an intelligent, significant answer, it seems to me.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Did the requirements that were submitted by companies that were claimant agencies filing for CMP allocations come to your attention at all?

A. No, sir.

Q. In connection with the study that was made of the distribution of materials, were other means for distributing materials, other than the system that eventually became known as CMP, discussed and considered?

[fol. 1670] A. Yes. In the Committee on the control of the flow of materials which I cared we considered the

straight priority ratings, and we considered the production requirements plan, commonly known as PRP.

The Commissioner: I think timing would help us there.

The Witness: This committee, in the spring and summer of 1942, considered these various plans, your Honor. We recommended in the summer, the early summer of 1942, that the PRP system be introduced and used for the third and fourth quarters, and it was. That was a horizontal system, not a vertical. It was getting each user of materials to apply direct. But we also had before us as a committee, in the summer of 1942, a wide variety of proposals. The steel industry came up with a proposal, and the automobile industry, and in the Government many units came up with suggestions for distribution. And it was finally decided—we recommended in favor of the vertical system, as I said before, the details of which, however, were not worked out until after this committee had finished its work and it was developed by one of Mr. Eberstadt's committees.

By Mr. Barnes:

Q. What was the basic difference between the production requirements plan and CMP?

A. The production requirements plan, as its title indicates, related to the raw material requirements for production by every producer without any tie-in as to where that [fol. 1671] product which he manufactured would end up in terms of its end product. So that it flowed in horizontally into every fabricator and every stage of fabrication.

The controlled materials plan, on the contrary, was constantly related to a set of end products, and quantities of end products, so that when a claimant agency came in under the controlled materials plan for materials its request was always related to a given level of output of that item, whether it be a military item or indirect military like railroads or power, or straight civilian items. So that the technique under CMP was always one of gearing the pouring in of materials to some end objective of given quantities of end items.

Q. Was there, in connection with PRP, something which was called the end products code?

A. Yes.

Q. What was that?

A. Well, the people who set up the PRP thought that they might, through this horizontal flow, be able to limit the flow of materials to a processor in some relation to end products, but since, say, a man who, let us say, made steel wire out of bar wouldn't know definitely the end uses toward which that wire went he would work out approximations in some categories, and he would submit these categories by code numbers. But it was pretty clear that these were so general that they were relatively meaningless, and that the [fol. 1672] system in essence destroyed the ability of gearing the flow of materials to specific end products.

Q. Did you at any time analyze the total requirements submitted under CMP when you were in the course of studying supply and demand relationships?

A. No, I did not, because CMP really came in effectively after I had left the Board.

By the Commissioner:

Q. How long did this PRP last?

A. Two quarters, just two quarters.

Q. Of what year?

A. The last two quarters of 1942.

Q. When did CMP start?

A. The first of '43. I think, as a matter of fact, as I recall, the first quarter of '43. It was sort of a practice quarter. CMP became quite effective around the middle of '43, and really tightend up and got over its rough spots.

By Mr. Barnes:

Q. In your opinion, are limitation orders which curtail or prohibit the production of end items necessary in the control of materials in a war economy?

A. Without question, totally dedicated to the principle that without limiting production, military and civilian, to what we might call reasonably feasible goals, no system of controlled materials is likely to be effective.

[fol. 1673] Q. Why is that?

A. Because the aggregate demands and the urgency of each claimant for his own product, without any limitation of that product, will make the problem of apportionment

utterly impossible, and I think it would also retard conversion.

Q. Now, referring to one limitation order, Mr. Nathan, are you familiar with L-208?

A. I am, sir.

Q. Will you explain the basis of your familiarity with that order?

A. I remember discussions of L-208 when I was in the War Production Board, but those memories are not very precise, and my familiarity with the order is based much more on investigations which I have conducted recently into the whole background of the L-208 order from official records.

Q. Have you undertaken that investigation at our request in an attempt to, among other things, secure a measure of the quantity of materials used by the gold mines?

A. Yes, sir.

Q. Will you describe generally the type of study or analysis which you have given to this problem?

A. We have—I and my associates—have reviewed every available record we could locate in the archieves and in other agencies with respect to L-208's issuance and implementation, and also with respect to the discussions concerning the [fol. 1674] gold industry for at least a year prior to the issuance of L-208.

Q. Mr. Nathan, do you recall whether you personnaly had anything to do with this order in your capacity as Chairman of the Planning Committee or in your previous position in the Bureau of Research and Statistics?

A. I do not recall any direct participation in it. I have a recollection of some discussions, but I have no recollection of having any direct responsibility in the area or of having worked specifically on that matter.

Q. To you knowledge, Mr. Nathan, what are the uses of gold?

A. Gold, I would say, breaks down into three principal categories: one is monetary, two is ornamental—perhaps I had better say four categories—two is ornamental, three is industrial, and four is—for a better word—hoarding, say, as I experienced quite closely in my recent trips to the Far East.

Q. Would you characterize gold as an essential product in the United States in 1942?

A. For certain purposes, such as indentures and some laboratory purposes it was essential.

Q. Do you have any means of measuring the quantity or relative volume of those essential uses?

A. I have seen figures in the Minerals Yearbook which indicate the total of industrial uses which are quite infinitesi-
[fol. 1675] mal compared with our total supply of gold in the United States.

Q. To your knowledge, was gold ever an essential product in our economy?

A. I was quite startled in reading some——

Mr. Rigney: I object to that, if your Honor please, his referring now to something that he read. I do not think he should tell us about something that——

The Commissioner: I think this question should be limited to time, too.

Mr. Rigney: Yes. I assumed he was making it all-inclusive, I don't know.

The Commissioner: I think it should be related to the time. I will put it that way.

Mr. Barnes: I used the word "ever", your Honor. I was not limiting it to time intentionally.

The Commissioner: I wanted to be sure that was understood.

Mr. Barnes: I limited it to time only in referring to the economy of the United States. I said "our economy".

Mr. Rigney: I will object now on the grounds that it is immaterial and irrelevant then.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Limiting ourselves to the period subsequent to 1930, can you tell me whether gold was ever an essential product in the economy of the United States?

[fol. 1676] Mr. Rigney: I think that is objectionable too as irrelevant and immaterial, and outside of the scope of the issues in this case.

The Commissioner: I will overrule that one.

The Witness: Except for the limited quantities needed for

these few industrial purposes, it would hardly be classified, in my judgment, as an essential commodity—certainly not for monetary purposes since 1933.

By Mr. Barnes:

Q. What was the situation with respect to monetary value of gold in 1942?

A. There was a law whereby the Government agreed to buy gold at $35 an ounce refined, whenever it was available. The United States had a gold stock valued at that price in excess of $20 billion dollars. We did not have a gold exchange standard, and this was merely a reserve, and our issuance of currency was then related to the size of this reserve.

Q. In your opinion, would the continued production of gold have been required in 1942 for any monetary function of the United States?

A. In the United States, no.

Q. Would its continued production have been required in order to settle international trade balances?

A. By no means.

Q. Was any gold used, to your knowledge, in settlement [fol. 1677] of international trade balances during the years subsequent to 1942?

A. In 1943 and 1944 we exported gold to other countries for compensation for commodities purchased in excess of exports.

Q. How substantial was that exportation?

A. In one of those years it reached a total of between $800 and $900 million, or about 4% of our total reserve.

Q. In your opinion, could the curtailment of gold production have any adverse effect on the economy of the country as a whole in 1942?

A. None.

Q. Why not?

A. Well, you say the economy as a whole. Certainly the cessation of the production of gold could not have had any significant monetary impact, and therefore the only impact could have been in terms of the producing industry itself, and any secondary or tertiary ramification out of that impact.

Q. On the basis of your study, can you tell me whether or not the gold mining industry used raw materials?

Mr. Rigney: Do you refer to the specific study that you questioned him about a minute ago or his general studies?

Mr. Barnes: Yes.

Mr. Rigney: His investigation as a consultant to the Department of Justice?

Mr. Barnes: That is right.

[fol. 1678] Mr. Barnett: We would like to know if he has ever been to a gold mine, or is he testifying from certain records and books or pamphlets that came to his attention. We would object on the grounds that a proper foundation for answering of the question has not been laid.

Mr. Barnes: If counsel wishes to examine the witness on his qualifications at this time I have no objection, your Honor.

The Commissioner: Well, I am going to overrule the objection and permit any preliminary questions that you might want to make.

By Mr. Barnett:

Q. Mr. Nathan, have you ever been in a gold mine?

A. No, sir.

Q. Have you ever visited a gold mine community?

A. No, sir.

Q. What is the basis of the evidence you are about to give? Reading books and pamphlets?

A. Official government documents, such as the census.

Q. Of what year?

A. 1939.

Q. Is that the only one that you read?

A. I have read a Minerals Yearbook also for subsequent years.

[fol. 1679] Q. In the census, does that give you any idea as to the production of gold?

A. Yes, sir.

Q. Whereabouts? Is that the census you are looking at now?

A. Yes. This is the census of mineral industries of 1939, Volume 4, published by the United States Bureau of Census, and this volume indicates production by various categories

of mines, mining industries, and one of the industries is the gold mining industry, and for the gold mining industry it gives the amount of production and also gives the amount of gold production for other than gold mining industries, like the copper mining industry.

Q. For what year is that?

A. 1939, and it also gives figures for previous years, 1929.

Q. Is that the year you referred to when in 1941 you made the recommendations that you have testified to?

A. Which recommendations?

Q. You testified as to the amount of material consumed by the gold mines.

A. No, I haven't yet.

Q. That you intended to testify to.

A. Yes, sir.

Q. And that is the latest document?

[fol. 1680] A. That is right, sir.

Q. Do you know what the situation was in 1941?

A. Unfortunately, the forms in the War Production Board which might have given that information appear to have completely disappeared, so that documents for 1941 and statistics for 1941 are not available.

Mr. Barnett: We submit the objection, your Honor.

The Commissioner: Let us have the question again.

(The question was read by the reporter as follows: "On the basis of your study, can you tell me whether or not the gold mining industry used raw materials?")

The Commissioner: Overruled.

The Witness: On the basis of available official evidence in 1939, the gold mining industry used raw materials.

By Mr. Barnes:

Q. Did it use machinery and equipment?

A. In 1939——

Mr. Pittman: At what time, your Honor? May counsel keep his dates on the record?

Mr. Barnes: The witness stated in each case 1939, your Honor.

The Commissioner: Yes.

The Witness: In 1939, yes.

By Mr. Barnes:

Q. In 1939, did it use fuel?

[fol. 1681] A. Yes, sir.

Q. Did it purchase electric energy?

A. Yes, sir.

Q. Have you been able to locate, Mr. Nathan, any statistical information which would indicate the relative importance of the gold mining industry in or shortly before 1942, either in terms of production or employment or of its use of materials?

Mr. Rigney: Relative to what? I object to the question on form.

The Commissioner: Sustained.

Mr. Barnes: I will strike out the word "relative" and ask the same question.

The Commissioner: Let us have it read, please.

(The pending question was read by the reporter.)

The Commissioner: Read it again.

(The pending question was read by the reporter.)

Mr. Pittman: I submit, your Honor, that the witness has already testified that his knowledge is limited to the book dated 1939, and this is prior to 1942, and I think the witness has answered the question.

The Commissioner: That one is overruled.

Mr. Rigney: I renew my former objection, and that is this: "The importance of the industry". I don't know what that means. There is no standard by which we can under-[fol. 1682] stand what the questioner means or what the witness may have in his mind as he answers the question.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Mr. Nathan, have you located any statistical information which indicates the amount of production by, employment in, or use of materials by gold mines in 1942 or shortly before that date?

Mr. Rigney: I will have to have that one read, your Honor.

(The pending question was read by the reporter.)

Mr. Rigney: The question is obviously too compligated to permit a meaningful answer. I think counsel should break it down and take it one at a time and we will see how we get along that way. I do not think it is a proper question and I object to it as to form at this point.

The Commissioner: Well, I think that the question is certainly a compound question. It is hard to follow the question, and it would obviously be hard to follow the answer in relation to the question. I am therefore going to sustain the objection.

By Mr. Barnes:

Q. Mr. Nathan, have you located any statistics which show the amount of production by gold mines in 1942 or shortly before that date?

[fol. 1683] A. Yes, sir; for 1939.

Q. Have you located any statistics which show the level of employment in gold mines in 1942 or shortly before that date?

A. Yes, sir.

Q. And for what period is that?

A. For 1939.

Mr. Pittman: That is not shortly before, that is three years before.

Mr. Barnes: Your Honor, I would like to point out in view of that comment that counsel for the plaintiffs have characterized as new items of major improvements on their property made in the middle '30s prior to 1939. If those were new in 1942 these statistics were collected shortly before 1942.

The Commissioner: I think I am going to suggest that if counsel have an objection to state, state it as an objection and withhold other comments, because that is the only way I can sensibly rule upon anything that comes up.

Mr. Barnes: I took that only as a comment and was making a return comment, your Honor.

The Commissioner: My suggestion will avoid that and save time.

By Mr. Barnes:

Q. Mr. Nathan, have you been able to locate any statis-
[fol. 1684] tical information as to the use of materials by gold mines in 1942 or shortly before that date?

Mr. Barnett: I make the objection that the words "shortly before" are apt to mean one, two or three years. If there could be a shorter period I would withdraw the objection, but without a definite date I will object, because of its uncertainty.

Mr. Barnes: The pattern of my examination has showed that in each case I have asked the witness when he answered the question "as of what date" and I intend to do that again.

The Commissioner: Overruled.

The Witness: Yes, for 1939.

By Mr. Barnes:

Q. And from what source was that?

A. The United States Bureau of Census, Census on Mineral Industries.

Q. Is that an official government publication?

A. That is an official government publication.

Q. Have you made a study of it?

A. Yes, sir.

Q. By whom was it conducted?

A. The Bureau of the Census, the United States Depart-
ment of Commerce.

Q. Do you know whether the information contained in that census is generally accepted as reliable among the non-
[fol. 1685] ferrous metal mining industries in the United States?

Mr. Rigney: I object to that question on the ground the witness is incompetent to answer it, and also on the ground that it is irrelevant and immaterial.

Mr. Barnes: Your Honor, I think in the listing of the witness' clients he listed non-ferrous metal clients.

The Commissioner: Overruled.

Mr. Rigney: I do not see how it could be binding upon us whether somebody accepted this particular book or not. Why would that make it binding upon us? And it would be hearsay, also as a basis.

The Commissioner: I am going to overrule it.

Mr. Rigney: He is not dealing now with custom or something of that sort, he is not testifying to a prevailing custom in a trade. I could understand something like that, but as to whether somebody in a particular industry accepted some publication or not, I think it is hearsay and objectionable.

The Commissioner: Your objection is overruled.

Mr. Barnett: The other objection is the remoteness of the document. In 1939 we all know what condition prevailed in America, and in 1941 we had a war situation. If the basis of this evidence is the number of men and materials used in 1939 it certainly cannot be projected as being of the same value in 1942.

The Commissioner: That objection goes to the weight.

[fol. 1686] Mr. Barnett: That may be.

Mr. Barnes: Will you read the question back, Mr. Reporter?

(The question was read by the reporter as follows: "Do you know whether the information contained in that census is generally accepted as reliable among the non-ferrous metal mining industries in the United States?")

The Witness: I believe it definitely is accepted. My only contact with them was when I was working on the national income field, we worked rather closely with the industry gathering data for inter-census years, and I never ran into an exception where anyone questioned the use of census figures as the base period.

Mr. Barnes: Would you mark this Defendant's Exhibit 53 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 53.)

By Mr. Barnes:

Q. Mr. Nathan, directing your attention to this document which has been marked Defendant's Exhibit 53 for identification, will you tell me what it is?

A. This document is taken from a table in a publication entitled "Mineral Industries, 1939, Volume One, General Summary and Industry Statistics, 16th Census of the United States, Bureau of the Census, United States Department of

Commerce", data taken from Table 1, pages 18 and 19 of that official document.

[fol. 1687] Q. Referring first to the various columns that appear in that exhibit, will you tell us what they are?

A. This tabulation—

The Commissioner: Have you a copy?

(Document handed to the Court.)

Mr. Rigney: I have a preliminary question, if I may.

Mr. Barnes: May I say that we did not anticipate that we would proceed quite this rapidly. We will have photostats of this and other exhibits available in the morning to supply to counsel. Unfortunately, our Photostat Department is also somewhat slow and they are not available, but they will be in the morning.

The Commissioner: This can be off the record.

(Here followed discussion off the record.)

Mr. Rigney: I want to ask a preliminary question about this particular exhibit before we proceed further.

The Commissioner: Yes.

By Mr. Rigney:

Q. Mr. Nathan, this exhibit which is denominated "Table One" and marked Defendant's Exhibit No. 53 for identification, is this a chart which you have prepared or which was prepared under your supervision from this book or is it a reproduction—

A. It was prepared under my supervision, and I have checked it from an enlarged table in the book.

[fols. 1688-1689] Q. I see, but all of the material, all of the figures which are set forth here, all of the topics which are listed here, are merely taken from the book?

A. That is correct.

Q. So that this is a compilation of material taken out of the book?

A. That is correct, yes, sir.

By Mr. Barnes:

Q. There has been no change in any figures or interpolations by you or by your staff, has there?

A. No.

Mr. Rigney: I did not mean to imply there had been any change in the figures. I wanted to find out the nature of the exhibit.

By Mr. Barnes:

Q. Would you describe what the column headings are across the page, Mr. Nathan, on this exhibit?

A. This table summarizes the number of mines, the value of products, the purchases of supplies and materials, the purchases of fuel, the purchases of electric energy, the cost of machinery, both new and used, and also the cost of buildings for different classifications of metallic mines in 1939.

[fol. 1690] By Mr. Barnes:

Q. Mr. Nathan, yesterday the Commissioner asked you a question relating to whether or not preference ratings were used at the same time the CMP plan was in operation, and you answered that they were. And then to a subsequent question asked, as to whether they applied to the same [fol. 1691] materials the CMP plan covered you said they did but they often used them for timing only. What did you mean when you referred to timing there?

A. Principally for timing within the quarter, in other words, on the CMP materials allocated on a quarterly basis they were merely used for time preference within the quarter. But I went on to say then that priorities were primarily used for the non-CMP materials, but the timing was only within the quarter for CMP materials.

Q. Referring to the question of the limitation orders that we were discussing yesterday, aside from the aid that they furnished in the general distribution of materials, did they serve any other function in the war program?

A. They served to facilitate or expedite the availability of productive machinery and equipment for military production, and for essential military-supporting production.

Q. When you refer to the availability are you referring to what is sometimes called conversion?

A. That is right, the conversion of existing machinery for military or military-supported production.

Q. Mr. Nathan, in reviewing the list of some of the L orders that were issued by the War Production Board, I

noted that they had issued orders relating to items such as fishing tackle and golf clubs? Those are relatively insignificant users of material, are they not?

[fol. 1692] A. Yes, those are limited users of raw materials, and the L orders went up and down the line for major users such as automobiles down to quite remote items which are relatively insignificant in terms of the quantity of the critical materials which were used.

Q. Would limitation orders of that type still fit into the general pattern that you were discussing yesterday as to the needs of limitation orders in a general scheme for the distribution of materials?

A. Very much so, because while an individual product or an individual industry might be a small user of materials, the aggregate of the small users adds up to a very substantial quantity.

Q. Now, is it true that some of the termination of end products that we have been referring to as having been done by limitation orders was also done by the so called conversion or M series orders?

A. The M orders were used very widely to eliminate production. There the technique was one of not an outright statement such as "Passenger cars cannot be produced" or "Gold mines must be closed"; there the approach was one of saying that "This specific material must not be used for this particular purpose or end product". And in most instances that had precisely the same effect as an L order prohibiting production, because in a great number of cases, [fol. 1693] I would say perhaps the overwhelming number, substitution of a completely different material was practically impossible. So that the restriction of the use of the material for given purposes had the same net effect in most cases of a direct limitation on production as such.

Q. Now, I have here before me a copy of M 9-c. I have the copy that was in the Code of Federal Regulations of 1941, supplement. I am referring to List A that appears starting at page 2910.

Was that one of the orders that operated as you have just been describing it?

A. Yes. I have looked over that. That was one of the M orders, or so-called conservion orders, which prohibited the use of copper for specific end purposes and end products.

Q. I notice, for example, among the items listed there are such things as letter boxes, mail chutes, dress ornaments. Were those, to your knowledge, large users of copper?

A. Well, I don't know the specific amounts used in each one of those items, but in going over this and other orders I was very much impressed with the number of items which are very small users of materials.

Mr. Rigney: If your Honor please, I move to strike his observation that he was very much impressed.

The Commissioner: It may be stricken.

By Mr. Barnes:

[fol. 1694] Q. Can you tell me whether or not there were included in these orders end products that were small users of material, as well as those that were large users of materials?

A. Yes. The M orders did include lots of small items, for instance, like metal fittings on bookcases or file cabinets, little types; distinctive types of jewelry, and it went down to quite a specific list. At the time the problem was one of going to literally endless lists of end items and included in those large and small.

By Mr. Rigney:

Q. That was confining it now to this particular order, M-9-c?

A. M-9-c.

Q. Did that relate exclusively to copper?

A. That related exclusively to copper. There were other orders that related to other types of materials, aluminum orders, and so forth.

Mr. Rigney: I was just asking about this one.

By Mr. Barnes:

Q. There have been references here to one of the M-1 orders which related to aluminum and to an order called M-1-G relating to iron and steel. Do you know whether those similarly prohibited the use of those metals in certain specified end products?

A. Both of those orders included long lists of items.

[fol. 1697] Q. Do you know whether or not the list there included, as it did in the copper order, small as well as large users?

A. It did include small items that were very limited users of materials as well as very large users of materials.

Q. And why, in the case of these small users, were they included?

Mr. Rigney: I think that is objectionable, your Honor.

The Commissioner: Sustained.

By Mr. Barnes:

Q. Mr. Nathan, going back to Table I, which I believe you were discussing yesterday, do you have a copy of that there before you?

A. I do.

Q. Does the Census of Mineral Industries indicate the definition which is used for "Gold Mine"?

A. Yes, the Census volume to which I referred yesterday afternoon indicates very clearly that——

Mr. Rigney: I object, if your Honor please, to his characterizing it.

The Witness: I am sorry. ——indicates the classification of these data. The Census classifies mines by major product as the product which provides the principal value in the output of the mine. Therefore, data on industries as revealed in our Table I, taken from the Census, are industry data, not commodity data. In other words, not all gold production will be [fol. 1696] included in the gold mining industry, nor is the gold mining industry confined exclusively to gold production, because if a mine which produces predominantly gold produces other commodities that will likewise be included in the gold mining industry.

By the Commissioner:

Q. Does that include in it dredging operations?

A. Placer gold?

Q. Yes.

A. That is included, it includes both lode gold and placer gold.

Mr. Rigney: Could we have the page?

The Witness: The discussion of this particular classification problem is on pages 5 and 6 of this Volume I, Mineral Industries, 1939.

By Mr. Barnes:

Q. Does that indicate the extent to which the mines which the Census classifies as gold mines produce the total gold in the United States?

A. Yes. On page 5 of this volume the figures show that 84.8% of all the gold production in the United States in 1939 was accounted for by gold mines, that is, those mines whose products were principally gold. 84.8% of the total gold production in the United States was included in that category.

Q. Now, do the figures which you have set down opposite the heading "Gold Mines" relate to only materials, for [fol. 1697] example, and supplies used in the gold production in those mines?

A. No. These figures represent the total supplies, for instance, the total production, total fuel, et cetera, used by these gold mining companies, that is, the total supplies used by the gold-mining industry, whether they were producing gold or by-products or related products.

Q. Is it possible from the information available there to determine how important the gold production of these gold mines is, as representing their total income, for example?

A. Yes, it is. If I may refer to Table 4 on page 347 of this report, there is a set of figures on the total production of these gold mines. Now, it shows the production of these gold-mines of gold, of silver, of copper, of lead, of zinc, only in physical quantities, not in value. Only the total value is shown as $114 million, approximately, but the value of each type of product is not shown. But it is clear that the overwhelming portion of this $114 million is gold.

Mr. Rigney: I move to strike his characterization of it that it is clear.

The Commissioner: Overruled.

By Mr. Barnes:

Q. How many ounces of gold are shown there as the production of the mines that produced gold?

A. 3,280,000 ounces. That is in round figures. It is actually 3,280,279.93 ounces, fine ounces of gold were produced [fol. 1698] by these gold mines.

By the Commissioner:

Q. What is the total of all of the products there?
A. $114 million.

By Mr. Barnes:

Q. One hundred fourteen million how much?
A. $114,089,844 is the value of total production of these mines.
Q. Do you know what the price of gold was in 1939?
A. $35 a fine ounce.
Q. If my mathematics are correct, and I multiplied $3,280,000 by 35, I get approximately $114 million.
A. Yes.

The Commissioner: Let us get that straight. You said $3 million.

By Mr. Barnes:

Q. You multiply 3,280,000 ounces by $35 an ounce.
A. Yes, it comes very close. On the other values, I can indicate the figures of the quantities of other items produced here, if you would like.
Q. Could you do that?
A. Silver is approximately 7 million ounces.
Q. Do you know what the price of silver was in 1939?
A. 64c an ounce. I can get that in a second, the exact figure.

[fol. 1699] By the Commissioner:

Q. While you are checking on those figures, as I understand it, these figures do not include such a producer as has been referred to as the largest producer, which is a copper mine?

Mr. Barnes: The largest producer is Homestake, your Honor.

By the Commissioner:

Q. The second largest, I guess I meant.

A. That is correct, sir. This includes only those mines whose principal product was gold, and they account for 84.8% of the total in gold production in the United States in 1939.

According to the Minerals Yearbook, United States Department of the Interior, Bureau of Mines——

Mr. Rigney: What year?

The Witness: This is the 1941 Yearbook, page 54. ——the Government price for newly mined domestic silver was maintained through 1938 and to January 30, 1939 at 64¢ plus, 64.646464, it comes out, per fine ounce. The act of Congress approved July 6, 1939 fixed the price of domestic silver mined after July 1, 1939 at 71.1 plus cents per ounce. The annual average prices used for domestic silver from 1932 to 1939 are given year by year, and the average figure for 1939 is 67.87 plus cents per ounce, fine ounce of silver.

By Mr. Barnes:

Q. What about the other metals that were produced by [fol. 1700] this group that were classified as gold mines by the Census?

A. Those mines produced copper to the extent of 5,978,207 pounds.

Q. Was the price of copper approximately 12¢ a pound?

A. It was about 12¢ a pound in 1939, which would be about $600,000-odd worth of copper produced in these mines. Lead is 20,925,993.

Q. Was the price of lead then in the neighborhood of 5¢ a pound?

A. About 5¢ a pound. It would be about a million dollars worth of lead in these mines.

Zinc was 3,295,133.

Q. Do you recall what the price of zinc was then?

A. I could provide that in a minute.

According to this 1941 Minerals Yearbook, on page 144, the 1939 price of prime western zinc, average for the year, was 5.12¢ per pound, and 3 million pounds would be about $150,000 or something like that.

Q. Now, Mr. Nathan, what types of mines in 1939 produced the other 15.2% of our total gold production?

A. Some were copper mines, some were primarily silver mines, some were lead and zinc. I could tell the copper ore mines' production just as an illustration.

At page 384 of this Volume I, Mineral Industries, it shows that in 1939 those mines which were defined as copper mines, [fol. 1701] that is their principal valued product was copper, produced 429,517.9 ounces of gold, which would account for about 90% of the difference between what the gold mines produced and the total gold production in the United States.

Q. Have you, in preparing Table I, made any attempt to include the materials used by mines other than those classified by the Census as gold mines?

A. No. These figures are taken directly from the Census and are confined to the category of mines which are defined by the Census itself as gold mines.

Q. Now, referring to Table I, Defendant's Exhibit 53 for identification, what does the figure $114 million, roughly, in the column headed "Value of Product" mean?

A. That means the value of all of the products produced by those mines within the year of 1939, whether it be gold, silver, lead, zinc, copper, or anything else.

Q. Now, going over into the next column headed "Materials and Supplies", and still opposite the heading "Gold Total" the figure is $17,369,000. Do you know what that means?

A. That means that the gold mining industry, or gold mines included by the Census, purchased in the form of raw materials or tangible items for production purposes $17,369,000 worth of products, commodities and raw materials for their production activities.

Q. Would those be the types of materials that during the [fol. 1702] war were sometimes referred to as MRO materials, maintenance repair and operating supplies?

A. Maintenance repair and operating supplies would be included in that category.

Q. Would it include any capital items too?

A. No. New plant — well, it is not supposed to, I should say.

Q. Do you personally have any knowledge of the composition of that figure?

A. I personally do not have any knowledge of the make-up of that figure, as to what portion might represent different kinds of raw materials.

Q. Has your research furnished you with any information as to the kinds of materials that might be included in those figures?

Mr. Rigney: If your Honor please, I had intended to raise an objection, several objections to the admissibility of this document when it is offered. Now, by the manner in which counsel is proceeding, I am afraid unless I state that now, he will have, in effect, gotten the contents of the document into evidence without my having had a chance to raise my objection. I would like to ask Mr. Nathan two or three preliminary questions. First, I would like to inquire of counsel for the Government——

The Commissioner: Let us stop a minute. I think in view [fol. 1703] of your observation so far that the document should be offered since testimony is being adduced concerning it, so that we can confine the testimony to documents which are in evidence.

Mr. Barnes: Your Honor, I offer at this time in evidence Defendant's Exhibit No. 53 for identification.

The Commissioner: All right.

Mr. Rigney: May I have a statement from counsel as to the purpose of the offer, the purpose of the document, and what he expects to use it for?

Mr. Barnes: Your Honor, referring to 1942, this is the most recent official tabulation that we have been able to find of the supplies and materials used by gold mines. A comparison of some of the total figures here with those used in memoranda of officials of the War Production Board, which are already in evidence, will show your Honor that these figures were used by the officials of the War Production Board, some of the total figures that are represented here, or at least figures drawn from identical sources. The similarity of figures that appear in the WPB's concurrent memoranda is so marked to the figures that are presented in the 1939 census of Mineral Industries as to indicate that these figures were known to and relied upon by the officials of the War Production Board at the time of the issuance of Limitation Order L-208.

For that reason we are offering this information here as the best available information as to the use of materials by [fol. 1704] gold mines, the prospective use of materials by gold mines that was curtailed by Limitation Order L-208. We are perfectly aware of the fact that unquestionably there would have been some diminution of this usage by virtue of priority restrictions between 1939 and 1942. There is nothing available to us that allows us to measure that diminution at the present time.

The Commissioner: Is that all?

Mr. Barnes: That is all.

Mr. Rigney: Could I ask if you expect to have the witness project, on the basis of this exhibit, estimates of uses of materials by gold mines subsequent to October 8, 1942? I mean, is this going to be used as a base upon which you expect to elicit testimony from him as to what his estimates might have been of the gold mine uses of critical materials?

Mr. Barnes: No.

Mr. Rigney: Could I have just a moment, your Honor?

(Plaintiffs' counsel conferring.)

Mr. Rigney: If I may just address three or four brief questions to the witness upon which I expect to predicate an objection, your Honor, I would like to.

The Commissioner: Very well.

By Mr. Rigney:

Q. Mr. Nathan, the figures which are contained in this census report for 1939, that you have been referring to, those are gathered, are they not, on a self-reporting basis?

[fol. 1705] A. The Census sends out specific forms and sometimes follows up with personal visits when there are questions about the forms.

Q. But, for the most part, would you agree that these data contained in the 1939 Census are data which have been gathered on a self-reporting basis for the most part?

A. Yes. They have to report, but they report it themselves. It is compulsory.

Q. You will agree, sir, will you not, that there was a substantial decline in gold production in the period from 1940 to 1942?

A. In 1941 to 1942, yes, sir. We have an exhibit which will be entered shortly on actual production by years. My indication is that '41 was higher than '39.

Q. I was asking about 1940 as compared to 1942. Showing you Appendix G to Plaintiffs' Exhibit No. 1, that reflects, does it not, in 1940 for the United States a production of 5,919,928 fine ounces?

A. Yes.

Q. And in 1942 in the United States 3,457,110 fine ounces?

A. Yes, sir.

Q. So that would you agree that there was that substantial reduction of approximately 27%, I believe, in that two-year period from 1940 to 1942?

A. In those two years, yes, sir.

[fol. 1706] Q. Wouldn't you further agree that the only pertinent use figures with respect to materials used by gold mines by which you could measure savings as a result of Order L-208 would be those for the month immediately preceding October, 1942?

A. I wonder if I could have that question again.

Mr. Rigney: Would you read it back, please?

(The pending question was read by the reporter.)

The Witness: If one wanted to get the precise decline in materials used from the month preceding L-208 to a month some time after all the mines were closed, I would say definitely, yes, that the comparison for, say, September or October or November before the sixty days were up as compared with a year later would be the specific figure of the decline that took place. But we must remember that for some months already prior to L-208 there were certain problems in the air which precipitated a partial decline, and I don't know specifically how much effort the mines made to try to continue their flow of supplies at previous rates, whether they were or were not successful in an anticipation of the order which was being discussed at the time, and other matters. But I would think that there would be other considerations than just the one month prior to the closing, which would be significant if the data for that one month were not available.

Q. But you would say that by all odds the most significant figures and comparison which could be made would be for

[fol. 1707] that period immediately preceding the issuance of L-208 as against the months thereafter?

A. Yes. It would be highly significant to have that specific figure of the uses immediately preceding L-208, and the period after they were closed, and it would also be significant to have some months to see what was going on.

Q. Now, directing your attention to this Table I, which is Defendant's Exhibit No. 53 for identification, where you see the number of lode mines as 841——

A. Yes, sir.

Q. —you would not be able to say how many of those were subject to closure, and were actually closed under L-208, would you?

A. No, sir.

Q. Nor would you be able to say how many of them were exempt under the provision in L 208 that mines producing less than 1200 tons annually were exempt from the order?

A. No. The specific application of the order to these mines is not identifiable.

Q. There has been testimony here earlier in this case from a Government witness, Mr. Nathan, in which he stated that at the October 1, 1942 meeting, at which this matter of this order was under discussion, he then estimated that the number of mines which would be affected by the order would be approximately 20. That is at page 1479 of the transcript.

[fol. 1708] Would the state of your knowledge permit you to say whether or not that was a reasonably accurate statement?

A. I would have no basis for judging that figure, but it would sound exceedingly low.

Mr. Barnes: May I point out that counsel has not reflected the testimony of Mr. Lipkowitz. Mr. Lipkowitz was asked as to the number of these Form 732s that he had, and he said, "The ones I had at the meeting were of mines which I considered would be affected by this order." And you then asked the question, "How many were they?" And he said, "I would say probably no more than 20."

That referred to the number of Form 732s that he had, not the number of mines to be affected by the order. I think

that is very clear from the testimony. I resent action of that type on the part of counsel.

Mr. Rigney: If you look at page 1479 the witness testified with respect to these forms, these 732s, and he was asked by the Commissioner: "You have testified that you had a number of them at this meeting."—That is the form—and he answered, "Yes, but the ones I had at the meeting were of mines which I considered would be affected by this order."

"How many were they?"

"I would say probably no more than 20."

So that would seem to dispose of the point.

The Commissioner: I do not think so at all.

[fol. 1709] Mr. Rigney: I would gather from the testimony, Your Honor, of the witness Lipkowitz that what he is saying in the portion that I just referred to was that he went to this meeting with the Forms 732 of the mines which he anticipated would be closed down by the order.

The Commissioner: But I think you are stretching it quite a bit. You conclude that he had a form for each of the mines that might have been affected.

Mr. Barnes: He was referring to the fact that he had 20 forms with many of the mines which he felt would be affected by the order.

Mr. Rigney: I would interpret the testimony to mean that he took to the meeting these Forms 732 for such mines as he anticipated would be closed down by the order.

The Commissioner: How can you conclude in your interpretation that he had a form for every such mine?

Mr. Rigney: Because that is what he said.

The Commissioner: I do not see it at all.

Mr. Rigney: I think it is arguable and we will not pursue it.

The Commissioner: Yes.

Mr. Rigney: If Your Honor please, I do object to the admissibility of Defendant's Exhibit 53 on the ground that it is so remote not only in point of time but because of the changed conditions that testimony indicates existed between [fol. 1710] the year 1939 and conditions in the autumn of 1942 and thereafter that it furnishes no reliable basis upon which conclusions could be drawn.

The Commissioner: Are you finished?

Mr. Rigney: And it includes figures of mines not affected by the order, gold and silver mines not affected by the order.

The Commissioner: It may be received, and I want to state in admitting this document that I admitted over the strenuous objection of Government counsel testimony by plaintiffs' witnesses with respect to the time during which plaintiffs' mines could have operated with the materials that they had in their inventories.

Mr. Rigney: Very well, Your Honor. I think that we have indicated sufficiently.

The Commissioner: Yes.

(Said document, Table I, Comparative Statistics for Metal Mining in the United States by type of metal ore, 1933, marked "Defendant's Exhibit No. 53", admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Mr. Nathan, plaintiffs' counsel read to you from Special Study No. 9 at page 71 certain figures which compared gold production in 1941 with that in 1942. Would you look at that again and tell me whether the two figures that were read to you, the figure of 5,856,000 ounces in 1941 is com- [fol. 1711] parable with the figure of 2,457,000 ounces in 1942?

Mr. Rigney: You said page 71. Did you mean 75?

The Witness: The reference was page 75.

Mr. Rigney: I was reading from 75, not 71.

Mr. Barnes: All right.

By Mr. Barnes:

Q. Referring back then to the table which appears on page 71, can you tell me whether it indicates that those figures are comparable or not comparable figures?

A. The two figures, for '40 and '42 on page 75 are comparable. On page 71 the same figures are broken down by sources and indicate that the definition United States included Alaska, the Philippine Islands and Puerto Rico, which are broken down in the previous table.

Q. In other words, is it correct that by looking at page

71 we see that the 1940 figure includes something in excess of 1 million ounces produced in the Philippine Islands and Puerto Rico that is not included in the 1942 figure?

A. Yes. The Philippine Islands and Puerto Rico are specifically excluded in 1942, and it could be easily recomputed, that is, the comparable figures between 1940 and 1942, by excluding the Philippine Islands and Puerto Rico. If just the Philippine Islands and Puerto Rico were excluded for both periods the result would be roughly 4,860,000 ounces for 1940 and 3,457,000 ounces for 1942.

[fol. 1712] Q. Now, referring particularly to the column headed "Supplies and Materials" on Defendant's Exhibit 53, Mr. Nathan, has your research indicated the types of materials that were included in that total?

A. Some indication has arisen out of our research, yes, although not a complete and total breakdown of these figures, yes, sir.

Q. And what information have you been able to develop in that connection?

A. We found evidence of testimony before a Senate Subcommittee by Dr. Wilbur Nelson, Administrator of the Mining Branch, in May of 1942.

Q. I am handing you a document entitled "Hearings Before a Sub-committee of the Special Committee on the Investigation of Silver, United States Senate, Pursuant to Senate Resolution 187", covering the period May 5, 6, 8 and 28 of 1942. Is the testimony to which you refer in there?

A. The testimony is here. There is a paragraph, Your Honor, I would like to read.

Mr. Rigney: I don't know, Your Honor, about reading from these books of this sort. It may be wholly inadmissible, what he proposes to read. It is difficult, and I do not want to attempt to restrict him unduly in his testimony here, and that is not my purpose, and I do not think I have tried to do so, but I do not know whether this is admissible or not, [fol. 1713] and it would be too late to say so after he has read from something.

The Commissioner: From the testimony so far, it sounds to me as though this is the same sort of thing as to which Government counsel has objected to in offers by the plain-

tiff. Did I understand that this is a hearing before one of the congressional committees?

The Witness: A Senate committee, sir.

Mr. Barnes: May I state, Your Honor, I will withdraw that question in any event. The testimony to which Mr. Nathan refers was read during Dr. Nelson's cross-examination and is already in the record.

By Mr. Barnes:

Q. May I ask you, Mr. Nathan, whether the material to which you refer appears on page 531, starting with the words "for instance, here are machine bolts"—and so forth?

A. Yes, sir. That is the information to which I refer as evidence we have found in our searches as to the indication of some types of materials and supplies included in this figure in our Table I.

By Mr. Rigney:

Q. Do you know what period of time Mr. Nelson was referring to in the testimony that you speak of?

A. He is referring to a period primarily when some of the serial numbers under P-56 were taken away from some of the gold mines, which would include principally the latter [fol. 1714] part of 1941 and the early part of 1942.

Q. He was referring to a period at least prior to March of 1942?

A. The testimony wasn't until May. Yes, I would assume that some little time had elapsed in the early part of '42, the first three or four months.

By Mr. Barnes:

Q. Mr. Nathan, how do the expenditures of gold mines for materials and supplies compare with the similar expenditures by other non-ferrous mines?

Mr. Rigney: That is objectionable.

The Commissioner: Sustained.

By Mr. Barnes:

Q. You have set forth on Defendant's Exhibit 53 figures for metalic mines, a total figure. What was the source of those figures that you made?

A. The source?

Q. Yes.

A. That figure was taken from this official document of the Census Bureau, Mineral Industries, Volume I.

Q. Is the same thing true with respect to the figures appearing opposite the heading "Iron" and opposite "Major Non-Ferrous Metalic Ores and other Non-Ferrous Metalic Ores"?

A. Yes. These figures are official figures from the Census of Mines for iron ore mines and all other mineral mines. [fol. 1715] metal mineral mines in the United States.

The Commissioner: You have gotten all of your figures, according to your previous testimony, from that book?

The Witness: Yes.

The Commissioner: We should not have any more questions relating to that.

Mr. Barnes: Would you mark this Defendant's Exhibit No. 54 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 54.)

By Mr. Barnes:

Q. Mr. Nathan, showing you Defendant's Exhibit 54 for identification, which is marked at the top "Table 2", can you tell me what the source of the information is contained in that table?

A. Table 2 is derived from the Census of Manufacturers in 1939, which is another census of the United States Bureau of the Census, the Department of Commerce.

Q. And have these figures been taken directly from that publication without any interpolation or change?

A. Taken from that publication and from one table in that publication.

Q. What is Table 3 appearing on page 429, is that correct?

A. That is right, sir.

[fol. 1716] OFFERS IN EVIDENCE

Mr. Barnes: I would like to offer in evidence at this time Defendant's Exhibit 54 for identification.

Mr. Rigney: I will object on the same grounds heretofore stated, Your Honor.

The Commissioner: It may be received.

(Said document, Table 2, Value of Mining Machinery and Equipment Produced in 1939, marked "Defendant's Exhibit No. 54", admitted in evidence and made a part of this record.)

By Mr. Barnes:

Q. Mr. Nathan, can you express an opinion as to the importance of gold mines in 1939 as customers for or at least outlets for the producers of mining machinery?

Mr. Rigney: I object to that as to form. As to the importance, I don't know in what respect he is referring, and the competence of the witness also.

The Commissioner: Sustained.

Mr. Barnes: On which grounds, Your Honor?

The Commissioner: I think it could be sustained on either ground.

Mr. Barnes: I mean, if you were sustaining it on form only I would have tried to rephrase the question. But you think you could sustain it on the other ground?

The Commissioner: Yes.

By Mr. Barnes:

Q. Mr. Nathan, according to Defendant's Exhibit 53, the [fol. 1717] gold mines purchased in 1939 $6,391,000 worth of new machinery. According to Defendant's Exhibit No. 54, the total value of mining machinery and equipment produced in 1939 was $33,558,000. Can you tell us what the mathematical relationship between those two figures is?

Mr. Rigney: If Your Honor please, I object to that. The exhibits are in evidence and they speak for themselves.

The Commissioner: Which is the first figure you used? I have been looking for that.

Mr. Barnes: $6,391,000, Your Honor.

The Commissioner: All right, it is overruled.

The Witness: Approximately 20%.

By Mr. Barnes:

Q. Do you know, on the basis of your examination of the Census of Manufacturers, whether or not the total figure

of $33 million shown there includes only machines, or includes something more than complete new machines?

The Commissioner: That is clear from the exhibit?

The Witness: It includes machines and parts as well.

By Mr. Barnes:

Q. On the basis of your examination of the 1939 Mineral Industries Census, can you tell us whether the information that appears under the heading of Cost of Machinery is intended to reflect only the cost of complete machines or of repair parts for machines?

[fol. 1718] A. According to the definitions, it is only supposed to be complete machines. The repair parts are supposed to be in supplies.

Mr. Barnes: Would you mark this Defendant's Exhibit 55 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 55.)

By Mr. Barnes:

Q. Mr. Nathan, showing you this document marked Defendant's Exhibit 55 for identification, is that a table that was prepared by you or under your supervision?

A. It was prepared under my supervision and checked by me.

Q. And what is the source of the information set forth there?

A. An official Government publication entitled "Mineral Industries, 1939, Volume I," of the United States Bureau of the Census.

Mr. Barnes: Your Honor, I would like to offer in evidence at this time Defendant's Exhibit 55 for identification.

Mr. Rigney: I object on the same grounds previously stated as to the other exhibits.

The Commissioner: All right, it may be received.

(Said document, Table 3, Fuels Consumed and Electric Energy Consumed by Major Non-Ferrous Metal-Ore Industries in the United States, 1939, marked "Defendant's Exhibit No. 55", admitted in evidence and made a part of this record.)

[fol. 1719] Mr. Barnes: Would you mark this as Defendant's Exhibit No. 56, please?

(Said document was marked for identification as Defendant's Exhibit No. 56.)

By Mr. Barnes:

Q. Mr. Nathan, I show you the document which has been marked Defendant's Exhibit 56 for identification. Was that prepared by you or under your supervision?

A. It was.

Q. And what was the source of that information?

A. An official publication of the United States Bureau of Mines, Department of the Interior, entitled "Minerals Yearbook" and it comes from the Volumes 1942, 1943, and 1944 Yearbooks.

Q. Referring to the information which appears here as to the number of mines, I see some difference between the figures here and those that are shown in Defendant's Exhibit 53. Can you furnish any explanation as to the reason for that difference other than the difference in year?

A. The Bureau of Mines' Mineral Yearbook figures include all mines, whereas the Census includes those mines whose values of product are under $2,500 per year. That is the major difference. It is a difference in coverage.

Q. Do you know whether or not there is any difference in definition from the ones you described as being used by [fol. 1720] the Census?

A. Between these two, other than the difference in value?

Q. Yes, that is right.

A. I believe that is the only real difference.

Mr. Barnes: Your Honor, I offer Defendant's Exhibit 56 in evidence.

By Mr. Rigney:

Q. Mr. Nathan, as to this Table I here, which is Defendant's Exhibit 53, where you refer to the number of lode mines as 841, does this include Alaskan mines, mines in Alaska, or just mines in the United States?

A. Just the United States.

Mr. Rigney: I will object to this, your Honor, if it is going to be used as a basis of drawing comparisons, because of the

dissimiliarity between the information in the two exhibits. The last exhibit, No. 56 for identification, includes Alaskan mines, and I would assume that the witness could not segregate them or say how many are included, so that it would not constitute a comparable standard or basis for drawing conclusions.

The Commissioner: I would imagine that this exhibit would be for another purpose. What do you have to say?

Mr. Barnes: I would like to have Mr. Rigney's statement read back to me. I missed the first part of it.

[fol. 1721] (The record was read by the reporter.)

The Commissioner: I feel that a further explanation should follow from what you said. On the basis of what counsel for the defendant said in relation to Defendant's Exhibit 53, I understand that this is a line of testimony and exhibits to follow with which to show what information was before the War Production Board at the time they were considering the issuance of the order. Do you have anything to say?

Mr. Barnes: This one goes somewhat beyond that, because it includes information as to the years 1943 and 1944, which was obviously not before the War Production Board.

The Commissioner: Oh, yes.

Mr. Barnes: But it is designed to show the trend, if you want, or the effect of the order, the extent to which mines were in fact closed as a result of the operation of L-208.

Mr. Rigney: I would not think it could be received for proof of the facts to which Mr. Barnes has just referred because it is hearsay, as to the number of mines that were closed, and so forth.

Mr. Barnes: Your Honor, I am perfectly willing to concede that there is no evidence that indicates that each of the mines that represent the decrease from 1942 to 1943 were closed by Order L-208. There is an element of inference there. It does show, however, the extent to which mines that [fol. 1722] had been producing gold in 1942 ceased producing gold in 1943, and it does afford some measure that may be used to evaluate the effect of the order.

The Commissioner: It boils down to the fact that you object to it as hearsay at this point?

Mr. Rigney: And to the unreliability of the information

obtained here, your Honor, because you cannot tell from the exhibit whether a particular mine or, of the total number of mines, how many of them were closed as a result of Order L-208 or for other reasons. That is a great difficulty that we are up against.

My attention is called, your Honor, to the fact that in Plaintiffs' Exhibit No. 1, Appendix C, the chart there in evidence indicates that gold mines were closing down very rapidly throughout the first half of 1942 prior to the issuance of L-208. There is a graph which illustrates very clearly the sharp decline in number of mines that were operating prior to the issuance of the order.

Mr. Barnes: Your Honor, I do not know whether you can see from your seat the heading of the table. The table relates to employment, it does not indicate that any mine at all closed down, not a single mine closed down. Mr. Rigney may be entitled to draw an inference from that exhibit, but I think similarly we are entitled to draw an inference from this exhibit.

[fol. 1723] The Commissioner: I am going to overrule the objection.

(Said document, Table 4, Number of Gold Mines in the United States and Alaska by class of ore, 1941-1943, marked "Defendant's Exhibit No. 56", admitted in evidence and made a part of this record.)

Mr. Barnes: Will you mark this Defendant's Exhibit 57 for identification?

(Said document was marked for identification as Defendant's Exhibit No. 57.)

By Mr. Barnes:

Q. Mr. Nathan, showing you the document which has been marked Defendant's Exhibit No. 57 for identification, may I ask you whether that was prepared by you or under your supervision?

A. Yes, sir.

Q. And what was the source of that information?

A. That came from the Minerals Yearbook, the same case as before, the Minerals Yearbook for 1944.

Q. Can you tell me whether or not that covers only pro-

duction in the continental United States and the Territory of Alaska for the years shown?

A. Yes, sir, it does. It excludes the Philippine Islands and Puerto Rico.

Mr. Barnes: Your Honor, I offer Defendant's Exhibit 57 in evidence.

[fol. 1724] Mr. Rigney: No objection.

The Commissioner: It is admitted.

(Said document, Table 6, Gold Production, United States and Alaska, 1939-1943, marked "Defendant's Exhibit No. 57", admitted in evidence and made a part of this record.)

Mr. Barnes: Your Honor, I am going to another subject, if you want to recess now.

The Commissioner: We will recess for five minutes.

(Thereupon, a five-minute recess was taken in the hearing.)

[fol. 1725] By Mr. Barnes:

Q. Mr. Nathan, was there any official data available as to the trend of employment in gold mines during the period subsequent to 1939?

Mr. Rigney: When do you say, now?

Mr. Barnes: I say subsequent to 1939 and prior to L-208.

Mr. Rigney: You mean available at the time he made his search, his study?

Mr. Barnes: Yes, that is right.

The Witness: Yes. As a matter of fact, in Special Study No. 9, which is already an exhibit, there is Appendix B, on page 69, a table which came from the United States Bureau of Labor Statistics indicating estimated employment in gold and silver mines, not the gold mines separately, but the gold and silver mines, by months, from January 1939 through February of 1944.

By Mr. Barnes:

Q. What does that show with respect to the trend of employment in the years 1939, '40, and '41?

A. It shows that employment in 1941 was about 5 per cent higher than it was in 1939 in the gold and silver mines combined.

Q. On the basis of your experience, is there any relationship between employment figures and the use by an industry of materials and supplies?

[fol. 1726] Mr. Rigney: I think that is objectionable, Your Honor.

The Commissioner: Overruled.

The Witness: Yes, I think on the basis of my own studies and, as a matter of fact, part of our war production period analysis was predicated on that. As I testified yesterday, when we projected in the War Production Board Planning Committee, and prior to that in the Bureau of Research and Statistics, projected estimated requirements of basic materials, such as steel, copper, and aluminum, under a total mobilization period, our projection was based fundamentally on employment figures, what the total manpower resources of the United States were, what those total manpower resources would be under conditions of total employment or full employment, what that full employment would permit in terms of levels of gross production in the United States, and then in turn translated that gross production into material requirements. As the period unfolded, it was clear that employment and materials consumption or materials usage is very correlated, positively.

By Mr. Barnes:

Q. Mr. Nathan, referring to Defendant's Exhibit 57, which has been marked Table 6, what was the trend of production in the gold mines during the years 1939, 1940, and 1941?

Mr. Rigney: The exhibit speaks for itself, I submit, Your Honor.

The Commissioner: Do you intend this as a preliminary [fol. 1727] question?

Mr. Barnes: It is a preliminary question, Your Honor.

The Commissioner: Overruled.

The Witness: Total gold production in the United States in 1940 and 1941 was slightly higher than it was in 1939.

By Mr. Barnes:

Q. On the basis of your experience, can you express an opinion as to whether or not there is a relationship between

the production by an industry and the use of materials and supplies by the industry?

A. On the basis of my experience, both in analyses of the over-all economy and company analyses which have been made by me and my firm in the past, I would say, without hesitation that there is a positive correlation and a close correlation between production in an industry and the use of materials and supplies by that industry.

Q. Mr. Nathan, have you made any attempt to check any available figures as to individual gold mining companies, as to their expenditures during the years in question for maintenance and repair materials?

A. Yes.

Mr. Rigney: Which years, now?

Mr. Barnes: 1939, 1940, 1941, and 1942.

The Witness: Yes, I have.

[fol. 1728] By Mr. Barnes:

Q. For which company or companies have you found information available?

A. For the Homestake Mining Company.

Q. Where did you find that information?

A. The Securities and Exchange Commission.

Q. In what form?

A. Documents submitted by the company to the Securities and Exchange Commission annually in its financial statements, which are a required submission by the Securities and Exchange Commission.

Q. What do those documents show as to the expenditures by Homestake during the years 1939, 1940, and 1941, for maintenance and repair expenditures?

A. The figures taken directly from the submitted reports by the company itself show that operating expenditures and maintenance and repair expenditures for the years 1939, 1940, 1941, and 1942, are quite stable, and in 1941 the company spent very nearly the same, only fractionally different amounts than it spent in 1939 for materials for maintenance and repairs.

Q. Do those same reports show the figures of Homestake for its operating expenses for mining, hoisting and primary crushers?

A. Those figures show that in 1941 the Homestake Mining Company spent not quite exactly but almost the same in 1941 [fol. 1729] as it did in 1939 for the operating expenses of its mining, hoisting, and primary crushing activities.

Q. What do those figures show as to the net sales of Homestake of bullion in those same years?

A. In 1940 and 1941, the proceeds from the sale of bullion by Homestake Mining was again fractionally different from what it was in 1939. It is very nearly a flat figure, insignificant differences between 1939, 1940, and 1941, in the proceeds from the sale of bullion.

Mr. Barnes: Your Honor, I would like specifically to call your attention at this time to Plaintiffs' Exhibit 10, so-called Document 12D, submitted to the November 18, 1941, meeting of SPAB, in which the statement is made that a great deal of new and relatively expensive equipment has been put into service in large placer mines, reaching a probable average total of $7,000,000 in the last two or three years. I call your attention to the fact that the figure shown in Defendant's Exhibit 53 for placer mine purchase of new machinery in 1939 is $3,348,000, so that a two or three-year projection of that would indicate a figure of approximately the magnitude used in Plaintiffs' Exhibit 10.

I would also like to call your attention to Defendant's Exhibit 43, a memorandum of September 9, 1942, from Mr. R. J. Lund to Mr. A. I. Henderson; Subject: Gold Mining Order, in which, under the heading "Critical Materials [fol. 1730] Saved," he makes this statement:

> "Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available, but the general order of magnitude of such consumption is indicated by the fact that in 1939, gold mines in the United States (excluding Alaska) spent about $17,000,000 on such supplies and materials, $2,000,000 for fuel, and about $5,000,000 for purchased electric energy."

I call your attention to the fact that those are very similar to the figures shown in Defendant's Exhibit 53 taken from the 1939 Census. This establishes that those figures were

then known and considered by the War Production Board. I realize that that is argumentative to a certain extent.

Mr. Rigney: I take exception to the last statement as a conclusion of counsel.

The Commissioner: Very well.

Mr. Barnes: That is all.

Cross-examination.

By Mr. Rigney:

Q. Mr. Nathan, this General Industries Book for 1939 to which you have been referring in your direct-examination —when was that published, do you know?

A. I am not sure. I think that the actual document is [fol. 1731] dated, letter of transmittal June 22, 1943. That is the date of transmittal from the Director of the Census Bureau to the Secretary of Commerce. I would assume it was in print shortly thereafter.

Q. Shortly after June 22, 1943?

A. That is right, sir.

Q. Now, sir, would you agree with me that neither you nor any other responsible official of the Government in the summer of 1942 could have predicted with any reasonable degree of certainty how long World War II was going to last?

A. Not with certainty, no.

Q. Not even with reasonable certainty, could you?

A. Well, if I may hazard an opinion, even in the summer of 1942 we were still building a lot of new facilities which wouldn't be in operation for at least another 12 to 18 months.

Q. There were many views expressed as of 1942 that the war conceivably might last for ten years?

A. I would say that the estimates were on the longer side rather than the shorter side.

Q. You were not able at that time, were you, to predict what the unfavorable balance of trade requiring settlement in gold would be during that period of time, those years following 1942, for however long the war lasted?

A. No. I am sure the longer the war lasted, the more we would try to import critical materials. There is no [fol. 1732] question of that.

Q. And our unfavorable balance of trade would continue to increase?

A. To the extent that materials were available to the United States.

Q. Yesterday you testified on your direct-examination with regard to the export of gold in 1943 and 1944, and you testified that in one of those years, it reached a total of between 800 and 900 million dollars, or about four per cent of our total reserve.

A. That is right. I was just going to get my Federal Reserve Bulletin which has the specific figures.

That is right. I can give you that specific figure in one year. In 1944, the net gold export was $845 million.

Q. That is in 1944?

A. That is in 1944.

Q. Could you give us the cumulative total for the period of World War II, in round figures, as to what our total exports of gold were?

A. Actually, the net for the war period, which was a net import, not a net export—1941—'41 should not be included. I beg your pardon. In 1942, we had a net import of 315.7 million dollars worth; in 1943, we had a net import of 68.9 million dollars worth; in 1944, we had a net export of 845.4 million dollars worth; and in 1945, we had a net [fol. 1733] export of 106.3 million dollars worth. The net of those four years would be about 570 million dollars net export over those four years, approximately; 567.1 million for the four-year net export.

Q. Isn't it a fact, Mr. Nathan, that the War Production Board had power to requisition property needed for war purposes, under the war statutes?

A. That is right, sir.

Q. And also had power to allocate critical materials and facilities?

A. Yes, sir.

Q. So, would you agree with me that if there were drills, hoists, generators, hoses, compressors, and like articles, needed for the war effort, the War Production Board had power throughout its existence to requisition them if it found it needed them?

A. The War Production Board came into existence in

January 1942. I believe the power to requisition was already in being in January 1942, yes.

Mr. Barnes: The Act was the Act of October 16, 1941, 55 Stat. 742.

By Mr. Rigney:

Q. So the War Production Board could have gone to any or all of the plaintiffs here in this case during the period of the war and requisitioned such things if it saw fit, [fol. 1734] couldn't it?

A. It had the authority to.

Q. As I understand your direct testimony and as I understand the fact to be, in exercising its powers of allocation of critical defense materials and facilities, the means by which the War Production Board acted was through its "P" orders, "L" orders, "M" orders, and then subsequently PRP and CMP, is that right?

A. That is correct.

Q. This was an integrated plan for thorough control?

A. CMP was the most integrated plan, yes. Each successive stage of control become a more integrated, more a total program and a tighter control over the flow of materials.

Q. Mr. Nathan, let me ask you, referring you to the entire period of these "L" and "M" orders, PRP, and later CMP, wasn't it the policy of the War Production Board to allow industry, regardless of its relative essentiality to the war effort, to obtain maintenance, repair and operating supplies? Wasn't that the general policy of the Board?

A. It was a general policy in the early stages; and later on, as you remember, under some of these orders when people, for instance, weren't able to get serial numbers, then they had to come in directly for aid. But generally the policy was to permit those industries which were allowed to operate, to get their essential maintenance and repair [fol. 1735] supplies. That was the general attitude.

Q. To allow industry generally to get maintenance, repair, and operating supplies?

A. That is right.

Q. That was without regard to their relative essentiality to the war effort?

A. Yes.

Q. Is it a fair statement to say that maintenance, repair and operating supplies never represented as much as 3 per cent of the total steel or copper production?

A. I frankly do not recall the figures, but in the total aggregate economy, the MRO, Maintenance, Repair and Operating supplies, would, I would say, never account for a major portion of the total requirements.

On the other hand, in the aggregate they certainly totaled much more than the amounts used by a great many industries which were closed down.

Q. Would I be pretty close to the fact if I suggest to you that this 3 per cent figure, as far as steel and copper are concerned, was a close approximation to the amount required for MRO during the period of the war?

A. I think that probably would not be unreasonable.

Q. And aluminum would be considerably less than that, wouldn't it?

A. I would think so, because aluminum generally had not [fol. 1736] been used so widely in the earlier periods that the maintenance and repair would be so large.

Q. You referred yesterday to the curtailment of automobile production. Let me ask you, was the purpose of the orders curtailing passenger automobile production, in so far as the saving of critical materials was concerned, to reduce or eliminate their use in the end product?

A. Your question is whether the purpose of the elimination of passenger cars was to save the raw materials used in their end product?

Q. Would you like to have it read back?

A. I would appreciate it.

(Thereupon, the question was read by the reporter.)

The Witness: That was certainly one of the purposes.

By Mr. Rigney:

Q. That was the primary purpose, wasn't it?

A. I think that was the primary purpose. The other major purpose was the conversion of the automobile industry to war production, to expedite and facilitate the conversion of that industry to war production.

Q. The same thing was true with respect to the refriger-

ators, isn't that right, as far as saving the critical materials that went into the end product?

A. I think the principal consideration was the saving of material. It was a very important consideration.

[fol. 1737] Q. That was also true with respect to domestic laundry machinery, wasn't it, sir?

A. Yes. I think in each one of these there was a complex of factors, in some of which I would suspect—not "suspect," I beg your pardon—in some of which I am certain the materials were the most important, and in others it was the facilities, and perhaps in others it was the manpower. There was a whole series of considerations, hardly ever an isolated one in these discussions, but material was the most important generally.

Q. With respect to the three that I have asked you about, would you agree that materials was the overriding consideration in those?

A. I would agree that if was the predominant consideration.

Q. Let me ask you if you were of the opinion, Mr. Nathan, in October and November 1942, that the release of labor from the so-called non-essential industries would be ineffective because adequate mechanisms did not then exist to channel the released labor into essential industries?

A. In the fall of 1942——

Mr. Rigney: If I may, Your Honor, I would like to have a "yes" or "no" to that, first, and then——

The Witness: Could I have that question reread, please?

(Thereupon, the question was read by the reporter.)

[fol. 1738] The Witness: No.

By Mr. Rigney:

Q. You would say "no," sir?

A. No.

Q. Let me ask you if you recall a memorandum of November 7, 1942, from you to Mr. Donald M. Nelson, on the subject of manpower? Do you recall that?

A. I remember——

Q. A memorandum of several pages.

A. I don't recall specific memorandums.

Q. Let me read to you from page 7 under the subject, "Transfer."

Mr. Barnes: I object to counsel reading from a document not in evidence.

Mr. Rigney: This is cross-examination, Your Honor. I have asked him the question, and he said that that was not his opinion, and I now propose to read from this document——

Mr. Barnes: It hasn't been established satisfactorily yet that the witness wrote the document.

Mr. Rigney: I will show him the document and ask him if he wrote it.

(Witness examining the document.)

The Witness: Yes, this appears to be a formal document of the Planning Committee which I sent to Mr. Nelson.

[fol. 1739] By Mr. Rigney:

Q. Do you recall that in that document you wrote:

"Unless the release of labor in non-essential industry is backed by an adequate organization to secure its transfer, training, and placement in war industry, the release will be in some measure ineffectual and demoralizing. Adequate mechanisms do not now exist. Development of such mechanisms is the major problem facing the War Manpower Commission and the Employment Service."

May I ask you if that was your opinion in November of 1942?

A. Apparently in 1942 we felt that the mechanisms for the effective transfer were not adequate.

Mr. Rigney: If we may have just a moment, Your Honor. I am not going to be very much longer. I would like to have just one moment.

The Commissioner: All right.

(Plaintiffs' counsel conferring.)

By Mr. Rigney:

Q. Directing your attention, Mr. Nathan, to Defendant's Exhibit 53, which is your Table No. 1, does the figure under

"Supplies and Materials," $17,369,000, include Maintenance, Repair, and Operating Supplies?

A. Yes.

[fol. 1740] Q. And the figure of 841 lode gold mines under the first column, "Number of Mines"—does that include mines which were substantial producers of other metals besides gold?

A. I believe before, sir, that I indicated how much the production of copper, silver, lead, and zinc was in this whole lode mine group. As I remember, it was about six million pounds of copper, about 20 million pounds of lead. That is included therein, yes.

Q. But the state of the figures would not permit you to say how many of the mines produced any substantial portion of the other metals?

A. No, sir. I can just say that those mines produced about six million pounds of copper, around 21 million pounds of lead, and a little over three million pounds of zinc. I can't tell how many of the mines produced those, no, sir.

Q. So it would not be possible for anyone to determine from these figures how many of those 841 mines were subject to closure under L-208?

A. No sir.

Mr. Rigney: That is all.

Redirect examination.

By Mr. Barnes:

Q. Just a couple of questions, Mr. Nathan.

You referred to the fact that this 1939 Census of Mineral [fol. 1741] Industries bore a letter of transmittal dated the middle of 1943.

A. June 22, I believe.

Q. On the basis of your experience, do you know whether or not that information is compiled at a date earlier than it is transmitted?

A. In my work, especially in the national income field, I have received Census data as long as a year or more before it is actually published. The data are tabulated in succession. Some of the summary data are available and some of the detail data are available. They put out preliminary reports, and some of the summary tables are available intra-

Government. So I am sure, without question, that these data were available, most of them, substantially before the actual publication date.

Q. With respect to the issuance of orders by the War Production Board, you referred to the fact that there was a complex of factors that was considered in connection with various orders, is that correct?

A. Yes, a number of considerations.

Q. What did those include?

Mr. Rigney: Your Honor, my recollection of the witness' testimony is that in his task as Chairman of the Planning Committee, he did not participate in the actual drafting or consideration of specific orders. His task was on the broader [fol. 1742] plane of planning, rather than the drafting or even the consideration within a particular division of the Board of specific orders. I object.

The Commissioner: Overruled.

By Mr. Barnes:

Q. Do you recall the question?

A. Yes. The considerations included a number in which materials savings were certainly highly important, if not the most important single factor. The conversion of that industry's equipment for use for war purposes or essential war-supporting purposes was very important. The availability of manpower was important. The availability of specific equipment therein was important. The question of location was a factor. A whole complex of economic and production considerations entered into the decision on either the degree to which an industry was curtailed or whether an industry was closed down completely.

Q. On the basis of your study of this matter, did those factors vary in their importance from order to order or industry to industry?

A. They certainly varied from industry to industry, because some industries were high material users relative, say, to the investment in facilities or the convertibility of the facilities to war production, and others were low material users. The factors varied considerably from one [fol. 1743] industry to another.

Q. You referred to the concept of facilities here. Was there ever a distinction made between the use of an entire plant with the installed facilities, and the use of some of the machinery in the plant severed from the plant and moved elsewhere?

A. Those were discussed in policy terms. I recall, as head of the Committee on the Flow of Materials, we talked about various controls, that is, techniques of distribution and the orders that supported those distribution techniques. But while there was quite a bit of discussion in that period of the thought of requisitioning specific items of materials, not very much was ever done in that matter, and mostly when there was conversion of facilities from civilian production to war production, the conversion was of a total facility rather than requisitioning a specific piece of equipment.

Q. Mr. Nathan, referring to this memorandum that you wrote on behalf of the Planning Committee in November of 1942, what was your view as to what happened to manpower that was released from a non-essential industry when it was closed down? Did it disappear?

A. No, it obviously didn't disappear, because total employment stayed very high in that period. Unemployment was almost nonexistent except for purely seasonal or geographic differences. So obviously people were reemployed. [fol. 1744] The rise in production of essential war industries and war-supporting industries, and the decline in the production of the non-essential, certainly indicated a general movement toward the essential industries and toward the war industries.

The problem was one of a deficiency of a mechanism for the precise movement of manpower, taking the man who was the most able into a job in which his talents would be 100 per cent utilized rather than 90 or 80 per cent. There wasn't a tight, close mechanism for moving men either geographically or occupationally or industrially where the talents would be most effectively utilized.

Q. Do you recall whether or not you or the Planning Committee at the time of this memorandum took any definite position on the manpower situation?

A. I don't recall whether we took any definite position on it. I know we were critical of the War Manpower Commis-

sion's failure to do an effective job of channeling the flow of manpower.

Q. What happened to a man who was released from a non-essential industry when it was closed down by a War Production Board order or otherwise?

Mr. Rigney: If Your Honor please, I don't see how anybody could answer that question. It is speculative.

The Commissioner: Sustained.

[fol. 1745] By Mr. Barnes:

Q. What employment opportunities were available to employees who were released from non-essential industries in 1942?

Mr. Rigney: I object again, Your Honor, on the grounds that the scope is so broad that we would be here all afternoon with Mr. Nathan answering that, I should think.

The Commissioner: Let's have that question again.

(Thereupon, the pending question was read by the reporter.)

The Commissioner: Yes, that is too broad.

By Mr. Barnes:

Q. Mr. Nathan, going back for a moment to the factors that you said were given consideration in the issuance of orders, I grouped them in my notes here under the broad headings Materials, Facilities, and Manpower. Was there, to your knowledge, a morale factor that was ever considered in connection with any of these orders?

A. Yes, there was a morale factor. I think many items—not "many"; some items were not eliminated from production that I don't think it would have made any difference as to life and death of the civilian population, but their continued production would have been helpful in maintaining the production of the working men and women. For instance, cosmetics. Cosmetics production was continued from the morale point of view, but I don't think they could be [fols. 1746-1749] classified as first order of essentiality.

Q. What about items that were eliminated? Was the morale factor ever considered in connection with their elimination, to your knowledge?

A. In our study of this gold order, many of the statements of the people in the War Production Board urged the closing of the gold mines as a positive morale factor, in terms of giving to the people of America, to the Armed Forces, to the soldiers in relation to the furlough matter, a sense of all-out dedication to the war. It was suggested—I don't recall any discussion of it, but just in reading these documents and making our study, we found references which suggested that as part of the morale factor.

[fol. 1750] **Transcript of Testimony**—February 13, 1953

TESTIMONY FOR DEFENDANT (resumed)

BREHON BURKE SOMERVELL, a witness produced on behalf of the defendant, having been first duly sworn by said Commissioner, was examined, and in answer to interrogatories, testified as follows:

Direct examination.

By Mr. Barnes:

Q. Will you state your full name, please?

A. Brehon Burke Somervell.

Q. What position do you hold at the present time?

A. I am Chairman and President of the Koppers Company.

Q. What rank did you hold in the Army.

A. I was General.

Q. And you are retired now?

A. I am retired.

Q. During World War II what were your official duties in the Army?

A. I was Assistant Chief of Staff until the creation of what was known as the Services of Supply in March of '42, later the Army Service Forces, when I was made Commanding General of the Army Service Corps.

Q. And did you hold that through the duration of hostilities?

A. I did.

Q. General Somervell, do you recall at any time during

the war having the question of gold mining come to your attention?

[fol. 1751] A. Yes, it was widely discussed at one stage of the game.

Q. Can you fix the approximate date when it came to your attention?

A. I think it was in 1942.

Q. Can you recall how it came to your attention?

A. No, I don't. The matter was widely discussed, as I said, with our staff, and most likely with the General Staff and with the WPB.

Q. What were the—in what connection did it come to your attention, the question of gold mining?

A. The shortage of miners needed for critical materials, particularly copper.

Q. Now you refer to copper as a critical material; what was the situation with respect to copper in 1942?

A. Well, copper, of course, is used extensively in munitions making and in signal equipment and in other uses in the Army, primarily for munitions, needed for cartridge cases, rotating bands, and things of that kind in munitions making.

Q. And what was the relationship of supply and demand of copper in 1942?

A. Extremely bad. We were way behind on our requirements, so much so that extraordinary measures were discussed in order to increase the supply of copper.

Q. Do you recall whether or not any request was ever [fol. 1752] received by the Army for the furloughing of miners who might be in military service?

A. Yes, such a request was received, and men were furloughed, as I recall it.

Q. Can you tell us approximately when that was?

A. Sometime in '42, as I recall it.

Q. Did the question of gold mining come under discussion in connection with this furloughing of miners? To your knowledge, did the Army have any need for gold in 1942?

A. No, sir.

Q. There is testimony here, General, that in approximately August of 1942 a Mr. Bjorge, who was general manager of the Home Stake Mining Company, came to see

you by appointment made by one of the Senators. Do you have any present recollection of that?

A. Well, I have a recollection of discussing the matter with people connected with this problem, whether it was Mr. Bjorge or not, I can't recall.

Q. Do you have any recollection of the substance of any discussions you might have had with representatives of the gold mining industry, as distinguished from others?

A. Yes.

Mr. Rigney: I think we ought to try to identify who they were.

The Commissioner: As far as we can.

[fol. 1753] By Mr. Barnes:

Q. Do you have any recollection as to what members of the gold mining industry you spoke to?

A. No.

Q. Can you tell us now what, in general, they said to you, as well as you can recall.

A. As well as I can recall it, they claimed to curtail the activities of the mines would bring on unnecessary hardships on the communities that were dependent on the mines. I remember it was during this time that I became aware of the fact that there was a gold mine in South Dakota; I didn't know there was one there before. They said that if we did anything to curtail the mines, that it would bring considerable hardship on the communities which existed on the mines.

Q. Do you recall in any discussions that you had with representatives of the gold mining industry, any information they might have given you as to the number of men available, number of miners available in the gold mines?

A. I can't say that I do, although representations were made that such action wouldn't produce the number of miners that were needed.

Q. Do you recall by whom those representations were made?

A. No; it could have been made at the time you suggested, it could have been made in the WPB, it could have been made by the Staff, in fact, I think it was the general

[fol. 1754] discussion of how much good it would do if the operations were detailed.

Q. By "Staff" you are referring to——

A. My own staff.

Q. And who on your staff was in direct charge of this matter?

A. Well, from the point of view of operations, General Clay was the head of our Productions Division, and Mr. Mitchell was the head of our Industrial Personnel.

Q. Was he under General Clay?

A. No.

Q. That was separate.

A. Yes, we had production and personnel, separate divisions.

Q. Do you recall now with what officials of the War Production Board you may have discussed this matter?

A. I think it's too far away; I imagine I discussed it with quite a number of them.

Q. Do you recall having any estimates available at any time as to the number of men who might be released by closing the gold mines?

A. Oh, I am sure we did; although I can't state what those figures are now; we must have known how much good such an act would do, or we wouldn't have done it.

Mr. Rigney: Your Honor, I move to strike that, "we must have known how much good such an act", and so [fol. 1755] forth.

The Commissioner: It may be stricken.

By Mr. Barnes:

Q. General Somerville, do you recall attending a meeting of the War Production Board on October 6, 1942, when the subject of an order closing the gold mines was discussed?

A. I think I attended practically all of them at that time. As to any particular meeting, I have difficulty in fixing the date.

Q. General Somerville, let me show you this document, Plaintiff's Exhibit No. 92, which is a copy of the minutes

of the meeting of the War Production Board on October 6, 1942; and ask you whether, looking at that, that refreshes your recollection as to the fact that that was the day when this matter was discussed.

A. It says I was there, yes.

Q. The minutes indicate, General, that in opening the discussion of the gold mining order Mr. Batt read certain figures as to the number of miners who might be released from the gold mines. Do you have any recollection now of that event?

A. I can't honestly say that I recall being there; although I can say honestly that I recall discussion of the subject at a War Production Board meeting, but as to details, eleven years ago, I can't honestly testify that I remember [fol. 1756] it in any detail.

Q. Referring to the fourth paragraph of the minutes there, General; there is a summary there of remarks ascribed to you. Do you have any present recollections as to—after refreshing your recollection by reading those minutes—as to making those remarks?

A. That sounds as if that is probably what I said, yes.

Q. Referring to the situation with respect to the supply and demand for copper: What effect would that shortage have in the Army production program?

A. Well, it was having a very material effect. Our whole munitions program was dependent on copper, either as such, or as an alloy; and we even went so far as to talk about taking the copper and brass grilles off public buildings and banks and melting down the statues in Washington, and things of that kind, to help out. Such action had been taken in other countries where they had shortages.

Q. Do you recall whether or not the labor situation in the copper mines was a factor which had any effect on the supply of copper?

A. Oh, yes.

Q. Do you have any recollection now as to the magnitude of the shortage of miners in the copper industry?

A. No, all I know is that it was bad and we had to furlough soldiers in order to step up production to acceptable [fol. 1757] levels, or try to step it up to those levels. It was a long leadtime between actually getting the ore out and the production of the shell, so it was an urgent matter.

Q. Looking at this statement, the early part of October, 1942, what was the general strategic situation existing then?

Mr. Rigney: If Your Honor please, I object, as being outside the scope of the issues here.

The Commissioner: Overruled.

By Mr. Barnes:

Q. You may answer that.

A. Well, it had improved considerably, and the dark days of Bataan and the reverses in the other islands in the southwest Pacific.

The Commissioner: That was in the Spring of —?

The Witness: 1942.

The Commissioner: Just fix the time as you go along, and speak up clearly.

The Witness: I thought that was the question. What was the situation in October.

After those reversals and so forth, we gained the ascendancy, we won the Battle of Midway, we won the Battle of Coral Sea, which was really the turning point, I think, in the Pacific campaign, the situation was improved. We were hard at work assembling forces for the invasion of North Africa, which, as you recall, was made on election day in 1942—so we were hard put to build up our material and pass on the advantages that we had gained and those [fol. 1758] that we expected to gain in North Africa. We hadn't yet taken on too large a commitment for the French forces, because we didn't know what the French forces were going to have. That wasn't determined until Casablanca, but on the other hand, we had very large land-lease commitments, in addition to our own requirements.

In other words, we were right at the peak of our effort to build up our materiel.

By Mr. Barnes:

Q. Was any consideration given during this period of 1942 to the use of materials other than copper in the munitions program?

A. I suppose so; but it wasn't until much later in the war, I have forgotten exactly when. I would say in '44

that we developed the steel cartridge cases; it was a very technical problem that was a very stubborn one, and we didn't learn to draw the shells, and what not, until around that time.

Q. You mentioned earlier the use of copper in rotating bands; what do you mean—what are rotating bands?

A. Well, you have a steel rifle gun barrel, you have a steel projector. In order to give direction to the projectile, prevent it from tumbling and varying from true course, you impart a rotating motion to the shell, and that's done by a copper band fastened around the projectile, which fits into the grooves of the gun and imparts this motion. [fol. 1759] You have to have a softer material than steel to do that, otherwise the gun would wear out almost immediately.

Q. Do you recall whether or not you discussed the general gold mine situation with any of your superiors in the War Department?

A. Oh, I can't definitely recall, but I am sure that I discussed it both with General Marshall and Secretary Patterson; whether I talked to Mr. Stimson about it, I don't know, but I am sure I did with the other two.

Q. Let me show you this document, which is Plaintiff's Exhibit 25, a letter from Undersecretary Patterson to Mr. Batt of the War Production Board. I ask you whether you had anything to do with the preparation of that document?

A. Well, there is nothing on here to indicate that I drafted it; on the contrary, it looks more as if Secretary Patterson wrote it. But unquestionably I did have something to do with it, because I had something to do with everything in this connection.

Mr. Rigney: If Your Honor please, I don't like to interrupt, but I don't know whether the General is now merely assuming that he had something to do with it, or whether he does have a recollection of it.

The Witness: I have no definite recollection of having prepared this paper, no.

[fol. 1760] Mr. Rigney: You do or do not, sir?

The Witness: I do not.

The Commissioner: Do you have any recollection of having discussed the subject with Judge Patterson prior to this date?

The Witness: I have a definite recollection of having discussed it with Judge Patterson, yes.

The Commissioner: So far as the date is concerned, you are uncertain?

The Witness: It is impossible for me to say; I can't recall having had a hand in this particular piece of paper.

The Commissioner: Do you recall whether you saw that document or a copy of it at or about that time?

The Witness: No, sir.

By Mr. Barnes:

Q. Let me show you this document, which is Plaintiff's Exhibit 26, a memorandum to Mr. Donald M. Nelson, signed jointly by Mr. Patterson and Mr. Forrestal, and ask you whether you have any recollection at all of that document?

A. No. This has been a good many years ago; I can't remember every letter that was written.

Q. A lot has happened since then?

A. Yes, sir.

Q. Were there other things happening at that same time, General?

A. Yes, sir; we were having crises every fifteen minutes. [fol. 1761] Q. Let me ask you this: On the basis of your knowledge of the situation that existed in October, 1942, will you tell us whether or not it is your opinion that the order closing the gold mines, Limitation Order L-208, went beyond what was required under the situation that existed?

Mr. Rigney: If Your Honor please, I object to that, as called for a conclusion. The issue in this case is for Your Honor to decide. This is not a proper question.

Mr. Barnes: Your Honor, this is not going to be determinative of your decision, but is always desirable to have aid from the people who were concerned at the time. You can attach such weight as you desire. It is not binding, his conclusion, on any one.

Mr. Rigney: You can go on forever calling people on one side who would say it is proper, and those on the other side could say equally forcefully that it was improper.

The Commissioner: I think it is improper. I think that, through this witness, you could develop what the situation

was with respect to the various phases of the problem confronting the country, but I think that that question exceeds propriety.

Mr. Barnes: Your Honor, I will then make an offer of proof and ask permission to have General Somerville state that, in his opinion, the order closing the gold mines was [fol. 1762] required by the situation that existed in October of 1942.

By Mr. Barnes:

Q. General, do you recall whether or not there were shortages in any of the other non-ferrous metals other than copper in 1942?

A. Yes, we were quite short in aluminum. I imagine also in some of the others, but copper and aluminum were the two principal ones.

Q. Do you recall what the situation was with respect to alloy steel?

A. It was tight.

Q. For what purpose did the Army require alloy steel?

A. Oh, for most any purpose, munitions, and other purposes; various types of equipment require alloys.

Q. Did the tank program originally require alloy steel?

A. Yes; for the armor plate.

Q. What was the status of the tank program in 1942, October, 1942?

A. Well, we were desperately working to get it into the highest gear, the requirements for tanks were being increased from month to month, changes in models; the requirements were very heavy.

Q. Do you recall whether or not shortages of armor plate were affecting that program at that time?

[fols. 1763-2058] A. That is rather hard to say definitely, but I am sure they were, because shortages of everything were affecting the program.

Mr. Barnes: That is all.

[fol. 2059] IN THE UNITED STATES COURT OF CLAIMS

[Title omitted]

Transcript of Testimony—April 7, 1953

TESTIMONY FOR DEFENDANT.

(The trial was resumed, at the time above stated, pursuant to the recess previously taken.)

APPEARANCES

Present: Hon. William E. Day, Commissioner; Ralph D. Pittman, Esq.; Edward E. Rigney, Esq., and Carlton S. Connor, Esq., counsel for plaintiffs, and Kendall M. Barnes, Esq., and Thomas H. McGrail, Esq., counsel for defendant.

COLLOQUY BETWEEN COURT AND COUNSEL RE: MR. BATT

The Commissioner: I think we might have a statement on the record for the testimony or lack thereof of Mr. Batt.

Mr. Barnes: Your Honor, the situation there is this: To go back and review what has transpired in the case during the course of plaintiff's evidence; counsel asked [fol. 2060] U. S. counsel whether they intended to produce Mr. Batt as a witness. They declared they did not.

The government, as I stated in the opening of our case, did not intend to call Mr. Batt as a witness. But in view of your interest in him, we made an attempt to locate him. As you recall, at that time he was in Mexico and was not expected at the Eastern Seaboard until around the first of April.

We stated we were prepared to close our case without his testimony, but we would be glad to produce him if you felt his testimony was desirable or necessary. And you stated that if we had not done so you probably would have called him as a Commissioner's witness.

We communicated immediately with Mr. Batt and asked him whether those dates would be satisfactory to him, but received no reply.

The first intimation we had that Mr. Batt had actually received our letters other than the fact that they had not been returned by the post office was when Mr. Berger,

the head of the Civil Division, received a call from Mr. Stassen, the head of the Mutual Security Agency, asking why he had Mr. Batt tied up the first week of April, that the President wanted to send Mr. Batt to Paris on a special mission.

[fol. 2061] Mr. Batt replied that Mr. Berger had him tied up and he was unavailable.

I explained the situation in detail to Mr. Berger, and after consideration of the respective missions Mr. Batt was being sent on, he determined that that was of much greater importance than any testimony Mr. Batt might give in this case, and that although we did not have Mr. Batt subpoenaed, or anything of that type, he instructed me not to press to take Mr. Batt's testimony at this time.

I had previously discussed the matter with you and explained the situation. It has been discussed with counsel for all of the plaintiffs.

The situation at the present time is that Mr. Batt is in Paris, has not returned. I don't know when it will occur. The government is prepared to rest their case without calling Mr. Batt.

The Commissioner: Frankly, I feel that the government's action in this thing is breaking faith with the court in that when I was informed by you that you were going to call Mr. Batt, I made no effort to locate him myself. I feel that we could have had his testimony before he went to Europe.

However, I was first advised that he was about to go to Europe just a few days before he went, while we were concluding the hearings with respect to the cases of Oro [fol. 2062] Fina and Bald Mountain.

In view of the situation, however, I felt that I was going to give the plaintiffs an opportunity to reconsider their not having called Mr. Batt in this way: I spoke to Mr. Rigney and Mr. Connor, who informed me they were in touch with West Coast counsel, and told them that if they wanted Mr. Batt as a Commissioner's witness we would leave the matter open until we got him, whenever that might be.

And that, of course, was in the presence of other counsel, Mr. Suydam and Mr. Nugent.

So that I think all plaintiffs were represented.

I was informed by plaintiff's counsel that he was not wanted as a Commissioner's witness.

So I would not hold the record open for Mr. Batt's testimony, in view of all that has transpired.

Mr. Barnes: There is just one thing, in view of the statement, your Honor, that you feel the defendant broke faith with the court, one additional fact I would like to record. That is that at the time we communicated with Mr. Batt and at the prior hearings, I read to you—I think it was read into the record—portions of Mr. Batt's first letter to me, in which he stated that he will be available to have his testimony taken in Mexico City during the month of February or on the West Coast during the month of March.

It was your preference to wait until April to take his [fol. 2063] testimony.

The Commissioner: I could have meant readily available for a West Coast hearing. But having been advised that he was going to be back on the East Coast in April, by you, that was the reason for deferring until April the taking of his testimony.

The breaking of faith that I feel has been done here was because you told me, as a representative of the government, that you were going to call him.

Having that in mind, I made no effort to communicate with him.

Mr. Barnes: If your Honor feels that is the case, I am still ready to hold the record open until Mr. Batt can be produced, if that is your desire. I am not trying to preclude calling Mr. Batt in this case.

The Commissioner: I realize that. But having told me you were going to call him, I made no effort, from February until about the first of April, to secure his attendance at any place, relying upon the statement by you that we were going to have him present.

Then I am told at the hearings that were held on Bald Mountain and Oro Fina that the decision had been made by the Department of Justice not to call him.

Mr. Barnes: No, sir. That is not the case, your Honor, I am very sorry.

[fol. 2064] The statement was made that Mr. Batt would not be available the first week in April because he was

being sent abroad on a mission of greater importance. And the statement was made that we were prepared to close our case without Mr. Batt's testimony, as has been our position throughout the course of these hearings.

We are still ready, if you feel Mr. Batt's testimony should be taken, to have you hold the record open until Mr. Batt can be produced here.

The Commissioner: Of course, I think that would be my prerogative, in any event, to hold it open.

Mr. Barnes: That is right, sir.

The Commissioner: But I am not going to do that, in view of the fact that the government has delayed, by its action, the action by the Commissioner in securing the attendance of Mr. Batt. We have lost all this time, from February until April.

Mr. Barnes: I am sorry you feel the government has delayed you, sir: I don't believe the charge is warranted, but I don't want to discuss it any further because we won't gain anything by it.

Your Honor, during the course of the hearings in January and February, a reference was made by Mr. Lipkowitz, a witness called by the defendant, to a study that had been made by the Social Security Board. That is referred to [fol. 2065] in a footnote to Special Study 9, which I believe is Plaintiff's Exhibit No. 1.

We attempted to find that in the record of the War Production Board and could not find it in the documents that have gone to Archives.

We have secured from the Federal Security Administration a copy of that document. The document had originally been held confidential under Section 1106(a) of the Social Security Act and the regulations under that.

But the Commissioner for Social Security has approved its release for use in this case.

OFFERS IN EVIDENCE

I now offer it in evidence as Defendant's Exhibit next in order.

That is on page 57, footnote 96, Special Study 9.

The Commissioner: That will be Defendant's Exhibit No. 62.

(Said document was marked for identification as Defendant's Exhibit No. 62.)

Mr. Barnes: I might state, your Honor, that it does not disclose the names of any employees. It does disclose the names of some seven gold mine companies, two of which are among the present plaintiffs.

Mr. Rigney: We have no objection.

Mr. Pittman: No objection.

The Commissioner: Without objection, it may be re-
[fol. 2066] ceived.

(Said document, marked "Defendant's Exhibit No. 62," admitted in evidence and made a part of this record.)

Mr. Barnes: Your Honor, during the course of the same hearings, Mr. Lipkowitz referred to certain forms that had been filed on form WPB-732.

You made inquiry at that time as to whether either those forms or information from them would be available. You remember there was some discussion as to the possibility of having to use secondary evidence.

We have checked with the Bureau of the Census, which is the agency which receives those forms. They advised us that the forms have all been destroyed, that none of them are available at the present time. And they informed us no summaries prepared from them are available, either.

I just wanted to note that on the record so as to dispose of that point.

Following Mr. Lipkowitz's testimony, your Honor, there was some controversy between counsel as to what Mr. Lipkowitz had meant in a portion of his testimony where he referred to the fact that he had had probably no more than twenty of the 732 forms in his possession at the time of a certain meeting which he attended in the latter part of September and first of October 1942.

[fol. 2067] I wrote to Mr. Lipkowitz and asked him if he would explain what he had meant at that point. I have received a letter from him.

He states in the letter that he is going to be on vacation during this week and will not be back until April 13. I have read the letter to Mr. Rigney over the telephone. He indicated that he would probably be willing to stipulate either that the letter or the substance of it could be accepted in lieu

of Mr. Lipkowitz's testimony for clarification of that point.

Mr. Rigney: Your Honor this relates to testimony that Mr. Lipkowitz gave on his direct examination at page 1479 of the transcript, where, after some preliminary testimony with respect to form 732, he was then asked by your Honor:

> "You have testified that you had a number of them at this meeting?"

That was with reference to the form 732.

And he gave the answer as follows:

> "Yes. But the ones I had at the meeting were of mines which I considered would be affected by this order."

Your Honor then asked:

> "How many were they?"

He answered:

> [fols. 2068-2075] "I would say probably no more than twenty."

I am perfectly willing to stipulate with Mr. Barnes, based upon what Mr. Lipkowitz has written to him in this letter of March 24, 1953, that Mr. Lipkowitz did not mean by that testimony to convey the impression that, in his opinion, only twenty mines would be affected by the proposed closing order.

Mr. Barnes: But that he had no more than twenty forms with him?

Mr. Rigney: Yes.

Mr. Barnes: That is satisfactory to me, your Honor.

The Commissioner: Do other counsel have any observations?

Mr. Pittman: No objection, your Honor.

[fol. 2076] Mr. Rigney: Plaintiff offers in evidence Plaintiffs' Exhibit 336, for identification, being a memorandum of July 9, 1942, from Mr. Bernard C. Gavit, general counsel of the War Manpower Commission, to Mr. Reginald G. Conley, "Subject: Release of Employees from Gold Mining Industry."

I might say parenthetically that Mr. Conley was a mem-

ber of the staff of the general counsel of the War Manpower Commission, and I have spoken to him on the telephone within the last few days. He is now employed by [fol. 2077] the Federal Security Agency—I believe it is called—and I did not imagine it would be necessary to produce him here today.

I haven't spoken to Mr. Barnes about that heretofore, but I presume there is no objection on that score.

Mr. Barnes: I fail to see how this is proper rebuttal testimony, your Honor.

It seems to me that if it had any standing it would be part of the plaintiffs' case in chief rather than rebuttal.

Mr. Rigney: Mr. Barnes, in the government's case, your Honor, put great stress upon the fact that one of the primary purposes of the order L-208 was the saving of the critical materials.

Here is a memorandum of July 9, 1942, and I don't think that there is any document in evidence at an earlier date which shows the real beginning of the drive to adopt order L-208.

I don't think there is any earlier document than this, and here is a document of this date which makes no reference to critical materials at all, but says:

"General McSherry wishes to secure"——

Mr. Barnes: I object to counsel's reading it into the record, your Honor.

Mr. Rigney: The document speaks for itself.

[fol. 2078] But it is General McSherry's statement as to what he wants to do about closing the gold mining industry.

The Commissioner: It may be received.

(Said Document, marked "Plaintiffs' Exhibit No. 336," admitted in evidence and made a part of this record.)

The Commissioner: Are you going to put in any further document that followed up this?

Mr. Rigney: Our search did not disclose any reply, your Honor.

I called Mr. Conley and asked him if he would have any recollection of his reply, and he said he does not. He recalls the subject matter generally, but he has a very vague recollection of it.

Our search of Archives did not disclose any reply from Conley from Mr. Gavit to this memorandum.

Mr. Barnes: Mr. Conley was a subordinate of Mr. Gavit, on his staff?

Mr. Rigney: That is right.

With respect to Defendant's Exhibit 55, which was table 3, which was introduced through the Witness Nathan, our examination of that exhibit has indicated to us some errors. I think that because of that I should move to strike the exhibit.

In other words, the two extreme right-hand columns, one [fol. 2079] designated "Load" and the other designated "Placer" are incorrect in that they should be reversed. They have been transposed in error.

So that the column which is labeled "Load" really should have been labeled "Placer" and conversely.

And the last line of the chart, which reads, referring to electric energy, "generated by reporting companies," and then under this column which is here designated "Total," being the second column designated "Total," $48,172, which is presumably the total of the next two figures, that is an erroneous addition.

That should be $108,172.

So I move to strike the exhibit.

Mr. Barnes: Your Honor, there doesn't seem to be any proof of that. This is a matter that should have been handled on cross-examination.

Mr. Rigney: I submit, your Honor, that examination of a chart like this can't be done while the witness is testifying about it.

Mr. Barnes: Your Honor, comparing this table with volume 1 of the Mineral Industry Census of 1939, it does appear that the columns on load and placer have been reversed in Defendant's Exhibit 55.

I have not checked the revised total of those of the electric generating by the reporting companies, but it does appear [fol. 2080] on a visual inspection that the total of the gold mines shown here is in error.

But that is something that can easily be added up by anybody at any time.

It would be satisfactory to me to have the record merely show that these headings have been transposed on load and placer.

Mr. Rigney: Don't you think it would be better for you to substitute a corrected exhibit?

The Commissioner: What that would require, of course, would be to check each one of the exhibits.

Why don't you put that in for identification with that statement in there? That would take care of it.

Mr. Rigney: You mean put the other corrected chart in for identification?

The Commissioner: Yes.

Mr. Rigney: That will be Plaintiffs' Exhibit 337.

(Said document was marked Plaintiffs' Exhibit No. 337 for identification.)

Mr. Rigney: So that, as I understand it, Plaintiffs' Exhibit 337 is in evidence supplementing Defendant's Exhibit No. 55.

Mr. Barnes: It is marked for identification.

Mr. Rigney: Would we be permitted to cite it in the proposed findings unless it is in evidence, your Honor?

[fol. 2081] The Commissioner: I think you could.

You see, you could offer it in evidence, but that is going to require a check by the government again to see that it is absolutely accurate. If the figures are correct, excepting the one figure that you pointed out and then the transposition of "Load" and "Placer," the exhibit plus the exhibit for identification will complete the record.

Mr. Rigney: All right, sir.

I would next like to offer as Plaintiffs' Exhibit 338 a photostatic copy of pages 18 and 19 of the 1939 Minerals Census. These are the two pages of the census report from which Mr. Nathan prepared Defendant's Exhibit No. 53, which was his table 1.

I am merely offering this to have before your Honor the complete figures here and also because there was some error made in the preparation of Mr. Nathan's table 1, a mathematical error.

For example, in note 2 of his table 1, it states that——

The Commissioner: Can you dispose of this exhibit first before we get into that?

Mr. Rigney: Yes, sir.

Mr. Barnes: Your Honor, without going back to the record and reviewing it, I don't want to concede, in other words, that this is the source used by Mr. Nathan. But

[fol. 2082] assuming that it is, I have no objection to its receipt.

The Commissioner: It may be received.

Mr. Rigney: I have the census volume right here if you want to check it.

The Commissioner: That will be received as Plaintiffs' Exhibit 338.

(Said document, marked "Plaintiffs' Exhibit No. 338," admitted and made a part of this record.)

Mr. Rigney: Now may I state for the record the errors to which I have referred.

In note 2 of table 1, which is Defendant's Exhibit 53, it states that 637 preparation plants are operated in conjunction with the metallic ore industry.

The correct figure is 678, according to the Plaintiffs' Exhibit 338, which has just been received.

It appears that the compiler of Exhibit 53 subtracted the number of iron ore preparation plants from the total. I don't know why, but that seems to account for the difference.

Then it is pointed out in this Defendant's Exhibit 53 that the 1,180 gold mines are operated by 820 companies.

Instead of 820 companies, the figure should have been 1,124 companies. He just dropped a line in taking the total and instead of taking the total for all gold mines he took [fol. 2083] the total for the load mines only.

Those are the two principal corrections there.

Mr. Barnes: Are there some others that you don't consider principal, Mr. Rigney? Or was that just a figure of speech?

Mr. Rigney: I don't believe there are, Mr. Barnes.

But, like yourself, I don't want to make any brash concessions.

Now may this be marked Plaintiffs' Exhibit 339?

(Said document was marked for identification as Plaintiffs' Exhibit No. 339.)

Mr. Rigney: I offer in evidence now Plaintiffs' Exhibit 339, which is a table of mining machinery and equipment, which is taken from page 429 of the Census of Manufacturers for 1939.

Mr. Nathan's table 2, which I believe was Defendant's

Exhibit 54, reproduced a part of this page, one of the charts from it, which is designated table 3 here on this Exhibit 339.

I would like to offer the entire page chiefly for the definitions which appear at the top, at the extreme left.

I have a copy of the Census of Manufacturers here for 1939.

The Commissioner: Is there any objection?

Mr. Barnes: I was hesitating here only because I don't [fol. 2084] think it proves anything. But I have no objection to it.

The Commissioner: It may be received.

(Said document, "Plaintiffs' Exhibit No. 339," admitted and made a part of this record.)

The Commissioner: We will recess now until one-thirty p.m.

(Thereupon, at 11:15 o'clock a.m., a recess was taken, to reconvene at 1:30 o'clock p.m., same day.)

[fol. 2085] AFTERNOON SESSION

The hearing reconvened at 1:30 p. m., upon the expiration of the recess.

The Commissioner: Let us come to order.

Mr. Rigney: May this be marked as Exhibit No. 340 for identification?

(Said document was marked for identification as Plaintiffs' Exhibit No. 340)

Mr. Rigney: Plaintiffs now offer in evidence Exhibit 340 for identification, being the photostatic copy of page 98 and 99 from the Mineral Yearbook for 1943. We have that book here, Mr. Barnes, in case you wish to check it.

Mr. Barnes: What is the purpose of this offer?

Mr. Rigney: The exhibit starts out with the statement:

> "Gold continued to play an important part in the war for use in many types of instruments."

And so forth.

And the chart on page 99 gives figures on the net industrial consumption of gold in the United States during the period 1939 to 1943.

There was testimony from Mr. Nathan that the industrial uses of gold were infinitesimal during the war years, and [fol. 2086] in connection with such testimony we offer this exhibit.

It shows rather substantial industrial consumption of gold.

I think Mr. Nathan used that exact word, "Infinitesimal," as his description for the uses of gold.

Mr. Barnes: We have a problem here, your Honor, of comparability. It seems to me it may almost require some testimony with respect to this exhibit. The table counsel refers to, if you will note, is in dollars for gold rather than ounces or any other unit of measure that has been the standard in all the other gables.

The Commissioner: Of course, the price is the same for gold throughout the periods.

Mr. Barnes: We don't know whether the price used for monetary purposes is the price on which this was computed, or whether it is some other basis.

The Commissioner: That is the price?

Mr. Barnes: I don't know.

The Commissioner: Are you stating an objection?

Mr. Barnes: Yes, sir; I am. I am objecting on the ground that there is no testimony showing a conversion of this to ounces or any other measure of weight, which is the basis on which all other tables have been prepared.

The Commissioner: I am prepared to rule on that. But I have a question about the document. I don't under- [fol. 2087] stand the two columns on page 98. This relates only to silver.

Mr. Rigney: Yes, your Honor.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 340," admitted and made a part of this record)

Mr. Rigney: Plaintiff now offers in evidence Exhibit 341 for identification, your Honor, which is a table showing the net industrial consumption shown of gold in the United States, 1941-1945, which is taken from page 106 of the Minerals Year Book for 1945.

We have the book here and offer it to Mr. Barnes for his perusal.

Mr. Barnes: Your Honor, I object to this on the ground, entirely aside from the question of the objection I made with the preceding exhibit, there is no definition on here whatsoever as to the meaning of the term "Net industrial consumption," which is used in the exhibit.

Mr. Rigney: All through the trial, your Honor, the testimony, it seems to me, of government witnesses was that gold was completely useless, worthless, and there is no sense, as far as the war effort was concerned, in having any gold.

We offer this for what it is worth showing a substantial [fol. 2088] industrial consumption of gold.

In connection with Mr. Barnes' objection, I have already talked to the people at the Bureau of Mines in an endeavor to obtain from them the definitions or breakdown of the categories that are included in these figures. They told me that they got the figures from the mint and that there are no such categories or breakdowns available.

So this exhibit is all that we are able to get on the subject.

The Commissioner: That is the unit of measurement? Is it tons, ounces, dollars?

Mr. Barnes: It is shown in dollars, your Honor, in the table from which this is copied:

I make a further objection, your Honor, on this basis:

In the preceding exhibit, which you admitted over my objection, Plaintiffs' Exhibit 340, plaintiff has reproduced the text that appears in the Minerals Yearbook. In this case they have eliminated the text apparently because the text in this case seemed to be less favorable to them.

I object to this on the ground of its incompleteness.

The Commissioner: Does this table appear in that volume in that form?

Mr. Rigney: Yes, your Honor.

The Commissioner: It will be received.

[fol. 2089] (Said document, marked "Plaintiffs' Exhibit No. 341", admitted and made a part of this record)

Mr. Rigney: I might say that the table in the book refers to silver, but we didn't reproduce that for obvious reasons.

Mr. Barnes: And I don't know whether the record shows it, but the book indicates this in terms of dollars.

Mr. Rigney: Yes.

May this be marked Plaintiffs' Exhibit 342 for identification.

(Said document was marked for identification as Plaintiffs' Exhibit No. 342.)

Mr. Rigney: I offer now, if your Honor please, Plaintiffs' Exhibit No. 342 for identification, being a photostatic copy of a chart appearing in the Federal Reserve Bulletin. I happen to have the issue for March 1953. This chart shows gold production outside the USSR from 1941 onward, by years, each year thereafter, including 1952. 1952 is also broken down by months.

We offer this in evidence.

Mr. Barnes: Your Honor, I see nothing in this which is in proper rebuttal of any testimony offered by the defendant in this case. There has been no testimony offered by the defendant relating to production of gold in places [fol. 2090] outside of the United States.

Figures with respect to production of gold in the United States are already amply in the record.

I object to this certainly to the extent that it shows production of gold in places other than the United States. It is the only thing we are concerned with and the only thing the case has been related to to date.

Mr. Rigney: I think, your Honor, it might be useful for the court to have it before it showing what was going on so far as gold was concerned not only in the United States, but in other countries during the years with which we are concerned.

Mr. Barnes: It opens up a whole new field of inquiry, your Honor. It may require the necessity of surrebuttal testimony.

We don't know what the situation was in any of these other countries.

The Commissioner: Certainly in this offer you are not relying upon any figure after 1945, are you?

Mr. Rigney: No, your Honor; that is correct.

The Commissioner: It may be received.

(Said document, marked "Plaintiffs' Exhibit No. 342," was admitted and made a part of this record)

Mr. Rigney: That is all that we have, your Honor, in behalf of Homestake.

[fol. 2091] There is just one other item which has been requested to offer on behalf of Idaho-Maryland.

The Commissioner: You are closed, so far as Homestake is concerned?

Mr. Rigney: Yes, your Honor.

May this be marked as Plaintiffs' Exhibit 343 for identification?

(Said document was marked Plaintiffs' Exhibit No. 343 for identification.)

Mr. Rigney: I have been requested, your Honor, by counsel for Idaho-Maryland, who are not able to be here today, to offer on their behalf Plaintiffs' Exhibit 343 for identification, which is a photostatic copy of page 15 of the Volume 1, United States Import and Export Statistics, for the calendar year 1945, prepared by the Bureau of the Census, Department of Commerce.

This is offered in connection with the allegation which is contained in Idaho-Maryland's amended petition, at page 47:

> "Mining machinery of an aggregate value in excess of three hundred million dollars was produced, manufactured, and exported from the United States to foreign countries during the years 1942 to 1945."

If your Honor will look under "Industrial Machinery", which is about the third principal line on the exhibit, and [fol. 2092] then follow that down to the line described as "Mining, Well and Pumping Machinery", your Honor will then see the years 1942, 1943, 1944, and 1945 are underlined.

I don't know whether it shows very well on that photostat, or not, but those are the figures in which Idaho-Maryland is interested and therefore for which the exhibit is offered.

Mr. Barnes: May I point out again, your Honor, a series of objections to that.

This is an allegation in the plaintiff's petition in which plaintiff offered no proof. The government has offered no proof on that subject whatsoever.

The exhibit is not properly offered at this time as part of the rebuttal case.

In any event, the classification to which they call attention is "Mining, Well and Pumping Machinery." We have

no testimony as to what part of it is mining machinery and what part of it comprises other items.

The Commissioner: That is true. The objection is valid, particularly the last part of it.

As a matter of fact, I felt that, in view of the fact that time was not extended, that there was not an extended period for preparaion, I would receive it in evidence even though it might properly be offered as proof of the case in chief.

[fol. 2093] In other words, I would be liberal in regard to whether the evidence should be properly rebuttal evidence, or not.

But here I don't see that the figure can be considered at all because it is a composite figure that we don't know how much is related to mining and how much to well and how much to pumping.

I am going to sustain the objection.

You can leave it in for identification.

Mr. Rigney: Very well, your Honor.

That is all we have, your Honor.

The Commissioner: Then proof is closed in the Idaho-Maryland case and Central Eureka?

Mr. Rigney: Yes.

The Commissioner: Then proof is closed on all, with the exception of Bald Mountain and Ermont.

Mr. Barnes: That raises a question. I understood counsel was going to file motions to dismiss some of the Bald Mountain plaintiffs. No such motions have been filed to date.

That does have to be addressed to the court, as I understand it.

The Commissioner: Yes.

Mr. McGrail: Yes, I will do that.

Since I have been released from these hearings I have been engaged in other work up in New York on an arbi-
[fol. 2094] tration. I will get back here Friday night. So that probably tomorrow I will be able to prepare them and file them.

I think separate ones should be filed in each case, although they have the same docket number.

Mr. Barnes: Your Honor, in view of your ruling admitting Plaintiffs' Exhibit 342, and in view of your state-

ment that you had intended to be liberal with respect to the scope of rebuttal proof, I suppose you will now accord the defendant a reasonable opportunity to investigate the information which has been injected into this case by virtue of Plaintiffs' Exhibit 342 to determine whether or not it desires to offer any surrebuttal with respect to the situation which has not been previously in the case, relating to production of gold in foreign countries.

The Commissioner: What do you have in mind with respect to an investigation?

Mr. Barnes: We have found out what the circumstances were in the countries listed on this exhibit, your Honor; whether there is any degree of comparability.

It has been offered without limitation or qualification whatsoever as establishing the situation with respect to the production of gold in South Africa, Rhodesia, West Africa, Belgian Congo, Canada, Mexico, Colombia, Chile, Nicaragua, Australia, and India.

If that has any relevance and materiality in the case, [fol. 2095] we are entitled to an opportunity to investigate what the circumstances were in those countries.

The Commissioner: You knew, did you not, that the plaintiffs have maintained throughout these hearings that the War Production Board permitted the export of mining equipment despite the issuance of L-208, to these countries?

Mr. Barnes: You are right.

The situation in that connection is this: There are allegations in some, although not all, petitions, to that effect. There was no proof offered as part of the case in chief.

It was my conclusion from that—and I think it was a reasonable conclusion—that plaintiff has therefore withdrawn that allegation of its case and did not intend to offer any proof with respect to it.

Mr. Rigney: Mr. Barnes, I don't think that is an accurate statement, that there was no proof offered during the plaintiffs' case with respect to that, because I think in the documents, in the exhibits which were offered, in several of them there is proof to some extent on that phase of the case.

The Commissioner: What can you point to?

Mr. Rigney: Your Honor, I don't have at my disposal

the precise number of the exhibits, but specifically, Plaintiffs' Exhibit 1, Report No. 9, does make reference to [fol. 2096] that very fact of the shipment of that machinery abroad during this period, and I know that there are on some of the documents that went in.

So that it is not an accurate statement to say that no proof was offered of it on the plaintiffs' case. There was proof offered, and there is evidence in plaintiffs' exhibit, Exhibit 1, on the point, Report No. 9.

The Commissioner: Of course, we have a lot of records in this case. I won't attempt to remember the contents of all these documents.

Mr. Rigney: Your Honor, I thought I might be able to pick it up rather quickly, in the Report No. 9, but I haven't been able to turn to it.

The Commissioner: I seem to remember——

Mr. Barnes: May I point out in that connection, your Honor, with respect to Plaintiff's Exhibit No. 1, that although, as Mr. Rigney indicates, looking at the sixty-page book, the first fifty-two pages of it are devoted to the historical events leading up to the issuance of the order L-208.

All he has to look at are the last eight pages, which are under the "Administration of Results of Order L-208."

I have just reviewed those eight pages and I find nothing in there indicates that there has been any exportation of mining machinery to these countries involved.

[fol. 2097] I might point out in that instance, your Honor, that, in any event, the situation we are faced with is this:

Regardless of what the plaintiff may have proved as part of his case in chief, the defendant offered no testimony whatsoever with respect to either the exportation of mining machinery to the other countries, or, on the issue of the production of gold in countries other than the United States.

It seems to me that we are faced very definitely with a situation where this exhibit, 342, is not proper rebuttal testimony.

I would like to renew my objection and make a motion to strike.

The Commissioner: The motion is overruled.

Mr. Barnes: In that case, I have no alternative but to

ask for an opportunity, your Honor, to make an investigation of this point.

Mr. Rigney: I seem to recall that plaintiff offered in evidence a letter of Donald Nelson to the Economic Defense Board, as I believe it was then called, later the Board of Economic Warfare, which was answered by what I believe is Plaintiffs' Exhibit 12 in evidence, letter of December 18, 1941, from Mr. Milo Perkins, answering certain questions which were posed in Mr. Donald Nelson's letter of December 3 concerning shipments of mining machinery abroad.

Then on the defendant's case, if I recall correctly, the [fol. 2098] government offered three exhibits which had been marked for identification on the pretrial, which were the responses of the Secretary of the Treasury and the Federal Reserve Board and the Department of State to this same letter of December 3 from Mr. Donald Nelson, bearing on this question of shipments of mining machinery to foreign countries.

The Commissioner: I seem to recall evidence contained in the documents that were admitted at pretrial bearing upon this point. Which ones they were, I do not remember.

I don't think that the defendant is entitled to additional time to study whether or not they are going to have any rebuttal.

Mr. Barnes: Your Honor, strangely enough, if we had any rebuttal, we would limit it to Plaintiffs' Exhibit 342.

As I see it, whether plaintiff proved any offer of proof on this point, or not, the defendant did not. And it does not seem to me this is properly admissible at this time to bolster its case in chief.

The Commissioner: Of course, you have urged that point twice, and I have overruled it.

Do you have anything now?

Mr. Barnes: I have a request, your Honor, for an opportunity to examine the facts underlying Plaintiffs' Exhibit 342, to determine whether we have any surrebuttal proof to offer.

[fol. 2099] The Commissioner: Yes, I know you made that request. I am now asking you if you have any other matters to present.

Mr. Barnes: The only other matter I have to present, your Honor, is this: I would like for the record to show that the minerals yearbook for the year 1945, from which plaintiff took the table that appears as Plaintiffs' Exhibit 341, contains the following preparatory note before the gable, under the heading "Gold.":

> "The arts require a much larger quantity of gold than does industry, but its corrosion resistant and other properties have resulted in some industrial demands. Consumption in the arts increased rapidly during the war. A high war-stimulated marriage rate and widespread prosperity have increased the sale of jewelry, watches and many luxury items made from gold."

The Commissioner: Is there anything further?

Mr. Barnes: Aside from our surrebuttal of Plaintiffs' Exhibit 342, that is all the defendant has.

PROOF IS CLOSED

The Commissioner: Then proof is closed with respect to all cases, excepting Ermont and Bald Mountain.

In the event that the defendant should find——

I am doing that because I want to get started on the submission of proposed findings so that we can work toward getting this case to the court as promptly as possible.

[fols. 2100-2138] If the defendant, while the plaintiffs are submitting their proposed findings, conducts an investigation and determines that it would like to have the evidence reopened, to put in evidence on this point, then that matter will be considered by the Commissioner.

And if the evidence is documentary as distinguished from testimony, then it may be possible to stipulate further exhibits into evidence in meeting what you feel is a situation that puts you at a disadvantage.

If there is nothing further the hearing is adjourned.

(Thereupon, at 2:15 o'clock p.m., the hearing was adjourned).

[fol. 2139] PLAINTIFF'S EXHIBIT 1

Copy No. 81

THE CLOSING OF THE GOLD MINES

(August 1941 to March 1944)

June 1, 1944

Report No. 9

Policy Analysis and Records Branch Office of the Executive Secretary War Production Board

[fol. 2140] WAR PRODUCTION BOARD
Washington, D. C.

May 31, 1944.

Memorandum

To: Mr. G. Lyle Belsley,
Executive Secretary.

From: James W. Fesler, Chief,
Policy Analysis and Records Branch,
Office of the Executive Secretary.

The attached study, *The Closing of the Gold Mines, 1941 to 1944*, records the history of one of many attempts by the War Production Board to meet labor, material, and equipment shortages by curtailing production of commodities adjudged to be low on the ladder of essentiality. Many interesting policy and administrative problems are raised by the report: the monetary importance of continued gold production; equal sacrifice among allies; coordination of manpower controls and production controls, though each is assigned to a separate agency; validity of by-product production as an excuse for continuation of production of an unneeded commodity; the relation of "unusual hardship" appeals cases to the effectiveness of promulgated policies of the Board; the participation of labor production officials in major policy decisions of the War Production Board; the administration of industry-regulating orders by Board officials who lack full sympathy with the policies expressed by the orders; and the role of the War Depart-

ment in pressing for prohibition of "non-essential" production.

A preliminary draft of this report was prepared on April 14, 1944, and circulated among officials who have actively participated in the formulation and administration of Limitation Order L-208. The comments and suggestions of these officials have been taken into account in preparation of the study in its present form.

All reports of the Policy Analysis and Records Branch are the result of collaboration. The present report was prepared by Miss Marycleire McCauley under the general supervision of Mr. Charles M. Wiltse.

[fol. 2141] I. Introduction

On October 8, 1942, the War Production Board, by Limitation Order L-208, ordered that all gold mining operations in the United States should cease within sixty days. The order defined a non-essential (gold) mine as "any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P-56". The primary reasons for this action were declared to be conservation of critical materials used in such mines and the release of labor and equipment to other nonferrous mines whose products were more essential to the war effort.

Issuance of this order climaxed a long period of storm and conflict in the War Production Board on the problem of most effectively diverting the equipment and labor resources of the admittedly non-essential gold mining industry to areas and industries whose products were vital to the war effort. Controversy over the gold mine closing order was not confined to one segment of the Board. Rather, there were a series of conflicts, from the top to the bottom levels of authority. At top-side, it was a question of policy, a disagreement between civilian and military opinions, between the "hair shirt" and "minimum sacrifice" schools of thought, on the depth to which civilian production, adversely affecting military and other essential needs, should be curtailed. Here the question of closing the gold mines was not of primary importance *per se*. Its importance lay

in the fact that it was a symbol, a more convenient and less easily defensible basis than other nonessential industries, or occupations, such as vacation resorts or professional flower-growers, on which the whole policy question could be focused. The fact that the gold mines were ultimately closed represented a definite and important victory for the "hair shirt", or military point of view.

At lower levels of authority, while the policy question bore some weight, specific controversies arose over methodology of diverting the resources of the industry: (a) whether gold mining should be curtailed, or stopped completely; (b) what criteria should be used to determine "essential" (from the stand-point of by-product nonferrous or fluxing ores) and "non-essential" gold mining; (c) whether the loss of by-product nonferrous metals entailed by stoppage of gold mining operations would be compensated by transfer of labor to other nonferrous metal mines; and (d) whether any labor would, or could, be transferred by stopping gold production.

[fol. 2142] Conflicting personalities were an important factor underlying the whole story. So too was the fact that the War Production Board mining authorities, viewing mine output in the light of essentiality to the war effort, used different criteria in determining mine classification than the generally accepted Bureau of Mines classification.

At the time of the present writing, the gold mines of the United States and its territorial possessions have been closed for some seventeen months—a period sufficiently long to permit balancing the results achieved by the order against the economic casualties incurred. It is the purpose of this report to attempt such analysis; to trace the evolution of Order L-208; to enumerate the benefits anticipated under the order, and to evaluate the effects of the closing of the gold mines upon the production of baser nonferrous metals and upon the economy of the mining communities affected by the order.

However, because gold plays a dual role, being at the same time a monetary standard and a commodity, produced, sold, and bought in the same manner as other commodities, analysis of the effects of the closing of the gold mines, with all attendant confusion, cannot be simply a resume of the stepwise processes by which the resources of the gold min-

ing industry were diverted to other base metal industries. Rather, broad political and economic factors must be considered, as well as repercussions upon the whole strategy of economic warfare of an action ostensibly affecting only a segment of the domestic economy. The reverence in which gold has been traditionally regarded over the greater part of the world is important to the background of the whole problem of closing the gold mines. The monetary role of gold is not particularly important from the domestic standpoint. Nevertheless, the collateral effects of a cessation of domestic gold production upon the international finance mechanisms; the delicate balancing of Allied requirements for gold mining machinery against domestic requirements; and the protests of domestic interests against a policy that on the surface gave tacit approval to continuance of foreign gold mining at the expense of the domestic industry, must all be borne in mind.

[fol. 2143] II. Early War Policies on Gold Mining

The competition between the gold mining industry and the baser metal industries in the machinery and equipment markets came to the attention of the Office of Production Management in the early autumn of 1941 and resulted in the exclusion of placer gold mines from priority ratings under Preference Rating Order P-56.

Necessity for granting priority relief to mining machinery manufacturers was recognized as early as May 1941. As the summer advanced, requirements for strategic and critical metals and for the machinery to produce these metals began to outdistance productive capacity. Shortages of both raw materials and facilities threatened to hold production under the level required to supply even the planned two million man army of the United States, much less the imperative needs of the Allies. Germany had invaded Russia in June; Japan moved into Indo-China in July. England was nearing the end of her own resources, and lend-lease material was desperately needed to stem the tide of Axis aggression.

First Priority Control on Mining Machinery; Order P-23.—By July, OPM realized that if metal production was to be expanded, some means of ensuring mining machinery deliveries had to be developed. With the thought in mind

of promoting production of such machinery, on July 29, 1941, OPM issued Preference Rating Order P-23, which assigned an A-3 rating for deliveries of materials needed in the production of mining machinery. The order was selective, and applied only to a special list of qualified mining machinery manufacturers. However, because of the similarity of most metal mining operations in underground drilling and blasting, in loading and transport, crushing and elevation of ores, the same concerns that supplied the coal and base metal mines with drills, explosives, hoists, cages, and screens, also supplied the gold mines. It was estimated that machinery for gold mines had been supplied by at least ten of the manufacturers permitted to use the A-3 preference rating under Order P-23. The order was intended merely as a temporary expedient, and was scheduled to expire on November 30, 1941. After a short period of administration of the order, it was discovered that an extremely small percentage of new mining equipment went into gold mines; but the use in gold mines of maintenance and repair equipment was considerably larger.

Exclusion of Gold Placer Mines from Priority Ratings for Maintenance and Repair Equipment: Order P-56.—By September, the necessity for providing for maintenance and repair equipment, as well as production of new equipment, for the mines, was generally admitted, and on September 17, Preference Rating Order P-56 was issued. Under this order, each mine whose operations were "important from the standpoint of defense or essential civilian needs" [fol. 2144] was granted a serial number, and could then apply for a priority rating under the order. A preference rating of A-1-a was assigned to deliveries of repair material to a mine in the event of an actual breakdown, to minimize the delay in resumption of production. Other deliveries of essential material and supplies to a mine were given an A-3 rating, while mine supplies and repair parts in general were assigned on A-8 rating. Order P-56 covered approximately 15,000 mines and was intended to facilitate an uninterrupted flow of mine products essential to the defense effort.

Gold placer mines were not granted serial numbers, and were therefore shut off from the priority benefits of Order P-56.

The reason for this exclusion, according to Wilbur A. Nelson, then Priorities Specialist and Administrator of Order P-56, was "that we felt that we must start restricting mining activities where they were not essential to the production of materials needed in a defense effort."[1] A further reason for exclusion of the placer gold mines was that placer operations could be (and often had been, seasonally) discontinued without deterioration of equipment.[2] It was still possible for such non-serialized placer mines to apply for an A-10 rating under the general Preference Rating Order P-22. In special cases, a placer mine operator was permitted to apply for a specific item of equipment on a PD-1 form, "which we will expedite as promptly as possible, provided he is not asking for an unreasonable amount of material. In other words, we wish to keep the mines going on a restricted basis and not to dislocate any more labor than is necessary,"[3] Wilbur Nelson explained.

There were immediate allegations of discrimination in the exclusion of gold placer mines from ratings under Order P-56. "United States Senators from several Western states and the Governor of one state have come to Washington to try to have the order changed", Nelson reported. However, the most vociferous protests came from Alaska, where placer gold mining was a major industry. Out of a total 7,891 gold and silver producing mines in the United States and Alaska, in 1941, 3,349 were placer operations. In Alaska alone, out of a total of 855 gold and silver producing mines, 799 were placer operations.[4]

Gold placer mining, in contrast to gold lode mining, which is an underground working of auriferous quartz veins in hard rock, consists in the derivation of gold from gravels or [fol. 2145] other stream-borne materials that have been displaced or carried away from original ore bodies. The principal type of modern placer operations consists in

the handling of these gravels by connected-bucket floating dredges. Other methods of placer mining include operation of dragline and power-shoved excavators in connection with dry-land and floating amalgamating and sluicing plants, and such older methods as hand washing, hydraulicking, drift mining (in frozen ground or ancient buried river channels), sluicing, and rocking. Enumeration of placer mines is generally more difficult and less accurate than that of lode mines, because many of the placers are sporadically worked and individually small operations, some employing a single operator on a part-time basis. Thus, while the main reason given for the omission of the gold placer mines from Order P-56 was that placer operations could be discontinued without deterioration of equipment, the virtual cutting off of so large a proportion of Alaska's gold mining industry from obtaining maintenance and repair equipment threatened a major economic catastrophe in that territory. Not only would it seriously affect Alaskan employment, but it would also result in a considerable reduction in the territorial revenue, since in Alaska there was a 3 percent gross production tax on the precious metals, while other mining operations paid only a net income tax.

With regard to foreign gold mines, Wilbur Nelson, using the discretionary authority permitted under P-56, "decided not to issue serial numbers to any foreign gold mines"[5] although such foreign mines were allowed to apply for maintenance and repair parts under the general

[5] "Status of Gold Mining", November 18, 1941 (SPAB Document 12d). On September 22, 1941, D. M. Nelson, Director of Priorities, delegated authority to act for him in the issuance of mine serial numbers. "Preference Rating Order P-56 provides in Paragraph B for the issuance by the Office of Production Management of mine serial numbers to approved mines. I hereby authorize you from and after the date of this memorandum and until this authority is revoked to act for me in the issuance of mine serial numbers to mines in the United States of America, its territories and possessions." Memorandum, Donald M. Nelson, Director of Priorities, to Wilbur A. Nelson, Administrator of Mine Priorities, September 22, 1941. This

A-8 rating that applied to domestic mines. This placed Canada and South Africa, two of the largest gold-producing countries in the world, in a position similar to that of the Alaskan placer industry, and coupled with the fact that shipments of new gold mining equipment to Alaska [fol. 2146] and to the above mentioned countries were scheduled to expire with Order P-23 on November 30, resulted in strong protests from these interests, and raised questions on over-all international policy. In three specific cases, the Policy Committee of the Economic Defense Board protested refusal of mining machinery to foreign countries on the grounds that "political and good neighbor considerations" were important.

Development of Over-All Policy on Gold Mining Equipment.—The status of Canadian gold-mining, under the United States' restrictions was brought before the Joint Economic Committees of the United States and Canada, and after a series of discussions, these committees resolved:

> "(a) Whereas, one of the purposes of the Hyde Park Agreement was to remove the problem of exchange as a barrier to the combined defense effort of Canada and the United States, and
>
> "(b) Whereas, the Hyde Park Agreement is having this effect to a large degree; but
>
> "(c) Whereas, the current production and refining of gold in Canada remain an important means to obtain dollar exchange which is necessary to pay for a large volume of needed war supplies from the United States;
>
> Therefore, the Joint Economic Committees recommend that: Although in the allocation of scarce supplies the gold mining and refining industry should in general be treated as a non-defense industry, wherever priorities or allocations would, through curtaining gold production, diminish the supply of exchange for vital

---

memorandum was actually written late in October but was mödated to the time when Wilbur Nelson began exercising the delegated authority on verbal instructions from the Director of Priorities. Wilbur A. Nelson, in an interview with the writer, April 21, 1944.

imports, this prospective deficit should be prevented:

(1) By increasing the purchase of defense articles or by other methods which will maintain the exchange position in the spirit of the Hyde Park Agreement; or

(2) By such particular modification of the system of priorities and allocations as will permit the continuance of gold production to prevent the deterioration of the exchange position." [6]

[fol. 2147] It was now decided within OPM, not to continue Order P-23 after its November 30 expiration, but to incorporate certain of its provisions in Order P-56. This would, of course, prohibit gold placer mines from obtaining new equipment, as well as maintenance and repair equipment, since under the proposed amendments to Order P-56 the Director of Priorities could at his discretion forbid the use of A-ratings for manufacture of any gold-mining machinery. A supplementary order, P-56-a, to replace P-23 was prepared, with new serial numbers to replace those that had been listed under Order P-23, but as it was clear that this order could not be issued by November 30, the expiration date of Order P-23 was advanced to December 31, 1941.

Meanwhile, the policy questions involved in the matter were under active consideration. The Clearance Committee asked Donald M. Nelson for a "policy determination, perhaps by SPAB, giving preference to copper, iron ore and coal mining as against gold mining." [7] On November 18, a document of the Supply, Priorities and Allocations Board declared that "A general announcement of policy toward gold mining is needed. Otherwise, specific administrative actions will be questioned by the mines as unfairly discriminatory. This is particularly necessary if the purchase of new machinery for gold production is to be

[7] Memorandum, Stanley Phraner, Clearance Committee, to Donald M. Nelson, November 23, 1941.

virtually prohibited after November 30."[8] Several alternative methods of handling the problem were suggested:

"(a) Continuation of the right of lode gold mines to use the A-8 rating under Order P-56 could be made entirely discretionary with the Director of Priorities. The guiding principle might be established by SPAB of requiring their purchases to be held to the bare minimum necessary to prevent disastrous shut-downs. SPAB might also wish to establish a separate test of eligibility in terms of the amount of other more useful metals that are produced jointly with gold. For example, if the selling value of the essential metals is 25 percent and that of gold produced 75 percent, the mine might be permitted to buy machinery and supplies on the same basis as other essential metal producers. Or the minimum ration might be set at 40 percent in the value of other metals, and 60 percent gold. The intent would be to avoid any discouragement to production of the essential metals.

[fol. 2148] "(b) An alternative, and more drastic, policy would be to eliminate all domestic gold mines, whether lode or placer, from Order P-56 and also from the general repair Order, P-22. Gold mine operators would thus be forced to buy repairs and supplies without A-ratings, but could apply for special help on form PD-1. It is quite possible that only very gradual declines in output and employment would result, because of managerial ingenuity. Here again, exceptions could be made for mines producing other metals.

"(c) In lieu of any blanket privileges to foreign mine operators, all foreign mine needs could be reviewed continuously with the Economic Defense Board, so that considerations of inter-American and British American policy could be consistently applied to decisions authorizing or forbidding shipments of gold-mining machinery and repair parts. No serial numbers authorizing several purchases would be issued, but

---

[8] "Status of Gold Mining", November 18, 1941 (SPAB Document 12d).

applications for individual shipments would be entertained. Here again, the specific quantities of burdened material (which are not large) are not the issue, but the political considerations involved and the question of treating non-essential industries consistently are paramount. In the special case of Canada, the Joint Economic Committees could secure all relevant statistical data.

"(d) Some special basis of treatment might be worked out for Alaska, where gold-mining assumes the proportions of a major industry. To cut off suddenly all shipments of new equipment needed for replacement, and to make it unduly difficult to secure supplies, might have several effects upon employment in Alaska, and upon the revenues of the Territory. The Labor Division might be asked for a formal opinion on the probable impact upon employment in the Territory of . . . suggested restrictions. The Territorial Government could also be asked for a formal report on the importance of gold-mining, with all relevant statistical data."

As a necessary preliminary to any over-all policy declaration, it was believed that the Treasury Department should be asked for "an immediate informal opinion on the significance of new gold production to monetary policy."

[fol. 2149] On November 25, the Economic Defense Board stated that because the United States was allowing "$35.00 to accrue to Canada's credit for every ounce [of gold] she delivers", Canada was "finding it . . . advantageous to apply precious labor, capital, supplies and power to gold mining, even giving to this industry substantial aid in the form of (a) Tax concessions, both under the corporation income tax and under the excess profits tax, and (b) Preferred priority ratings." Further, this Board suggested that "the question of exports of machinery for Canadian gold mines presents an opportunity to reduce now a problem raised by the very grave weaknesses of United States gold purchase policy . . . . The Canadians have shown reluctance to reduce substantially their production of gold while United States gold producers are

still going full blast. The Canadians point out, quite accurately, that there is no economic or financial reason whatever for the continuation of United States gold production, since there is no foreign exchange problem within this country . . . . We can assist Canada's war effort by declining to ship machinery for gold mines and at the same time making a financial arrangement which recognizes Canada's grave inability to pay now in useful goods and services."[9]

The preceding day, at a meeting of the Financial Division of the State Department, the consensus of opinion of representatives from the Treasury Department, the Federal Reserve System, and the Office of Production Management, was reported to be:

> "(1) That preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output, and to refusing equipment for any expansion of output, subject to exceptions in cases where extraordinary hardship might result, as in the case of isolated communities having no alternative forms of employment;
>
> "(2) Preference ratings for exports of gold mining equipment should be made to depend on a showing that the maintenance of the present level of gold production is necessary.
>
> (a) To supply dollars for an otherwise deficit dollar position in the balance of payments of the country (or as in the case of South Africa) for the dollar position of the sterling area, or
>
> [fol. 2150] (b) For special political reasons;
>
> (c) To give effect to the foregoing conclusions, no general priority ratings for gold mining equipment, including repair and maintenance parts, should be granted, but individual consideration should be given to each application on its merits, unless adequate

compliance investigations can be made (particularly in Canada) as is done in the United States." [10]

On December 2, the Supply, Priorities and Allocations Board directed Donald M. Nelson to obtain the official opinions of the State Department, Treasury Department, Federal Reserve Board, and Board of Economic Warfare on "supplying gold mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit positions." [11] Nelson carried out these instructions in a letter addressed to the foregoing agencies and departments on the following day, and on December 23 reported the summary of the opinions received as follows:

"(1) In a war economy labor, materials and machinery applied to gold production are largely wasted. Moreover, dollars made available through Lend Lease, R. F. C. and stabilization loans, etc., have made gold unnecessary as a provider of dollar exchange. Therefore:

(a) Nothing should be allowed for expansion, although minimum amounts for maintenance and repair should to some extent be provided.

(b) Only high-grade ores or those yielding high percentages of other minerals useful in the war effort should be mined.

(c) Labor, materials and machinery should be converted to more vital production except where extreme political or economic hardship would result.

[fol. 2151] "(2) In-the-ground purchase of gold is neither necessary nor desirable. It is an experiment which raises serious complications and not only fails to solve the present problem but also presents a new one for the post war period.

---

Coe; *Federal Reserve System*, Walter R. Gardner, Charles P. Kindleberger; *OPM*, L. A. Morrison, Dennis E. Pickens, Shaw Livermore.

[11] Minutes, Supply, Priorities and Allocations Board Meeting XIV, December 2, 1941.

"(3) Agreements should be entered into with gold producing countries to the end that they do not divert labor, materials and machinery from more essential uses to gold production." [12]

While all of the agencies were unanimously of the opinion that "gold mining is hardly justified except where special conditions surrounding a particular case make a maintenance or increase in gold production desirable", and that "domestic gold production in wartime serves no military purpose but does consume labor and materials that have usefulness in military production, particularly in the mining of scarce metals",[13] the Board of Economic Warfare went beyond this. Milo Perkins reported that "in dealing solely with the question of gold mining equipment, there is a danger of losing an opportunity both to solve the longer-term aspects of the gold problem and to maximize the joint war effort. Such an opportunity exists now. The United States can and should use the power that it derives from being practically the sole buyer of the yellow metal in order to initiate a program of a gradual reduction in gold production. Such a program would contribute to maximization of the joint war effort and, at the same time, would facilitate a solution of the post-war gold problem. . . . It is essential . . . that a reduction in gold mining should be envisaged for the post-war period." [14]

On December 23, the Supply, Priorities and Allocations Board adopted the spirit of the recommendations. "It was the judgment of the Board that in view of the military program only limited priorities and export licenses should

---

[13] Letter, Henry Morgenthau Jr., Secretary of the Treasury, to Donald M. Nelson, December 15, 1941. Letters from the State Department; the Board of Governors of the Federal Reserve System and the Board of Economic Warfare concurred in these conclusions (SPAB Document 19b).

[14] Letter, Milo Perkins, Executive Director, Economic Defense Board, to Donald M. Nelson, December 19, 1941 (SPAB Document 19b).

be granted to the gold mining industry", and it was agreed "that in granting priorities and export licenses for gold mining machinery, materials should not be allowed for expansion of production although minimum amounts for maintenance and repair may be provided."[15]

[fol. 2152] On December 31, 1941, Order P-56-a was issued, replacing Order P-23. A preference rating of A-3 was assigned to all types of mining machinery and equipment. Serial numbers which had been issued under P-23 were to be replaced by new serial numbers upon application of the manufacturer, although this was optional; the manufacturer could operate simply by extending the individual ratings he received from mines under Order P-56. The new serial numbers for mining equipment were based upon the use for which such equipment was intended: lead mining, copper mining, coal mining, etc. This, in effect, allowed the Director of Priorities discretionary authority in the assignment of the serial numbers, and in the actual assignment of such numbers, gold mining equipment came in last. On December 18, the general Preference Rating Order P-22 was replaced by Order P-100, which liberalized the provisions of the old P-22 so far as essential users were concerned, but by the same token tended to leave gold mining at the tag end.

Impact of Pearl Harbor Upon Mining Equipment Requirements.—After Pearl Harbor, the whole metals and mining machinery problem became acute. In the first few months of 1942 the war with Japan was not going well; sources of large supplies of alloying materials, especially chrome and manganese, were cut off by enemy action, while steel requirements skyrocketed. The metals and fabricating equipment necessary to produce mining machinery were at a premium, and used mining equipment was pitifully short of requirements. At the same time, it was necessary to continue to expand domestic copper, lead, and zinc production not only to replace the supply cut off by enemy action, but to meet the enormously enlarged Army requirements. On January 15, 1942, the Supply, Priorities and Allocation Board amended its previous policy of expedit-

[15] Minutes, Supply, Priorities and Allocations Board, Meeting XIX, December 23, 1941.

ing "expansion of copper production to the maximum that can be obtained by the middle of 1943 . . . to urge expansion within the next few months to the maximum that can be obtained by the middle of 1944." [16] The same policy of all-out expansion was followed with the other critical metals and minerals. Expansion necessarily meant the opening of new mining enterprises, and maximization of existing mining activities, both of which required additional mining equipment when the supply was already inadequate for existing operations. E. R. Rott, Deputy Administrator of Order L-208 states that: "December 1941 and January 1942 were marked by activity in collecting information as to requirements of gold mines for continued operations. Restriction on priority assistance was increased." [17]

[fol. 2153] In a letter to the Chairman of the War Production Board, writen on January 20, 1942, Wilbur Nelson, Administrator of the Mining Branch, asked that the branch be given "clear-cut authority . . . to make final decisions" in the sale of mining machinery for use both in domestic and foreign mines.

> "The point is that no single agency will take responsibility in making decisions on policy, particularly with reference to foreign mines outside of North and South America (e.g., South Africa). I have made decisions myself, but without clear-cut authority. In each case such decisions have restricted or prohibited the shipping of items to gold mines. The Mining Branch should have such authority to make final decisions. We must have this power if we are to divert the limited supply of mining machinery into the most important channels, both domestic and foreign. There are other types of mining besides gold which may also have to be given harsh treatment in future months." [18]

In February 1942, the Office of Lend-Lease Administration joined in the general plea for prohibiting essential

---

[17] Edward H. Rott, "Report on Gold Mine Order L-208, Its Effect and Accomplishments", May 24, 1943.

[18] Memorandum, Wilbur A. Nelson to Donald M. Nelson, January 20, 1942.

equipment and material to gold mining operations. While E. R. Stettinius, Jr.: Administrator of the Office of Lend-Lease Administration was primarily concerned with the supply of such items to foreign countries, he stressed the non-essential nature of gold-mining generally:

"Originally the British asked us for 100,000 tons of steel to increase their South African gold production. Naturally, in view of the steel and shipping shortage here, we turned them down. However, one of the most acute shortages in this country is nitroglycerin which is used extensively in gold mining. In addition, gold mining requires large amounts of hardened steel and the use of a considerable body of capable mining labor which might well be used in other fields.

"In order to divert this extremely valuable stockpile of men and material *we would like to suggest that both nitro-glycerin and hardened steel be denied the gold mining companies for the duration of the war. If we could set this example in the United States it might be possible to speed up the whole British war effort by getting the British to concentrate on the production of war materials rather than on the production of dollars* as exemplified by their request for 100,000 tons of steel for gold mining in South Africa.

[fol. 2154] "In order to allay their fears of a shortage of dollars for exchange it might be possible to make them a loan based on future gold production, or better still, to buy their normal production for the next two years in the ground, said production to be delivered to us when the war is over. *The important thing is to put to war uses the men and labor supply that are now being consumed in gold mining.*" [19]

Nelson replied that:

". . . The decision on the large volume of requests for material and equipment on the part of South African gold mine operators will have important economic and political implications. Under these circumstances and in view of several communications received from General Smuts in the last few months, the Board of

[19] Letter, E.R. Stettinius, Jr., to Donald M. Nelson, February 11, 1942. (Underlining added).

Economic Warfare is now in the process of preparing an agenda of specific subjects to be investigated by a commission which it is contemplated will be sent to South Africa and which General Smuts has indicated would be most welcome. I understand that one of the principal subjects for investigation will comprise the possibilities and requirements for the development and operation of mines both in the Union itself and in Rhodesia for the production of copper, chrome, asbestos, manganese and other available materials required for the war effort.

"Pending a final decision on a general policy, together with the receipt of further information from the South African gold mines concerning the circumstances surrounding their requirements, little or no equipment or materials including nitro-glycerin are being exported to South African or other foreign mines."[20]

---

[20] Letter, Donald N. Nelson to E. R. Stettinius, Jr., February 24, 1942. The Lend-Lease Administration's reply to this letter mentioned the fact that "A member of our staff who attended a recent meeting of Mr. Batt's Requirement Committee stated that some mention was made at one of these meetings that there had been some form of directive received from the White House relative to furnishing supplies for the maintenance of the South African gold fields at their current level of operation. We have not seen the purported directive, but it may be that you will wish to check into that." Letter, T. B. McCabe, Deputy Administrator, Office of Lend-Lease Administration, to Donald M. Nelson, March 2, 1942. No other reference to this directive has been found. The Minutes of the Requirements Committee simply state: "A mission is being sent to South Africa to assist in converting equipment and men from work in gold mines to the extracting of copper and other materials needed for the production of munitions. It is recommended that the South African gold mines be granted priorities for basic maintenance but not for expansion. Conversion is to be stimulated by paying more than recent market quotations for the desired materials." Minutes, Requirements Committee, Meeting II, February 18, 1942 — Statement of Lt. Col. R. B. Lord, Assistant Director and Chief of Operations, Board of Economic Warfare.

[fol. 2155] On February 18, John P. Gregg, Chairman of the Clearance Committee, wrote to C. H. Matthiessen, Jr.:

> "The Committee is of the view that the restrictions with respect to materials to be used in the mining of gold and silver are not sufficiently restrictive and that a limitation order should be drafted forthwith to stop production of gold and silver in the United States, appropriate consideration being given to the continuance of such production in Canada, Mexico, South Africa, and other areas now permitted to obtain materials and equipment from this country under Lend-Lease or direct purchase." [21]

With the mining equipment shortage so acute, and in view of the fact that top-side policy decreed that shipments of mining equipment to foreign countries must be maintained, it became necessary to revise order P-56 so as to uprate for essential mines and to reduce priority ratings for non-essential operations.

Exclusion of all Gold Mines from Priority Ratings Under Order P-56.—On March 2, 1942, Preference Rating Order P-56 was amended to up-rate the priorities on machinery for essential mines. This uprating followed seven steps:

(1) The A-1-a rating for repair of actual breakdowns was continued;

(2) An A-1-c rating was assigned to deliveries to essential mines of repair parts for essential machines;

(3) An A-1-c rating was assigned to deliveries of other repair parts and to other mines when necessary to avert breakdowns;

(4) The A-3 rating formerly in effect was withdrawn;

[fol. 2156] (5) The A-8 rating for other repairs and for material for maintenance and operating supplies for essential productive purposes was continued;

(6) An A-10 rating was assigned for repair, maintenance and operating supply material not closely connected with production (office supplies, etc.).

---

[21] Memorandum, John P. Gregg to C. H. Matthiessen, Jr., February 18, 1942.

(7) Gold and silver mines were excluded from the ratings assigned by the order.

The clause relating to gold and silver mining described as a mine eligible for ratings:

> "Any plant actually engaged in the extraction by surface, open-pit or underground methods, or in the beneficiation, concentration or preparation for shipment of the products of mining activity, but not including any plant more than 30 percent of the production of which in dollar value consists of gold and or silver."

This exclusion of gold and silver mines resulted in the cancellation of 373 serial numbers held by mines producing gold [22] and caused a veritable deluge of protests from the mining industry. It was, of course, still possible for mines excluded from P-56 to apply for equipment under the general repair, maintenance, and operating supplies order, P-100, but with demand for the desired equipment far under the available supply, the possibility that the equipment would thereby be obtained was rather remote.

On March 12, 1942, a meeting on priorities for mining machinery was held in Nevada, with the Senators, Representatives, Governors, and mining experts from the western mining states, and Dr. Wilbur Nelson, Chief of the Mining Branch of the Materials Division of WPB in attendance. The Governor of Nevada stated the purpose of the meeting to be the "bringing of our views and problems relative to recent mining priority ratings before the War Production Board." [23] After a review of these views and problems by Governor Carville of Nevada and others, Dr. Nelson stated the policies of WPB with regard to Order P-56, and particularly on the 30 percent exclusion clause.

[fol. 2157] "I am administering the amended Order P-56, containing the '30 percent' clause which has excluded gold and silver mines. However, there is a relief clause in this

---

[22] Edward H. Rott, "Report on Gold Mine Order L-208, Its Effect and Accomplishments", May 24, 1943.

[23] Minutes, Meeting on Priorities, University of Nevada, March 12, 1942.

order, as there is in every order passed. That clause permits those who feel the order is doing them untold damage to apply for relief.

"In accordance with this order, when it was passed on the second of March, I notified those mines which were primarily gold and silver producers. There is no desire on the part of any one in the Priorities Division or in the Materials Division of the War Production Board, the two divisions concerned, to cut down for one minute the production of copper, lead, or zinc, which are the three things that are primarily tied into our production of gold and silver. I can assure you that where any mines are producing appreciable amounts of copper, lead, or zinc (and great amounts are needed for the war effort), irrespective of the amount of gold and silver produced along with these strategic metals, those mines will get back their priority ratings. I do not mean to say that every mine will get back its priority rating. I don't want to be accused of making promises. A mine producing nothing but gold, unless it can be shown that it is a siliceous flux for a smelter and that the smelter cannot get along without it, will have to work on a lower priority rating.

"Now, there are many people working today satisfactorily on the A-10 rating which any mine can get under Order P-100. They can get all the powder they want under A-10 or without rating, they can get all the grease they want.

"I know you are all wondering why all of the mines cannot have what they need. The answer is the mining machinery situation. The makers of mining machinery have the finest machine shops in the United States, and every one of them has been in part, you might say, taken over by the Army and Navy. The capacity of every mining machinery plant in the United States is taken up in part in making munitions and machine tools or parts of machine tools." [24]

Nevertheless, the turmoil continued. By May, the opposition to the 30 percent exclusion clause had coalesced into

[24] Quoted from original text supplied by Wilbur A. Nelson. Differs only grammatically from the version recorded in the minutes of the meeting, cited in the preceding footnote.

a powerful lobby, and the matter was taken up in a series of hearings before the Senate Special Silver Committee.[25] [fol. 2158] Out of these hearings several facts emerged:

(1) That the 30 percent exclusion percentage had been arbitrarily chosen in order to "get complete information on all the gold and silver" so that a survey of the essentiality of those mines might be made;[26]

(2) That the psychological influence of the 30 percent clause would detract from the opening of new strategic metal mines, since it removed a considerable part of the profit incentive;

(3) That, because the siliceous ores yielding gold and silver also produced fluxing materials absolutely necessary to the smelting of copper, lead, and other metals, the closing of the gold mines would necessitate the opening of quartz mines or other sources of flux, so that the benefits derived from closing the gold mines as a result of lack of equipment would be cancelled out by the cost and new equipment required to open the new fluxing ore mines.

Appreciation of the importance of fluxing materials and other products associated with gold production depends upon an understanding of the metallurgy and mining processes of gold. The domestic supply of new gold is obtained chiefly from two sources: (1) dry and siliceous ore, and (2) placer gravel. These two sources yielded 87 percent of the output of gold in the continental United States in 1940.[27] The dry and siliceous gold-bearing ores may yield gold alone, or may, in addition, yield copper, silver, lead, zinc, and arsenic, as well as small percentages of other metals. Dry and siliceous ores, according to the Bureau of Mines, include "both dry siliceous and irony, but chiefly siliceous ores, valuable for their gold and silver content . . .

and dry fluxing ores carrying considerable quantities of iron and manganese oxides or iron sulfides; and very small quantities of gold and silver."[28]

Where large deposits of ores high in gold content occur, the gold is mined solely for its own value, and the baser metals are recovered as by-products. Where the gold content of the ore is small in proportion to other metals, gold [fol. 2159] is recovered as a secondary product, the dollar value of the precious metal providing a profit incentive to compensate for the production costs of the baser metal. Dry and siliceous fluxing ores are essential to the smelting and refining of certain non-ferrous metals, particularly copper, nickel, and zinc. Here the yellow metal is scrupulously recovered from the slime resulting from the refining process, the high price of gold ($35 per fine ounce) adding substantially to the total profit obtained from the production of the baser metal. It is estimated that about 15 per cent of the total gold production, and 80 per cent of the total silver production of the world are recovered as by-products from copper, lead, nickel and cobalt refining.[29]

---

[28] *Ibid.*, p. 76.

[29] T. E. Veltfort and B. B. Caddle, Copper and Brass Research Association, "The Copper Industry," in John G. Glover and William B. Corneli (eds.), *The Development of American Industries* (1941), p. 427. According to Veltfort and Caddle, a typical blister copper slime (blister copper being obtained by a "flotation process" from ores where the copper occurs as copper or copper-iron sulphides) will have about the following composition:

Metal	Percent	Ounces Per Ton
Silver	42.23	12.610
Gold	.234	68.4
Copper	13.86	
Arsenic	3.88	
Antimony	2.46	
Selenium	1.46	
Tellurium	6.14	
Lead	3.96	
Bismuth	0.26	
Iron	0.22	
Nickel	0.27	

From the above table, it is evident that the by-product gold and silver contribute a not inconsiderable amount to the total profit obtained from the mining and refining processes.

Governor Osborne of Arizona, describing the situation in his state, said:

> [fol. 2160] "Here is the situation in my State. We have any amount of small operators that are shipping gold and silver. Maybe that ore does not carry any other metallic content; however, that goes to the smelters. They have to have it for flux. If they don't get that ore they will have to provide their own flux and that will take new machinery. So isn't it better to . . . take that ore and get some money out of it, rather than have to get new machinery and produce fluxing rock that has no metal at all?" [30]

Governor Maw of Utah stated:

> "We have one of the largest copper mines in the world, but not counting that, the silver and gold mines produce ten million ounces of silver a year, one hundred fifty million pounds of lead, eighty-seven million pounds of zinc. Yet the value of the gold and silver is 40.8 percent of the total value of the ore taken out. That would mean . . . if the order were enforced, every single gold and silver mine in Utah except one small one . . . would be closed down . . . Forty percent of the people of Utah are dependent almost entirely on the mining industry for their livelihood. Shut down our silver and gold mines, and we will be moving out." [31]

The Governor of Idaho stressed the dependence of his state upon mining activities for revenue:

> "We have about five million dollars annual production in gold. We collect not only ad valorem taxes and income taxes, but we have them [the mines] pay us a 3 percent tax on the gross output of their mines. Our budget in Idaho is made up on the anticipated revenue from that gold, and if this revenue were taken away

---

[30] Minutes, Meeting on Priorities, University of Nevada, March 12, 1942, Statement of Sidney B. Osborne, Governor of Arizona.

[31] *Ibid.*, Statement of Herbert B. Maw, Governor of Utah.

from us, it would of course upset our revenue and budget in our State. . . . If you need the machinery to make guns to help us win this war, you take that machinery. We can close our gold and silver mines, and we will develop our State of Idaho after the Japs and the Germans and Italians have been whipped."[32]

Senator Pat McCarran deprecated the sending of mining machinery to foreign countries while denying it to domestic interests:

[fol. 2161] "Mining machinery was shipped out of this country during the months of October, November and December. In October, $1,843,454 worth. In November, $1,236,186 worth. In December, after Pearl Harbor, we shipped out of this country $2,174,673 worth of steel and mining machinery. Now, it is getting so scarce we cannot have it at home. Where are they shipping it and why?"[33]

In response to a query as to where the 30 percent figure came from, who is responsible for it?", Wilbur Nelson replied:

"The orders are drawn by the Priority Division, not by the Materials Division. I am in the Materials Division."[34]

All of these statements were corroborated, and enlarged at the Senate hearings in May, and the pressure became overwhelming, despite the fact that Wilbur Nelson reported that, "Slightly over 300 serial numbers were withdrawn from mines producing gold and silver, and over 200 were reinstated."[35] On May 15, 1942, the definition of "mining enterprise" in Order P-56 was amended to include any plant "actually engaged in the extraction by surface, open-pit or underground methods, or in the beneficiation, concentration or preparation for shipment of the

products of mining activity." The elimination of the 30 percent clause removed psychological, rather than actual, deterrents to obtaining mining machinery, and it was stated at the time of the issuance of the amendment that the change in language would "have no practical effect, as no person can use the ratings assigned; unless a serial number is assigned by the Director of Industry Operations, and gold and silver mines which produce no substantial quantities of critical materials have not been and will not be issued serial numbers."[36]

[fol. 2162] III. Evolution of Limitation

Order L-208

After the removal of the 30 percent clause from Order P-56, there was no mandatory restriction on the granting of priority assistance to gold mines, and what restriction there was lay in the discretionary power of the Director of Priorities to issue serial numbers for the various ratings under Order P-56. Approximately 373 serial numbers had been cancelled under the 30 percent exclusion clause. In the period between March 2 and May 6, 1942, 121 of these were reinstated. The criteria for reinstatement, according to Edward H. Rott, Deputy Administrator of Order L-208 was "based on the amount of strategic metals produced along with the gold or the necessity of the production of the mine for smelter flux."[37] Non-serialized mines were slowly being starved for machinery. In April, the Chairman of the Requirements Committee, in approving uprating for essential mining machinery, had directed that "Gold and silver mines are to receive repair parts only and are not to receive new machinery to replace old equipment or to expand production."[38] As these non-serialized mines were increasingly unable to secure equip-

[38] Minutes, Requirements Committee, Meeting XIX, April 3, 1942.

ment with their low priority ratings, some curtailed operations, others closed down. However, a new critical shortage was developing, over and above the need for equipment. This was a general shortage of labor in the western nonferrous metal mines.

Shortage of Labor in Nonferrous Metal Mines.—Mine labor supply had remained fairly stable during the first quarter of 1942, but with the beginning of the second quarter, war industries, Army construction projects, and Selective Service began to drain labor from the mines. Gold mines were no exception to the general migration of workers, tempted by high wages, to the West Coast shipyards and airplane factories. By April, when the large construction projects sponsored by the Army went into operation, a general manpower shortage in the nonferrous metal mines threatened. However, because copper was at this time most critical, with expanding Army requirements left begging, the plea for more labor for the copper mines became most urgent, and the matter reached the top levels of the government.

Several factors contributed to the outmigration of labor from the mines: (1) Higher wages in government [fol. 2163] projects and defense industries;[39] (2) the workings of the Selective Service System; (3) fear of the possibility of freezing of wages or freezing of men in jobs; (4) lack of adequate living and working conditions in the new mining areas (particularly acute in the case of housing facilities); and (5) wage disputes between unions and companies.

For these reasons, labor accessions at the mines began to fall below the number sufficient to maintain current production levels, much less to increase total production. In approximately 50 mining establishments for which data were received by the Bureau of Employment Security in May, total employment actually decreased about 340, although more than 4,000 workers were known to have been

[39] Daily earnings on construction projects proximate to the mines ranged between $12 and $15 as compared with earnings of $5 to $7.25 in the mines. A similar difference prevailed between wages in war industries and those in the mines.

hired in the 60-day period prior to May 31. During the entire second quarter of 1942, withdrawals amounted to 13 percent of total employment, there being, on an industry-wide basis, approximately 11 withdrawals for every 10 hires. In June, the Tacoma plant of the American Smelting and Refining Company reported that it would lose by July 1, production of 2,000 tons of copper per month due to the loss of men, some 200 having already departed. The Butte operations of the Anaconda Copper Mining Company were maintained at full force only because of the transfer of labor from zinc to copper mines. Kennecott Copper operations in Utah, and the Morenci, Bisbee and Douglas operations of the Phelps Dodge Corporation in Arizona, reported serious loss of labor.[40] On July 25, current copper operations were declared to stand absolutely in need of 1,000 more workers, while planned expansion of mining facilities would require 3,000 additional workers. Lead and zinc mines were reporting a current shortage of 2,000 workers.[41]

While hindsight reveals that the shortage of zinc, and perhaps also of copper, was to a certain extent statistical rather than actual,[42] the need for additional labor was real at this time, and the War Production Board, through its Labor Production Division; the War Manpower Commission; and the Army and Navy undertook a series of steps to augment the labor supply. There were several courses of action open. (1) to attempt to hold labor at the mines; (2) to recruit additional mine labor from out- [fol. 2164] side areas; (3) to prevent recruitment by other war industries of workers in the mining areas; (4) to transfer workers from nonessential mines to the nonferrous mines; (5) to utilize aliens and Mexican labor in agricultural regions of the West in order to release addi-

tional workers for employment in the mines; and (6) to urge the Army to furlough enlisted soldiers for work in the mines.

Various efforts were made to hold labor at the mines and to recruit additional outside labor. Labor management committees were set up in the mining areas. The Labor Production Division of WPB, in cooperation with the Labor Morale Section of the Services of Supply of the War Department, arranged a series of publicity programs designed to impress miners with their patriotic duty of remaining at their posts. On June 3, 1942, a celebration for this purpose was held in Butte, Montana. On June 13, Donald M. Nelson, in a radio address to a Miner's Day rally at Butte, formally launched the War Production Drive in the nonferrous metals industries.[43] In spite of these efforts, and inducements offered by the mine operators to new labor in the form of promises of better housing and transportation of miners and their families to the new mining areas, the labor supply continued to decline. Miners accepted the transportation to the mining areas, worked a few days or a week, and went on to the more lucrative jobs on the Coast. There was no authority to force them to remain at a job.

Efforts to handle the labor situation were for the most part uncoordinated until July. Early in that month, at the suggestion of the Labor Production Division of WPB, a meeting of those interested in the problem was called by J. P. Mitchell of the Manpower Branch, Army Services of Supply.[44] In a report dated July 8, 1942, the group out-

lined a joint program of responsibility on the problem of increasing mine labor supply. A recommendation, submitted by the Services of Supply of the War Department, urged immediate action.

[fol. 2165] It was agreed that the War Manpower Commission be assigned responsibility for recruitment of additional mine labor, maintenance of existing labor supply, transfer of unemployed iron miners and coal miners to the copper mining regions, utilization of alien and Mexican labor in agricultural regions of the West to release additional workers for employment in the mines, and arrangement for Selective Service deferments for mining operations.

The War Labor Board was urged to eliminate the wage element in the problem by accelerating settlement of wage disputes. The War and Navy Department and the Army and Navy Munitions Board were asked to cooperate with the War Production Board in securing employer, labor, and community backing for a morale-building program for the mines, to "use their influence to have their contractors desist from further recruitment of workers in the nonferrous mining areas," and "to give formal endorsement and backing to the program" as outlined by the committee.

The War Production Board, in addition to using the full force of its War Production Drive to form labor-management production committees in the mines, and to impress workers and mine owners with the necessity of cooperating

with the United States Employment Service and the War Manpower Commission in labor recruitment, was assigned responsibility for curtailing gold production.

> "Production of gold," the committee reported, "with the exception of required amounts of essential siliceous gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines which are essential to the war effort. In special cases where smelter operations may be severely handicapped by lack of sufficient fluxing ores or diluent, it may be necessary to permit limited production of siliceous gold-bearing ores." [45]

The War Manpower Commission was to have responsibility for the "orderly transfer of workers in gold mines and other nonessential industries to the non-ferrous mines." [46]

Proposal to Curtail Gold Mining Operations.—The question of curtailing gold production was now out in the open, with the benediction of many government agencies. The Labor Production Division of WPB went to work to gather background data necessary for such curtailment. On July 13, Bela Low, a mining engineer retained by the Raw Materials Section of the Labor Production Division, summarized the case for retaining gold production as a source of fluxing ores in a memorandum to Allen Buchanan, Chief of the Section:

> [fol. 2166] "Regarding the question of curtailing production of gold and silver, there may be specific instances where such properties ought to be kept in operation because their ore is useful as a flux, but as you will note . . . the proportion of such properties will evidently be very small.
>
> "According to Minerals Yearbook, year of 1940, ore, old tailings, etc., treated in amalgamation and

[45] Memorandum, H. O. King to A. I. Henderson, July 25, 1942.

[46] *Ibid.*

cyanidation mills amounted to 16,078,947 tons, from which 2,003,466 ounces gold were recovered.

"Siliceous gold, gold-silver and silver ores shipped to smelter during the same year amounted to 973,820 tons, from which 262,676 ounces gold were recovered.

"Of the siliceous gold and silver ores produced in the United States, 94.3% were thus treated in mills, while 5.7% were shipped to smelters."[47]

Using this estimate of a small proportion of siliceous fluxing ores necessary for other nonferrous ore smelting, the Labor Production Division prepared a program for curtailing gold mine operations. On July 31, Richard A. Lester outlined this program in a memorandum to A. I. Henderson.

Lester defined the purpose of the curtailment as the "release of labor and facilities for nonferrous metal mining", and the conservation of "critical material for which priorities are now being granted for maintenance, repair and operating supplies." A gold mine was defined as "property on which the value of the recoverable gold content is three times or more the total value of all other recoverable metal content, at the price prevailing on the effective date of the order."

In this definition, which classified mines on the basis of the dollar value of the metal produced, lies the beginning of a controversy that eventually beclouded the whole issue of closing the gold mines, aligned labor and mining officials on opposite sides, and led to unnecessary bitterness in both camps. For almost a year WPB mining officials had been evaluating mine output not in dollars but in terms of the needs of the war program. A mine deriving 75 percent of its income from gold and 25 percent from copper would be a gold mine on Lester's definition, but if the actual output of copper were appreciable, the Mining Branch would classify the same operation as a copper mine.

Only lode mines were included in the proposed curtailment, presumably because the crying need was for under-

[47] Memorandum, Bela Low to Allen Buchanan, July 13, 1942.

ground miners and muckers. Dredging, hydraulicking, or [fol. 2167] other placer operations were not to be included, although it was not recognized that placer operations might be affected later. Further, the curtailment was to apply to both the United States and Alaska, the reason given for the inclusion of Alaska being that this territory was drawing mine labor from the critical Pacific Northwest area.

The curtailment was to be applied to gold mines coming within Lester's definition, and was envisaged as a series of graduated cuts. Gold mines that produced 50,000 tons or more of ore in 1941 were to be limited to 50 percent of the average monthly ore production in 1941; mines that produced 30,000 or more tons of ore in 1941, but less than 50,000 tons, were to be cut to 70 percent of the average monthly ore production in 1941; and those whose output was 5,000 or more but less than 30,000 tons of ore in 1941 were to be allowed to produce 90 percent of the average monthly yield in that year. Gold mines that produced less than 5,000 tons of ore in 1941 were to be excluded, provided their future production did not exceed 5,000 tons.

Curtailment by this step-wise process, Lester explained, would affect an estimated 221 mines (employing between 15,000 and 20,000 men in 1941) in the continental United States, and the suggested bases of curtailment would free initially between 4,000 and 5,000 men. About eight of the large Alaskan mines would be affected by the order. The plan also contemplated stoppage of all exploration and development work on gold mining within ten days after issuance of the order; and provided for appeals to alleviate hardship cases, particularly those of gold mines producing other metals in sufficient quantity to justify their continued operation, and mines shipping siliceous ore to smelters as fluxes.

Controversy Over Method of Curtailment.—Wilbur Nelson's reaction to the proposed curtailment was immediate. On August 3 he wrote to A. I. Henderson:

> "I have received a copy of Richard A. Lester's memorandum of July 31 to you in regard to the proposed limitation order on gold mining. This memorandum, if put into effect, would seriously curtail the

> production of nonferrous metals and disrupt smelter practice." [48]

Thus the cleavage of opinion between the labor officials and the mining officials on the question of closing the gold mines was sharply presented. From this time on, WPB's Labor Production Division, with the support of the War Manpower Commission, and later, of the War Department, pressed for the closing of the gold mines. The WPB [fol. 2168] divisions concerned with mining activity took a firm stand on the opposite side, and remained adamant in their position until the gold mines were finally closed. The psychology behind each position is clear: the labor officials were being urged to exhaust every means to supply additional labor to the copper mines, and try though they did, labor continued to move on to the lucrative positions on the West Coast, either by-passing the mining districts entirely, or stopping only long enough to earn travel fare to the Coast. The mining officials, on the other hand, with the experience of the 30 percent exclusion clause still fresh in mind, were reluctant to accept any closing order in which the definition of a gold mine was based upon percentage of gold produced.

Since it was clear from Wilbur Nelson's first reaction to the Lester memorandum that strong opposition would have to be overcome, the labor officials carried the question of the necessity of closing the gold mines to higher authority. On August 14, Richard A. Lester wrote to Wilbur Nelson again:

> "In a discussion the other day Mr. Batt told me that he hadn't realized that priorities were still being granted for maintenance, repairs and operating supplies for gold mines and he was surprised when I told him of the attached item in the Journal of Commerce [49] indicating that gold mines seemed to be getting materials enough to get along.

---

[48] Memorandum, Wilbur A. Nelson to A. I. Henderson, August 3, 1942.

[49] The article mentioned which had been referred to Lester by Samuel Lipkowitz was as follows: "Domestic gold mining companies anticipate a further contraction in operations in the last six months of his year, due to grow-

"The Labor Policy Committee has also asked how much materials are being used for gold mining in view of the fact that workers are being laid off in war [fol. 2169] plants for lack of materials.[50] In order to answer the questions of Mr. Batt and the Labor Policy Committee, I should like to obtain information on the amount of iron and steel, non-ferrous metals, mercury,

---

ing labor scarcity. The industry appears fairly well supplied with equipment for the next six months or year, but may have to reduce mining operations slightly due to minor shortages, it is reported in the trade. Because of the reduced volume and higher taxes, net earnings of the industry for the last half of this year may be smaller than for the first six months. However, a few companies may report an increase, since in some cases comparisons will be made with relatively poor showings in the last half." *The Journal of Commerce and Commercial*, New York, August 7, 1942.

[50] A summary of the critical situation in mining machinery and equipment was given by A. I. Henderson on July 31, 1942. "The mining machinery companies are already behind on deliveries. Shipments of mining equipment and supplies from certain of the largest mining machinery companies have declined as much as 35% in July below June shipments. Most of them have mining machinery orders booked for nine months or more in advance. This makes it imperative that these plants produce more machines and repair parts in the future than they are now making if mine production is to be maintained, much less increased.

"Many makers of mining machinery operating under Processing Directive PRD 39 are fulfilling Army and Navy orders carrying AAA and AA-1 ratings on direct ordnance contracts calling for full production for several quarters ahead. These ratings are making it increasingly difficult and in many cases impossible to obtain materials and fabricating components from suppliers for mining equipment which the Mining Branch is directing them to produce in order to maintain mining production." Memorandum, A. I. Henderson to J. A. Krug and C. H. Matthiessen, July 31, 1942.

etc., on which priorities have been granted to gold mines since January 1. . . . The Labor Policy Committee was particularly interested in the Juneau Alaska operations since materials sent there consumvaluable shipping space and there is such a shortage of labor that companies were recruiting copper miners for work in Alaska until the War Department and Selective Service put a stop to it."[51]

On the same day, Wilbur Nelson wrote to H. O. King, Chief of the Copper Branch:

"The Mining Branch views with serious alarm the dissipating of the only appreciable reserve of highly competent mining labor through the hasty closing of the gold mines in the United States. The gold and silver miners constitute the last reservoir of the skilled mining labor. We must, therefore, be certain that labor is directed toward the most critical points before permitting it to be [dispersed.]

[fol. 2170] "The present critical situation developed when copper, lead, zinc, mercury and other miners left their jobs and went to the west coast on shipbuilding and on aircraft jobs, and into the mountain areas in new war industries work.

"If we close down the gold mines while these same opportunities are available for work at substantially higher rates of pay in other war industries, the miners will not move to a copper, lead or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast.

"Logic dictates this, for when a copper miner at Butte is willing to leave his home and go to the coast, I am sure that a gold miner, living in the excellent living conditions at Lead [South Dakota] is not going to leave his family and stop at Butte if he could go to the west coast."

Nelson suggested an all-out effort to obtain labor from other sources before closing the gold mines, but agreed that "when it becomes clear that the next labor which is free

[51] Memorandum, Richard A. Lester to Wilbur Nelson, August 14, 1942.

for employment in the critical metal mines would be obtained by closing down the gold mines, I think steps should immediately be taken to force gold mines to shut down except for skeleton crews to maintain them in a workable condition so that mining operations in these mines can be started again at the close of the war." [52]

At the request of Frederick Eaton, Assistant General Counsel, J. Churchill Owen drafted a proposed order on August 20, 1942. This proposed the closing of all "nonessential mines" within a period of thirty days after issuance of the order. A "nonessential mine" was defined as "any mining enterprise in which gold is produced, unless the operator of such mining enterprise is the holder of a serial number for such enterprise issued under Preference Rating Order P-56, as amended". Any mine producing 1200 tons or less of commercial ore in the year 1941; and producing commercial ore at the rate of 100 tons or less per month from and after the date of issuance of the order, was not to be closed. In substance, this draft was remarkably similar to Order L-208, as finally issued.

H. O. King, Chief of the Copper Branch, questioned the feasibility of tying the gold closing order with Order P-56.

> "It appears . . . that a number of mines that produce practically nothing but gold have serial numbers, and I wonder if the definition in the Gold Curtailment Order tying this to mines with serial numbers would be effective.
>
> [fol. 2171] "I realize the issuance of this order is a function of neither the Copper Branch nor the Joint Interdepartmental Committee, but the pressure for action is so great that I feel it advisable to call this to your attention, as I am continually called upon to answer questions as to when the curtailment order is to be issued.
>
> "With the continuing and increasing loss of production in copper mines, I feel that immediate action should be taken." [53]

---

[52] Memorandum, W. A. Nelson to H. O. King, Chief, Copper Branch, August 14, 1942.

[53] Memorandum, H. O. King to Wilbur A. Nelson, September 1, 1942.

Wilbur Nelson's reply was that:

> "The . . . mines producing gold which have serial numbers are mines which also produce critical minerals needed in the war effort. These serial numbers in each case were only given after the branch handling the needed mineral was consulted and requested that each such number be issued.
>
> "The Mining Branch was designated as the Branch to handle the curtailment order. Naturally, it is not within the power of the Mining Branch to issue this gold mining curtailment order. When those responsible for issuing this order issue it, the Mining Branch is ready to enforce it."[54]

Shortly after this, A. I. Henderson directed the Miscellaneous Minerals Division to prepare an order closing all gold mines in which the total value of gold production was 50 percent or more of the total value of all metals produced, and Wilbur Nelson put himself on record as opposing any order drawn on such a basis:

> "If this basis is used for shutting down the gold mines, it will result in temporarily closing down many mines in the West producing siliceous fluxing ore for smelters, as well as a number of mines producing needed amounts of copper, lead, and zinc.
>
> "It naturally goes without saying that such mines will be reinstated when they have presented their cases. This method, however, of closing down gold mines is a method that was used so disastrously by the War Production Board last March in an amendment to the mine order, P-56. As a result of this amendment, a meeting was held of the Special Silver Committee of the Senate, protesting the use of a percentage basis for closing down any mines, as it worked an unnecessary hardship on mines that would be reinstated. Mr. Batt, Mr. Knowlson, and I appeared before this committee, and as a result of that presentation, the 30% clause relating to gold mines in order P-56 was taken out of the Order.

---

[54] Memorandum, Wilbur A. Nelson to H. O. King, September 3, 1942.

[fol. 2172] "It was our consensus of opinion that this was an approach that should not be used in the future by the War Production Board in any future orders which were designed to close down any mines by denying them the ability to get equipment, materials, or supplies. Due to my statement before this committee, which had the concurrance of Mr. Knowlson and Mr. Batt, I would have to oppose handling the closing down of gold mines in the proposed limitation order on the basis of closing down all mines where the value of the gold was 50% or more of the total value of the mine's production. You can get the same result and close down the gold mines just as quickly by using the Limitation Order first written by Mr. Churchill Owen, in which mines, having serial numbers under P-56, would not be considered as gold mines. None of the 100% gold mines have serial numbers under P-56 at the present time. If there are any mines producing gold which also are producing minerals needed in the war effort which have serial numbers under this order and should not have serial numbers, these numbers can be promptly withdrawn. In this way you can promptly close down any and all gold mines in the United States without reverting to the percentage basis, which has been recognized as a bad policy to be followed by the War Production Board.

"Let me emphasize again that the gold mines can be closed down promptly under the Limitation Order as drawn up first, which ties the whole administration of such a closing down under Order P-56."[55]

For the time being Wilbur Nelson appeared to have carried his point, or so J. M. Scribner, operating assistant to A. L. Henderson, reported to Donald Nelson a few days later.

"Mr. Henderson", he wrote, "requested that the order be prepared in a manner completely divorced from Order P-56. However, in his absence, after a consulation with Mr. H. W. Dodge and Dr. Wilbur A.

---

[55] Memorandum, Wilbur Nelson to H. W. Dodge, September 9, 1942.

Nelson, and a meeting with Messrs. Fred M. Eaton, Richard Lester and myself, it was determined to be most practical that the order not be divorced from P-56.

"The effect of this order will be to close down all gold mines not having a serial number, within 30 days from issuance. It is the intention of the Mining Branch to review all mine serial numbers assigned to [fol. 2173] mines producing 50% or more gold in dollar value and to withdraw such serial numbers unless the balance of the production represents critical materials urgently needed for the war effort in amounts sufficient to justify continuance of the operation."[56]

In the same memorandum, Scribner stated that "this order is in process of circulation in accordance with the procedure for order clearance and should be presented to the Clearance Committee for action about September 21."

Pros and Cons of Gold Mine Closing.—While the interested groups within the War Production Board were debating methods, word of the contemplated closing of the gold mines leaked out and a barrage of protests began to arrive. First came a letter from Senator Pat McCarran of Nevada, who had been largely influential in getting the 30 percent clause rescinded.

"I maintain that the object to be accomplished by those who propose shutting down the gold and silver mines will not be accomplished; that the only accomplishment coming out of such an order would be the irreparable injury of communities dependent upon the mines for their existence. . . .

"Some months ago the gold and silver mine operators assured the War Production Board that they were not going to be competitive in any sense with war industries, and their promise in this respect has been carried out.

"I am reliably advised that the gold and silver mine operators have in many instances made special effort to inform their men that they could get better wages in the war industries. Then mine operators have not

[56] Memorandum, J. M. Scribner to Donald M. Nelson, September 11, 1942.

raised wages in their mines in any attempt to compete with war industries.

"Gold and silver mine operators have assured the men who left their employ to enter war industries that their positions would be waiting for them when they came back. Cooperation of the precious metal mine operators has been forthcoming at all times. . . .

"I respectfully suggest, first, that any order closing down the mines of gold and silver in the United States would avail nothing in the way of increasing labor for mines of strategic metals; and secondly, if such an order were enforceable, its principal result would be the destruction of the moral and economic life of communities in the several states, without any beneficial results."[57]

[fol. 2174] Senator McCarran specified several alternatives to increasing the labor supply available to the nonferrous metal mines, principal among which were (1) direct subsidies to essential metal mines, to be paid to labor in addition to current wages; (2) removal of price ceilings on essential metals; (3) expediting of government loan procedures; and (4) giving to the producer of copper, lead, and zinc, the full and proper value of $1.29 per fine ounce for silver and $35 per ounce for gold which he produces in combination with the copper, lead, and or zinc.[58]

---

[57] Letter, Senator Pat McCarran to Wilbur Nelson, August 27, 1942.

[58] Wilbur Nelson drafted a reply to this and a similar letter that had been addressed by McCarran to Donald Nelson. This draft reply stated that "We are not contemplating closing gold mines in the United States, although such a suggestion has been made." Donald Nelson modified this to read: "The War Production Board has no plan nor has it considered any plan to close down the silver mines of the United States of America. Serious study has been and is being made of a source from which mine labor could be made available to the nonferrous metal mines. Naturally, our thoughts have included gold mines but we have not at this time reached any conclusions thereon." Letter, Donald M. Nelson to Senator Pat McCarran, September 1, 1942.

On September 15, Guy N. Bjorge, General Manager of the Homestake Mining Company of Lead, South Dakota, (the largest gold producer in the United States) protested curtailment of domestic gold production when the record gold production of South Africa was being made possible through shipment of United States machinery.[59] Bjorge enclosed an article from the July 25, 1942 issue of the *South African Mining and Engineering Journal*, which revealed that production on the Witwatersrand (the largest producing area of South Africa) had reached an all-time high during the first half of 1942. Senator Chan Gurney of South Dakota sent a copy of the same article to William L. Batt, Director of the Materials Division of WPB, protesting the injustice of the contemplated closing of domestic gold mines. The Labor Production Division received a third copy.

The issues raised by the gold mine closing order were summarized, but not resolved, in a memorandum from Morris Creditor, Sejcial Assistant to the WPB Chairman, on September 15:

> "'. . . In the preamble of the limitation order no mention is made of manpower requirements. It simply states that the order is made necessary because of the shortage in the supply of critical materials which are used in the maintenance and repair of gold mines. [fol. 2175] "It would seem to me that if the order is based on the premise of critical materials alone, the question might be raised as to why such an order would not apply to materials being sent by this country to other gold mines in Canada, South America, and South Africa.
>
> "If the main purpose of this order is to divert miners from the gold mining industry to copper and other mining industries, it seems to me that there is no assurance that this order would accomplish the desired results. . . . Would it not be more practical to accomplish the purposes by a freeze order similar to that which is now in effect for workers in the copper mines and the lumber industry. This may be more drastic but, on the other hand, may give better assurance that

[59] Letter, Guy N. Bjorge to Wilbur A. Nelson, September 15, 1942.

the miners in the gold mines would eventually find their way into the copper mines.

"Even aside from the possible dissipation of these skilled miners into other occupations, there is question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally, will be stuck in Alaska. Where are they expected to go?

". . . Unless there is a high degree of assurance that the *main purpose* will be accomplished; namely, the diversion of these miners to the non-ferrous mines, I feel it is important to weigh the adverse effects it might have in other directions.

"Acutally, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries."[60]

The truth of the matter was that those concerned with the order did not agree among themselves as to its real purpose, nor as to its probable effects. As late as September 25, 1942, A. I. Henderson believed that "conserving of materials, rather than labor, was the main purpose of the order," while F. H. Hayes of the Copper Division contended that the primary object was "the transferring of gold-miners to the strategic mines."[61] Even those who con- [fol. 2176] curred with Hayes as to the reason for closing the gold mines did not agree as to the number of miners that would be released, nor as to how their transfer to other mines was to be effected.

The Labor Production Division believed that a minimum of 4,000 to 5,000 workers would be released by closing the

---

[60] Memorandum, Morris Creditor to Donald M. Nelson, September 15, 1942.

[61] Minutes, Interbranch Meeting of Branches concerned with Mineral Production, September 25, 1942.

gold mines. The Mining Division and other WPB Mining officials believed the number would be much less. The bases for both beliefs were taken in good faith. The Labor Production Division had United States Bureau of Labor Statistics' verification of the fact that in August of 1942 slightly more than 17,000 workers had been employed in United States gold and silver mines, this despite the fact that there had been a steady outmigration of labor since January 1942, when gold and silver mine employment had topped 25,000 workers.[62] Here again, however, the classification of the mines was based upon dollar value of the mine output, and many of the mines here called "gold" mines actually possessed serial numbers under WPB Order P-56. As such serial numbers were granted only to mines producing a substantial proportion of metals and minerals essential to war production, the WPB Mining Division refused to recognize them as "gold" mines, defined them rather as "copper," "zinc" or "arsenic" mines, and contended that they could not be shut down regardless of the amount of gold they produced.

Furthermore, the Mining Division believed that all "loose" labor, i.e., such as could readily be transferred, had already been siphoned away from the gold mines and what labor remained would resist a transfer.

While the processes employed in mining gold are roughly similar to any other hard rock mining processes, specific techniques vary because of differing geological formations of the ore bodies. Gold miners work mainly narrow quartz veins in hard rock, and, except in the largest gold mines, little timbering and relatively simple stoping operations are required. Copper mines, on the other hand, are mainly large deposits, worked on a greater scale with complicated methods of timbering and stoping.

Hard rock mine labor includes several highly skilled trades. Pump operators, hoisting engineers, and surface labor, such as mechanics, may be transferred from auriferous mines to base metal mines without noticeable loss of efficiency. The need was not so much for transferring this type of worker, however, as for transferring miners and muckers to the copper mines, and here technical difficulties

---

[62] See Appendix C.

would be encountered. A miner transferred from a gold mine to a copper mine, for example, must learn an entirely new type of ore deposit, learn to follow a different ore, master new drilling, blasting and timbering techniques, [fol. 2177] and must become accustomed to a new set of underground hazards. While it is true that such technical difficulties could be, and often had been, overcome, and that an experienced hard rock miner could be brought to efficient operation in a base metal mine such as copper much more rapidly than would be possible in the case of a man with no mining experience, psychological factors arising out of the middle age and settled condition of the majority of the gold miners militated against an effective transfer.

The mining officials advanced arguments to this point, stating that (1) the gold miners would be reluctant to leave established homes, families, and good living conditions for relatively poor living conditions in new mining communities; (2) the gold miners would not exchange working conditions in the cool depths of the gold mines for the higher temperatures and humidity of the copper mines if an alternative of high-paying surface labor in the construction projects adjacent to the gold mines were offered; and (3) the old adage, "Once a gold miner, always a gold miner" still held true, not so much from the miner's reluctance to turn from one type of mining to another as from the peculiar satisfaction a gold miner derived from producing the precious metal. Such intangibles were discounted by the labor people. In their view, gold mining was nonessential to the war effort; the gold mines possessed a reservoir of hard rock mining labor; such labor was desperately needed in the copper mines; practically every other method of obtaining additional labor for the copper mines had been tried, without much success. In addition, the War Manpower Commission and the War Production Board were now requesting the Army to furlough 4,000 soldiers for work in the nonferrous metal mines. This the Army was reluctant to do, in view of the fact that the reservoir of gold mine labor was still untapped.

The political and strategic considerations underlying the policy of tacitly approving foreign gold mining while prohibiting domestic operation were not generally understood. Even where it was recognized that the economy of South

Africa, and, in fact, the good will of the government toward the cause of the Allies, was dependent on continued mining of gold, there was a general feeling that machinery for gold mining in South Africa had been supplied to some extent through the British Army's military priorities, and that there should be some insistence on curtailment of South African gold production.

Probably in response to this general undercurrent of feeling over the South African situation, on September 19, Batt requested Wilbur Nelson to:

> [fol. 2178] "(1) Determine definite measures that will ensure the South African gold mining being slowed down by a reasonable amount, and
>
> "(2) Consider, with the aid of those concerned, the advisability of holding a meeting with the labor and mining interests involved to the end of securing a voluntary transfer of a substantial portion of the mining labor from gold mining to the desired types of mining." [63]

Drafting the Gold Mine Closing Order.—After almost two weeks of work on the order, the Miscellaneous Minerals Branch protested that it was concerned primarily with materials, and that the gold mine closing was outside its jurisdiction. The problem of drafting the order was then turned over to Wilbur Nelson's Mining Branch, and on September 17, J. M. Scribner advised Marcellus Stow, Acting Chief of the Mining Branch, as to the procedure to be followed.

> "Acting in accordance with instructions received from Mr. Donald Nelson's Office this morning, please be advised that the gold order is to be cleared with all of the branches involved as promptly as possible, but it is not to be presented to the Clearance Committee until further word is received from Mr. Nelson's Office.
>
> "The order is to be held in the branch in such shape that it may be presented to the Clearance Committee

[63] Memorandum, L. R. Boulware to Wilbur Nelson, September 19, 1942.

for action immediately upon advice from Mr. Nelson's Office that it is to go through."[64]

On the 22nd, Stow replied:

"In accordance with your instructions of September 17, I have had this order, which has been given the number L-208 prepared in final form and am holding it pending further advice from you.

"I am informed that the order has been circulated among the various branches by the Office for Order Clearance and that no substantial objections were raised. Since the order was circulated, the Mining Branch has made a few minor verbal changes for purposes of clarity, has included an exception for small placer operations, and has added a provision permitting use of mills or machine shops to fill rated orders or to do milling work for essential mines which are not closed down by the order."[65]

[fol. 2179] On September 23, following Batt's suggestion of the 19th, Wilbur Nelson met with a group interested in the closing of the gold mines. Among those present were Samuel Lipkowitz of the Labor Production Division, Samuel Hill of the War Manpower Commission, and Richard Lester, who by this time had left WPB and was with WMC. The purpose of the meeting was to "discuss" the various "wishes in regard to bringing the gold mine operators to Washington to discuss the curtailment of gold mining." It was the opinion of Wilbur Nelson and Marcellus Stow, his Deputy, that the gold mine operators should be given an opportunity to turn to other types of mining, to open zinc, tungsten, or vanadium mines, and transfer their labor to this type of mining. Lipkowitz and the War Manpower Commission representatives believed that while RFC subsidies were available to finance such development, only the larger companies would be in a position to take advantage of such offers, and even in such cases it would be months

[64] Memorandum, J. M. Scribner to M. H. Stow, September 17, 1942.

[65] Memorandum, Marcellus H. Stow, Acting Chief, Mining Branch, to J. M. Scribner, September 22, 1942.

before a transfer of labor could be effected. Then, too, if Wilbur Nelson's argument were correct, i.e., if the miners would show great reluctance to transfer, it would be preferable to force such transfer by mandatory government action rather than intercompany edict. No decision was reached at the meeting.

On the same day, the Interdepartmental Group on Mineral Production, presided over by Wilbur Nelson, went on record as believing that—

> "South African gold mines . . . have appreciably increased production during the first six months of 1942 over any previous six-months period in their history. It is felt that the production of these mines should be kept as low as is consistent with wise political policy, and that they should be prevented from building excess inventories of supplies. The Witwatersrand mines have a central pool of supplies, which it is doubted has been kept down to a minimum. These mines are supplied to some extent through the British Army's military priorities." [66]

On the 24th, another meeting was held in Batts Office, with General McSherry of the War Manpower Commission in attendance. "At the conclusion of this meeting Mr. Batt stated that he felt we should go ahead with the issuing of the gold mining order, but he would hold it up at General McSherry's request until the wage awards had been made by the War Labor Board." [67]

On the 25th, W. L. Batt informed A. I. Henderson:

> [fol. 21[illegible]] "I have told the Chairman that my judgment is that the limitation order on gold mining should be released at the appropriate time, and he has agreed. It was the consensus of opinion that we should wait until the War Labor Board had acted on certain wage matters, and I shall expect to be advised when the situation is clear on this point.

---

[66] Minutes, Interdepartmental Group on Mineral Production, September 23, 1942.

[67] Memorandum, Wilbur A. Nelson to A. I. Henderson, October 1, 1942.

"It seems to me imperative that we very carefully word our press release so that the predominant objective: namely of releasing less essential labor for *more essential requirements, shall be clearly evident.* And I particularly direct the attention of those who have to do with this matter at this point.

"It is also important that General McSherry be notified several days in advance in order that he may take such steps as he outlined.

"I shall advise Senator Gurney a day or so in advance so that he learns it from us and not in the newspapers. Please see that I am protected on this point."[68]

On the same day that Batt's memorandum, which seemingly settled the issue, was written, a meeting of the WPB Branches concerned with mineral production was held, with Wilbur Nelson presiding. At this meeting the following resolution was unaimously passed:

"Resolved that before the Gold Mining Limitation Order L-208 is sent to clearance that:

"1. Representatives of the gold mining companies be called to Washington immediately to confer with Government officials on the gold order so that:

A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort;

B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production."[69]

At the next meeting of the group, on September 28, Wilbur Nelson reported that the resolution had been "turned down by Mr. William Batt," but those attending the meeting stuck to their guns.

[fol. 2181] "It was the consensus of opinion that by calling together the leaders of the large gold mining

---

[68] Memorandum, W. L. Batt to A. I. Henderson, September 25, 1942.

[69] Interbranch Meeting of Branches Concerned with Mineral Production, September 25, 1942.

companies, we could ask them to work as a unit, both management and miners, to produce strategic metals so necessary to the war effort. We want to give management a chance to talk to the workers and ask them to cooperate and work systematically as one unit. We want to point out to the men that we feel that gold mining will come back after the war, and that by sticking together now they will be able to have their jobs back after this war is over." [70]

Batt yielded the point, and the next day Wilbur Nelson telephoned the largest gold mine operators, inviting them to a meeting in Washington on October 1.[71]

On September 30 a preliminary meeting was held in Batt's office. Among those present were Senators Gurney of South Dakota and McCarran of Nevada, Congressmen Englebright of California and Case of South Dakota, General McSherry of the War Manpower Commission, Wilbur Nelson and Samuel Lipkowitz, who represented the WPB Labor Production Division. The Senators and Congressmen argued against closing the gold mines, on grounds of community dislocation and individual hardship, while the labor case was based on the non-essentiality of gold and the need for manpower in the strategic metal mines. When the meeting reached an impasse, Batt adjourned it with the remark that if a use for gold could be found in the war program the mines probably would not be closed.[72]

On October 1, the meeting with the gold mine operators opened at 2:30. It was attended by branch chiefs and production men from each of the branches dealing with mineral production; by military and manpower officials; by Senators and Congressmen from the principal gold mining states;

[fol. 2182] and by various gold mine operators.[73] It was a stormy session. Most of the mine operators were statistically unprepared to present their case, and there were bitter recriminations and denouncements. Lipkowitz was accused of having said the day before that 20,000 men would be released by the closing of the gold mines, but this he denied, offering reports to show that the figure was about

---

[73] Memorandum, Wilbur Nelson to A. L. Henderson, October 6, 1942. The following is a partial list of those in attendance at this meeting:

Mica-Graphite Branch: M. H. Billings, S. A. Montague, E. H. Dawson, E. F. Wierum.

Copper Branch: H. O. King, Frank Ayer, F. H. Hayes.

Mining Branch: M. H. Stow, Wilbur A. Nelson.

Tin-Lead Branch: Erwin Vogelsang, C. A. Wright.

Ferro-Alloys Branch: Miles K. Smith, E. F. Hatch, O. N. Rove.

Miscellaneous Minerals Branch: R. J. Lund, J. S. Macgregor.

Others:

Senator Edwin C. Johnson of Colorado
Senator Pat McCarran of Nevada
Senator Chan Gurney of South Dakota
Representative Harry L. Englebright of California
Representative Francis Case of South Dakota
William L. Batt

Brigadier General Lucius D. Clay, Deputy Chief of Staff for Requirements and Resources, Services of Supply, War Department.

F. H. Harbison, Manpower Branch, Civilian Personnel Division, Services of Supply, War Department.

Brigadier General Frank J. McSherry, Director of Operations, War Manpower Commission.

Samuel Lipkowitz

Guy N. Bjorge, Homestake Mining Company, Lead, South Dakota; Merrill Shoup, Golden Cycle Corporation, Colorado Springs, Colo.; Errol Macboyle, Idaho-Maryland Mines Co., Grass Valley, Calif.; Thomas MacCormack, Natomas Dredging Co., Sacramento, Calif.; Carroll Searls and H. E. Dodge, Empire Star Mines Co., Grass Valley, California.

5,000.[74] Even this figure was believed by the operators to be too high. At 5 p.m. Batt left the meeting and turned its chairmanship over to Wilbur Nelson. In a session that lasted until seven o'clock statistical data were developed that indicated some 3,270 workers would be released by closing the gold mines.

[fol. 2183] Immediately before the meeting, Batt informed Donald Nelson that "The more I study the gold mining situation, the more uncertain I am as to the form a restriction of operations should take. Complete closing without exceptions will produce very serious economic dislocation and the total possible gain in men is a small figure."[75]

How small the figure was could not be accurately determined, but it was estimated at the meeting "that if all of the gold mines and dredges in the United States" were put on a stand-by basis, the number of men released, including workers of all types, would approximately as follows:

"Homestake Mining Company, Lead, South Dakota		1,373
Cripple Creek, Colorado		338
Idaho-Maryland California Mine, Grass Valley, California		69
Empire, North Star, Pennsylvania Mines, Grass Valley, California		240
Total		2,020
Estimate of men available from other mines		500
Total		2,520
Dredge Operators in California	525	
Dredge Operators in Other States	225	750
Total from lode mines and dredges		3,270
From these figures we find that there are the following number of muckers:		
Homestake Mining Company		421
Cripple Creek		100
Idaho-Maryland		45
Empire, North Star, Penna. Mines		130

Estimated additional miners and muckers from other small mines		200
Total number of experienced miners and muckers		896

[74] Samuel Lipkowitz, in an interview with the writer, May 5, 1944.

[75] Memorandum, W. L. Batt to Donald M. Nelson, October 1, 1942.

"Of these 896 miners and muckers a certain percentage of them would have to be left in the mines when the mines operate on a stand-by basis. Probably 300 of them would be needed for this purpose. This makes available about 600 miners and muckers for other mining enterprises provided they can all be induced to go into other mines."

[fol. 2184] "If the gold mines are curtailed to 50% of the 1941 tonnage or to the tonnage they produced in September of this year where it is less than 50% of their 1941 tonnage, the only mine affected would be the Homestake Mine. If this mine reduced to 50% of its 1941 tonnage, it would probably have to reduce the men employees from 1876 on their payroll at the present time to around 1000, so that such action by WPB would release around 900 men of whom probably 200 would be miners and muckers." [76]

The labor representatives did not quarrel with the figures for the listed properties, but objected that the estimate of men available from other mines was too low.

On October 2, Wilbur Nelson reported to W. L. Batt and Donald Nelson on the results of the gold mining meeting.

"As a result of this conference, it was decided that a new order would be drawn giving the gold mines six months in which to close, and during that period to require them to curtail their production to 50% of their average production for 1941." [77]

Later on October 2, Wilbur Nelson, J. Churchill Owen, and Frederick Eaton conferred for the purpose of drawing a new gold mining order. On October 3, another meeting was held in the office of Senator McCarran, on the "necessity for closing gold mines at the present time." Wilbur Nelson represented W. L. Batt, and Paul V. McNutt and General McSherry were also present.[78]

[76] Memorandum, Wilbur A. Nelson to W. L. Batt, October 3, 1942.

[77] Memorandum, Wilbur A. Nelson to A. I. Henderson, October 6, 1942.

[78] *Ibid.*

Meanwhile, the War and Navy Departments brought pressure to bear. On October 2, Robert P. Patterson, Under Secretary of War, stated his views to Batt:

> "I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other nonferrous metals, as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.
>
> "If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's approval, and I believe that Mr. Forrestal will do the same for the Navy." [79]

[fol. 2185] On October 5, the Under Secretaries of War and Navy joined forces in requesting the War Production Board to close the gold mines.

> "The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> "There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> "The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.
>
> "The matter has hung fire for some time. We deem

---

[79] Letter, Robert P. Patterson to William L. Batt, October 2, 1942.

it of the utmost importance that prompt action be taken and that half-measures be avoided."[80]

Decision to Close the Gold Mines.—The Chairman of the War Production Board, harassed on all sides, now took the matter before the War Production Board, convened on October 6. Batt appeared before the Board to outline the problem. He reported:

1. After conferences with the War Manpower Commission and the gold operators, it had been revealed that the current employment in the gold mine industry was 3,270, of which 750 were engaged in dredging and only 896 were hard-rock miners.

2. Higher costs and loss of labor had already sharply curtailed operations of all domestic mines except Homestake, whose labor force had dropped from a peak of more than 2,000 workers to 1,876, including lumberman and machine shop workers. If Homestake were shut down, all but 500 of these workers could be released for work elsewhere.

3. Lead and Deadwood, South Dakota, with aggregate populations of 16,000 were totally dependent on the Homestake mine's operation.

[fol. 2186]. 4. In regard to foreign gold mining, the State Department, "because of broad international considerations" had previously urged that South African and Honduran gold mining be maintained; South African because "the economy . . . and the stability of the present government are largely dependent on gold mining" and Honduran because the "basic industries" were "the cultivation of bananas, whose exportation to the United States has been reduced to 20 percent of normal, and gold mining." Canadian gold mining was already being curtailed.

5. From consideration of the foregoing, he recommended that (a) "all nonessential domestic mining of gold other than that incident to the mining of critical metals be stopped as soon as possible and not later than within 60 days" and (b) "gold mines not producing critical metals be allowed to continue standby maintenance operations lest it be impossible to reopen them at the close of the war."

---

[80] Joint Memorandum, Robert P. Patterson and James S. Forrestal to Donald M. Nelson, October 5, 1942.

The consensus of the meeting was that the gold mines should be closed, and only Vice President Wallace had any other suggestion to make. He thought definite arrangements should be made to channel the released labor into the critical nonferrous mines before the gold mines were closed. *General Somervell's position, however, amounted almost to an ultimatum, which permitted no alternatives.* In view of the fact that the Army had "taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines" he said, "failure to stop [gold] production immediately would be inexcusable." It was therefore agreed that:

> "An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within sixty days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition."[81]

With this directive in view, Limitation Order L-208 was drafted that same evening (October 6) by Wilbur Nelson and Frederick Eaton, Assistant General Counsel of the War Production Board. Order L-208, closing all gold mine operations in the United States and its territorial possessions, was issued on October 8, without prior circulation and without reference to the Clearance Committee. By the terms of this order, the Director General for Operations prohibited all operators of gold mines, whether lode or placer: (a) from breaking ore or proceeding with any development work or new operations after October 15, 1942, and (b) within 60 days from October 8, from carrying on any operations incident to gold mining except to the minimum extent necessary to maintain buildings, machinery, and access facilities in safe and accessible [fol. 2187] condition. Lode mines that produced 1200 tons or less of commercial ore in 1941 were exempted from the provisions of the order on the condition that their future rate of production should not exceed 100 tons per month, and placer mines that treated less than 1,000 cubic yards of material in 1941 were likewise exempted on condi-

---

[81] Minutes, War Production Board, Meeting XXXIV, October 6, 1942.

tion that their future treatment of material should be limited to 100 cubic yards per month.

The die had been cast: the gold mines of the United States were ordered closed. It now remained to channel the labor into other strategic metal mines—a matter that had caused considerable apprehension since August. Preliminary plans had been made: on September 27, in anticipation of the closing of the gold mines, the United States Employment Service had issued USES Operations Bulletin B-50, so that its field staff would have advance information. "Thus, the prohibition of employment of gold miners, except with a certificate of separation issued by the Employment Service, had been confined to the twelve states covered by the employment stabilization plan [of September 7]. In order to restrain the workers from moving to other employment, the certificate of separation provided for is a 'limited' certificate of separation good for employment only in other nonferrous metal employment."[82] A meeting was held by War Production Board mining and labor representatives with War Manpower Commission representatives on October 7. It was reported that:

> "Since the issuance of Operations Bulletin No. B-50 the General Counsel has raised questions as to the possibility of modifying the procedures. That office takes the position that the contemplated plan with respect to gold miners, being a transfer plan rather than a freezing plan, must be recognized as essentially different in principle and objectives from the nonferrous metal plan of September 7, 1942. It therefore recommends (1) that the use of limited and unlimited separation certificates presently contemplated in Operations Bulletin No. B-50 be abandoned, and that instead all employers be ordered not to hire former gold miners except upon referral by the United States Employment Service, which will utilize the ordinary referral card for that purpose; and (2) that the pro-

[82] From the Agenda of the Gold Curtailment Order Meeting, October 7, 1942.

> hibition on hiring extend not only to employers in the twelve western states covered by the non-ferrous metal plan, but also at the very minimum to employers in other states, in which substantial numbers of gold miners will be released and in states bordering on such states."[83]

It was also reported that application had been made "for $375,000 from the President's fund to pay transportation for gold miners to new employment in other nonferrous metal mining activities."[84]

[fol. 2188] On October 8, War Manpower Commission Directive No. 13 was issued, incorporating the above provisions. Employers were instructed not to "hire in, or hire for work in, Alaska or any state west of the Mississippi River, any person who on or after October 7, 1942, has left employment as a production or maintenance worker in connection with gold mining, except upon referral of such worker to such employer by the United States Employment Service." The Directive also instructed the U. S. Employment Service to refer "gold mine production or maintenance workers to essential non-ferrous metal mining, milling, smelting and refining activities." The War Manpower Commission announced further that "transportation expense for workers and in some instances their families will be provided where transfers to new locations are involved," and that "every gold worker who transfers to copper, aluminum, zinc, and other nonferrous activities is contributing to the war effort."

Donald M. Nelson and Paul V. McNutt issued a special appeal in a joint letter, urging gold-mine workers to transfer to nonferrous metal mines rather than to other war industries, as a patriotic duty.[85]

---

[83] *Ibid.*

[84] *Ibid.*

[85] This appeal, which was undated, read:

> "At the present time the armed forces of the United States are in vital need of large quantities of copper, zinc and other non-ferrous metals. These metals are used in carrying the war to our enemies

[fol. 2189] The anticipated protests against the order materialized immediately; the benefits did not. There was a flood of criticism from the gold mining interests, the affected communities, and their Congressional representatives. There were claims of damage to community economy, of dislocation of normal debtor-creditor relationships and property rights in the mining districts, and of personal hardships. Complaints were made to the War Production Board, to the War Manpower Commission, to the Army and Navy, to the President. One of the largest gold mine operators threatened an injunction against the WPB, saying, "There is no action of Congress which authorizes the War Production Board to close any industry.

---

and must be available in sufficient amounts if victory is to be assured.

"Inadequate supplies of non-ferrous metals are reducing production of tanks and airplanes, ships and shells. Immediate production of these weapons of war in the amounts necessary is of the utmost importance. We are not mining enough of these critically needed metals. One reason for this is a shortage of hard-rock miners in the western states.

"To meet our war production program with respect to these metals, it becomes necessary now to maneuver our manpower so that less essential mining can be diverted to vitally important operators. With this as our objective it has been determined that all gold mining shall be discontinued at the earliest possible moment.

"It is realized that such an order must occasion considerable hardships. Nevertheless, at this juncture no other course is open and, accordingly, the shutdown will become effective in sixty days.

"We urge all miners now working in gold mines to leave such work for jobs in mines producing the more essential nonferrous metals. It is important that gold miners transfer to nonferrous metals mines rather than to other ware industries. This is imperative to meet the shortage of miners, and it will enable men now working in gold mines to make a most effective contribution to the national war effort."

Its powers are limited to regulating materials and supplies used in industry where necessary for the war effort."[86] Newspapers predicted utter ruin of mining communities in Colorado, California, Nevada, Montana, Arizona, Utah, and South Dakota. Stocks of the larger companies slumped.

Within a short time, strong community and Congressional blocs had been organized to force modification or recision of Order L-208. Through the winter of 1942-1943, appeals for relief from the provisions of the Order poured into the War Production Board. The legislatures of Nevada, California, South Dakota, and Alaska, passed resolutions calling for the withdrawal of L-208. Several bills were introduced into the Senate and the House of Representatives by members of Congress from the western mining states, calling for suspension of the enforcement of obligations against gold mine owners required to suspend operations as a result of the War Production Board's action.[87]

On May 24, 1943, a group of thirty Senators from the Western states petitioned the War Production Board for "immediate recession or modification of the order."[88] The appeal was denied when, on June 15, the WPB unanimously voted to continue Limitation Order L-208, with exceptions allowed on appeal only if:

> "(a) The critical material output of the individual mine makes an equal or larger contribution to the war effort than the materials, equipment and labor used in operating the mine, considering the relative urgencies of the critical materials involved, or
> [fol. 2190] "(b) The necessary labor can be obtained without drawing upon any essential war activities, and

certification to this effect can be obtained from the War Manpower Commission."[89]

At this time a serious effort was made by the mining officials, and the Administrators of Order L-208, within the War Production Board, to modify L-208 by amendment.

In April, the staff of the Planning Committee of the War Production Board made a study on the effectiveness of Order L-208 at the direction of William L. Batt. This study, using largely the figures of the Labor Production Division, reported:

"1. Displacement of Labor by the Order and Results.

(a) The Gold Order was responsible for the transfer of approximately 2000 gold miners to war industries, at least 1200 of these going to copper and other essential non-ferrous metal mines;

(b) As a result of the Labor transferred from gold mines, more than 11,000 tons of copper, 4,000 tons of zinc, 2,400 tons of lead, 13,000 tons of tungsten, and 6,000,000 pounds of molybdenum have been added to the annual production of these metals.

"2. Release of Equipment and Materials by the Order.

(a) One and a half million dollars in equipment has been transferred from the gold mines to essential non-ferrous mines and has accelerated strategic metal development.

(b) Approximately $15,000,000 worth of strategic material has been released from gold mines that were closed."[90]

The report was immediately challenged by Wilbur Nelson, Administrator, and Edward H. Rott, Deputy Administrator of L-208. On April 30, Wilbur Nelson informed Howard I. Young that,

---

[89] Minutes, War Production Board, Meeting LXI, June 15, 1943.

[90] Memorandum, Edward T. Dickinson, Jr., Executive Director, Planning Committee, to William L. Batt, Vice Chairman, War Production Board, April 22, 1943. (Planning Committee Document 236).

[fol. 2191] "It is stated that the gold mining limitation order was responsible for the transfer of approximately 2000 gold miners to war industries and at least 1200 of these went to copper and other essential non-ferrous metal mines. In no place do any statistics refer to gold miners, but only to workers in gold mines. Those familiar with mine employment know that only about 60 percent of the total workers at a mine are underground miners and muckers. . . . On the basis of my checks with . . . officials of . . . companies, it can readily be seen that instead of 1200 workers from gold mines going to copper and other essential non-ferrous metal mines, that only between a third and a half of this number are actually working in such mines today; that of the 1200 referred to these mines, many of them never accepted employment. . . . 497 workers in gold mines probably were actually placed in metal mines due to the gold mine closing order, and only a percentage of these workers were miners or muckers. This is the most optimistic view that can be taken.

"I believe that only between 3000 and 4000 tons of all non-ferrous metals can be logically assumed as possible additional production for the year 1943 due to the closing of the gold mines.

"Of the $1,500,000 in equipment that has been transferred by the Mining Equipment Division from gold mines to other mines, $713,500 went to essential non-ferrous mines and the remainder to other operations. About 33⅓ percent of this equipment came from gold dredging operations, which were limited by the War Production Board before the gold mine closing order was issued; and about 5 percent came from gold mines which were shut down before the gold mine closing order was issued."[91]

On May 24, Edward H. Rott, Deputy Administrator of Order L-208, stated:

"The general effect of the Order has been to antagonize the individual and the communities dependent

---

[91] Memorandum, Wilbur A. Nelson to Howard I. Young, April 30, 1943.

on gold mining, and caused large losses to the operators. To repeal it would not calm the situation, but would stir up increased resentment from the many who have lost their livelihood, relinquished leases, forfeited equity in equipment, or sold equipment in anticipation of no further need for the duration.

"However, from the administrative standpoint, and to alleviate exceptional and unreasonable hardship in cases where such relief would not affect our war effort, it is felt that amending of this order to permit limited production and employment is desirable and justifiable."

[fol. 2192] Rott, to stress his point, said that there had been 187 appeals from Order L-208, of which number, 137 had been granted, principally on the basis of financial hardship, possible recovery or development of strategic metals, or to provide employment for elderly and physically handicapped men who would not be used elsewhere in the mining industry. Many of the appeals had been granted within a few weeks after L-208 was issued, when Wilbur Nelson, T. Munford Boyd, Mining Division Attorney, and Allen Buchanan of the Labor Production Division were designated by the General Counsel's office to act as an appeal board. Others were granted by the Appeals Board when the process was formalized.

Modification of L-208 was again considered during the summer of 1943. However, with a copper shortage once more threatening because of lack of labor at the mines, WPB had again requested the War Department to furlough soldiers to the mines. History was viciously repeating itself when the Under Secretary of War wrote:

"Men with hard rock mining experience, I am told, are still engaged in mining gold, silver and other non-critical metals. I know of the arguments that are used in an effort to justify these operations, but the fact remains that their contribution toward prosecution of the war is very small. I submit that there is no warrant for asking that soldiers be turned over to work in copper mines as long as men with the very

experience required for mining copper are permitted to work these nonessential mines."[92]

With modification of Order L-208 tantamount to a refusal by the Army to furlough soldiers, WPB decided to continue the order.

On November 17, 1943, Representative Clair Engle of California introduced a bill in the House of Representatives, proposing repeal of Order L-208. The bill was referred to the House Committee on the Judiciary, and to date no further action has been taken thereon.

[fol. 2193] IV. Administration and Results of Order L-208

In summary, it would appear that the slow crystallization of opinion that gold mining was not essential to the war effort, and that it did consume labor and equipment that might be more effectively used elsewhere, made ultimate closing of the gold mines inevitable. The closing of the gold mines represented a definite victory for the military point of view that all production not immediately essential to the prosecution of the war should be eliminated. The fact that this industry was the *test case*—the *guinea pig*—for such policy and that *similar non-essential industries* were not shut down, throws emphasis on the controversy as to the method of closing the gold mines, a controversy that otherwise might be lightly passed over.

The main arguments that arose, and are still continuing, derive from questions as to whether it would have been better to allow the industry to strangle slowly as a result of tightening of priority restrictions under Order P-56; or whether it was more effective to shut down the mines at one swift stroke. These conflicting questions presuppose still others: Was the real purpose of closing the gold mines conservation of equipment, was it release of labor, or was it both.

It is generally admitted that the priority restrictions under P-56 had curtailed gold production, by the time of the issuance of Order L-208, to a point considerably under

---

[92] Letter, Under Secretary of War Robert P. Patterson to Harry O. King, Director of the Copper Division, June 13, 1943.

1941 gold production. It is likewise admitted that some of the smaller gold mines welcomed L-208 as an opportunity to stop unprofitable operation.

With regard to the question as to whether or not the results achieved by L-208 compare favorably with the results anticipated at the time the order was issued, the answer would appear to be in the negative. The actual benefits in labor and equipment obtained through closing the gold mines were small in proportion to the economic distress and individual hardship that ensued. Considerable confusion prevails as to the exact number of men transferred to essential nonferrous metal mines, but the number seems in any case to be very small. Here, again, it is impossible to weigh the exact advantages, because many of the released gold miners, while they did not go into other metal mines, did engage in occupations, such as lumbering, that were beneficial to the war effort. Nevertheless, some did not go into any other occupation, and remained idle. There are opposing claims as to the amount of equipment saved, and the amount of equipment transferred elsewhere, by the closing of the gold mines.

However, when all the claims and counter-claims are sifted and weighed, it is possible to arrive at some fairly accurate general conclusions. These fall into three categories: (1) Labor released and transferred; (2) Equipment released and transferred; and (3) Results on community economy.

[fol. 2194] *Effects of Order L-208 on Labor.*—At the meeting of the gold mine operators held in Washington on October 1, 1942, the industry developed statistics showing that if all gold mines and dredges in the United States were closed, approximately 3,270 men would be released, of which 896 would be miners and muckers. It was further estimated that about 10 percent, or 300, of the total released would actually remain in the mines to operate them on a standby basis.

There has been general agreement that approximately 3,200 men, including both placer and lode miners, were released by the closing of the gold mines.[93] As of Janu-

[93] Raw Materials Section, Labor Production Division, WPB, "Effect of Order L-208 (Gold Order) on Production

ary 1944, the War Manpower Commission reported that 2,600 of these had

> "registered with the United States Employment Service. About 2,100 were referred by the United States Employment Service to essential activities; metal mines received 1,200 of the referrals.
>
> "Many displaced gold mine workers found jobs in mines and other activities without ever contacting the United States Employment Service. Moreover, many of the workers recorded as displaced returned to gold mine operations when these operations were resumed either pending or subsequent to an appeal to the War Production Board for permission to continue production; hence, they never became really available for placement elsewhere." [94]

It is in the failure to distinguish between "gold mine workers" and "gold miners", or between underground miners and muckers and surface laborers, maintenance crews, and mechanics, that the first confusion arises. If the industry statistics as presented on October 1 were accurate (and it is here presumed that they were), no more than 896 underground workers were made available for employment elsewhere.

The second confusing point arises from that fact that no adequate record has been kept on the number of men who accepted the jobs to which they were referred by USES, or how long they remained at jobs when they did accept them. It has been variously stated that the men [fol. 2195] worked for a few days, or a few weeks in a new operation, and then either moved on to the more lucrative construction or defense jobs, or returned to their homes, hoping to return to their former positions should the gold mines be reopened following WPB's granting of appeals. Spot checks of major mines to which the men

of Strategic Metals", no date; Edward H. Rott, "Report on Gold Mine Order L-208, Its Effect and Accomplishments", May 24, 1943, p. 4; letter, Paul V. McNutt to Representative Harry L. Englebright of California, April 19, 1943.

[94] Memorandum, E. Frankel, War Manpower Commission, to the writer, January 10, 1944.

were referred indicate that few of them remained for any length of time.

The Raw Materials Section, Labor Production Division, of the War Production Board compiled statistics in April 1943 showing the number of referrals made to specific nonferrous western mines. A cross-section of such referrals may be compared for what the comparison is worth, with statistics reported by the Deputy Administrator of Order L-208 on the number of transferred miners who remained in their new jobs for any length of time.

Company	Type of Mine	Men Referred from Gold Mines: Reported as referred by Labor Prod. Div. of WPB	Men Referred from Gold Mines: Reported as Placed by Wilbur Nelson April 1943	Number of Transferred Miners, who remained on mine payrolls
Anaconda	Copper	238	91	119 (11-19-42)
Gray Eagle	Copper	102		28 (4-30-43)
Consolidated Copper Mines	Copper	44	36	15 (4-30-43)
Climax	Molybdenum	125 *		10 (4-30-43)

* Only 60 actually came to the mine, 6 were physically unfit, 44 quit.
Source: Edward A. Rott, "Report on Gold Mine Order L-208", May 23, 1943.

Figures which tend to indicate that transferred gold miners remained on the job for brief periods only must, of course, be used with great caution, since the turnover for labor from all sources was exceedingly high in the nonferrous mines.

Of the 3,217 men displaced, 1,288 came from three mines:

Homestake Mining Company	1,018
Empire North Star Mines	150
Idaho-Maryland Mines	120
Total	1,288

[fol. 2196] Even allowing a 10-percent labor reserve left in the mines for stand-by operations in addition to the number of men released by L-208, the total employment of these mines shows a sharp drop from 1941, when the employment was:

Homestake Mining Company	2,085
Empire North Star	293
Idaho-Maryland Mines	425
Total	2,803

A steady decline in employment had been occurring in gold and silver mines (as well as all other nonferrous metal mines) since the beginning of 1942, as is indicated in Appendixes B and C. The monthly decline in workers in gold and silver mines from January to October 1942 averaged 1,300, in view of which the release of 3,200 men presents no startling accretion to the labor available to other nonferrous metal mines, all of which had suffered proportionate rates of out-migration. The closing of the gold mines for the sake of obtaining additional labor becomes even less justifiable in the light of a development that occurred shortly after Order L-208 was issued.

One of the primary reasons for loss of labor at the copper mines had been a drainage of labor by high-wage inducements of the Army construction projects. Less than a week after the gold mines had been closed, largely because of the insistence of the Army, the Army ski-tow construction project at Pando, Colorado, was completed. In the period October 15 to November 1, 1942, some 7,000 workers were released. This project was located only twenty miles from the Climax Molybdenum mine, one of those particularly in need of employees. It has been alleged, and records would seem to substantiate the allegation, that few of the 7,000 workers released by the completion of the project returned to the mines from which they had originally come.[95] There was thus allowed to be dissipated a labor force more than double that which conceivably could have been obtained by the closing of the gold mines.

It is generally agreed by the WPB divisions concerned with mining activities that a very small percentage of the released gold mine workers actually were employed by other mines. A majority of them probably went into work of greater value to the war effort than gold mining, such as lumbering, agriculture, construction, shipbuilding, air-[fol. 2197] craft manufacture;[96] but the fact remains that

[95] Memorandum, Wilbur Nelson to H. W. Dodge, November 24, 1942; Minutes, Interdivision Meeting of Divisions Concerned with Mineral Production, November 23, 1942.

[96] A partial analysis based on the records of the Social Security Board, indicates that the released gold mine work-

the primary justification for closing the gold mines was to get labor for the production of the strategic metals. Wilbur Nelson, Arthur S. Knoizen, present Director of the Mining Division, and F. H. Hayes, Chief of the Primary Production Branch of the Copper Division, concur in the statement that the number of gold mine workers who went into other mines and remained there for a year or more was not over 100.[97]

From the foregoing, it may be concluded that since the number of gold miners actually re-employed was negligible, their contribution in increased production of copper, lead, zinc, etc., was likewise small, and probably was counterbalanced by the loss of such metals as are normally produced as by-products of gold mining.

Effects of Order L-208 on Mining Equipment.—There is considerable controversy on the amount of equipment released and reutilized, and on the amount of new equipment saved because the potential demand was suddenly cut off. The Mining Equipment Division states that the "potential dema. d of gold mines operating in 1941 in the United States and Alaska for materials for repair, maintenance and operating supplies" amounted to $15,000,000 per year.[98] Theoretically, this was eliminated by the closing of the gold mines under Order L-208. Actually, however, as priority restrictions under P-56 had been in effect all during 1942, this demand must have fallen to a considerable extent. This figure of $15,000,000 is higher than estimates of mining engineers associated with the industry, who place the potential demand at $11,000,000. Nevertheless, with all gold

[98] Edward H. Rott, "Report on Gold Mine Order L-208", May 23, 1943.

mines in the United States except Homestake operating at one-third capacity by September 1942, it may be presumed that even this figure is high.

Edward H. Rott states:

[fol. 2198] "Closing of gold mines under Order L-208, in the brief period of less than a month, promptly created a great reservoir of used equipment estimated to exceed $75,000,000 in value, including, in addition to that normally recognized as essentially mining equipment—tractors, draglines, and trucks. This equipment and idle inventories of material has been moving into channels leading to essential work at the rate of approximately $82,600 per week since November 19th."[99]

In April and May 1943, this transfer was accelerated to the rate of $100,000 per week. The disposition of equipment transferred from gold mines is indicated in Appendix I. Rott reports further:

"These transfers have accelerated strategic metal development, coal and non-metallic development. Construction and military needs have been met without delay. However, very little of this was transferred from the three principal operators from which manpower was released by the order. How rapidly this equipment would have moved into strategic metal production if Order L-208 had not been issued is pure speculation, but we know it was under way. How much of the millions in used equipment still idle will remain so, cannot be estimated."[100]

Effects of Order L-208 on Individual and Community Economy.—The effects of the closing of the gold mines on community and individual economy have been great. Gold mining was a major industry in many western states; state taxes on gross value of gold mine output constituted a considerable proportion of the state revenue. The State of Idaho normally collected not only ad valorem taxes and income taxes, but a 3 percent tax on the gross output of the

---

[99] *Ibid.*

[100] *Ibid.*

mines. South Dakota normally imposed a 6 percent severance tax on the gross value of mineral production, with an exemption of the first 100,000 tons of ore per year in order to lift the burden from small enterprises. This tax, borne chiefly by the Homestake Mining Company, accounted for nearly 7 percent of total State revenue. Utah, Arizona, New Mexico, Montana, and Idaho likewise imposed smaller gross production or severance taxes. In California the net income tax was proportionately heavier to make up for the absence of a gross production tax. Alaska imposed a 3 percent gross production tax on precious metals, whereas other mining operations paid a net income tax. It is necessary only to compare the total gold production in 1941 and 1942 in these states to arrive at conclusions as to the serious effect the closing of the gold mines had on state revenue.[101] However, the South Dakota state treasury reports that ore tax payments to the state by Homestake in 1943 amounted to only $98,929 compared with $1,200,000 in 1941.

[fol. 2199] It is not necessary to go into any detail on the losses suffered by individual gold mine operators. Homestake, the largest gold producer in the United States, is a case in point. The net profit for this company for 1943 is revealed as $304,000 in contrast to a profit of $5,682,999 for 1941, the last full year in which the mine was operated at capacity.[102] This profit was obtained because, after the gold mines were ordered closed, Homestake was granted an appeal allowing it to operate on a reduced basis to complete milling ore already broken. In June 1943, the mine was completely shut down. Actual return from the sales of gold in 1943 was $1,504,043, but since operations ended in June, $1,200,000 was deducted for depreciation, property taxes, and maintenance costs for the entire year. When the gold mines were closed, the Homestake operators turned to the development of strategic metal deposits: tungsten, in the Black Hills; vanadium, in Wyoming; and manganese, in Southern California. The tungsten development was ordered closed by the government at approximately the time the mine was just coming into capacity operation,

---

[101] See Appendixes D and E.

[102] "Homestake Gold Mine Reports Year's Profit", *Engineering and Mining Journal*, December 1943, p. 116.

because the tungsten situation had eased. The Mining Division of WPB states that it is costing Homestake $100,000 a month and the labor of 210 men simply to keep the mine in standby condition, and to prevent flooding. In December 1943, the *Engineering and Mining Journal* reported that "The Company [Homestake] still employs about 800 men in maintenance work, in essential jobs in the foundry at Lead, and in the lumber mill at Spearfish, South Dakota." Idaho-Maryland is spending approximately $75,000 a month to keep its mine in standby condition, and even despite this expenditure, subterranean swelling and the pressure of ore bodies that cannot be removed are crushing the mine timbers and threatening to make the mine forever unusuable. An appeal on this case is now in process.

It is impossible to estimate the loss to the individual miner and home-owner in affected mining communities, but appeals and protests against the relinquishing of leases and the necessity for forfeiting equity in equipment are on file in the War Production Board. Several bills have been introduced into both Houses of Congress for relief of gold mine operators forced out of production by Order L-208. Through the winter of 1942-43, the legislatures of Nevada, California, South Dakota, and Alaska passed resolutions calling for withdrawal of Order L-208. The basis for these various resolutions was mainly damage to community economy, and individual inequity, and the resolutions cited facts that had been adduced at the Senate hearings prior to issuance of L-208. "Fifty-seven percent of the entire revenue of Teller County, Colorado, which embraces the Cripple Creek district, arises from the production tax [on gold], and ninety-five percent of the total revenue of Teller County comes either directly or indirectly from gold mining", it was stated.[103] Further, the old arguments that the [fol. 2206] age of the miners precluded their effective transfer to other mines were again advanced with scattered evidence that the miners had not transferred to other mines.

---

[103] Statement of David Strickler, President, Cripple Creek Development Company, Colorado Springs, Colorado. U. S. Senate, 74th Cong., 2nd Sess., Subcommittee of the Special Committee on the Investigation of Silver, *Hearings*, May 5, 1942, p. 642.

"The average age of the miners of the Cripple Creek District is about 48 years. The miners . . . own their own homes. I think it can be fairly stated as a general proposition that once a gold miner, always a gold miner. . . . By the very nature of their work, they have disqualified themselves from becoming efficient in any other occupation."[104]

Despite the economic casualties admittedly caused by the closing of the gold mines, the War Production Board declined to amend Order L-208 when the question arose in May 1943. The reasoning behind this refusal was stated by Dr. Gustav Peck, Labor Advisor to the Chairman:

> "I questioned the need and method of L-208 when it was brought up before the Manpower Commission. Practically all the arguments now being made against the continuation of the Gold Order were made before the Order was issued. However, the decision having been made, we are now confronted with quite a different situation. . . . We knew before the Order was issued that it would be costly to the companies affected and to some communities.
>
> "Waiving the question as to whether the Gold Order should have been issued in the first instance, I believe it would be poor policy to revoke it now, since the forces it has accelerated are generally in the right direction . . . .
>
> " . . . hundreds of workers formerly employed in the gold mines are now employed away from home in non-ferrous mining or other necessary war work and . . . if the gold mines were generally reopened there would be a strong temptation for them to return home . . . .
>
> "From the point of view of the War Production Board it seems to me there is only one course to follow, now that the Gold Order is in existence and there is an escape clause in it under which exceptions can be made . . . .
>
> "In other words, I would continue the closing order but handle appeals on a more liberal basis."[105]

[105] Memorandum, Gustav Peck to William L. Batt, May 28, 1943.

EMPLOYMENT

GOLD AND SILVER MINING

UNITED STATES DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

NOTE: "Gold and
value of m
Classifica
of ore pro
dence "gol
includes
or "zinc"

NOTE: "Gold and Silver Mines" determined from dollar value of metals produced (Bureau of Census Classification) rather than from actual tonnage of ore produced (Bureau of Mines Classification) hence "gold and silver mines" as used here includes some mines classed as "copper", "lead" or "zinc" by the Bureau of Mines.

[fol. 2201] Since that time the losses to communities and individuals asmitted in May have been aggravated considerably. Mining Division officials believe that few except the very largest gold mining companies can, or will, much longer bear the burden of keeping the mines in stand-by condition with no indication of any future return. The mines are beginning to deteriorate; if they are once allowed to cave or flood to any appreciable extent, subsequent dewatering and reopening operations costing millions of dollars may prove prohibitive. This situation obviously poses the policy question of whether, if the mines are ever to be restored to active production, positive action in this direction can be much longer delayed. If the broader aspect of the gold problem,—the belief that "a reduction in gold mining should be envisaged for the post-war period" [106] holds, then the problem of curtailment on a world wide scale must be faced. The efforts of the United States to induce other countries to cut gold production have been only slightly successful, the decline in gold production in both Canada and South Africa being due principally to labor and equipment shortages. South African gold production for 1943 was down to the 1939 level; Canadian gold production for the same period was 28.4 percent under the 1939 level; United States gold production was 75.5 percent under the 1939 total.

Since the beginning of 1944, there has been a slight increase in the supply of labor available to mining in Canada; a few gold mines have resumed operations and some exploratory and development work has been undertaken. In South Africa, gold mining companies are rapidly taking up options on new gold fields in the Orange Free State; development work is being accelerated, with the government fostering experiments in the possibility of mining gold below the 8,500 foot level.

Dr. J. F. Walker, Deputy Minister of Mines for British Columbia, Canada; commenting on the decline in value of Canadian mine output for 1943 (a decline due in large part to the decreased operations of the gold mines) declared:

---

[106] Letter, Milo Perkings, Executive Director, Economic Defense Board, to Donald M. Nelson, December 19, 1941.

"The decline in value of mine output is only the reflection of a serious situation that is imperiling the future of the mining industry in the Province. . . . This is what finally shut down so many gold mines—production during the war or to permit competition in means that the physical condition of many of the mines that have shut down, and of some of those still operating is not what it should be, either to maintain production during the war or to permit competition in [fol. 2202] the post war period. If production is to be maintained, more men must be diverted to the mining industry, and if we are to be able to compete in the postwar world, still more men must be found so that our mines can be put back into the condition they were in when the war started. We appreciate to the full the necessities of war, and the demands on labor and materials, but we believe that labor can be made available to our mining industry." [107]

The political and economic factors underlying the continuance of foreign gold mining are recognized, but a long-range view of the domestic situation raises the issue of whether the domestic gold mining industry may be facing extinction while foreign gold mining anticipates an early return to pre-war status.

[fol. 2203] APPENDIX A

Chronology

1941

July 29. Preference rating Order P-23 issued, providing blanket rating of A-3 for deliveries of material required for production of mining machinery.

September 17. Preference Rating Order P-56 issued; assigning preference ratings to metal mines, based on serial number classification system. Rating of A-8 assigned to maintenance and repair equipment for mines in general. Gold placer mines excluded from priority benefits.

November 8. Joint Economic Committee, United States and Canada, resolves that gold mining and refining in-

---

[107] *Engineering and Mining Journal*, January 1944, p. 117.

1941

dustry in general be treated as a non-defense industry but that where curtailment through priorities would cause prospective deficit in dollar exchange, such prospective deficit be avoided.

November 18. Supply, Priorities and Allocations Board asked to consider promulgation of policy on gold mining.

November 30. Preference Rating Order P-23 scheduled to expire: expiration date advanced to December 31, 1941.

December 2. SPAB considers gold mining problem, requests Donald M. Nelson to obtain official opinion on matter from State and Treasury Departments, Federal Reserve Board, and Board of Economic Warfare.

December 18. Preference Rating Order P-22 (under which gold placer mines had been permitted to obtain low ratings) replaced by more stringent Order P-100, virtually shutting off gold placer mines from obtaining equipment.

December 23. Donald M. Nelson reports consensus of governmental finance authorities that gold is not essential to war effort. SPAB agrees that in granting priorities and export licenses for gold mining machinery and equipment, no materials be allowed for expansion of production but minimum amounts for maintenance and repair be granted.

[fol. 2204] December 31. Preference Rating Order P-23 expires, and is replaced by Order P-56-a, providing rating of A-3 for essential mining machinery, assigning serial numbers on basis of essentiality. New Machinery for gold mines placed at bottom of list.

1942

February 11. E. R. Stettinius, Jr., Lend-Lease Administrator, suggests that WPB adopt policy of denying nitroglycerin and hardened steel for gold mining companies for duration of the war.

March 2. In view of shortage of mining equipment, Order P-56 amended to uprate priorities on machinery for essential mines. Any mine more than 30 percent of the production of which in dollar value consists of gold and/or silver was excluded from priority ratings.

March 12. Meeting held at University of Nevada, West-

1942

ern Senators, State Governors, and mining representatives; protest inequity of 30 percent exclusion clause.

May 5, 6, 8. Series of hearings held before Senate Special Silver Committee to protest 30 percent exclusion clause.

May 15. Order P-56 amended to eliminate 30 percent exclusion clause. Power to assign serial numbers vested in Director of Industry Operations, who declares that mines producing primarily gold and or silver have not been and will not be granted serial numbers.

May-June. Labor shortage develops in western nonferrous metal mines.

July. Meeting of representatives of government agencies interested in the mine labor problem called by Manpower Branch, Army Services of Supply. It recommended that WPB issue order curtailing gold production, and that War Manpower Commission take steps to see that labor released through WPB action be transferred to essential nonferrous metal mines.

[fol. 2205] 1942

July 31. Richard A. Lester, Labor Production Division, WPB, proposes progressive curtailment of gold mining on percentage basis; submits draft plan.

August 3. Wilbur Nelson, Mining Branch, WPB, declares Lester plan would seriously curtail production of nonferrous metals and disrupt smelter practice.

August 20. First draft order closing gold mines prepared. Order proposes to close all non-essential mines, "non-essential mines" being defined as "any mining enterprise in which gold is produced, unless the operator of such mining enterprise is the holder of a serial number for such enterprise issued under Preference Rating Order P-56 as amended". Shutdown date to be thirty days after issuance of the order; mines producing less than 1,200 tons of commercial ore in 1941 exempted from order.

September 1. Chief of Copper Branch questions feasibility of tying gold closing order with P-56.

1942

September 3. Wilbur Nelson replies that mines possessing P-56 serial numbers are those that also produce critical minerals needed in war effort.

September 3-9. A. I. Henderson directs Miscellaneous Minerals Branch to prepare order closing all gold mines in which total value of production of gold is 50 percent or more of total value of all metals produced.

September 9. Wilbur Nelson protests that if 50 percent basis is used, result will be temporary shutdown of many mines producing essential fluxing ores; requests that August 20 draft order be used.

September 11. J. M. Scribner, Operating Assistant to A. I. Henderson, reports that after conferences with Wilbur Nelson and others, "it was determined to be most practical that the order not be divorced from P-56." Mining Division proposes to cancel, where possible, mine serial numbers assigned to mines producing 50 percent or more of gold in dollar value.

[fol. 2206] 1942

September 15-16. Miscellaneous Minerals Branch declares closing of gold mines outside its jurisdiction; preparation of order turned over to Mining Division.

September 17. J. M. Scribner advises Mining Branch to clear order with all branches concerned, but withhold issuance pending instruction from office of Donald M. Nelson.

September 19. W. L. Batt requests Wilbur Nelson to determine measures calculated to slow down South African gold production and to consider advisability of calling labor-management representatives of gold mines to Washington meeting.

September 22. Mining Branch informs J. M. Scribner that it has added a few minor verbal changes to the gold closing order, for purposes of clarity, and will hold the order until further directions are given.

September 23. At W. L. Batt's suggestion, Wilbur Nelson, Labor Production Division and War Manpower Commission representatives meet to discuss feasibility of bringing gold mines representatives to Washington. Wilbur Nelson believes it should be done; Labor Production Division and WMC disagree. No decision reached.

1942

September 24. Batt holds meeting on gold mine closing order, with General McSherry of WMC in attendance. Batt states his belief that the order should be issued, but agrees to hold it up at McSherry's request pending settlement of wage dispute by War Labor Board.

September 25. Batt informs A. I. Henderson of conclusions reached at September 24 meeting.

September 25. At meeting of WPB branches concerned with mineral production, resolution is unanimously passed requesting that gold mine companies be called to Washington before order is issued.

September 28. Wilbur Nelson reports at Interbranch meeting that Batt had turned down the resolution; group reaffirms earlier stand.

[fol. 2207] 1942

September 29. Batt agrees to necessity of calling gold mine operators to Washington; Wilbur Nelson telephones invitation to largest gold mine operators to meet in Washington on October 1.

September 30. Meeting held in Batt's office with Senators interested in gold closing order.

October 1. Meeting held with gold mine operators. Statistics developed at meeting reveal that approximately 3,270 men will be released by closing the gold mines, of which 896 are miners and muckers.

October 2. At conference of Donald M. Nelson, W. L. Batt and Wilbur Nelson, it is agreed that new order would be drawn giving gold mines six months in which to close, during which period they would have to operate at 50 percent of average 1941 production.

October 2. Robert P. Patterson, Undersecretary of War, writes Donald M. Nelson that the longer the delay in closing the gold mines the further off will be the relief of the copper shortage.

October 5. Patterson and Forrestal jointly request Donald M. Nelson that "prompt action be taken" and "half-measures avoided".

October 6. Donald M. Nelson brings matter of closing the gold mines before the War Production Board. General Somervell declares that in view of Army agreement to fur-

1942

lough 4,000 soldiers for work in copper mines, "failure to stop [gold] production immediately would be inexcusable". WPB agrees that order be issued stopping all non-essential domestic gold mining operations within 60 days, and thereafter permitting only minimum maintenance operations.

October 6. Draft of gold mine closing order prepared by Wilbur Nelson and Frederick M. Eaton, Assistant General Counsel of WPB.

October 7. Meeting held by WPB mining and labor representatives with War Manpower Commission representatives on mechanisms to channel released labor into nonferrous metal mines.

[fol. 2208] 1942

October 8. Limitation Order L-208 issued, without prior circulation, or submission to Clearance Committee. Operators of all lode and placer gold mines prohibited from proceeding with breaking ore or any development work or new operations after October 15, 1942, and within sixty days from October 8, 1942, from carrying on any except minimum operations incident to maintaining mines in standby condition.

October 8. War Manpower Commission Directive No. 13 issued, instructing employers not to hire in Alaska or any state west of the Mississippi River any released gold mine labor without certification by United States Employment Service.

1943

January-April. Appeals for relief or modification of L-208 pour in to WPB. State legislatures pass resolutions calling for its withdrawal; bills are introduced into Congress requesting relief for gold mine operators forced to suspend operations under L-208.

May 24. Thirty Senators from Western states appeal to WPB to rescind or modify L-208.

May 24. Edward Rott, Deputy Administrator of L-208 declares that general effect of the order has been to antagonize individuals and communities dependent on gold min-

ing and cause large losses to operators. He suggests modification of L-208 by an amendment.

June 13. Patterson states that as gold miners are still at work in some gold mines, there is no warrant for asking that soldiers be furloughed for work in copper mines.

June 15. WPB unanimously votes to continue Order L-208 with exceptions allowed on appeal only if value of essential metals produced by mine outweighs use of critical materials involved, or if necessary labor can be obtained without drawing upon essential war activities.

November 17. Representative Engle of California introduces Bill into House of Representatives proposing repeal of Order L-208.

[fol. 2209]

Title 32—National Defense

Chapter IX—Office of Production Management

Subchapter B—Priorities Division

Part 959—Materials for the Production of Mining Machinery and Equipment Specified Herein

Preference Rating Order No. P-23

Producer's Serial No. ——

To: _____ _____
(Name of Producer) (Address)

959.1 Preference Rating Order. For the purpose of facilitating the acquisition of Material for the production of Defense Products, a preference rating is hereby assigned

to deliveries to the above-named Producer and to deliveries to his Suppliers, upon the following terms:

(a) *Definitions.* For the purposes of this Order:

(1) "Producer" means the specific person to whom this Order is addressed above.

(2) "Defense Products" means the following mining machinery and equipment to be produced by the Producer:

(i) Machinery and equipment directly necessary for underground and open-cut production of (a) coal, and (b) any materials produced with a view to extracting their metallic content; and

(ii) Machinery and equipment for all customary processes necessary for beneficiation and preparation for shipment of the coal and materials specified in (i) above.

(3) "Supplier" means any person with whom a contract or purchase order has been placed for delivery, to the Producer or to another Supplier, of Material which will enter directly or indirectly, at any stage, into the production of the Defense Products.

(4) "Material" means any commodity, equipment, accessories, parts, assemblies or products of any kind.

(b) *Assignment of Preference Rating.* Preference Rating A-3 is hereby assigned to deliveries of all Material which will enter directly or indirectly, at any stage, into the production by the Producer of the Defense Products; *provided, however, that the preference rating may be applied only to deliveries of Material included under the current Priorities Critical List as amended from time to time;* and provided further that such rating shall not apply to deliveries to a Supplier of machinery or equipment used in the manufacturing process by a Supplier.

(c) *Persons Entitled to Apply Preference Rating.* The preference rating hereby assigned may be applied by:

(1) The Producer;

[fol. 2219] (2) Any Supplier who has been furnished with a signed copy of the Order in the manner specified in paragraph (d).

(d) *Application of Preference Rating.* The Producer or any Supplier who has been so furnished with a signed copy

of this Order, in order to apply the preference rating to deliveries to him must:

(1) Execute a copy of this Order by signing the acceptance at the end thereof, and file such signed copy with the Director of Priorities; and

(2) Furnish one additional copy of the Order, signed by him in the same manner, to each of his Suppliers with whom he has placed a contract or order for Material to the delivery of which he elects to apply the preference rating. After he has furnished one such copy to a particular Supplier, he need furnish no additional copy to that Supplier to cover any subsequent deliveries of Material entering into the Defense Products. The Producer or Supplier who has applied the rating shall identify subsequent purchase orders which are covered by the rating by specifying thereon the number and serial number of this Order and the preference rating hereby assigned.

(e) *Restrictions on Use of Rating.* The rating shall not be applied:

(1) Unless the Material to be delivered cannot be secured when required without such rating;

(2) To obtain deliveries greater in quantity or on dates earlier than required for the delivery on schedule of the Defense Products or of Material entering into the Defense Products.

(f) *Reports and Information:*

(1) The Producer and each Supplier who applies the preference rating hereby assigned shall keep and preserve for a period of at least two years accurate and complete records and information concerning:

(i) All applications of such preference rating, including the kinds, values, quantities and delivery dates of Material covered by each such application, together with the name and address of each Supplier to whose deliveries of Material the rating has been applied.

(ii) Inventories and stocks on hand of Material of the kind covered by each application of the rating.

(iii) Contracts and Orders on his books, including de-

livery schedules, for Defense Products or for Material which is to enter directly or indirectly at any stage, into the production of Defense Products.

[fol. 2220] (2) The Producer and each Supplier who applies the preference rating shall file reports containing such information concerning the matters specified in paragraph (f)(1) above, and concerning any other pertinent matters, with the Division of Priorities, Office of Production Management, as shall from time to time be required by said Division. No reports are to be filed by the Producer or any Supplier until so requested and until forms therefor are prescribed by the Division of Priorities.

(3) The Producer and each Supplier who applies the preference rating, shall submit from time to time to an audit and inspection by representatives of the Division of Priorities concerning the matters specified in paragraph (f)(1) above.

(g) *Use of Higher Preference Ratings.* If any delivery entitled to be rated under this Order is assigned a higher preference rating by an individual preference rating certificate or by any other order issued by the Director of Priorities, the Producer or Supplier may use the higher rating instead of the rating assigned by this Order.

(h) *False Statements.* Any person who wilfully falsifies records to be kept, or information to be furnished, pursuant to this Order may be prohibited by the Director of Priorities from receiving further deliveries of any Material subject to allocation by the Director of Priorities, and the Director of Priorities may also take any other action deemed appropriate, including a recommendation for prosecution under section 35 of the Criminal Code (18 U.S.C. 80).

(i) *Revocation or Modification.* This Order may be revoked or amended by the Director of Priorities at any time as to the Producer or any Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, unless the rating has been specifically revoked with respect thereto. No additional applications of the rating shall be made to any other deliveries by the Producer or Supplier affected by said revocation or expiration.

(j) *Effective Date.* This Order shall take effect on the

29 day of July, 1941; and, unless sooner revoked, shall expire on the 30 day of November, 1941. (O.P.M. Reg. 3, March 7, 1941, 6 F. R. 1596; E. O. 8629, January 7, 1941, 6 F. R. 191; Sec. 2(a), Public No. 671, 76th Congress, Sec. 9, Public No. 783, 76th Congress.)

Issued this 29 day of July, 1941.

E. R. Stettinius, Jr., Director of Priorities.

[fol. 2221] Acceptance

To Be Signed by an Authorized Official of the Producer or Supplier before Applying the Rating Assigned by the Foregoing Order.

(Before signing this Acceptance read carefully sections (c), (d), and (e) of the foregoing Order.)

The Producer or Supplier named below hereby accepts the foregoing Order and certifies to the Director of Priorities of the Office of Production Management that he is entitled to apply the preference rating assigned by the foregoing Order in accordance with its terms.

Dated this ——— day of ———, 1941.

———,
Legal Name of Producer or Supplier.

By: ———,
Name and Title of Authorized Individual.

(Section 35 of the Criminal Code, 18 U.S.C. 80, makes it a criminal offense to make a false statement or representation to any Department or Agency of the United States as to any matter within its jurisdiction.)

Additional copies of this Order may be secured from the Division of Priorities, Office of Production Management, Washington, D. C., or photostatic copies may be made and used by persons entitled to apply the preference rating.

[fol. 2222] PLAINTIFF'S EXHIBIT 4

Title 32—National Defense

Chapter IX—Office of Production Management

Subchapter B—Priorities Division

Part 982—Mines

Maintenance, Repair, and Supplies

Preference Rating Order No. P-56

982.1 Preference Rating Order. For the purpose of facilitating the acquisition of material for the maintenance and repair of the property and equipment of, and for supplies for Mines, preference ratings are hereby assigned to deliveries of such material upon the terms hereinafter set forth, until such time as the Office of Production Management certifies specific quantities of such material to which the preference ratings herein assigned may be applied.

(a) *Definitions.*

(1) "Person" means any individual, partnership, association, corporation, or other form of enterprise.

(2) "Mine" means any plant physically situated within the limits of the United States, its territories and possessions, and actually engaged in the extraction by surface, open-pit or underground methods, or in the beneficiation, concentration or preparation for shipment of the products of mining activity.

(3) "Mine Operator" means any person operating a Mine to whom a Mine Serial Number has been issued in accordance with the provisions of paragraph (b).

(4) "Supplier" means any person with whom a purchase order or contract has been placed by a Mine Operator or another Supplier for material.

(i) required by a Mine Operator for maintenance, emergency repair, emergency inventory, or operating supplies of a Mine, or

(ii) to be physically incorporated in other material so required by a Mine Operator.

(5) "Material" means any commodity, equipment, accessories, parts, assemblies, or products of any kind.

(6) "Maintenance" means minimum upkeep necessary to

continue the working condition of the essential operating equipment of a Mine at its then current rate of production.

(7) "Emergency Repair" means a restoration of Mine property which is necessary to re-establish Mine Operation after a breakdown or suspension of operations because of damage, wear and tear, destruction of parts, or the like.

[fol. 223] (8) "Emergency Inventory" means minimum inventory of material required to make reasonable advance provision for emergency repair of a Mine.

(9) "Operating Supplies" means material which is essential to and consumed in the operation of a Mine and which is generally classified as "mine supplies" or "mine stores."

(b) *Certification of Mines.* The agency designated by the Governor or other chief executive officer of each state, territory or possession shall furnish in duplicate to the Office of Production Management a certificate setting forth the names of the persons operating within such state, territory or possession a recognized mining enterprise actually engaged in the extraction by surface, open-pit, or underground methods, or in the beneficiation, concentration or preparation for shipment, of the products of mining activity, (but not including that form of mining known as "gold placer mining"). The Office of Production Management will thereupon issue to each such Person who may be approved by the Director of Priorities, through such state agencies, a Mine Serial Number. Any person aggrieved by failure or refusal of a state agency to certify him as a Mine Operator may apply in writing to the Director of Priorities for issuance of a Mine Serial Number. The Director of Priorities may thereupon take such action as he deems appropriate.

(c) *Assignment of Preference Ratings.* Subject to the terms of this Order, the following preference ratings are hereby assigned, but nothing herein contained shall prevent the use of any other or higher rating to which any person may be entitled by reason of any other Preference Rating Certificate or Order.

(1) A-1-a to deliveries to a Mine Operator of material essential for emergency repair of a Mine, as approved by the Office of Production Management pursuant to paragraph (c)(1).

(2) A-3 to deliveries to a Mine Operator of material required for emergency inventory or for operating supplies or for maintenance of a Mine.

(3) A-3 to deliveries to a Supplier

(*a*) of material required by a Mine Operator for maintenance, emergency repair, emergency inventory or operating supplies of a Mine, and

(*b*) of material to be physically incorporated in other material so required by a Mine Operator.

(d) *Persons Entitled to Apply Preference Ratings.* The preference ratings hereby assigned may be applied by a Mine Operator or by any Supplier making to a Mine Operator or another Supplier deliveries of the kinds specified in paragraph (c) which have been rated pursuant to this Order.

(e) *Application of Preference Ratings.*

(1) A Mine Operator, in order to apply the A-1-a preference rating assigned by paragraph (e)(1), must communicate with the Office of Production Management, describing the material essential for emergency repair and the nature of the emergency necessitating such repair. [fol. 2224] The Office of Production Management will notify such Mine Operator whether, and to what extent, his application is approved, and a copy of such notification shall be furnished by the Mine Operator to his Supplier to evidence the A-1-a rating.

(2) A Mine Operator or a Supplier, in order to apply the A-3 preference rating assigned by paragraph (c)(2) and (3), must endorse the following statement on the original and all copies of each purchase order or contract for material, the delivery of which is entitled to such preference rating:

"Purchase order for Materials for a Mine rated pursuant to Preference Rating Order P-56, Mine Serial No. ——. Rating A-3. This application of the rating is made pursuant to the terms and conditions of that Order, with which the undersigned is familiar.

—— —— (Name of Mine Operator or Supplier) By:
—— —— (Authorized Signature)"

Such purchase order or contract so endorsed shall be delivered to the seller of such material. Such endorsement shall constitute a certification to the Office of Production

Management that the Mine Operator or Supplier is entitled to apply such rating to such delivery pursuant to this Order. Such purchase order or contract must be in writing and shall not include any material, the delivery of which is not rated pursuant to this Order.

(3) A Mine Operator or Supplier placing any such rated purchase orders or contracts and the Supplier selling the material covered thereby, must each retain endorsed copies of such purchase orders, contracts, notifications and other relevant documents segregated from all other purchase orders or contracts for a period of two years from the date thereof for inspection by authorized representatives of the Office of Production Management.

(f) *Restrictions on Application of Rating.* The preference ratings hereby assigned shall not be applied

(1) unless the material to be delivered cannot be secured when required without such rating;

(2) to obtain deliveries greater in quantity or on dates earlier than required for the operation, maintenance or repair of Mine property or equipment;

(3) by a Supplier to obtain material for a delivery by him which has not been rated pursuant to this Order.

(g) *Restrictions on Inventory.* No Mine Operator shall accept deliveries (whether or not rated pursuant to this Order) of operating supplies or other material which will increase such Mine Operator's inventory of such operating supplies or other material to an amount greater than the minimum necessary for the efficient operation of his business, and the ratio of inventory to current production shall in no event exceed the ratio of average inventory to average production for the years 1938, 1939, and 1940.

[fol. 2225] (h) *Resale of Operating Supplies and Other Material Prohibited:* Except with specific permission of the Director of Priorities, no Mine Operator shall resell any operating supplies or other materials (whether or not obtained pursuant to rating assigned by this Order) except to another Mine Operator.

(i) *Conservation and Standardization.* Every person affected by this Order shall use his best efforts to effectuate conservation of materials by elimination, simplification or standardization of types, sizes, or forms, or otherwise, and to cooperate in any program developed for such purpose by

the Office of Production Management. The Director of Priorities may from time to time issue specific directions as to conservation, elimination and standardization.

(j) *Relief.* In case the productivity or sound working condition of any Mine is adversely affected by any provision or application of this Order or by inability to obtain essential operating supplies or other materials, such Mine may apply for relief to the Director of Priorities. The Director of Priorities may thereupon take such action as he deems appropriate.

(k) *Records, Audit and Reports.* Each Mine Operator and each Supplier shall keep and preserve for a period of not less than two years accurate and complete records of all transactions affected by this Order and shall submit from time to time to audit and inspection by duly authorized representatives of the Office of Production Management. Each Mine Operator and each Supplier shall execute and file with the Office of Production Management or other designated agency, such reports and questionnaires as the Office of Production Management shall from time to time require. Until otherwise directed, each Mine Operator shall file with the designated state agency on or before the 10th day of each month, beginning October 10, 1941, a report of purchases made during the preceding month pursuant to the ratings granted by this Order.

(l) *Violations.* Any person affected by this Order who violates any of its provisions or a provision of any other Order, regulation or other directive of the Office of Production Management may be deprived of priorities assistance, or subjected to such other or further action as the Director of Priorities may deem appropriate.

(m) *Revocation or Modification.* This Order may be revoked or modified by the Director of Priorities at any time as to any Mine Operator or Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, unless the rating has been specifically revoked with respect thereto. No additional applications of this rating to any other deliveries shall thereafter be made by the Mine Operator or Supplier affected by said revocation or expiration.

(n) *Revocation of Prior Order.* The provisions of Preference Rating Order P-22, insofar as they relate to Mines are hereby revoked.

[fol. 2226] (o) *Effective Date.* This Order shall take effect immediately, and unless sooner revoked shall expire on the 30th day of April, 1942.

(P.D. Reg. 1, Aug. 27, 1941, 6 F.R. 4489; OPM Reg. 3, March 8, 1941, 6 F.R. 1596; E.O. 8629, Jan. 7, 1941, 6 F.R. 191; E.O. 8875, Aug. 28, 1941, 6 F.R. 4483; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session; sec. 9, Public No. 783, 76th Congress, Third Session.)

Issued this 17th day of September, 1941.

Donald M. Nelson, Director of Priorities.

Office of Production Management
Priorities Division

Preference Rating Order No. P-56-a

Material Entering into the Production of Mining Machinery and Equipment

To:
Name of Producer:
Address:
Serial No. Date:

PREFERENCE RATING ORDER. For the purpose of facilitating the acquisition of certain Material in the public interest and to promote the national defense, a preference rating is hereby assigned to deliveries to the above-named Producer and to deliveries to his Suppliers, upon the following terms:

(a) *Definitions.*

(1) "Producer" means the specific person to whom this Order is addressed above.

(2) "Supplier" means any person with whom a contract or purchase order has been placed for delivery of Material to the Producer or to another Supplier.

(3) "Material" means any commodity, equipment, accessory, part, assembly or product of any kind.

(b) *Assignment of Preference Rating.* Preference Rating A-3 is hereby assigned:

(1) to deliveries to the Producer by his Suppliers of those quantities and kinds of Material entering into the production of the following products, which may be specifically authorized for rating by the Director of Priorities from time to time on Form PD-25A: Mining machinery and equipment, and parts thereof, of the types set forth in Schedule A attached.

(2) to deliveries to any Supplier, of Material which will ultimately be delivered by him or another Supplier to the Producer under the rating assigned above, or will be physically incorporated into Material which will be so delivered; or which will be used, within the limitations of paragraph (d) (2) hereof, to replace in such Supplier's inventory Material so delivered.

(c) *Persons Entitled to Apply Preference Rating.* The preference rating hereby assigned may, in the manner and to the extent hereby authorized, be applied by:

(1) the Producer;

[fol. 2228] (2) any Supplier of Material to the delivery of which the preference rating has been applied as provided in paragraph (e).

(d) *Restrictions on Use of Rating.*

(1) *Restrictions on Producer.*

(i) The Producer may apply the rating only to those quantities and kinds of Material specifically authorized for such rating by the Director of Priorities as indicated on the copy of Form PD-25A returned to the Producer, and only to purchase orders and contracts placed by him prior to the termination of the period specified on said Form.

(ii) The Producer may not apply the rating to obtain delivery of Material on earlier dates than required to enable him to maintain his production schedules.

(2) *Restrictions on Supplier.*

(i) No Supplier may apply the rating to obtain Material in greater quantities or on earlier dates than required to enable him to make on schedule a delivery rated hereunder or, within the limitations of (ii) and (iii) below, to replace in his inventory Material so delivered. He shall not be deemed to require such Material if he can make his rated delivery and still retain a practicable working minimum inventory thereof; and if, in making such delivery, he reduces his inventory below such minimum, he may apply the rating only to the extent necessary to restore his inventory to such minimum.

(ii) A Supplier who supplies Material which he has in whole or in part manufactured, processed, assembled or otherwise physically changed may not apply the rating to restore his inventory to a practicable working minimum unless he applies the rating before completing the rated delivery which reduces his inventory below such minimum.

(iii) A Supplier who supplies Material which he has not in whole or in part manufactured, processed, assembled or otherwise physically changed may defer applications of the rating hereunder to purchase orders or contracts for such Material to be placed by him until he can place a purchase order or contract for the minimum quantity procurable on his customary terms; *provided*, that he shall not defer the application of any rating for more than three months after he becomes entitled to apply it.

(f) *Application of Preference Rating.*

(1) The Producer or any Supplier, in order to apply the preference rating assigned hereunder to deliveries to him must

[Fol. 2229] (i) Furnish one copy of Preference Rating Order No. P-56-a, with the attached form of acceptance thereof unsigned, to each of his Suppliers with whom he places a contract or purchase order for Material to the delivery of which he elects to apply the preference rating. After one such copy, regardless of Serial Number, has been furnished to a particular Supplier, no additional copy need be furnished to that Supplier to cover any subsequent application of the preference rating assigned hereunder; and

(ii) endorse on each purchase order or contract which is covered by the rating assigned hereunder, a statement in the following form, manually signed by an official duly authorized for such purpose, specifying the rating assigned and the appropriate Serial Number or Numbers:

> "Preference Rating A-3 is applied hereto under Preference Rating Order No. P-56-a, Serial No(s). ———, with the terms of which Order the undersigned is familiar
>
> ——— (Name of Producer or Supplier), By ——— (Duly Authorized Official).

Such endorsement shall constitute a representation to the Office of Production Management and the Supplier with whom the purchase order or contract is placed that such purchase order or contract is duly rated in accordance herewith. Such Supplier shall be entitled to rely on such representation, unless he knows of has reason to believe it to be false. Any such purchase order or contract shall be restricted to Material the delivery of which is rated in accordance herewith.

(2) A Supplier who has received from two or more Producers or Suppliers endorsed purchase orders or contracts for Material to the delivery of which the same rating has been applied in accordance with this Order, may (within the limitations of paragraph (d) hereof) include in a single purchase order or contract any or all of the Material which he in return requires to make such rated deliveries, but must specify in the endorsement on such single purchase order or contract all of the Serial Numbers contained in the purchase orders or contracts which have been so received by him and to fill which he is applying the preference rating.

(3) In addition to the foregoing requirements, a Supplier (but not a Producer), before he first applies the preference rating assigned hereunder to deliveries to him, must accept Preference Rating Order No. P-56-a by executing the form of acceptance attached at the end hereof, and file it with the Office of Production Management. No additional acceptance need be filed for any subsequent application of [fol. 2230] Preference Rating Order No. P-56-a, regardless of the Serial number under which or of the name of the Producer to whom it is issued.

(f) *Records.* In addition to the records required to be kept under Priorities Regulation No. 1, the Producer, and each Supplier placing or receiving any purchase order or contract rated hereunder, shall each retain, for a period of two years, for inspection by representatives of the Office of Production Management, endorsed copies of all such purchase orders or contracts, whether accepted or rejected, segregated from all other purchase orders or contracts or filed in such manner that they can be readily segregated for such inspection.

(g) *Reports.* The Producer, and each Supplier who applies the preference rating assigned hereunder, shall file such reports as may be required from time to time by the Office of Production Management. Until further notice each Producer shall file quarterly reports of material purchased on Form PD-25-a and each Supplier shall file quarterly reports on Form PD-81 (or, at his election, Form PD-81-a accompanied by copies of all endorsed purchase orders or contracts for Material to which the preference rating has been applied by him during the preceding quarter).

(h) *Communications to Office of Production Management.* Acceptance of this Order, all reports required to be filed hereunder, and all communications concerning this Order, shall, unless otherwise directed, be addressed to:

"Office of Production Management, Washington, D. C. Ref: P-56-a."

(i) *Violations.* Any Person who willfully violates any provision of this Order or who by any act or omission falsifies records to be kept or information to be furnished pursuant to this Order may be prohibited from receiving further deliveries of any Material subject to allocation, and such further action may be taken as is deemed appropriate, including a recommendation for prosecution under Section 35(A) of the Criminal Code (18 U.S.C. 80).

(j) *Revocation or Amendment.* This Order may be revoked or amended at any time as to the Producer or any Supplier. In the event of revocation, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, unless the rating has been specifically revoked with respect thereto. No additional applica-

tions of the rating to any other deliveries shall thereafter be made by the Producer or Supplier affected by such revocation.

(k) *Applicability of Priorities Regulation No. 1.* This Order and all transactions affected thereby are subject to the provision of Priorities Regulation No. 1, as amended from time to time, except to the extent that any provision hereof may be inconsistent therewith, in which case the provisions of this Order shall govern.

(l) *Effective Date.* This Order shall take effect on the date specified in the heading hereof, and shall continue in [fol. 2231] effect until revoked.

(P.D. Reg. 1, Aug. 27, 1941, 6 F.R. 4489; O.P.M. Reg. 3 Amended, Sept. 2, 1941, 6 F.R. 4865; E.O. 8629, Jan. 7, 1941, 6 F.R. 191; E.O. 8875, Aug. 28, 1941, 6 F.R. 4483; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session; sec. 9, Public No. 783, 76th Congress; Third Session)

Issued this 31st day of December, 1941.

Donald M. Nelson, Director of Priorities.

[fol. 2232] Supplier's Acceptance of Preference Rating Order No. P-56-a

Material Entering into the Production of Mining Machinery and Equipment

(Before signing this acceptance, read carefully the terms of the foregoing Order).

To: Office of Production Management, Washington, D. C. Ref. P-56-a

The undersigned has received a purchase order or contract containing an endorsement in the form provided in Preference Rating Order No. P-56-a. For the purpose of applying to deliveries to the undersigned the rating assigned by said Order, the undersigned hereby accepts said Order and agrees to be bound by the terms and conditions thereof.

Dated this —— day of ——, 194

————, Legal Name of Supplier, By —— ——, Signature of Duly Authorized Official, Title, —— ——, Address of Supplier, —— ——

(Section 35(A) of the Criminal Code (18 U.S.C. 80) makes it a criminal offense to make a false statement or representation to any Department or Agency of the United States as to any matter within its jurisdiction).

INSTRUCTIONS

The requirements for furnishing copies of the foregoing Order to Suppliers and for execution of the above form of acceptance by Suppliers are set out in detail in paragraph (e) of the Order. Copies may be obtained for such purpose from the Office of Production Management, Washington, D. C.; or Producers or Suppliers required to furnish the copies may make them by photo-offset or similar photographic process. Such copies must be identical in size and every other respect with the Order and acceptance as issued by the Office of Production Management.

Copies furnished to Suppliers by Producers or other Suppliers, pursuant to the requirements of paragraph (e) of the foregoing Order, should have the form of acceptance left blank for execution by the Suppliers to whom they are furnished.

[fol. 2233] Schedule "A"

As to all machines listed below, the rating provided herein likewise applies to equipment items, accessories, and tools customarily sold with such machines.

Aerial tramway equipment.

Air compressors for mine use.

Air distribution equipment.

Assaying and testing laboratory equipment at the mine.

Ball-casting machines.

Boxcar loaders.

Cages and skips.

Car dumpers—rotary or end.

Cleaning plants and equipment, including design, construction, and erection.

Concentrating plants and equipment, including design, construction, and erection.

Conveyors—shaking, belt, chain, or gravity type, including duckbills and other self-loading heads.

Cutting machines—cable reel and self-propelling transportation trucks therefor.

Diamond core drilling machines.
Dragline dredges, excavators, and scraper units.
Dredges—continuous bucket, including pumps.
Drills and drilling machines, power driven, and reconditioning equipment therefor.
Dust control equipment.
Electrical equipment for mine transportation and power.
Hoists—including room hoists and car pullers.
Hydraulic monitors, with feed pipe and fittings.
Jacks for lifting and roof support.
Lamps—mine, miners', safety, and ore-exploration types.
Locomotives for mine use.
Loaders, mobile, including mucking machines.
Milling plants and equipment, including design, construction, and erection.
Mine cars, track or trackless.
Pit-car loaders and elevating conveyors.
Preparation plants and equipment, including design, construction, and erection.
Pumps, pipe, and fittings for mine drainage or material transport.
Rock dusting equipment.
Safety and defense equipment.
Sand dryers.
Scraper loaders.
Sheaves and sheave blocks.
Shovels, power.
Shuttle cars, track or trackless.
Slusher hoists and scrapers.
Steel sections for support of mine openings.
Storage batteries for mine use.
Tanks and bins for storage of mine products.
Tipples and head frames, including design, construction, and erection.
Track and track accessories for mine transportation.
Treating plants and equipment, including design, construction, and erection.
Trucks, tractors, and trailers for mine use.
Ventilation equipment.
Waste disposal equipment.
Weighing equipment, including automatic devices.
Wire rope for haulage and hoisting.

Title 32—National Defense

Chapter IX—War Production Board

Subchapter B—Division of Industry Operations

Part 982—Mines

Preference Rating Order P-56

(As Amended to March 2, 1942)

Section 982.1 is hereby amended to read as follows:

982.1. PREFERENCE RATING ORDER. For the purpose of facilitating the acquisition of material for continued and expanded operation of Mining Enterprises in the public interest and to promote the national defense, preference ratings are hereby assigned to deliveries of such material upon the terms hereinafter set forth:

(a) *Definitions.*

(1) "Person" means any individual, partnership, association, business trust, corporation, governmental corporation or agency, or any organized group of persons whether incorporated or not.

(2) "Mining Enterprise" means

(i) any plant actualy engaged in the extraction by surface, open-pit, or underground methods, or in the beneficiation, concentration, or preparation for shipment of the products of mining activity, but not including any plant more than 30 per cent of the production of which in dollar value consists of gold and/or silver;

(ii) any plant wholly engaged in the processing and burning of refractories;

(iii) any prospecting enterprise for the discovery or exploration of new or additional mining projects.

(3) "Operator" means any person operating a Mining Enterprise, who holds a Serial Number issued in accordance with the provisions of paragraph (b).

(4) "Supplier" means any person with whom a purchase order or contract has been placed for delivery of material to an Operator or to another Supplier.

(5) "Material" means any commodities, equipment, accessories, parts, assemblies, or products of any kind.

(6) "Maintenance" means minimum upkeep necessary to continue the working condition of equipment used by an Operator in the operation of a Mining Enterprise at its then current rate of production or operation.

(7) "Repair" means the restoration of property or equipment used by an Operator in the operation of a Mining Enterprise to a sound working condition after wear and tear, damage, destruction, or failure of parts or the like have made the property or equipment unfit or unsafe for service.

[fol. 2235] (8) "Operating Supplies" means material which is essential to and consumed in the operation of property and equipment used by an Operator in the operation of a Mining Enterprise and which is generally carried as Operator's stores and charged to operating expense account. The term does not include raw materials which enter into or form part of the finished product

(b) *Certification of Mining Enterprises.*

(1) *Domestic Mining Enterprises.* The agency designated by the Governor or other chief executive officer of each State, territory, or possession of the United States, including the Commonwealth of the Philippines, shall furnish to the War Production Board a certificate setting forth the names of the persons operating Mining Enterprises within such State, territory, or possession. The War Production Board will thereupon issue a Serial Number or Numbers to each such person who may be approved by the Director of Industry Operations. Any person aggrieved by failure or refusal of a State agency to certify him as an Operator may apply in writing to the Director of Industry Operations for issuance of a Serial Number. The Director of Industry Operations may thereupon take such action as he deems appropriate. Serial Numbers may be cancelled by the Director of Industry Operations in appropriate cases.

(2) *Foreign Mining Enterprises.* The Director of Industry Operations may, in his discretion, issue a Serial Number or Numbers to a person operating a Mining Enterprise outside the limits of the United States, its territories, and possessions and may cancel any such Serial Number.

(3) *Standards.* In issuing, denying, or cancelling Serial Numbers, the Director of Industry Operations will consider the importance to National defense of the present and prospective output of materials to be produced, the consumption of essential materials by the Mining Enterprise in its operations, the necessity to the Mining Enterprise of obtaining priorities assistance, and the available alternative methods of obtaining such assistance.

(c) *Assignment of Preference Ratings.* Subject to the terms of this Order, the following preference ratings are hereby assigned; provided, that no preference rating is assigned to the delivery of any machinery or equipment, or repair parts therefor, unless such machinery and equipment are used primarily to maintain or to increase the existing production of the Mining Enterprise, and not primarily to reduce operating costs. Nothing herein contained shall prevent the use of any other or higher rating to which any person may be entitled by reason of any other Preference Rating Certificate or Order.

(1) *As to Deliveries to an Operator.*

(i) A-1-a to deliveries of material for repair of property and equipment used in and essential to the operation of a Mining Enterprise, when and only when there has been an actual breakdown or suspension of operations because of damage, wear and tear, destruction or failure of parts, or the like, and the essential material is not otherwise available.

~~(ii)~~ A-1-c to deliveries of repair parts for machinery and equipment of the types listed in Schedule A hereto; provided, that such repair parts are for use in a Mining [fol. 2236] Enterprise less than 30 percent of the production of which in dollar value for the previous calendar quarter was derived from any one or more of the following:

Sand (except foundry sand), gravel, crushed stone, and slag, including all commercially recognized forms of these products;

Clay of all types, except those used for refractories and ceramics for electrical use;

Building and ornamental stone of all types;

Gypsum, talc, soapstone, slate (except for electrical

use), and all raw material for the manufacture of lime and calcareous cements.

Such ratings shall be applied by any Operator only to deliveries in any calendar quarter of a quota consisting of such dollar value of repair parts as may be expressly authorized by the Director of Industry Operations after application by such Operator in form prescribed by the Director of Industry Operations. For the first calendar quarter of 1942 such quota shall be the dollar value of repair parts which bears the same ratio to the dollar value of repair parts delivered to the Operator in the last calendar quarter of 1941 as the dollar value of the Operator's production in the first calendar quarter of 1942 bears to the dollar value of the Operator's production in the last calendar quarter of 1941.

(iii) A-1-c to deliveries of repair parts for essential productive facilities to other Mining Enterprises and or for other types of machinery and equipment up to the minimum required to make reasonable advance provision to avert an actual breakdown or suspension as described in paragraph (c)(1)(i),

(iv) A-8 to deliveries of material for other repairs to, for maintenance of, and for operating supplies for, property and equipment used in and essential to the operation of a Mining Enterprise.

(v) to deliveries of essential machinery and equipment, whether or not included in Schedule A, such preference ratings as the Director of Industry Operations may from time to time assign to particular orders for such equipment submitted to him for approval in the manner described in paragraph (c)(2) below.

(vi) A-10 to deliveries of material for all other repairs, maintenance and operating supplies.

(2) *As to Deliveries to a Supplier.* Deliveries of material which will be delivered (or physically incorporated into material which will be delivered) to an Operator under any preference rating assigned by or pursuant to paragraph (c)(1) are assigned the same preference rating as that assigned to the delivery to the Operator.

(d) *Persons Entitled to Apply Preference Ratings.* The preference ratings hereby assigned may be applied by

(1) An Operator, or

(2) A Supplier to enable it to make to an Operator or to another Supplier deliveries on purchase orders or contracts endorsed or otherwise identified pursuant to paragraph (e).

[fol. 2237] (e) Application of Preference Ratings.

(1) Application of A-1-a or A-1-c Rating by Operator. An Operator, in order to apply the A-1-a preference rating assigned by paragraph (c)(1)(i) or the A-1-c preference rating assigned by paragraph (c)(1)(iii) must communicate with the War Production Board, Washington, D. C., Ref: P-56, describing the material needed for emergency repair and the nature of the emergency, or the reasons why advance provision is necessary to avert breakdown or suspension, and such other information as may be required. The Director of Industry Operations will notify such Operator, whether, and to what extent, its application is approved, and a copy of such notification shall be furnished by the Operator to its Supplier to evidence the A-1-a or A-1-c rating.

(2) Application of Ratings by an Operator to Deliveries of Machinery or Equipment. An Operator, in order to apply the ratings assignable under paragraph (c)(1)(v), must communicate with the War Production Board, Washington, D. C., Ref: P-56, describing the machinery or equipment needed and the reasons why such machinery or equipment is essential for the proper operation of the Mining Enterprise. The Director of Industry Operations will notify such Operator whether its application is approved, and if approved, shall assign a Preference Rating thereto; a copy of such notification and assignment of rating shall be furnished by the Operator to his Supplier.

(3) Standards. In acting on any application pursuant to paragraph (e)(1)(2), the Director shall consider the importance to national defense of the material to be produced by the machinery, equipment, or other material for which rating is requested, and the consumption of scarce materials rating assigned by paragraph (c)(1)(ii), the A-8 preference

(4) *Application of Other Ratings by Operator or Supplier.* An Operator in order to apply the A-1-c preference

rating assigned by paragraph (c)(1)(ii), the A-8 preference rating assigned by paragraph (c)(1)(iv), or the A-10 rating assigned by paragraph (c)(1)(vi), or a Supplier in order to apply any preference rating assigned by paragraph (c)(2), must endorse the following statement on the original and all copies of the purchase order or contract for such material, signed by a responsible official duly designated for such purpose by such Operator or Supplier:

> "Materials for a Mining Enterprise, Rating A—— under Preference Rating Order P-56, Serial No. —— and in compliance therewith.
>
> ——, (Name of Operator or Supplier), By ——, (Authorized Signature)"

If the material is for export outside the limits of the United States, its territories and possessions, the Commonwealth of the Philippines, or the Dominion of Canada, such endorsement shall also contain the sentence:

> "This material is for export and is covered by Export License No. ——, dated ——."

[fol. 2238] Such purchase order or contract so endorsed shall be delivered to the Supplier of such material. Such endorsement shall constitute a representation to the War Production Board and the Supplier with whom the purchase order or contract is placed that such purchase order or contract is duly and properly rated in accordance herewith. Such Supplier shall be entitled to rely on such representation, unless he knows or has reason to believe it to be false. Any such purchase order or contract shall be restricted to material the delivery of which is rated in accordance herewith. With respect to any purchase order or contract for such material placed before the effective date of this Order, such preference rating may be applied by delivering to the seller a duplicate copy of such purchase order or contract so endorsed.

(5) An Operator or Supplier placing any such rated purchase order or contract, and the Supplier of the material covered thereby, must each retain endorsed copies of all such purchase orders or contracts, and certificates and notifications made or received pursuant to this paragraph

(e), for a period of two years from the date thereof, for inspection by authorized representatives of the War Production Board.

(6) *Restrictions on Deliveries by Supplier.* No Supplier shall deliver machinery, equipment, or repair parts to an Operator or another Supplier under any rating

(i) unless such Supplier has received from such Operator or such other Supplier all certificates and notifications required by paragraph (e).

(ii) if such Supplier knows or has reason to believe that such material is not properly rated under the terms of this Order.

A Supplier must report forthwith to the War Production Board the details of any such attempt to apply any rating in violation of the terms of this Order.

(f) *Restrictions on Application of Rating.*

(1) The preference ratings hereby assigned shall not be applied

(i) unless the material to be delivered cannot be secured when required without such rating;

(ii) to obtain deliveries greater in quantity or on dates earlier than required for the operation, maintenance, or repair of the property or equipment used by an Operator in and essential to the operation of a Mining Enterprise;

(iii) by a Supplier to obtain material in excess of the amount necessary to make rated deliveries.

(g) *Restrictions on Inventory.* No Operator shall accept deliveries (whether or not rated pursuant to this Order) of operating supplies or other material which will increase such Operator's inventory of such operating supplies or other material to an amount greater than the minimum necessary for the efficient operation of his business, and the ratio of inventory to current production shall in no event exceed the ratio of average inventory to average production for the years 1938, 1939, and 1940.

[fol. 2239] (h) *Resale of Operating Supplies and Other Material Prohibited.* Except with specific permission of the Director of Industry Operations, no Operator shall resell any operating supplies or other materials (whether or not obtained pursuant to rating assigned by this Order) except to another Operator.

(i) *Conservation and Standardization.* Every person affected by this Order shall use his best efforts to effectuate conservation of materials by elimination, simplification, or standardization of types, sizes, or forms, or otherwise, and to cooperate in any program developed for such purpose by the War Production Board. The Director of Industry Operations may from time to time issue specific directions as to conservation, elimination, and standardization.

(j) *Relief.* In case the productivity or sound working condition of any Mining Enterprise is adversely affected by any provision or application of this Order or by inability to obtain essential operating supplies or other materials, the person operating such Mining Enterprise may apply for relief to the Director of Industry Operations. The Director of Industry Operations may thereupon take such action as he deems appropriate.

(k) *Records, Audit, and Reports.* Each Operator and each Supplier shall keep and preserve for a period of not less than two years accurate and complete records of all transactions affected by this Order and shall submit from time to time to audit and inspection by duly authorized representatives of the War Production Board. Each Operator and each Supplier shall execute and file with the War Production Board or other designated agency, such reports and questionnaires as the War Production Board shall from time to time require. Until otherwise directed, each Operator shall file with the designated State Agency on or before the 10th day of each month a report on form PD-119 of purchases made during the preceding month pursuant to the ratings granted by this Order.

(l) *Violations.* Any person affected by this Order who violates any of its provisions, or a provision of any other Order, regulation, or other directive of the War Production Board may be deprived of priorities assistance, or subjected to such other or further action as the Director of Industry Operations may deem appropriate.

(m) *Revocation or Modification.* This Order may be revoked or modified by the Director of Industry Operations at any time as to any Operator or Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, unless the rating has been

specifically revoked with respect thereto. No additional applications of this rating to any other deliveries shall thereafter be made by the Operator or Supplier affected by said revocation or expiration.

(n) *Amendment of Prior Order.* The provisions of Preference Rating Orders P-22 or P-100 shall not apply to deliveries to which a preference rating is assigned by this Order.

(o) *Effective Date.* This Order shall take effect immediately and shall continue in effect until revoked.

Issued this 2nd day of March, 1942.

J. S. Knowlson, Director of Industry Operations.

[fol. 2240] Schedule "A"

As to all machines listed below, the rating provided herein likewise applies to equipment items, accessories, and tools customarily sold with such machines.

Aerial tramway equipment
Air compressors for mine use
Air distribution equipment
Assaying and testing laboratory equipment at the mine
Ball-casting machines
Boxcar loaders
Cages and skips
Car dumpers—rotary or end
Equipment for Cleaning plants
Equipment for Concentarting plants
Conveyors—shaking, belt, chain, or gravity type, including duckbills and other self-loading heads
Cutting machines—cable reel and self-propelling, transportation trucks therefor
Diamond core drilling machines
Dragline dredges, excavators, and scraper units
Dredges—continuous bucket, including pumps
Drills and drilling machines, power-driven, and reconditioning equipment therefor
Dust control equipment
Electrical equipment for mine transportation and power
Hoists—including room hoists and car pullers
Hydraulic monitors, with feed pipe and fittings
Jacks for lifting and roof support

Lamps—mine, miners', safety and ore-exploration types
Locomotives for mines use
Loaders, mobile, including mucking machines
Equipment for Milling plants
Mine cars, track or trackless
Pit-car loaders and elevating conveyors
Equipment for Preparation plants
Pumps, pipe and fittings for mine drainage or material transport
Rock dusting equipment
Safety and defense equipment
Sand dryers
Scraper loaders
Sheaves and sheave blocks
Shovels, power
Shuttle cars, track or trackless
Slusher hoists and scrapers.
Steel sections for support of mine openings
Storage batteries for mine use
Tanks and bins for storage of mine products
Tipples and head frames
Track and track accessories for mine transportation
Equipment for Treating plants
Trucks, tractors, and trailers for mine use
Ventilation equipment
Waste disposal equipment
Weighing equipment, including automatic devices
Wire rope for haulage and hoisting

Amendment No. 2 to Preference Rating Order P-56
As Amended March 2, 1942

Paragraph (a)(2)(i) of Section 982.1 is hereby amended to read as follows:

"any plant actually engaged in the extraction by surface, openpit, or underground methods, or in the beneficiation, concentration, or preparation for shipment of the products of mining activity;"

Issued this 15th day of May, 1942.

[fol. 2243] PLAINTIFF'S EXHIBIT 10

Minutes SPAB November 18, 1941 Doc. 12d

Status of Gold-Mining

I. THE PROBLEM

(1) Repair, Maintenance and Supplies Order

Gold-mining has been treated as part of the mining industry in all priority actions, with the exception of Order P-56. The benefits of that Order, which granted an A-8 rating, were extended to lode gold mining for maintenance, repairs and supplies, but gold placer mining was excluded. The latter was left under Order P-22, which grants an A-10 rating on repairs and supplies to mines not included in Order P-56. This discriminatory treatment raises a question of policy.

(2) New Machinery Order

Order P-23 provided a blanket rating of A-3 for concerns making new machinery for coal and metal mines. It expires on November 30. Machinery for gold operations has been made by at least ten of the companies which have been given serial numbers and allowed to use ratings under this Order. Presumably such new equipment for gold mines of any type will not be authorized in the future, unless specific directions are issued to manufacturers.

(3) PD-1 Application

It is possible for individual gold mines to apply for ratings on a PD-1 form. It is reported that no applications for equipment and supplies—at least recognizable as such—have been made up to the present time. This may or may not be accurate. However, it is important that the treatment of such applications in the future be uniform.

(4) Foreign and United States Territorial Mines

a. Foreign

Foreign mines are permitted, under Order P-56, to apply for help from the Division of Priorities by seeking permission to order supplies and parts in the United States with the A-8 rating. Mines in Canada and in South America, as well as Central America will be the principal beneficiaries. In Canada gold-mining is of great importance. At the present time the Division of Priorities, using its discretionary authority under the Order, has decided *not* to issue serial numbers to any foreign gold mines. Discussions of the resulting status of Canadian gold-mining are now being conducted by the Joint Economic Committees of the United States and Canada.

b. Territorial

Under Order P-56, lode gold mines located in the territorial possessions of the United States will receive serial numbers and be allowed to use the A-8 rating. Gold-mining is of particular importance in Alaska and the Philippines. But placer-mining, excluded from the A-8 rating, accounts for 70 percent of Alaska's output. Under Order P-23, new

machinery has been freely shipped to Alaskan producers, but this privilege will expire when the Order dies. The question arises whether Alaska and/or the Philippines should be given more favorable treatment than other regions, for the reason that they produce one-th.. d of our annual gold output and that gold production is of great importance in their respective economies.

Answers to the foregoing questions will be suggested after a survey of relevant data.

[fol. 2244] II. The Size of the Industry

(1) Output

The gold-mining industry is commonly measured in terms of the value of its output. Careful checks are made by the Bureau of Mines annually, in cooperation with the Bure..u of the Mint, to determine the actual output of gold in continental United States and in the territorial possessions. The analysis for 1940 shows the following totals, by states or territories.

State or Territory	Ounces of Gold Produced	Value (at $35)
California	1,408,700	$49,304,500
Philippine Islands*	1,079,896	37,796,360
Alaska	765,200	26,782,000
South Dakota	592,936	20,752,760
Colorado	368,798	12,907,930
Nevada	367,400	12,859,000
Utah	352,770	12,346,950
Arizona	292,500	10,237,500
Montana	275,700	9,649,500
Idaho	145,000	5,075,000
Oregon	112,700	3,944,500
All other	143,452	502,082
Totals	5,905,052	$206,676,820

* Not included in American totals except in this table.

Of the total output, exactly 65 percent comes from two territorial possessions and from two states—California and South Dakota.

Value of gold produced is in one sense a misleading measure of the entire industry. In many areas—particularly in Utah, Arizona, Nevada and Montana—gold is a by-product of copper production. The value of the gold alone is thus no indicator of the scope of the mining operations conducted, although in some cases its extraction may pro-

vide the margin of profit and its importance not therefore be truly reflected by statistics. Nor is value of output an index of the investment or employment in the industry of any given state, for methods of mining vary widely between areas. This problem will be discussed more in detail below.

(2) Employment

Census data show a relatively small employment in the gold-mining industry in the continental United States, exclusive of the Territory of Alaska and the Philippines. Approximately 15,000 individuals seem to have been employed in lode and placer mines which were classified as gold mines, in 1939. Obviously the portion of employment in several large copper mines, which could be assigned to their gold output, is not included.

[fol. 2245] The most interesting aspect of employment in gold mines is the large number of individuals who have sporadically engaged in small-scale placer operations during the past decade. Prior to the depression years, and the increase in the price of gold, hand placer mining had almost vanished, so that in 1929 less than 1,000 persons were reported by Census as engaged in all placer enterprises, including the larger mechanized developments. But in 1935-36, as evidenced by a study made by the National Research Project of the WPA, the number had vastly increased. This field survey reported 28,000 individuals engaged in small placer locations, earning an average of $72 per year per person. Their total output of gold in the year 1935 was less than 5 percent of the United States total, and has almost certainly declined since that date because of the reemployment of part-time miners in more customary pursuits. To the extent that these people were covered by Census surveys in 1939 and 1940, they have been included in the figure given above for total employment in the industry. Nearly all of those surveyed were transient and part-time workers and had entered the field since 1932.

If the individuals directly dependent upon the maintenance of gold-mining industry are added—i.e., those engaged in making equipment, furnishing supplies, and engaged in service trades in exclusively gold-mining communities—the total of employment involved would only be 30,000 as a maximum.

Characteristics of the Industry

A sharp line must be drawn between lode-mining and placer-mining of gold, because policy toward materials used in the two branches may vary greatly. Placer-mining is the derivation of gold from gravels or other stream-borne materials which have been displaced or carried away from original ore bodies. Lode-mining extracts gold from ores in their original location; the ores may be solely gold-bearing, or be complex mixtures yielding copper (most commonly), silver, lead and other metal. Gold recovered from ores which are mined primarily for their content of other metals is probably about 15 percent of the American-Alaskan output. This is a difficult figure to determine accurately.

In 1939 and 1940, about 30 percent of total gold output in Alaska and the United States has been from placer mines. This percentage has grown rapidly since 1933; prior to that year, placering either by machine or hand-methods was almost non-existent. There are important regional differences. In Alaska, placer-mining accounts for 70 percent of total output, and there are over fifty substantial dredging operations. In California, about 125 large dredge operations and many small placer mines account for one-half the State's large output. But Idaho and Oregon are the only other states where placering is important.

Lode-mining is closely similar to other underground mining in technique and equipment; it may be surface stripping in a few cases. The problems encountered are those found in other branches of the mining industry. Placer-mining, however, is distinctive in that special equipment has been designed and put in use for large operations, and in that it has on the other extreme a large number of small hand-labor enterprises which would not be profitable in recovering any other metal.

A further distinction has been drawn between the two types of gold-mining. Most lode mines are underground, and consequently subject to the hazards of rapid de- [fol. 2246] preciation if they are shut down. Flooding by water is the chief hazard. Though not all lode-mining is deep enough to suffer seriously if a shut-down occurs, continuity of operation is clearly desirable to prevent depreciation of installed equipment and structures. On the other

hand, placer operations can be discontinued (and often are, seasonally) without injuiry to equipment. This was the basis of the decision excluding placer mines from the benefits of Order P-56.

There are about 9,500 distinguishable gold-mining enterprises in Alaska and the United States, of which about 4,100 are placer operations. Here again not all the small-scale placer undertakings are fully covered, since many were operated for only a few weeks in the year or did not occupy the full time of even a single operator. Otherwise the count is fairly accurate.

But in contrast to this fairly large total number of enterprises is the fact that only 30 large mines produce *over half* the total gold output. Of this group only five are large-scale placer enterprises. Six others are primarily copper-producing enterprises, and recover large amounts of gold as a by-product. Included in this leading group are such well-known large corporations as Homestake Mining (the largest enterprise), U. S. Smelting, Refining and Mining, Utah Copper, Alaska Juneau, Phelps Dodge, Howe Sound, Consolidated Coppermines, Nevada Consolidated Copper, and New Jersey Zinc.

Equipment and Supplies Used in the Industry

In lode-mining, underground drilling and blasting operations, loading and transport, elevation and crushing of ores, are similar to the same operations in non-ferrous metal-mining or even in coal. The same concerns supply drills, explosives, jacks, loaders, mine cars, locomotives, hoists, cages, screens and crushers as supply the mining industry generally. In separation of the gold, however, distinctive operations are necessary. Flotation concentration, amalgamation and cyanidation all require distinctive equipment and supplies. Among the latter, mercury, sodium or calcium cyanide, and zinc dust are important. Rough estimates indicate that at least 50,000 pounds of mercury, 100,000 pounds of zinc dust, and several million pounds of cyanides are consumed annually by the gold-refining industry. Although many supplies could be obtained without any rating whatever, it is probable that lack of mercury or zinc dust, and of alloy steel and electrical repair parts would gradually strangle the industry.

Within less than ten years, a great deal of new and relatively expensive equipment has been put into service in large placer mines, reaching a probable average total of $7,000,000 in the past two or three years. Large dredges with continuous-connected buckets are the most spectacular development. They handle enormous quantities of gravel which is washed usually in floating plants, so that the whole operation progresses along a stream. The second prevalent type of equipment is the dragline bucket dredge, usually reaching far into a stream bed to transfer material to stationary plant. These, and numerous variations on the latter principle, use heavy equipment and motive power which requires a great deal of alloy steels, copper, diesel or electrical power equipment, and also requires frequent repairing. Buckets in particular must be made of alloy steels and wear out rapidly under the abrasive action of gravel or sand. In total quantities, placer mining probably consumes more equipment than lode mines, despite its smaller output.

[fol. 2247] Taxation of Gold-mining

In a number of Western States mining operations are either taxed on the basis of the gross value of output, or of the income of mining operations. Whichever the method, the revenues of a few mining states have come to depend heavily on the collections from this source. Probably the most notable example is South Dakota in which there is a 6 percent severance tax on the gross value of mineral production, with an exemption of the first 100,000 tons of ore per year in order to lift the burden from small enterprises. According to recent estimates, this tax (which is borne chiefly by the Homestake Mining Company) accounts for nearly 7 percent of total State revenue. There are much smaller gross production or severance taxes in Utah, Arizona, New Mexico, Montana and Idaho. In other states, such as California, the net income tax is proportionately heavier to make up for the absence of a gross production tax. In Alaska there is a 3 percent gross production tax on the precious metals, whereas other mining operations pay a net income tax. In recent years there has been an effort to raise the tax on gold production to 8 percent of gross output, as well as 8 percent on net income. There seems little doubt that a decline in gold output would have serious

results on the revenues of Alaska and to a lesser extent of South Dakota, California and Idaho.

Gold Mining in North and South America

Mexico produces about 20 percent as much gold as the United States and all of South and Central America together about one-third as much. Canada, as is well-known has produced slightly more than the United States in the past few years. Among South American countries, Colombia is the leader, but all of the small nations have a substantial production.

There will undoubtedly be a demand from all producing countries in the Western Hemisphere for permission to buy mining repair parts and supplies in the United States. New equipment will also be needed in many instances. The need in Canada for such privileges has been under discussion in the Joint Economic Committees for the past few weeks. The intimate connection between gold output and monetary policy will undoubtedly lead to a particular emphasis on maintaining operations of gold mines in these countries. The direct value of gold in maintaining a supply of foreign exchange in the United States is an obvious basis for claiming special consideration.

The Incidence of Government Monetary Policy on Gold Production

Our present stocks of gold are so large that the net additions made by the purchases each year from producing mines are relatively very small. The total output of the United States and Canada and South American countries will scarcely amount to 1½ percent of the existing supply in the year 1941. Thus, even if all operations were suspended for a period of two or three years, the potential loss in our gold supply would be less than 5 percent. This is the most effective answer to the argument advanced by gold-mining executives that a continued increase of gold supply is necessary to future monetary policy.

On the other hand, maintenance of a free gold purchasing policy by the Treasury at $35 an ounce implies to many leaders of the mining industry that the industry is to be encouraged to the full. It would seem highly contradictory, [fol. 2248] in their opinion, to take any steps which would

cripple gold production unless its monetary position were at the same time officially changed. This attitude is and will be reflected in attitudes of political leaders in the mining states. And theoretically it must be recognized that maintenance of the gold standard implies unlimited purchases of newly mined metal. That obligation, however, need not be construed to include a corollary obligation to protect gold mining. Maintenance of the policy does not depend on specific accretions to the already large supply.

Steps Taken by OPM Affecting Gold-mining

1. The right to manufacture new gold-mining equipment with an A-3 rating, under Order P-23, will expire with that Order. On November 30, Order P-23 will not be continued, but certain of its provisions will presumably be made a part of Order P-56 (Mine Repairs and Supplies). Under that Order, with proposed amendments, the Director of Priorities may in his discretion forbid the use of A-ratings for manufacture of gold-mining machinery.

2. Gold-placer mines, as indicated above, were excluded from the operations of Order P-56, which granted an A-8 rating on mine supplies and repairs generally. Lode mines, on the other hand, have been given the right to use the A-8 rating. The placer mines, however, may still use A-10 under the general repair order, P-22.

3. The Division of Priorities has refused to grant serial numbers under Order P-56 to gold mines outside the United States and its territorial possessions. This has been done under the discretionary authority in the Order to extend the A-8 rating on supplies and repairs to such mines. The Policy Committee of the Economic Defense Board has protested this refusal in three specific cases in which the Committee claims that political and good neighbor considerations are important.

III. Considerations

1. A general announcement of policy toward gold-mining is needed. Otherwise, specific *administrative* actions will be questioned by the mines as unfairly discriminatory. This is particularly necessary if the purchase of new machinery for gold production is to be virtually prohibited after November 30. A necessary preliminary to such a declaration

would be a request to the Treasury for an immediate formal opinion on the significance of new gold production to monetary policy. It is to be emphasized that from a consumption of scarce materials standpoint, this whole issue is a minor one. Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political. It is political from two opposing standpoints—that of popular reaction to the continuation of an industry widely regarded as unnecessary (to the point of jocularity), and contrari-wise, that of the regional interests delineated in the report.

2. The continuation of the right of lode gold mines to use the A-8 rating under Order P-56 could be made entirely discretionary with the Director of Priorities. The guiding principle might be established by SPAB of requiring their [fol. 2249] purchases to be held to the bare minimum necessary to prevent disastrous shut-downs. SPAB might also wish to establish a separate test of eligibility in terms of the amount of other more useful metals that are produced jointly with gold. For example, if the selling value of the essential metals is 25 percent and that of gold produced 75 percent, the mine might be permitted to buy machinery and supplies on the same basis as other essential metal producers. Or the minimum ratio might be set at 40 percent in the value of other metals, and 60 percent gold. The intent would be to avoid any discouragement to production of the essential metals.

3. An alternative, and more drastic, policy would be to eliminate all domestic gold mines, whether lode or placer, from Order P-56 and also from the general repair Order, P-22. Gold mine operators would thus be forced to buy repairs and supplies without A-ratings, but could apply for special help on Form PD-1. It is quite possible that only very gradual declines in output and employment would result, because of managerial ingenuity. Here again, exceptions could be made for mines producing other metals.

4. In lieu of any blanket privileges to foreign mine operators, all foreign mine needs could be reviewed continuously with the Economic Defense Board, so that considerations of inter-American and British American policy could be consistently applied to decisions authorizing or forbidding ship-

ments of gold-mining machinery and repair parts. No serial numbers authorizing several purchases would be issued, but applications for individual shipments would be entertained. Here again, the specific quantities of burdened material (which are not large) are not the issue, but the political considerations involved and the question of treating non-essential industries consistently are paramount. In the special case of Canada, the Joint Economic Committees could secure all relevant statistical data.

5. Some special basis of treatment might be worked out for Alaska, where gold-mining assumes the proportions of a major industry. To cut off suddenly all shipments of new equipment needed for replacement, and to make it unduly difficult to secure supplies, might have several effects upon employment in Alaska, and upon the revenues of the Territory. The Labor Division might be asked for a formal opinion on the probable impact upon employment in the Territory of the restrictions suggested in this report. The Territorial Government could also be asked for a formal report on the importance of gold-mining, with all relevant statistical data.

Because of the rush request, I haven't had a chance to check this with the V.P., but I feel sure he would agree.

[fol. 2251] December 17, 1941.

Statement on Priorities for Gold Mining Machinery

The demand of foreign gold producers for gold mining equipment raises two issues. The first is specific, and relates to the criteria of policy for issuing priorities on gold mining equipment. The second issue is broader, and concerns the desirability, from the point of view both of the efficient conduct of the war and of a satisfactory post-war order, of allowing the continuance of gold production at present levels in the major producing countries.

The constituents of a correct policy in issuing priorities on gold mining equipment are the following:

1. The demands of foreign gold producers should not be allowed under any circumstances to divert to the production of gold mining equipment more machine tool facilities than in the past, and preferably should be satisfied on a basis which involves a successive reduction in the allocation of such facilities.

2. Equipment should be made available in the first instance for mines whose ores contain, in addition to gold, a large percentage of metals useful for defense or civilian purposes.

3. Equipment should be made available readily only when adequate proof has been provided that the refusal of such equipment will entail large economic dislocation because of the absence of alternative openings for employment of men and resources now engaged in gold mining. In such cases equipment should be made available only for the purposes of repair and replacements.

The granting of licenses for gold mining equipment might be made conditional on the submission of satisfactory evidence that:

a. Past imports of equipment are not adequate to cover production requirements for the next two or three years;

b. The high-grade ore mines rather than low-grade ore mines are being exploited.

It needs to be borne in mind that since the depreciation of currencies which began in 1931, there has been an increasing shift in gold mining from high-grade to low-grade ores. This is true of most gold production which is not based on alluvial deposits but on mine ores, and is es-

pecially the case with South Africa. The factor responsible for this shift is the fact that the depreciation of the [fol. 2252] currency brought about an increase in the monetary value of gold while leaving unchanged operating costs. Most producers have found it profitable, therefore, to shift to lower grade ores, and save their high-grade ore mines for the future. The shift was inspired or approved by the government, especially so in South Africa.

Even if the prerequisites listed above are satisfied in full, a unilateral American policy on priorities may turn out to be ineffective if the foreign producer who is refused American equipment succeeds in persuading his own government to allow the manufacture of such equipment at home. Influential producers may well succeed in inducing their own governments to permit the allocation of industrial plants engaged in defense work, or capable of being so engaged, to manufacturing gold mining equipment. In order to make the American policy on priorities effective, it is necessary, therefore, to bring in the foreign governments into some arrangement whereby they will implement decisions taken by the authorities engaged in issuing the priorities. This can perhaps, be done best by adopting a system whereby the individual requests of foreign gold producers are submitted to the American authorities through a competent agency of their own government, and to require such agencies to pass on, or to certify, in each particular case the urgency or need of the request. The certification of the degree of urgency or need should specify as to whether the request would promote defense efforts, employment, or the general national interest in providing necessary foreign exchange. Such a system would place the full responsibility for requests for equipment on foreign governments and would, at the same time, make possible a system of checking which would be incomplete or ineffective if carried out solely through American authorities.

The system of priorities on gold mining equipment was devised as part of the general effort to economize on scarce facilities and thereby to maximize the joint war effort of the nations fighting for the democratic cause. But in dealing solely with the question of gold mining equipment there is a danger of losing an opportunity both to solve the

longer-ferm aspects of the gold problem and to maximize the joint war effort. Such an opportunity exists now. The United States can and should use the power that it derives from being practically the sole buyer of the yellow metal in order to initiate a program of a gradual reduction in gold production. Such a program would contribute to a maximization of the joint war effort and, at the same time, would facilitate a solution of the post-war gold problem.

The present gold situation is characterized by two outstanding features. The first is that considerable resources in men and materials continue to be tied up in the production of a metal which serves no defense purpose. Secondly, the present output of gold is, in view of the fundamental changes that have taken place in currency systems of the world, also highly in excess of any possible future requirements. Gold has been divorced from any specific tie to the domestic monetary supply in most countries. The yellow metal has been relegated to its actual, and only desirable function, which is to meet deficits in national balances of payments. These deficits are not, nor are likely to be, such as to require world gold holdings largely in excess of those at present in existence. The gold stocks of the world amount now to over thirty billion dollars. This gold stock properly redistributed should be adequate for the future, even on the assumption that at the end of the war all the national currencies of the world are put on a gold basis similar to that in practice before the outbreak of the war.

It is essential, therefore, that a reduction in gold mining should be envisaged for the post-war period. It is, however, obviously impossible to effect a cessation of gold production overnight because of the enormous dislocation it would involve in the national economies of the more important gold producing countries. The purchase of gold in the ground leaves the problem unsolved, and merely adds to the difficulties of the immediate post-war period. A program of gradual reduction and final cessation of all new gold production spread over a period of fifteen to twenty years is the only satisfactory solution to the general gold problem. This is the moment to insfitute such a program. Further, the United States possesses the necessary powers to initiate such a program. Being practically

the only buyer of the yellow metal, the United States is in a position to demand that its future purchases will be on an increasingly restricted scale. The lend-lease and other arrangements further permit the United States to tide over the producing countries during the initial stages of the shift of production away from gold to other metals and to articles satisfying human needs. Its present powers also permit the United States to specify the direction in which the receivers of lend-lease aid shall shift the resources and men now engaged in gold production. This direction is, in the first instance, towards the production of defense articles or to the local production of those goods which it is no longer possible to acquire from normal sources on account of the war-time scarcity of shipping and other transport facilities.

[fol. 2256] Report on Gold Mine Order L-208
Its Effect and Accomplishments

by

Edward H. Rott

May 24th, 1943.

Introduction

This report has been prepared to present a general picture of the gold mining industry and the effect of Limitation Order L-208. The writer has been in close touch with the industry, both domestic and foreign, since January, 1942. During the earlier part of this period, his work was chiefly on matters relating to priority assistance to gold mines, but since October 8, he has taken an active part in the administration of Limitation Order L-208 and measures to curtail the flow of materials to foreign gold mines.

History

On September 17, 19 ., Preference Rating Order P-56, to provide priority assistance to mines, was issued. This marked the recognition of the importance of control by specialists in mining, over the flow of materials and equipment to the mining industry. Shortage of materials and difficulty in getting delivery of fabricated items rapidly forced development of a strong distinction between essential and non-essential mines, with gold mines at the bottom of the list. December, 1941 and January, 1942, were marked by activity in collecting information as to requirements of gold mines for continued operations. Restriction on priority assistance was increased.

Preference Rating Order P-56 was issued on March 2, 1942; outstanding was the provision which provided for the exclusion of:

> "any plant more than 30% of the production of which in dollar value consists of gold and/or silver"

The issuance of this amended order precipitated the cancellation of 373 serial numbers held by mines producing gold. To date, approximately 144 of the cancelled numbers have been reinstated, leaving a total of 229 of those mines

classed as "non-essential", which were privileged to operate until L-208 was issued, October 8, 1942. Restricted priority assistance for maintenance, repair and operating supplies was allowed on PD-1A applications. Only five of the reinstatements occurred since October 8, but these are offset by ten cancellations during the same period. A detailed review of gold mines operating under serial numbers is in progress, which when completed, will be made an appendix to this report. The essentiality of the reinstated mines was based on the amount of strategic metals produced along with the gold or the necessity of the production of the mine for smelter flux. On May 15, Order P-56 was amended to remove the "30% clause", to which strenuous objection was raised by the operators of mines producing complex ore and by our Western legislators, but no change was made in the method of treating these mines.

[fol. 2257] Priority assistance to the non-serialized gold mines was severely restricted. Gold mines curtailed operations; some closed down and others were preparing to close, due to difficulties in securing material, labor shortage and those economic factors always adverse to gold mining when there is a general rise in commodity prices and labo cost. High wages in war industries and Selective Service, were rapidly syphoning manpower from the mines, even the better gold mines were finding it difficult to operate. It is this writer's personal belief, that the lack of a clause in Order P-56 restricting priority assistance to gold mines, stimulated some Divisions of the War Production Board and other agencies of our Government, to agitate for more forceful measures to release labor from gold mines.

Limitation Order L-208 was issued on October 8, 1942, at a time when all large gold mines in the United States were operating on a greatly reduced basis. The provision of this order applies to all mines producing gold which do not have a serial number under Order P-56, except certain small producers indicated in the order. Mines covered by the order are designated as "nonessential".

Under the provisions of L-208, all "nonessential" mines were required to cease operations, as provided for in the order. Immediately, appeals for relief from its provisions, based on need for additional time to get in standby condition, financial hardship, possible recovery or development

of strategic metals, or to provide employment for elderly and physically handicapped men who would not be used elsewhere in the mining industry, poured into this office.

Including all of the above categories of reasons on which appeals were based, 187 appeals had been processed by May 15. Some of these have been reappealed, two and even three times. Many other cases, not clearly appeals, were handled informally. The following tabulation indicates the action taken on appeals and distribution of the grants made among the different types of gold mining operations:

Action Taken on L-208 Appeals

Denials				17
Cases Closed Informally and Expired Grants				33
Grants Made To:	Lode Mines	Tailings Operations	Hydraulic and Other Placers	
	24	4	109	137
Total Number of Cases Processed				187

[fol. 2258] Employees Provided for by Grants in Effect

Employed within the Forty-Eight States	1019
(Includes 210 at Homestake Mine and Mill, and approximately 335 by Golden Cycle Corporation at Cripple Creek, and at their mill in Colorado Springs, in handling and treating gold ore, and by shippers from Cripple Creek and Boulder County to Golden Cycle Mill.)	
Employed in Alaska (150 in two operations)	468

Under existing procedure, appeals are analyzed in the office of the administrator; action is recommended and the case is referred to the Appeals Board for final approval. No grant is recommended until we are reasonably well assured that men under fifty-five years of age will not be employed, unless it is felt they are so handicapped that they could not find suitable employment elsewhere. In addition, each grant carries a provision which permits the War Manpower Commission to secure release of any employee, if the operator steps out of line by employing men who are needed elsewhere in the mining industry.

The Gold Mining Industry

Manpower

To really appreciate the effect on gold mining of our "all-out" effort to equip and produce for war, we must survey briefly, its status during previous years. The accompanying tabulation, "Employment in Gold Mines in 1941 and 1942", indicates the position of gold mining as an employing industry, and its trend toward curtailment in 1942 over 1941.

The records presented, indicate the average employment throughout the year. However, when we look at the figures furnished by the War Manpower Commission, as to actual number of men employed in gold mining and those displaced by the closing of mines under Limitation Order L-208, we get a very different picture. Their findings are contained in the tabulation: "Effect of War Production Board Order L-208 on employment in the Gold Mining Industry by States". (In the writer's opinions, "gold mine worker" would be a more appropriate term than "gold miner", which is used in the tabulation.)

Mr. Edward T. Dickinson, Jr., Executive Director of the Planning Committee, in his memorandum on "Effect of Gold Mining Curtailment Order L-208", prepared in April for Mr. William Batt, Vice Chairman of the War Production Board, estimated that Order L-208 only effected about 6,500 workers in gold mines. This estimate is closely in accord with the figures arrived at through independent analyses of employment in the gold mining industry made by Dr. Wilbur Nelson and the writer.

fol. 2259]

Employment in Gold Mines 1941–1942

	1941		1942*	Lode Mines Producing 1,200 Ton or More Annually 1941**			
	Number of Operations	Employees	Estimated Employees	Number of Operations	Employees	% of Total Employees	Estimated Employees 1942
Gold Mines (1)	2,845	18,522	14,890	270	11,406	62	9,232
Gold-Silver Mines (2)	435	2,815	2,171	38	1,040	37	781
Mills (Gold)	.....	3,146	2,360	.....	.....	..	.....
Mills (Gold-Silver)	.....	388	291	.....	.....	..	.....
Placer Mining (Dredging, Hydraulic and Other)	3,349	14,000	10,500	.....	.....	..	.....
Total	.....	38,771	30,152	308	12,446	..	10,013

* Estimate from preliminary tabulation of partial reports. Number of operations involved not estimated.

** From tabulation by Miscellaneous Minerals Division of the War Production Board.

(1) Gold Mine is any mine that produces ore in which the principal value is in gold, and the copper, lead or zinc value is too low for the one to be classified as a copper, lead, zinc or mixed ore.

(2) Gold-Silver Mine is one that produces an ore in which the metal of lower value in the bi-metal classification is equal to or over one quarter of the combined value of gold and silver.

[fol. 2260] Effect of War Production Board Order L 208 on Employment in the Gold Mining Industry by States

State	Number of employees engaged in gold mining operations (not all of these employees affected by L-208)	Total number of gold miners displaced	Total number of gold miners placed in other nonferrous metal mines by U. S. E. S.
	September, 1942	Between October 8, 1942 and February 27, 1943	
Total	12,286	3,217	1,156
Alaska	(1)	277	118
Arizona	800	29	9
California	3,871	1,350	296
Colorado	981	180	97
Idaho	1,000	17	4
Montana	365	140	88
Nevada	890	209	147
New Mexico	190	(1)	(1)
Oregon	150	91	3
South Dakota	2,459	919	393
Utah	1,500	5	1
Washington	80	(1)	(1)

1 Data not available.

Their accomplishment in placing manpower displaced, is briefly summarized in the following:

Of 3217 employees displaced, 2564 registered with the U.S.E.S.
Of 1571 referred to metal mines, 1156 were placed.
Of 894 referred to other industries, 515 were placed.
280 indicated dissatisfaction with subsequent job opportunities by refusing to accept referrals.

This leaves 524 referrals not reported on and 99 of the total registered, for whom suitable openings apparently have not been found. The displacements may be 10 or even 20% low, due to shifting of men, with failure to report them as displacements, incomplete canvass or other reason. Never-the-less, they are significant. There may be controversy as to accuracy of figures presented, but this seems, to a degree, to be dependent on classification of employees and difference in date of taking records. This is more of a point for controversy that cannot be adjusted in the limited time available, than one warranting the thorough analysis [fol. 2261] necessary to determine the reasons for differences.

These figures would indicate that there was a very rapid decline in employment by mines of the class that comes under the provisions of L-208 from January to October, 1942. From this, it is only reasonable to conclude that the steps being taken to restrict priority assistance to gold mines and the natural factors of high prices for commodities and higher wages, were effectively curtailing operation of such mines.

Of the total displacements of 3217 men, three mines supplied 1288.

Homestake Mining Company	1,018
Empire North Star Mines	150
Idaho-Maryland Mines Corp	120
Total	1,288

The magnitude of the effect of this order is very great, with but extremely limited accomplishment. The losses entailed by all mines through forced closing under Order L-208, promptly became potential claims for post war adjustment. Those claims are cumulative.

Considerable controversy exists as to the accuracy of the figures presented by the War Manpower Commission. If we review figures furnished to Dr. Wilbur Nelson by four mine operators, the accomplishments of the order in securing manpower for non-ferrous mines appears more dubious:

Men Referred from Gold Mines

Name of Company	Reported by W. M. C. to Labor Prod. Bd. of W. P. B. as referred	Reported by W. M. C. to W. A. Nelson April, 1943 as placed	Workers released from gold mines after October 8, 1942, still on payroll
Anaconda	238	..	119 (11-19-42)
Gray Eagle Copper	102	91	28 (4-30-43)
Cons. Coppermines Corp	44	36	15 (4-30-43)
Climax Molybdenum Co	125*	..	10

* Only 60 came to mine, 6 physically unfit, 44 quit.

The order has been administered to accomplish the end for which it was proposed, namely: to release manpower. Our policy of conserving materials through restricted priority assistance which was in effect prior to the issuance of L-208, has been continued toward small operators not under the order, and those mines operating under grants.

[fol. 2262]. Idle Equipment

Closing of gold mines under Order L-208, in the brief period of less than a month, promptly created a great reservoir of used equipment estimated to exceed $75,000,000 in value, including, in addition to that normally recognized as essentially mining equipment—tractors, draglines and trucks. This equipment and idle inventories of material has been moving into channels leading to essential work at the rate of approximately $82,600 per week since November 19th. During the past six weeks, releases for transfers have averaged over $100,000 per week. The following tabulation indicates the disposition of the equipment transferred:

Equipment Transferred from Gold Mines
(To May 13th, 1943)

Type of Use	Number of Releases	Estimated Used Equipment Value	Remarks
Metallic Mining	65	$749,102	Principally Tungsten, Zinc, Copper, Mercury and Arsenic
Non-Metallic Operations	14	165,864	
Coal Mining	3	278,100	One Dragline 14 Cu Yds. $270,000 will greatly accelerate production of an anthracite coal project. Production of project to be 10,000 tons per day.
Construction	26	221,015	Canada to Mexico.
Military	18	325,494	Principally Alaska and West for construction.
Used Equipment Dealers	20	348,556	For release to holders of serial numbers under Orders P-56, P-58 and P-73.
All others	25	59,349	Principally Agriculture.
Total	171	$2,147,480	

[fol. 2263] These transfers have accelerated strategic metal development, coal and non-metallic development. Construction and military needs have been met without delay. However, very little of this was transferred from the three principal operators from which manpower was released by the order. How rapidly this equipment would have moved into strategic metal production if Order L-208 had not been issued is pure speculation, but we know it was under way. How much of the millions in used equip-

ment still idle will remain so, cannot be estimated. This would largely be dependent on the length of the war.

Strategic Metal Production

The loss in copper, lead and zinc production from mines closed under the provisions of Order L-208 was nominal, as indicated in the attached tabulation, "Production of Silver, Copper, Lead and Zinc from Gold Mines". This will be more than offset by the sustained or increased output from mines whose principal production is strategic metals, resulting from transfer of manpower and the utilization of gold mining equipment in the development of new strategic metal deposits. The order has had the effect of stimulating prospecting for and development of strategic metals. The loss in silver production from gold mines has been somewhat more alarming. The indications are that there will be a deficiency of at least 17% in domestic silver production for 1943, due to closing of mines under L-208.

Gold and Silver Production of United States and Alaska

	Gold	Silver
January Production, 1942	290,632 Ounces	5,118,934 Ounces
January Production, 1943	135,113 "	3,774,867 "

The importance of domestic silver to our war effort is a factor to be carefully weighed, in considering the future application of Order L-208. To administer the order and exclude mines producing silver is extremely difficult, since some of our large silver producers have a very low ration of silver to gold.

An analysis of ore shipments received by nine smelters operated by the American Smelting & Refining Company, led to the conclusion that there was only 20.4 ton loss in arsenic production in January, 1943 over September, 1942, which could be attributed to reduced shipments of gold ore from mines in the United States.

[fol. 2264] Production of Silver, Copper, Lead and Zinc from Gold Mines Within Specified Ranges of Percentage Value of Gold in Ores

Percentage of Total Value of Ore in Gold	Silver in Ounces	Copper in Pounds	Lead in Pounds	Zinc in Pounds
100%–75%	2,724,498	1,868,527	7,755,516	.....
75%–50%	2,445,893	1,355,298	4,748,825	99,094
50%–25%	5,869,476	21,976,047	21,950,571	15,120,319
TOTALS				
100%–75%	2,724,498	1,868,527	7,755,516	.....
100%–50%	5,170,391	3,223,825	12,504,341	99,094
100%–25%	11,039,867	25,199,872	34,454,912	15,219,413

Under present policy in applying L-208, practically all mines where gold values range from 75% to 100% of total, come under the provisions of the Order.

It is estimated that about 50% of those for which gold values range from 50% to 75% of total, will remain closed under the Order.

The Order does not include lode mines which produced less than 1,200 tons in 1941 and continue in production at rate not to exceed 100 tons per month, nor placer mines which produced less than 1,000 yards in 1941 and continue in production at not to exceed 100 yards per month.

[fol. 2265] Consumption of Material for Repair, Maintenance and Operating Supplies

Issuance of Order L-208 accelerated curtailment in consumption of materials for repair, maintenance and operating supplies. However, though consumption of such items may have been curtailed, purchases of materials and supplies by gold mines would not show a corresponding drop. A decrease in purchases was enforced on the industry as early as the spring of 1942, when it became necessary to restrict priority assistance to non-essential mines, in an effort to provide for needs of mines producing strategic materials and other essential industries. The War Manpower Commission's figures on employment in gold mines in September, 1942, when compared with 1941 employment, indicate the effectiveness of restricted priority assistance in curtailing mining activity. Some mines which continued operations, were only able to do so because they had large stocks of supplies on hand. Never-the-less, it is important to call attention to the annual *reduction in normal demand* on the sources of supply of material for the mining industry, through closing of gold mines. This is best illustrated in an analysis of the employment and production records of 270 mines producing 1200 tons of ore or more annually during 1941.

Analysis of Gold Mining Operation for 1941 Covering 270 Mines
(75% of Total Value of Product Represented by Gold)

Total Mine Employees	Tonnage of Ore Mined	Ounces of Gold Produced	Total Value of Gold	Estimated Labor Cost	Estimated Consumption—Materials and Supplies
11,406	15,131,977	2,256,805	$78,988,000	$23,940,800	$15,131,977

Estimate of materials and supplies consumed is based on the asumption that cost for such items averaged $1.00 per ton or ore mined and milled, which is believed to be conservative for gold mining. The item of $15,131,977, is significant in amount, but in actuality, the steps taken to restrict the flow of materials and supplies to gold mines, curtailment of operations due to labor shortage and information from operators, all indicates that this draft had been greatly reduced before Order L-208 was issued.

The above figures appear reasonable when compared with the estimate presented to Dr. Wilbur Nelson on January 6, 1942 by Mr. Merle Guise. Mr. Guise included in his estimate, the requirements of the placer mines too.

Estimate of Requirements of Gold Mines for 1942

	Production	Materials and Supplies			
		Capital	Maintenance	Operation	Total
Lode	94,692,170	5,000,000	$7,000,000	$8,000,000	$20,000,000
Placer	52,917,445	4,000,000	5,000,000	6,000,000	15,000,000
Total	$147,610,155	$9,000,000	$12,000,000	$14,000,000	$35,000,000

[fol. 2266] The estimate of $11,000,000 in maintenance and operating supplies for lode gold mines, furnished to Dr. Wilbur Nelson by the Homestake Mining Company and other mining engineers in the West, compares favorably with these figures.

Effect of the Order on Individaal, Com unity and Company

The general effect of the Order has been to antagonize the individual and the communities dependent on gold mining, and caused large losses to the operators. To repeal it would not calm the situation, but would stir up increased resentment from the many who have lost their liv-lihood, relinquished leases, forfeited equity in equipment, or sold equipment in anticipation of no further need for the duration.

However, from the administrative standpoint, and to alleviate exceptional and unreasonable hardship in cases where such relief would not effect our war effort, it is felt that amending of this order to permit limited production and employment is desirable and justifiable. It has been recommended that lode mines be permitted to operate when production does not exceed 200 tons per month, and that placers continue operation when not employing over five men, provided that, in neither case, men under the age of fifty-five are employed unless such employment is first approved by the War Manpower Commission. It is felt that larger operations cannot be effectively controlled by any blanket relaxation in the order. Limited relief by appeal is favored, when the following accomplishments are involved:

1. Employment is provided for aged and physically unfit, and any others whom the War Manpower Commission feels they cannot place elsewhere.
2. Development and or exploration of gold deposits to provide for prompt resumption and or expansion of existing operations or initiation of new operations, in the post war period.
3. Assist in meeting excessive standby costs.
4. The operation does not materially interfere with our war effort through use of manpower, critical material or transportation facilities.

Relief Needed for Gold Mines

The resources and assets of the mines must be preserved. A mine, in general, is not like an industrial plant, that can be converted to produce for war needs or locked up and left with merely the watchman. The deterioration of a mine is rapid in the in-operative state. There is constant [fol. 2267] heavy cost for repair and maintenance. Furthermore, utilities such as water supply and power, must be operated in many cases for the community and to permit carrying on of necessary maintenance and repair work. If this work is not properly carried out, not only the assets in buildings, equipment and development may be lost, but the resources, which are important to our post war econ-

Provisions should be made to assist the mines in meeting these expenses. This may be done by permitting operation on a curtailed basis or by providing a subsidy for the conduct of such work. In view of the fact that the order has been administered as written, and many operators have complied by closing down, sold equipment, went into other operations, or disbanded their staff and crew in good faith, assuming that gold mining was over for the duration; provision should be made to assist those, to preserve their assets and resources, as well as for the more fortunate operators who have been permitted to continue under grants or serial numbers. Any other action could too rapidly be seized upon by small business "as just another move to squeeze out the little fellow". The most equitable action would probably be to place all mines closed by the order, on a subsidy, to carry maintenance and repair. To relax the order further than already proposed, solely for the purpose of assisting the larger operators to meet standby costs, without provision to take care of those less able to sustain themselves under existing restrictions; would be, to say the least, favoring a select few. This is indicated by the following tabulation and can be further analyzed by reference to Appendix 3, "L-208 Grants in Effect May 15, 1943".

	Number of Employees			
	100 or more	25–50	6–24	Less than 5
U. S. A. (Lode Mines)	2	3		
U. S. A. (Lode & Placers)			29	29
Alaska (Lode & Placers)	1 (Lode)	1 (Placer)	17	55

It must be borne in mind, that many operators are not in a position to resume operation, because their equipment has been "sent to war". If we permit mines to operate to meet standby costs, we are faced with the question of replacing equipment for those who have sold theirs, or of providing other relief. The shortage of critical materials, the fact that the major portion of the items sold are those on which it is most difficult to secure delivery now, and that any attempt to replace those items with new, would further congest production facilities which are vitally needed for our war effort cannot be overlooked. The following points must be considered, if any further relaxation of Order L-208 is to be given:

1. Where home ties exist or the operator is able to offer competitive wages or advantages in living and or working conditions, a drain of employees from strategic metal mines and other essential work would be created.

[fol. 2268] 2. Replacement of material and equipment or other relief would be in order for those operators who shut down and disposed of equipment in good faith.

3. Pressure for relaxation of our policy of restricting the supply of materials to foreign gold mines would develop. Operation of foreign gold mines is dependent on materials generally, not labor, as in this country.

4. A new drain on critical materials and further congestion of our production facilities would be eminent, to meet demand for replacement of capital equipment and provide for repair and maintenance requirements.

5. The existing supply of used equipment and material which has been moving into channels where it will serve in vital war work, will be cut off to a large degree.

6. Sub-contract work now being done in machine shops at closed gold mines and by private industries which formerly served the gold mining industry, would be curtailed.

7. Operators who have lost their assets and resources through lack of financing to preserve them, certainly would not be happy over the situation after being led to believe that destruction of their assets was a necessary step to Victory.

Still, we have the problems peculiar to maintenance of a mine in the preservation of its assets and resources, to face. The War Production Board cannot justly do otherwise than request Congress to provide the necessary subsidy for relief and protection of the gold mine operator whose interest has been adversely effected by Limitation Order L-208.

EHR:M. Edward H. Rott.

[fol. 2269] Summary and Conclusions

Historical—Steps taken to curtail gold mine operation prior to issuance of Limitation Order L-208 and results.

1. September 17th, 1941, recognition of importance of control on flow of materials to mines by qualified experts in mining—Order P-56 issued.

2. Order P-56 amended to exclude gold and silver mines, March 2nd, 1942, but such mines were still permitted to operate. Limited priority assistance for maintenance, repair and operating supplies was available to them through the medium of PD-1A applications. However, the high priority ratings available to mines under Order P-56 were not allowed.

3. Of 373 serial numbers cancelled on March 2nd, 1942, approximately 144 have been reinstated. Only five reinstatements made after L-208 was issued, which are offset by ten cancellations in the same period.

4. Gold mining operations were steadily and effectively being curtailed during 1942, the number of employees having decreased in the lode mines from 18,522 (Bureau of Mines' figure) in 1941 to 12,286 (War Manpower Commission's figure) in September, 1942. The 18,522 does not include workers in gold-silver mines or in the mills treating gold or gold-silver ores, totaling in all, over 6,000 men. The above figures apply to the gold mining industry and not specifically, to mines coming under L-208.

Issuance of L-208—Its effect and accomplishments

5. Limitation Order L-208 was issued October 8th, 1942.

6. Mr. Edward T. Dickinson, Jr., Executive Director of the Planning Committee, in his memorandum on "Effect of Gold Mining Curtailment Order L-208", prepared in April for Mr. William Batt, Vice Chairman of the War Production Board, estimated that Order L-208 only effected about 6,500 workers in gold mines. This estimate is closely in accord with the figures arrived at through independent analyses of employment in the gold mining industry made by Dr. Wilbur Nelson and the writer.

7. One hundred eighty-seven appeals for relief from the provisions of Order L-208 have been processed. In the cases where relief was given, one hundred thirty-seven grants remain in effect. Eighty-four are small operations, employing from one to five men each. Forty-six employ from six to twenty men. Employment of not less than 1,487 men is provided for in the operations covered by these grants; 1,019 in the States and 468 in Alaska. Only seven grants are in effect, which permits the employment of more than twenty-five men.

[fol. 2279] 8. The War Manpower Commission reports: Closing of gold mines under Order L-208 displaced 3,217 men. Of these, 1,156 were placed in non-ferrous mines by February 27th, 1943 and 515 in other industries. These are official figures; their accuracy may be questioned, but the differences do not seem important, in view of the issue at stake.

9. Idle equipment valued at $2,147,480, of which it is estimated approximately one-third came from placer operations, was transferred: $749,102 to metal mines, $165,864 to non-metallic operations, $278,100 to coal mining and the balance of $954,414 to construction, military, dealers' stock, and miscellaneous uses. In all, 171 releases were made. During the past six weeks, transfers averaged in excess of $100,000 per week.

10. Losses in strategic metal production, excepting silver, due to the closing of gold mines, has been nominal. Manpower transferred from gold mines to strategic metal mines, helped stem the decline in production. The degree to which this manpower was effective, depends on whether we accept the War Manpower Commission's figure of 1,156 men transferred to other non-ferrous metal mines, as illustrative of accomplishments, or, Dr. Wilbur A. Nelson's estimate of approximately 500 men, based on spot check of various mines to which men were referred, as the number actually placed in metal mines, due to the gold mine closing order. Utilization of idle gold mining equipment accelerated new strategic metal producion. However, silver production was approximately 17% lower in January, 1943 than that for January, 1942.

11. Because of complexities involved, due to constant activity in new development and expansion in strategic metal production, the shifting of personnel, and depletion of existing deposits; it is impossible to estimate how much of the increase in strategic metal production, since issuance of Limitation Order L-208, might be attributed to manpower obtained from mines closed under the order.

12. Cessation of gold mining climaxed the gradual reduction in annual potential demand by lode mines for repair, maintenance and operating supplies amounting to more than $15,000,000 in a year such as 1941. The requirements of gold dredges, though somewhat smaller, is never-the-less, appreciable.

13. Limitation Order L-208 inflicted hardship and losses on a very large group, to accomplish the release of manpower from a source (gold mines), which had for the major part, already lost the best of their workers. In numbers, it is estimated that the total leaving gold mines prior to October 8th, 1942, at least equalled those effeced by Order L-208 and greatly exceeded those actually displaced.

Relief for Mines Under L-208

14. Relief by appeal should be based on the following accomplishments:

(a) That employment is provided for the elderly or physically unfit, whom the War Manpower Commission does not feel are needed elsewhere in essential work. [fols. 2271-2287] (b) Development and/or exploration work will favor post war operation.

(c) Assist in meeting excessive standby cost.

(d) The operations will not interfere with our effort through the use of manpower or critical materials.

15. Relief is needed for the gold mines, but it should not be in such form as to favor largely, the few who have been fortunate enough to sustain themselves and continue operations under a grant.

16. If general relaxation in the provisions of Order L-208 is made, the following points should be considered:

(a) A drain of employees from the strategic metal mines and other essential industries would be eminent.

(b) Replacement of material and equipment or other relief to those operators who shut down and disposed of equipment in good faith.

(c) Relaxation of our policy of restricting supply of materials to foreign gold mines.

(d) A new drain on critical material and equipment would be created.

(e) Pronounced reduction in the $100,000 weekly transfer of used equipment and materials from gold mines to essential uses.

(f) Curtailment in sub-contract work now being done in machine shops at gold mines and by private industries which formerly served the gold mining industry.

17. Steps should be taken to provide relief to the mines closed under Order L-208, which will be an actuality to all

and in no way interfere with our war effort. Congress should include in a law for relief to such mines, provisions for subsidy to carry maintenance and repair cost.

Edward H. Rott.

August 14, 1942.

Memorandum

To: Mr. H. O. King, Chief, Copper Branch.
From: Wilbur A. Nelson, Chief, Mining Branch.

The Mining Branch views with serious alarm the dissipating of the only appreciable reserve of highly competent mining labor through the hasty closing of the gold mines in the United States.

The gold and silver miners constitute the last reservoir of the skilled mining labor. We must, therefore, be certain that that labor is directed toward the most critical points before permitting it to be disbursed.

The present critical situation developed when copper, lead, zinc, mercury and other miners left their jobs and went to the west coast on shipbuilding and on aircraft jobs, and into the mountain areas in new war industries work.

If we close down the gold mines while these same opportunities are available for work at substantially high rates of pay in other war industries, the miners will not move to a copper, lead or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast.

Logic dictates this, for when a copper miner at Butte is willing to leave his home and go to the coast, I am sure that a gold miner, living in the excellent living conditions at Lead, is not going to leave his family and stop at Butte if he could go to the west coast.

I would suggest for your consideration the following:

1. An agreement among the principal non-mining defense industries on the west coast and the Rocky Mountain areas to discontinue hiring any men who have had mining experience. Perhaps this agreement should further prohibit the hiring of any labor outside of a stated area.

2. The immediate closing down of nonessential industries, such as paper and textile, within the area of labor shortage, particularly on the Pacific Coast. In this way, [fol. 2289] labor will be employed in its own locality. The creation of housing, transportation, and other piecemeal disruption which flow from permitting labor from afar to come into already congested areas will be avoided. Thus will be provided the necessary labor for the essential industries.

3. An agreement with the various unions involved to assist in the enforcement of the foregoing agreement.

4. An active campaign on the part of both management and labor in the gold mining areas to move the miners into the critical metal mines.

These steps can be taken in a very short period of time. When it becomes clear that the next labor which is free for employment in the critical metal mines would be obtained by closing down the gold mines, I think steps should immediately be taken to force gold mines to shut down except for skeleton crews to maintain them in a workable condition so that mining operations in these mines can be started again at the close of the war.

[fol. 2290] PLAINTIFF'S EXHIBIT 17

September 1, 1942.

To: Dr. Wilbur A. Nelson, Room 1035, Temporary Building R

From: H. O. King, Room 1085, Temporary Building R

With reference to the Gold Mining Curtailment Order, the Labor Division have furnished me with some data on gold mines that have serial numbers, which I believe were obtained from the Mining Branch. It appears from this list that a number of mines that produce practically nothing but gold have serial numbers, and I wonder if the definition in the Gold Curtailment Order tying this to mines with serial numbers would be effective.

I realize the issuance of this order is a function of neither the Copper Branch nor the Joint Interdepartmental Com-

mittee, but the pressure for action is so great that I feel it advisable to call this to your attention, as I am continually called upon to answer questions as to when the curtailment order is to be issued.

With the continuing and increasing loss of production in copper mines, I feel that immediate action should be taken.

(Signed) H. O. King, Chief, Copper Branch.

[fol. 2291] PLAINTIFF'S EXHIBIT 21

September 15, 1942.

Memorandum.

To: Mr. Donald M. Nelson
From: M. Creditor

I have reviewed the proposed limitation order for the gold mining industry and I wish to raise certain points as to the soundness of such an order.

You will recall that we received a letter from Senator Gurney on August 31 in which he set forth the harmful effects that such an order would have on the economy of the State of South Dakota. In your reply you stated in effect that we were confronted with the manpower problem and something had to be done to overcome the losses of production which are being experienced in the mining of copper and other strategic materials through the shortage of experienced miners.

In the preamble of the limitation order no mention is made of manpower requirements. It simply states that the order is made necessary because of the shortage in the supply of critical materials which are used in the maintenance and operations of gold mines.

It would seem to me that if the order is based on the premise of critical materials alone, the question might be raised as to why such an order would not apply to materials being sent by this country to other gold mines in Canada, South America, and South Africa.

If the main purpose of this order is to divert miners from the gold mining industry to copper and other mining in-

dustries, it seems to me that there is no assurance that this order would accomplish the desired results. As Gustav Peck pointed out to you in his memorandum of September 9, it would be too bad to close the Homestake Mine, for instance, without the assurance that most of the miners will continue to practice their trades in the copper mines.

Would it not be more practical to accomplish the purposes by a freeze order similar to that which is now in effect for workers in the copper mines and the lumber industry. This may be more drastic but, on the other hand, may give better assurance that the miners in the gold mines would eventually find their way into the copper mines. Consideration might also be given to the idea of having the Army give indefinite furloughs to Service men who in the past were engaged in the mining of non-ferrous materials. [fol. 2292] Even aside from the possible dissipation of these skilled miners into other occupations, there is question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally, will be stuck in Alaska. Where are they expected to go?

I am sure that a great deal of thought has been given to the proposed limitation order on gold mining, but unless there is a high degree of assurance that the main purpose will be accomplished; namely, the diversion of these miners to the non-ferrous mines, I feel it is important to weigh the adverse effects it might have in other directions.

Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries.

MCREDITOR:deo

[fol. 2293] PLAINTIFF'S EXHIBIT 22

Interdepartmental Committee on Non-Ferrous Metals,
Meeting September 8, 1942

H. O. King, Chairman

The following were present:

General McSherry, War Manpower Commission.
Mr. Allen Buchanan, War Production Board.
Major George L. Webber, Army & Navy Munitions Board.
Captain Russell W. Nauman, Services of Supply, War Department.
Major R. B. Coons, Selective Service System.
Mr. Robert Abelow, War Labor Board.
Mr. James Newman, Planning Committee, War Production Board.
Mr. W. H. McPherson, Planning Committee, War Manpower Commission.
Mr. Robert R. R. Brooks, Office of Price Administration.
Mr. Edwin V. Collins, Bureau of Mines, Department of the Interior.
Mr. Erwin Vogelsang, Lead Branch, War Production Board.
Mr. Herbert W. Woolley, Requirements Committee, War Production Board.
Mr. George C. Heikes, Zinc Branch, War Production Board.
Captain Sidney C. Sufrin, Services of Supply, War Department.
Mr. Richard J. Lund, Miscellaneous Minerals Branch, W.P.B.
Mr. Wilbur A. Nelson, War Production Board.
Mr. Marcellus H. Stow, Mining Branch, War Production Board.
Mr. Hugh R. Van Wagenen, Office of Price Administration.
Mr. Darrell D. Smith, War Manpower Commission.
Mr. N. E. Randolph, Ferro Alloys Branch, War Production Board.
Mr. F. D. Cannon, War Production Board.
Mr. Samuel Lipkowitz, War Production Board.
Mr. Louis Lister, War Production Board.

General McSherry acted as chairman of the committee in Mr. King's absence, due to illness.

Mr. Frank Cannon reported that the letters on manpower shortage had been sent to all but the molybdenum, tungsten and vanadium operators. General McSherry also reported that his letters to the mayors in mining communities had been sent.

Mr. Lister reported on the employment and labor requirements for smelters and refineries in the United States and [fol. 2294] distributed a set of tables giving summary and individual plant data. He stated that although data on labor requirements at 15 plants were not available, the reporting plants needed some 2,200 additional workers for the balance of 1942, and that 75 per cent of the total labor needs were in the far western states.

General McSherry then gave a detailed report on the employment stabilization order in the mining and lumber industry, which War Manpower Commission had issued on September 7. Copies of the order were distributed to those present. The provisions of the order were then discussed. General McSherry explained that enforcement of the order preventing mining and logging employees in Regions X, XI and XII from changing to jobs in other essential industries would be implemented by the Accounting Offices of the War Department, Navy Department, Maritime Commission and Procurement Division of the Treasury Department, which would be requested not to approve payroll disbursements to migrants from mines who had been hired by a Government financed project without certificates of separation from their jobs. He also pointed out the following: The machinery for executing the directive will consist of the U.S. Employment Service and local committees of the War Manpower Commission composed of two representatives from labor, two from management, and a chairman representing the Commission. Any employee can appeal from a decision of the Employment Service on not granting a certificate of separation and bring the appeal before the local Labor-Management Committee, whose recommendation is made to Industrial Area War Manpower Commission director, who makes a final decision. The members on the local committees are to be nominated at the local level by management and labor groups. The Re[illegible]onal Committees

are to select the local Committees from among these nominees.

[fol. 2295] In discussing the effect of the order upon labor morale, Mr. Heikes expressed his belief that the freezing of workers might create strong resentment and therefore steps should be taken to convey to workers the importance of the job they were doing and the need for such drastic action to keep up the production of zinc and copper. There was general agreement on this point and steps to this end which had already been taken were described.

On other actions taken, Captain Nauman reported two novel attempts to overcome the labor shortage in Arizona. Eighty women have been recruited in the Globe-Miami area for surface work in order to relieve manpower for underground operations. Because of the efforts of the Services of Supply, Phelps-Dodge properties had hired 100 Indians, and arrangements were made by the Company to provide transportation. It is understood that plans are in prospect to hire some 250 more Indians. General McSherry brought up the fact that one of the large mining companies in Arizona had refused to pay transportation costs for workers transferred from other states although they were willing to pay intra-state transportation costs.

Captain Nauman also reported that these recruiting efforts are being undertaken in conjunction with members of the U. S. Employment Service, especially detailed to the Globe-Miami area.

General McSherry expressed his belief that hiring specifications for new workers were too strict throughout the mining industry and that steps should be taken to reduce these standards. General McSherry indicated that a representative of the War Manpower Commission might report on discrimination at the next meeting of the Committee.

[fol. 2296] In a discussion of the proposed gold order it was the firm belief of the members of the Committee that gold mining was now an unessential industry and that even if the manpower released by the gold order was not directly transferred to copper, lead or zinc mining, it still might help relieve the shortage of labor in other war industries, such as aircraft and shipbuilding. There was impatience among some members of the Committee with the length of time which was being taken to promulgate a gold order. Mr. Lund, Chief of the Miscellaneous Minerals Branch, re-

ported that he was drafting an order which would curtail every mining operation whose gold production was over 50 per cent by dollar value but which would exempt those which produced less than 4,000 tons of ore per year. Mines which produced a mixed ore with an essential metal content and mines which produced dry and silicious ore necessary for fluxing, could appeal from the order. Dr. Nelson disagreed with the principle of a blanket curtailment because he believed that it would open the way to too many appeals. He favored his original gold curtailment proposal according to which a gold mine coming under Order P-56 could be shut down by being denied a serial number. He believed this was a more flexible instrument since the mines whose ores were necessary could be exempted from the terms of the order beforehand simply by being given a serial number. The Committee discussed the problem of the existing wage discrepancies between construction projects in the West and wages in the mines, even if the latter should be raised by the War Labor Board. It was suggested that the institution of the 48 hour week on these project might partly eliminate the discrepancy.

The members of the Committeee were asked to suggest topics for next week's agenda. It was suggested that (1) [fol. 2297] they would continue discussing the problem of wage discrepancies; (2) that they would like to hear a report by Mr. Joseph Tufts of the War Manpower Commission on housing and transportation problems in mining areas; (3) that they were expecting a report from Mr. Lund on the progress of his gold orders; and (4) they would like to hear a report from the War Manpower Commission on discriminatory hiring practices.

The meeting was then adjourned with the understanding that it would meet again next Tuesday at two o'clock.

[fol. 2298] PLAINTIFF'S EXHIBIT 23

War Production Board

Washington, D. C.

Office of: W. L. Batt, Vice Chairman.

Memorandum for Mr. Nelson

The more I study the gold mining situation, the more uncertain I am as to the form which a restriction of operations should take. Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure. If the question comes up in your press conference, I would suggest that you refer to the need for miners and the lack of need for gold, and say that the matter is being studied from all angles.

W. L. Batt.

Noted by DMN 11/1/42 before press conference.

War Production Board

Washington, D. C.

October 3, 1942

In reply refer to: Room 1035-R

Memorandum

To: W. L. Batt, Vice Chairman.
From: Wilbur A. Nelson.
Subject: Labor Statistics on Gold Mines in the United States.

It is estimated that of all of the gold mines and dredges in the United States be put on a stand by basis that there would be available the following men, including all types of workmen from the following listed areas.

Homestake Mining Company, Lead, South Dakota		1,373	
Cripple Creek, Colorado		338	
Idaho-Maryland California Mine, Grass Valley, California		69	
Empire, North Star, Pennsylvania Mines, Grass Valley, California		240	
Total		2,020	
Estimate of men available from other mines		500	
Total		2,520	
Dredge Operators in California	525		
Dredge Operators in other States	225	750	
Total from lode mines and dredges			3,270

From these figures we find that there are the following number of miners and muckers.

[fol. 2300]

Homestake Mining Company	421
Cripple Creek	100
Idaho-Maryland	45
Empire, North Star, Pennsylvania Mines	130
Total	696
Estimated additional miners and muckers from other small mines	200
Total number of experienced miners and muckers	896

Of these 896 miners and muckers a certain percentage of them would have to be left in the mines when the mines operate on a stand-by basis. Probably 300 of them would be needed for this purpose. This makes available about 600 miners and muckers for other mining enterprises provided they can all be induced to go into other mines.

If the gold mines are curtailed to 50% of the 1941 tonnage or to the tonnage they produced in September of this year where it is less than 50% of their 1941 tonnage, the only mine affected would be the Homestake Mine. If this mine reduces to 50% of its 1941 tonnage, it would probably have to reduce the men employees from 1876 on their payroll at the present time to around 1000, so that such action by WPB would release around 900 men of whom probably 200 would be miners and muckers.

There are 16,000 people residing in the county in which Homestake Mine is located, most of them in Lead and the nearby town of Deadwood. About 5000 people reside in the county in which Cripple Creek Mines are located. The number of people residing in Grass Valley, California, is not available.

Wilbur A. Nelson.

October 2nd, 1942.

Mr. William L. Batt,
War Production Board,
Washington, D. C.

DEAR BILL:

I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other non-ferrous metals as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.

If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's approval, and I believe that Mr. Forrestal will do the same for the Navy.

Sincerely yours,

Robert P. Patterson, Under Secretary of War.

[fol. 2302] PLAINTIFF'S EXHIBIT 26

War Department
Washington

October 5th, 1942.

Memorandum to Mr. Donald M. Nelson:

Gold Mining

The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.

There are two thousand to three thousand hardrock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.

The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.

The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half-measures be avoided.

Robert P. Patterson, Under Secretary of War.
James V. Forrestal, Under Secretary of the Navy.

[fol. 2303] PLAINTIFF'S EXHIBIT 33

War Production Board

Washington, D. C.

September 1, 1942.

DEAR SENATOR MCCARRAN:

Your letters of August 26 and 27 have been read with great interest.

The War Production Board has no plan, nor has it considered any plan, to close down silver mines in the United States of America.

A serious study has been and is being made of sources from which mine labor could be made available to the nonferrous metal mines. Naturally, our thoughts have included gold mines, but we have not at this time reached any conclusion thereon.

We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today.

Because of your experience in mining matters, and the factual evidence you secured in your recent hearings in the West, I am asking our people responsible for mine production to carefully consider your suggestions.

I appreciate very much the opportunity your letter affords me to have your views on these important problems.

Sincerely, (S.) Donald M. Nelson, Chairman.

The Honorable Pat McCarran, United States Senate, Washington, D. C.

[fol. 2304] PLAINTIFF'S EXHIBIT 34

To All Workers in Gold Mines:

At the present time the armed forces of the United States are in vital need of large quantities of copper, zinc and other nonferrous metals. These metals are used in carrying the war to our enemies and must be available in sufficient amounts if victory is to be assured.

Inadequate supplies of non-ferrous metals are reducing production of tanks and airplanes, ships and shells. Immediate production of these weapons of war in the amounts necessary is of the utmost importance. We are not mining enough of these critically needed metals. One reason for this is a shortage of hard-rock miners in the western states.

To meet our war production program with respect to these metals, it becomes necessary now to maneuver our manpower so that less essential mining can be diverted to vitally important operations. With this as our objective it has been determined that all gold mining shall be discontinued at the earliest possible moment.

It is realized that such an order must occasion considerable hardships. Nevertheless, at this juncture no other course is open and, accordingly, the shutdown will become effective in sixty days.

We urge all miners now working in gold mines to leave such work for jobs in mines producing the more essential non-ferrous metals. It is important that gold miners transfer to non-ferrous metal mines rather than to other war industries. This is imperative to meet the shortage of miners, and it will enable men now working in gold mines to make a most effective contribution to the national war effort.

Paul V. McNutt, Chairman, War Manpower Commission. Donald M. Nelson, Chairman, War Production Board.

[fol. 2305] PLAINTIFF'S EXHIBIT 36

December 2, 1941.

Memorandum

To: Mr. Donald M. Nelson.
From: Edwin B. George.
Subject: Status of Gold Mining (meeting held in the Department of State on November 24, 1941).

The foregoing meeting was called by Mr. A. A. Berle, Jr., Assistant Secretary of State, apparently in response to our request for an opinion on the position SPAB should take with respect to gold mining. Mr. Shaw Livermore attended this meeting as a member of your staff (SPAB). A memorandum is attached which seems to reflect in a clear and useful manner the attitude of those present.

During the course of the discussion it was brought out that the Treasury Department would do nothing to prevent a decline in domestic gold production within the next few years, as a result of shutting off supplies and repair parts. There was an undercurrent of opinion that it may be entirely possible, in a postwar reconstruction period, that the Treasury would limit its buying of newly mined gold.

Discussed at some length also was the position of South Africa whose gold production does not come directly to the United States but is used to bolster the dollar-exchange position of the sterling-bloc countries. Since this is the case the same attitude should be taken towards South African mines as toward Canada or Latin American mines.

If the opinions of the State and Treasury Departments as expressed herein become the official attitude of SPAB with respect to Canada and South Africa, it may be necessary to frame a specific policy for treatment of Philippine and Alaskan gold mining. The latter two territories were purposely omitted from this meeting because they did not pose problems of foreign exchange and the State Department felt that they did not lie within its jurisdiction.

Enclosure.

Office of Production Management

Social Security Building

Washington, D. C.

November 27, 1941.

Memorandum

To: Mr. E. B. George.
From: Shaw Livermore.
Subject: Statuts of Gold Mining.

Meeting Held in the Department of State, November 24, 1941

I attended a meeting called by Mr. A. A. Berle, Jr., Assistant Secretary of State on November 24, 1941. This meeting was apparently called in response to a request from S.P.A.B. for the opinion of the State Department, as suggested in a document submitted to S.P.A.B. on November 19. The memorandum covering the attitude of those present at the meeting is attached.

During the course of the discussion it was brought out that the Treasury Department would do nothing to prevent a decline in domestic gold production within the next few years, as a result of shutting off supplies and repair parts. There was an undercurrent of opinion that it may be entirely possible, in a postwar reconstruction period, that the Treasury would limit its buying of newly mined gold.

Discussed at some length also was the position of South Africa whose gold production does not come directly to the United States but is used to bolster the dollar-exchange position of the sterling-bloc countries. Since this is the case the same attitude should be taken towards South African mines as toward Canada or Latin American mines.

The expressed opinions of the State and Treasury Departments, as embodied in the attached memorandum will probably become the official attitude of S.P.A.B. However, it will be necessary to frame a specific policy for treatment of Philippine and Alaskan gold mining.

Shaw Livermore.

[fol. 2307] PLAINTIFF'S EXHIBIT 36B

Department of State

Memorandum of Conversation

Financial Division

Date: November 24, 1941.

Subject: Priorities and Export Licenses for Gold Producing Machinery.

Participants: Mr. Frank V. Coe, Treasury Department; Mr. Walter R. Gardner, Mr. Charles P. Kindleberger, Federal Reserve System; Mr. L. A. Morrison, Mr. Dennis E. Pickens, Mr. Shaw Livermore, Office of Production Management.

Copies To: Mr. Berle, Mr. Wickerson, Mr. Stinebower and Mr. Livesey, State Department.

Mr. Berle opened with general remarks closely following his memorandum of November 24 entitled "Priority for Gold Mining Machinery" recognizing the actual unimportance of gold as a defense material but in relation to foreign gold production, which was the concern of the meeting, pointing also to the importance of gold as a balancing element in our accounts with Canada and South Africa and to its psychological and industrial importance to those countries.

The ensuing discussion brought out that general priority ratings have been refused but that individual licenses have been issued after careful scrutiny of need and of the use to be made of the machinery and of the local conditions where it was to be used, such as possibilities of alternative employment and of production of more essential strategic materials such as chrome and other alloys. Mention was made of the probability that in case supplies from the best qualified sources are refused, the gold producing territories would divert energies to the inefficient production of inferior substitutes within their own manufacturing capacity. The licensing of exports requires particular

care because outside the United States our licensing authorities do not have available facilities for inspection on the ground to assure that proper use is made of the exported machinery and that the licenses are not abused.

It appeared to be the consensus of the meeting that preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output and to refusing equipment for any expansion of output; subject to exceptions in cases where extraordinary hardship might result—as in the case of isolated communities having no alternative forms of employment—preference ratings for exports of gold mining equipment should be made to depend on a showing that the maintenance of the present level of gold production is necessary (a) to supply dollars for an otherwise deficit dollar position in the balance of payments of the country (or in the case of South Africa, for the dollar position of the sterling area), or (b) for special political reasons; whenever the current gold mining is maintained mainly to prevent a dollar deficit and especially where the labor could be used for more direct contribution to defense production, this Government should endeavor to find other means of meeting this deficit such as lend-lease activities, purchase of gold "in the ground" for postwar delivery, and the like. To give effect to the foregoing conclusions, no general priority ratings for gold mining equipment, including repair and replacement parts, should be granted but individual consideration should be given to each application on its merits unless adequate periodic compliance investigations can be made (particularly in Canada) as is done in the United States.

[fol. 2308] PLAINTIFF'S EXHIBIT 37

War Production Board

Interbranch Meeting of Branches Concerned with Mineral Production

9 A. M.—September 25, 1942.

Present:

Mica-Graphite, M. H. Billings, S. A. Montague.
Mining, M. H. Stow, L. W. Hildreth.
Copper, Frank Ayer, F. H. Hayes.
Tin-Lead, C. A. Wright.
Zinc, G. C. Heikes.
Ferro-Alloys, E. F. Hatch, O. N. Rove.
Misc. Minerals, R. J. McEwen.
Office of Deputy, Director General, Wilbur A. Nelson.

Presiding:

Wilbur A. Nelson.

Access Roads. Mr. Nelson read a memorandum from Mr. A. I. Henderson announcing the establishment of the Access Roads Section of the Mining Branch, of which Mr. Neil Stull is now chief. Mr. Stull, however, will return to the Department of Interior, from which he is on leave, on October first, and after that date Mr. Hughey Hudson will head the Access Roads Section. All matters pertaining to access roads in connection with mining or lumber production will be handled through this Section, in order that the information given out, and the policies followed, will be uniform. Access roads appropriations cleared through this Section must then be certified by Mr. Maury Maverick. Mr. Nelson would like to have brought to his attention cases where access roads in connection with mine or lumber production are handled through other units or agencies.

Attendance Record. Dr. Stow mentioned the new administrative procedure in regard to attendance records. A detailed attendance record on each employee will be required hereafter, to be kept in the various Sections or Operating units within the branches.

Army Requirements. Mr. Nelson mentioned the discussion which took place at the Interdepartmental Meeting on Wednesday, September 23, of the Army's method of estimating its requirements. The Army has used figures based on an ideal program, rather than the amounts it will actually be able to make use of, taking into consideration fabricating facilities, etc. Moreover, when the amounts actually received and used during a certain period have fallen short of the estimate for that period, the Army has added the remainder of the estimate to its estimate for the following period, even though this remainder could not be used. This has meant that WPB has been trying to reach production goals based on false figures.

The meeting requested that some means be found to get official estimates, revised on the basis of actual requirements, of the Army's needs.

Major Chambers, at the Interdepartmental Meeting, stated that the change to steel cartridge cases will not affect the Army's requirements of copper and zinc. Major Chambers also stated that antimony sulphide ores of 65% or better content may be ground and used without processing in camouflage paint by the Army, and therefore such ores should be furnished to the Army without mixing with leaner ores.

South African Gold Mines. Mr. Nelson stated that at the [fol. 2309] Interdepartmental Meeting it was brought out that the South African gold mines have produced more gold during the first six months of 1942 than in any previous six-months' period in their history. These mines have been supplied, to some extent, through the British Army's military priorities. It was the feeling of the meeting that such expansion of production is out of line with the war effort, and that a certain amount of curtailment should be insisted upon, keeping in mind the South African political situation.

Financing of Drilling by Metals Reserve Co. Mr. DeWitt Smith, at the Interdepartmental Meeting, stated that the Metals Reserve Company will finance drilling on the recommendation of WPB, without going through the Bureau of Mines. This was mentioned by Mr. Smith specifically with reference to bauxite drilling in Arkansas. The meet-

ing requested Mr. Nelson to ascertain the exact procedure to be followed, including the following points:

1. The limit of the amount of money to be had for such purposes without long delay and red tape.
2. Whether the financing will be in the form of loan or gift, on the understanding that the branches would use care in their recommendations.
3. What are the legal angles? Will a warranty deed be required on the properties to be drilled?
4. Will this include exploration work aside from drilling, as in the case of mercury?

Mr. Nelson stated that the Minerals and Metals Division of the Department of Commerce has inaugurated a study of the impact of war on small business which depends on metals and minerals.

Gold Mining Limitation Order. The meeting was not in favor of the issuance of the Gold Mining Limitation Order L-208 until preparations are completed to channel the labor so released into strategic metal mining. Mr. Hayes stated that he had suggested to Mr. Henderson that this order be delayed until such channels were provided, and Mr. Henderson had said that the necessity of issuing the gold order was imminent, and it could not wait for the channeling of the labor into the strategic mines. Mr. Hayes then stated that the transferring of gold miners to the strategic mines was the main purpose of the order. Mr. Henderson replied that the conserving of materials, rather than labor, was the main purpose of the order.

The following resolution was proposed by Mr. E. F. Hatch, seconded by Mr. F. H. Hayes, and unanimously passed:

> Resolved that before the Gold Mining Limitation Order L-208 is sent to clearance that:
>
> 1. Representatives of the gold mining companies be called to Washington immediately to confer with Government officials on the gold order so that:
>
> A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort.

B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production.

This resolution was to be embodied in a memorandum to Mr. Batt from Mr. Wilbur Nelson.

The gold mining curtailment order, if issued, will not apply to mines having serial numbers under Order P-56. The Homestake Mining Company had its serial number withdrawn on March 2, 1942.

The meeting adjourned at 10:00 a.m. until Monday, September 28, at 9:00 a.m.

[fol. 2310] PLAINTIFF'S EXHIBIT 38

April 7, 1943

Revised April 17, 1943.

Memorandum

To: Mr. A. S. Knoizen, Director, Mining Equipment Division, Administrator, Order L-208.

From: Mr. Edward H. Rott, Deputy Administrator, Limitation Order L-208.

Subject: Proposed Plan for Amending Limitation Order L-208.

In the following paragraphs, suggested changes in the provisions of Limitation Order L-208 are presented. It is felt that these changes will make the order more practical from the standpoint of application and administration. These changes will liberalize the order to some extent, but we do not believe the operations permissible under the proposed provisions will effect our war effort.

To make the order practical from the standpoint of application, a "nonessential mine" should be redefined.

(a) Definitions.

(1) "Non-essential Mine" means any mining enterprise from which the principal product is gold, whether lode or placer, located in the United States, its terri-

tories or possessions, unless the operator of such mining enterprise is the holder of a serial number for that operation, which has been issued under Order P-56.

(2) "Principal Product" For the purpose of this Order, if the gold value exceeds 50% of the total dollar value of the recovered products of the mining enterprise, it will be considered the principal product.

To take care of misunderstandings and a loop hole in the Order which might permit considerable expansion of a given operation, the term "associate," has been introduced which should be defined as follows:

(3) "Associate", means any co-owner, partner, contractor, lessee actively engaged in the operation.

Section (b)(4) should be amended to liberalize the order to cover types of grants on which, with practically no exception, it has been the policy of this office to recommend and for the Appeals Board to grant, permission to continue [fol. 2311] operation. The proposed change is also desirable to make the order practical from the standpoint of the operator. 100 tons of ore per month is hardly a practical operation for two men. An increase in this tonnage to 200, might be of some benefit in increasing the supply of silicious flux to smelters. In the case of placer mines, the values are generally so low that a 100 yard per month operation is out of the question. It is more reasonable to limit such operations on a manpower basis. To avoid objection on the part of the War Manpower Commission, we have included in the proposed amendment, a provision similar to that contained in the grants made to permit continuance of such operations. The changes recommended are as follows:

b) 4. The provision of this order shall not restrict the operation of any lode mine which was in production in 1941, provided the rate of production after the effective date, shall not exceed 200 tons per month, employing not more than 3 men, nor to any hydraulic placer mine, or any other type of placer mine which was in operation in 1941, provided the number of employees working on such operation, after the effective date, does not exceed 5, including owner and associates. It

is further provided that no employee under the age of 55 shall be retained if the War Manpower Commission finds that he can be used elsewhere in the mining industry.

To Section (d), a paragraph might be added to clarify the situation as to priority assistance.

Any mill engaged in milling ores for the holder of a serial number under Order P-56, may be classed as a producer, as defined in that order, eligible to the same consideration with respect to issuance of a serial number and priority assistance. This provision may have some value in stimulating the conversion of idle mills to handling custom ore.

The restrictions on disposition of machinery and equipment can be administered more easily, and I believe will be received better by the industry, if conformed more closely to the provision of Order P-56, relative to transfer of equipment.

e) 1. On or before January 18, 1943, or within 60 days after the effective date, whichever is later, each operator of a nonessential mine shall file with the Mining Division, War Production Board, Washington, D. C., Reference: L-208, an itemized list of machinery and equipment of the types listed in Schedule A, signed by such operator or an authorized official, giving complete specifications and condition for each item and indicate those items available for sale or transfer.

[fol. 2312] 2. No person shall sell, otherwise dispose of or transfer any such machinery or equipment which has been used in a nonessential mine, and no person shall accept delivery thereof except with specific permission of the Administrator of the Order, unless the operation for which the machinery or equipment is to be used is covered by a serial number under Order P-56, P-58 or P-73. Any transfer to an operation covered by a serial number shall be reported, in accordance with instructions contained in Section (f).

The matter of reporting on transfers may be included under Section (f) as a first paragraph. It seems that by doing this and retaining the original Section (f) as the second

paragraph, the requirement for reporting transfer of equipment may be more effective.

(f) 1. Any operator who sells, otherwise disposes of, or transfers any item of the class listed in Schedule A in accordance with exception to the restriction contained in Section (e)(2), permitting transfer to an operation with serial number under Orders P-56, P-58 or P-73, shall immediately report such transaction to the Mining Division, War Production Board, Washington, D. C., Reference L-208, giving the following information:

(1) Name of company and mine from which transferred.
(2) Identity of items transferred
(3) Name of party acquiring equipment and serial number of operation for which equipment is acquired.

2. Same as original Section (f).

In Section (i) Violations, it seems that the last sentence should be revised in a manner that it would be applicable to the type of operation involved. The following is suggested:

In addition, any such person may be prohibited from continuing operations or obtaining any further deliveries of material, supplies or equipment under priority control for conduct of his operation and may be deprived of further priority assistance.

Edward H. Rott.

Memorandum

To: Mr. Donald M. Nelson
From: M. Creditor

Under the Gold Order, L-208, most of the permits which allow many of the companies to operate will expire on June 8. Since Howard Young understands that you will

probably take up Order L-208 at tomorrow's meeting of the War Production Board, he has authorized the administrator of the Order to extend their present permits for a period of 60 days, I believe.

I also understand that our Appeals Board, headed by Dr. Holcomb, has received instructions from Mr. King that the extension will be permitted for one week instead of 60 days.

If it is likely that Order L-208 will not be taken up at tomorrow's meeting of the Board, it may be necessary for practical purposes to make sure that the extension is authorized for a longer period than one week so that there will be no possibility of companies having to shut down or of being in violation if they continue to operate. I believe it is generally understood by the operating companies that until a final determination is made by the War Production Board they are going to be allowed to operate under the restrictive terms of the present Order.

You may wish to take up at the top staff meeting this afternoon the question of the extension of time.

M. C.

August 26, 1942

Mr. Donald Nelson, Chairman
War Production Board
Room 5055, Social Security Building
Washington, D. C.

My Dear Mr. Chairman:

From all over the country there come to my desk protests from patriotic Americans against what has been termed a proposal that your Board will direct the closing down of gold and silver mines in the United States to direct the flow of manpower toward the production of other strategic and critical metals and minerals.

I beg leave to call to your attention what appear to me to be important considerations in this program of production in the war effort, and several factors enter into my strong conviction that any order closing down gold and silver mines would be most unwise.

In the first place, the transfer of necessary labor from closed gold and silver mines to mines producing copper, lead, zinc, etc., would be negligible, due to the fact that very few operations exist today where only gold and silver are mined, and in these districts (mainly, the Homestake Mining activity in South Dakota and the Mother Lode Mining district in California), the number of men who could be so transferred is small. Many of the usual workers have joined the armed forces; many are familiar only with the routines of this type of mining and cannot be successfully transplanted. Thus little good would result and great hardships would be inflicted upon affected families and communities.

Secondly, there is no rule or procedure by which such workers could be legally forced to transfer to other mines. The labor that would be denied employment by reason of

the shutting down of the mines producing gold and silver would most likely go to the places where they would receive higher wages than are paid in mines.

Also, gold and silver mines are largely the sources of fluxing ores, without which copper production would be greatly impeded if not altogether halted.

All in all, I cannot too strongly urge that no order be issued which would lead to the closing down of gold and silver mines.

[fol. 2316] If the aim of such an order would be to increase production of war essentials and strategic and critical metals and minerals, may I respectfully suggests that your Board investigate the possibility of increasing mine production by constructive measures, which have presented themselves to me forcefully as Chairman of a Subcommittee holding hearings in the west recently on the subject of mining.

Tremendous evidence was presented to my Committee in these hearings by mine owners, superintendents, and workers, pointing to the fact that the solution to the lack of production lay in certain factors which could be remedied through government action. These factors centered, in brief, around the following points:

1. Take the ceiling price off war essential and strategic metals.

2. Make government assistance promptly obtainable to existent and potential metal producing mines by way of loans authorized by existing law but buried in delay and complexities.

3. Accord mining operations the same allowance as to depletion in revenue laws as is accorded in oil operations.

4. Compute the base-period income of a mining operation on the basis of three out of four base-period years, obtaining the average by dividing by three.

5. Make adequate allowance to mining operation so a reserve fund, non-taxable, for development of new mines and ore bodies may be encouraged.

6. Eliminate the excise tax on freight.

7. Give to the producer of copper, lead, and zinc the full and proper value of $1.29 per fine ounce for silver and $35 per ounce for gold which he produces in combination with the copper, lead, and zinc.

I respectfully draw these details to your attention, with the urgent request that you do not approve any order bringing about the closing of gold and silver mines as I feel the results will be destructive to the welfare of the war effort.

Respectfully, Pat McCarran.

[fol. 2317] PLAINTIFF'S EXHIBIT 46

May 6, 1943.

Memorandum

To: Mr. A. S. Knoizen
Director, Mining Division
Administrator, Limitation Order L-208

From: Mr. Edward H. Rott
Deputy Administrator
Limitation Order L-208

Subject: Proposed Plan for Amending Limitation Order L-208 (Revised May 6, 1943)

In the following paragraphs, suggested changes in the provisions of Limitation Order L-208 are presented. It is felt that these changes will make the order more practical from the standpoint of application and administration. These changes will liberalize the order to some extent, but we do not believe the operations permissible under the proposed provisions will effect our war effort.

To make the order practical from the standpoint of application, a "nonessential mine" should be redefined.

(a) Definitions.

(1) "Non-essential Mine" means any mining enterprise from which the principal product is gold, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for that operation, which has been issued under Order P-56.

(2) "Principal Product" for the purpose of this Order, if the gold value exceeds 50% of the total dollar value of the recovered products of the mining enterprise, it will be considered the principal product.

To take care of misunderstandings and close loop holes in the order which might permit considerable expansion of a given operation, the following terms should be defined:

(3) "Operation" for the purpose of this order, should include the mining and or treating of ore or placer material, development work or prospecting, excepting contract drilling.

(4) "Associate" means any co-owner, partner, contractor, lessee actively engaged in the operation.

[fol. 2318] Section (b)(4) should be amended to liberalize the order to cover types of grants on which, with practically no exception, it has been the policy of this office to recommend and for the Appeals Board to grand permission to continue operation. Justification for the continuance of such operations is that they provide employment for elderly, feeble, physically handicapped, less skilled men, and that they can continue without consuming any appreciable quantities of critical materials, new or salvaged. The proposed change is also desirable to make the order practical from the standpoint of the operator. One hundred tons of ore per month is hardly a practical operation for two men. Also, an increase in this tonnage to two hundred, might be of some benefit in increasing the supply of silicious flux to smelters. In the case of placer mines, the values are generally so low that a one hundred yard per month operation is out of the question. It is more reasonable to limit such operations on a manpower basis. The omission of the amount of production in 1941 for both lode and placer mines, permits the larger operator to take advantage of this production for clean-up and selective mining by maintenance crew. To avoid objections on the part of the War Manpower Commission, we have included in the proposed amendment, a provision similar to that contained in the grants made to permit continuance of such operations. The changes recommended are as follows:

b) 4. The provision of this order shall not restrict the operation of any lode mine which was in production in 1941, provided the rate of production after the effective date, shall not exceed 200 tons per month; nor of any placer mine which was in operation in 1941, provided the number of employees working on such operation, after the effective date, does not exceed five, including owner and associates who

are actively engaged in the operation. It is further provided that no employee under the age of fifty-five shall be employed unless such employment has been approved by the local office of the War Manpower Commission, and that no critical materials other than those on hand will be required.

Section (d) should be revised to clarify the situation as to priority assistance.

Priority assistance under Order P-56 is not available to a nonessential mine, except when applied for in accordance with Section (c). The District General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in paragraph (b)(3) above.

[fol. 2319] Any mill engaged in milling ores for the holder of a serial number under Order P-56, may be classed as a producer, as defined in that order, eligible to the same consideration with respect to issuance of a serial number and priority assistance. This provision may have some value in stimulating the conversion of idle mills to handling custom ore.

The restrictions on disposition of machinery and equipment can be administered more easily, and I believe will be received better by the industry, if conformed more closely to the provision of Order P-56, relative to transfer of equipment.

c) 1. On or before January 18, 1943, or within 60 days after the effective date, whichever is later, each operator of a nonessential mine shall file with the Mining Division, War Production Board, Washington, D. C., Reference: L-208, an itemized list of machinery and equipment of the types listed in Schedule A, signed by such operator or an authorized official, giving complete specifications and condition for each item and indicate those items available for sale or transfer.

2. No person shall sell, otherwise dispose of or transfer any such machinery or equipment which has been used in a nonessential mine, and no person shall accept delivery thereof except with specific permission of the Administra-

tor of the Order, unless the operation for which the machinery or equipment is to be used is covered by a serial number under Orders P-56, P-58 or P-73. Any transfer to an operation covered by a serial number shall be reported, in accordance with instructions contained in Section (f).

The matter of reporting on transfers may be included under Section (f) as a first paragraph. It seems that by doing this and retaining the original Section (f) as the second paragraph, the requirement for reporting transfers of equipment may be more effective.

f) 1. Any operator who sells, otherwise disposes of, or transfers any item of the class listed in Schedule A, in accordance with exception to the restriction contained in Section (e) (2), permitting transfer to an operation with serial number under Orders P-56, P-58 or P-73, shall immediately report such transaction to the Mining Division of the War Production Board, Washington, D. C., Reference: L-208, giving the following information:

[fol. 2320] (1) Name of company and mine from which transferred.

(2) Identity of items transferred.

(3) Name of party acquiring equipment and serial number of operation for which equipment is acquired.

2. Same as original Section (f).

In Section (i), "Violations", it seems that the last sentence should be revised in a manner that would be applicable to the type of operation involved. The following is suggested:

In addition, any such person may be prohibited from continuing operations or obtaining any further deliveries of material, supplies or equipment under priority control for conduct of his operation and may be deprived of further priority assistance.

The attached Schedule A should be appended as a part of this order.

Edward H. Rott.

EHR:M

[fol. 2321] PLAINTIFF'S EXHIBIT 47

April 17, 1943.

Revised 5/6/43

Memorandum

To: Mr. A. S. Knoizen, Director, Mining Equipment Division, Administrator, Order L-208

From: Mr. Edward H. Rott, Deputy Administrator, Limitation Order L-208

Subject: Proposed Plan for Amending Limitation Order (Revised April 17, 1943)

In the following paragraphs, suggested changes in the provisions of Limitation Order L-208 are presented. It is felt that these changes will make the order more practical from the standpoint of application and administration. These changes will liberalize the order to some extent, but we do not believe the operations permissible under the proposed provisions will effect our war effort.

To make the order practical from the standpoint of application, a "nonessential mine" should be redefined.

(a) Definitions.

(1) "Non-essential Mine" means any mining enterprise from which the principal product is gold, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for that operation, which has been issued under Order P-56.

(2) "Principal Product" for the purpose of this Order, if the gold value exceeds 50% of the total dollar value of the recovered products of the mining enterprise, it will be considered the principal product.

To take care of misunderstandings and a loop hole in the Order which might permit considerable expansion of a given operation, the term "associate" has been introduced which should be defined as follows:

(3) "Associate", means any co-owner, partner, contractor, lessee actively engaged in the operation.

Section (b) (4) should be amended to liberalize the order to cover types of grants on which, with practically no ex-

ception, it has been the policy of this office to recommend [fol. 2322] and for the Appeals Board to grant, permission to continue operation. Justification for the continuance of such operations is that they provide employment for elderly-feeble, physically handicapped, less skilled men, and that they can continue without consuming any appreciable quantities of critical materials, new or salvaged. The proposed change is also desirable to make the order practical from the standpoint of the operator. One hundred tons of ore per month is hardly a practical operation for two men. Also, an increase in this tonnage to two hundred, might be of some benefit in increasing the supply of silicious flux to smelters. In the case of placer mines, the values are generally so low that a one hundred yard per month operation is out of the question. It is more reasonable to limit such operations on a manpower basis. The omission of the amount of production in 1941 for both lode and placer mines, permits the larger operator to take advantage of this production for clean-up and selective mining by maintenance crew. To avoid objection on the part of the War Manpower Commission, we have included in the proposed amendment, a provision similar to that contained in the grants made to permit continuance of such operations. The changes recommended are as follows:

b) 4. The provision of this order shall not restrict the operation of any lode mine which was in production in 1941, provided the rate of production after the effective date, shall not exceed 200 tons per month, employing not more than three men, including owner and associates, nor to any hydraulic placer mine, or any other type of placer mine which was in operation in 1941, provided the number of employees working on such operation, after the effective date, does not exceed five, including owner and associates. It is further provided that no employee under the age of fifty-five shall be employed unless such employment has been approved by the local office of the War Manpower Commission.

To section (d), a paragraph might be added to clarify the situation as to priority assistance.

Any mill engaged in milling ores for the holder of a serial number under Order P-56, may be classed as a pro-

ducer, as defined in that order, eligible to the same consideration with respect to issuance of a serial number and priority assistance. This provision may have some value in stimulating the conversion of idle mills to handling custom ore.

The restrictions on disposition of machinery and equipment can be administered more easily, and I believe will be received better by the industry, if conformed more closely to the provision of Order P-56, relative to transfer of equipment.

[fol. 2323] e) 1. On or before January 18, 1943, or within 60 days after the effective date, whichever is later, each operator of a nonessential mine shall file with the Mining Division, War Production Board, Washington, D. C., Reference L-208, an itemized list of machinery and equipment of the types listed in Schedule A, signed by such operator or an authorized official, giving complete specifications and condition for each item and indicate those items available for sale or transfer.

2. No person shall sell, otherwise dispose of or transfer any such machinery or equipment which has been used in a nonessential mine, and no person shall accept delivery thereof except with specific permission of the Administrator of the Order, unless the operation for which the machinery or equipment is to be used is covered by a serial number under Orders P-56, P-58 or P-73. Any transfer to an operation covered by a serial number shall be reported, in accordance with instructions contained in Section (f).

The matter of reporting on transfers may be included under Section (f) as a first paragraph. It seems that by doing this and retaining the original Section (f) as the second paragraph, the requirement for reporting transfers of equipment may be more effective.

(f) 1. Any operator who sells, otherwise disposes of, or transfers any item of the class listed in Schedule A, in accordance with exception to the restriction contained in Section (e)(2), permitting transfer to an operation with serial number under Orders P-56, P-58 or P-73, shall immediately report such transaction to the Mining Division of the War Production Board, Washington, D. C., Reference L-208, giving the following information:

(1) Name of company and mine from which transferred.
(2) Identity of items transferred.
(3) Name of party acquiring equipment and serial number of operation for which equipment is acquired.

2. Same as original Section (f).

[fol. 2324] In Section (i), Violations, it seems that the last sentence should be revised in a manner that it would be applicable to the type of operation involved. The following is suggested:

"In addition, any such person may be prohibited from continuing operations or obtaining any further deliveries of material, supplies or equipment under priority control for conduct of his operation and may be deprived of further priority assistance."

Edward T. Rott.

War Production Board

Ottawa Branch, Canadian Division

7 September, 1943.

Memorandum

To: Hugh C. Porter, Acting Director, Canadian Division, WPB.
From: Gilbert J. Brown, Chief, Ottawa Branch.
Subject: Final Report on Gold Mining in Canada.

Received Sep. 9, 1943, Canadian Division.

The use of U.S. materials in Canadian gold mining operation continues to this date to be a problem. In making this statement as a matter of summary of the present situation I am not giving consideration to (a) the approximately 20 thousand experienced and skilled Canadian miners who are still engaged in gold mining or (b) the materials of Canadian origin which are being used to support such

operations and which has two reflections in the U.S. even though indirect: the first being that it is probable that such use of Canadian materials is reflected in their deficit requirements from the U.S. and second, the trend is to develop Canadian production of mining machinery at the expense of American manufacturers who are prevented from manufacturing machinery under M and L orders.

Under the present priority arrangements including operation of PB-1005, PB-1007 and PB-1010 we are carrying out the policy of refusing any priority assistance to Canadian applicants for materials to be used in gold mining operations as per your memorandum to me dated 30 June. We feel, however, that this is futile as a means to compensate for what is obviously a failure on the part of the Canadian Government to take appropriate action themselves.

Briefly, it appears that there is no policy in the Canadian Government with respect to gold mines for the obvious reason that the problem is so fraught with political implications that they are simply handling the problem by ignoring it.

It is my personal feeling and, in fact, the conviction of many Canadians as evidenced by the attached editorial from the Ottawa Evening Citizen that this state of affairs is neither in keeping with the spirit of the Hyde Park Agreement nor a fair treatment of a problem which directly relates to U.S. interests.

[fol. 2326] It is therefore my recommendation that (1) the Canadian Division take the initiative in consideration of the whole problem with the Mining Division and other interested parties in the W.P.B. (2) unless better reasons are developed than are now apparent for continuing to ignore the problem as far as the W.P.B. is concerned that final representations be made to Canada either through the Canadian Division or perhaps more appropriately through the State Department, (3) that the substance of such representation be that Canada should formally and effectively give evidence of good faith in this matter by carrying into effect comparable provisions to the restraint placed upon the gold mining industry in the U. S. forthwith and at once.

GJB/CW.

Ottawa Evening Citizen—August —, 1943

"Piker" Recruiting

An advertisement to persuade Canadian girls to enlist is headed, "I had better quit being a piker." A girl is shown in civilian clothes, while others are marching past smartly in the uniform of the R.C.A.F.

This coercive method of recruiting is considered necessary, of course, only because of Canada's lack of an effective policy of compulsory military service. Even without the national selective draft as it should be applied to women as well as men, it should surely be unnecessary to shame girls into joining up.

A year ago, many Canadian girls were rejected or put off when they tried to enlist. They have since taken employment in essential occupations, or decided to carry on in the work which they were willing to leave a year ago.

It could, of course, be due to ignorance; but it is public knowledge that there are thousands of fit men employed in the gold-mining industry. In the United States, gold-mining has been officially declared to be non-essential. In Canada, however, where the gold-mine workers could be more usefully employed in productive industries, the authorities are doing nothing to apply national selective service.

This country is threatened with a coal shortage next winter. Gold-mining is different from coal mining, but gold-mine workers should be just as adaptable for coal-mining as structural steel workers have been for shipbuilding or as office workers for aircraft manufacturing.

There is great need for skilled mechanics in workshops where marine engines are manufactured. It would be possible to set up a complete shipyard, including marine engine builders, from among the Canadian workers whose productive capacity is at present being wasted in gold-mining. Before girls are described as "pikers" when they hesitate to enlist in the armed forces, some of the responsible authorities would do well to take a closer look at themselves.

Mr. Donald Nelson, Chairman
War Production Board
Room 5055, Social Security Building
Washington, D. C.

MY DEAR MR. CHAIRMAN:

On page 12 attached of the Washington Post of this morning there appears an article entitled "Order to Shut Gold Mines may be Issued."

The article recites that an order which would halt the greater part of the Nation's gold production was submitted to you about a week ago; hence, I address you with the hope that such an order may not be made.

I have heretofore presented this subject more at length, and I respectfully refer to my letters of August 26th and 27th, copies of which are enclosed herewith.

I respectfully urge that an order closing the gold mines of America will not at the present time augment labor in the mines of copper, lead and zinc, or in the mines of the strategic or war essential metals.

The alluring wage paid to the workers in shipyards and other war-construction industries would first attract labor thrown out of employment in gold mining communities, that

is, so much of such labor as would be able or willing to migrate from homes and families established in the communities where gold mining industry has prevailed for a half century or more. The greater percentage of men who might be put out of employment by shutting down the gold mines would go to places paying these attractive wages. The percentage of those qualified for mining, who would go to mines of non-precious metals, would be negligible. The amount of hardship and heartache, and the destruction of communities and economic set-ups, and the discouragement growing out of these things that would follow from the closing of the gold mines in America would far outweigh any gain that would be made by such a conclusion.

Aside from what I have emphasized in the letters heretofore sent to you, copies of which are attached, let me draw your attention to the outstanding fact that Great Britain, even today in the darkest hour of her war period, is encouraging the production of gold in her South African mines. Mines of the Rand-British Processing properties have reached an all-time high in the production of gold during this current year.

[fol. 2328] I would draw your attention to an editorial appearing in the South African Mining and Engineering Journal, under date of July 25, 1942, in which that recognized publication says, "The most important contribution that the Witwaterrand gold mining industry can make to the National war effort is the maintenance of its production—so declared Mr. W. H. A. Lawrence at the meeting of the Chamber of Mines a few months ago, and the same point has been emphasized by responsible Government officials, from the Prime Minister down."

On page 529 of the same publication of the same date, under the heading "Rand Gold Industry Output Well Maintained", we find a very comprehensive statement as to the production of gold in South Africa, the language being, "All things considered, the results of operations by the gold mining industry of the Witwatersrand for the first six months of the present year must be regarded as satisfactory."

We cannot believe that your Board would seriously consider the bringing about of irreparable loss by the closing down of the gold mines of America with the comparatively

small number of employees engaged when, as a matter of fact, the United States has been—and is now—transporting to South Africa mine machinery and equipment to maintain the production of gold in the mines of that territory, while here at home we have curtailed priorities for mine essentials in the gold producing industry.

Great Britain recognizes that gold is a backing to her credit, as a sustenance, and support to her monetary system. If we are to continue to ship metal-made equipment to keep the gold mining industries of South Africa going, it is inconceivable that we would close down the same industry here at home when that industry is maintaining communities, paying taxes to the Treasury of the United States, and insuring a sound money for the government of the country when this war is over.

I hope—and those in the Senate who are interested in the mining of metals which we deem essential to national welfare, both now and hereafter—join me in expressing the hope that you will not give sanction to an order that will be productive of so much havoc and conducive to so little improvement.

Sincerely, Pat McCarran.

enes.

[fol. 2329] The Washington Post, Tuesday, September 29, 1942

Order to Shut Gold Mines May Be Issued

The question of whether the Nation's principal gold mines are to be shut down for the duration and between 15,000 and 20,000 miners released to relieve critical manpower, shortages in copper, zinc and lead mines and other industries is expected to be answered in a few days by War Producton Board Chairman Donald M. Nelson.

An order which would halt the greater part of the Nation's gold production was submitted to Nelson about a week ago.

As presently drafted, the order, subject of controversy in WPB for three or four months, would shut down about 75 per cent of the country's 150 larger lode gold mines and all of the principal placer mines, including many in Alaska.

The lode mines, including the famed Homestead Mine in South Dakota, now employ between 4000 and 5000 miners whose training would fit them for work in copper and other nonferrous metal mines in the West. A manpower crisis in them several weeks ago caused the War Manpower Commission to issue a "stay-put" order intended to keep miners from migrating to shipbuilding and aircraft industries.

The placer mines last year employed 15,500 men, many of them experienced in handling heavy equipment and believed qualified for assignment to construction projects, such as highways and airfields in Alaska where workers are needed.

October 30th, 1943

Memorandum

To: Mr. Hiland G. Batcheller, Operations Vice Chairman.
Mr. John J. Hall.
Mr. Howard I. Young.

From: A. S. Knoizen, Director, Mining Division.
Subject: L-208 Gold Mine Closing Order.

Confirming our telephone conversation, I have felt for some time that the Gold Mine closing order should be considerably relaxed, and I would like to submit the following suggestions for your consideration:

1. I believe that the time has come when we should relax the Gold Order as much as possible, especially insofar as old employees are concerned, who are still living at mining camps or around gold mines. I do not believe that we should continue to deprive them of employment as I am quite sure that they will not move to other localities to work in other mines or other industries.

2. That the operators of these properties have the right to expect to have their property in operating condition when the War is over.

3. That it will take from six months to a year to rehabilitate most gold mines to get them back in condition to operate.

4. That all mines be left under the No. 4 War Manpower Classification and that recruitment of labor be permitted at will by the USES.

5. With regard to the tremendous pressure that is now coming from the field on the Gold Order, the relaxation of the order should have a real political advantage and would take the Senatorial and Congressional pressure off of the War Production Board.

[fol. 2331] 6. I do not believe that further economic hardships should be imposed upon the mine operator, labor, state or community which depend upon these operations.

7. I feel that material should only be allocated to these operators to permit them to get their property back in operating condition, and that they be permitted to operate on a minimum tonnage in order to have the property prepared for operation when complete relaxation takes place.

I am passing the above on as suggestions and the details and administration can be worked out if the War Production Board feels that we are in a position to give it further consideration.

Room 1003, Temporary R

April 30, 1943

Memorandum

To: Mr. Howard I. Young.

From: Wilbur A. Nelson.

Subject: Analysis of Memorandum on Effectiveness of Gold Mining Curtailment Order L-208 Prepared by Edward T. Dickinson, Jr., Executive Director, Planning Committee, for William L. Batt, Vice Chairman, War Production Board.

I am giving the result of my investigation of each one of the statements made in the summary of the findings.

Paragraph A-1. It is stated that the gold mining limita-

tion order was responsible for the transfer of approximately 2000 gold miners to war industries and at least 1200 of these went to copper and other essential non-ferrous metal mines. In no place do any statistics refer to gold miners, but only to workers in gold mines. Those familiar with mine employment know that only about 60% of the total workers at a mine are underground miners and muckers. It is my understanding that the figures on employment which are used in Mr. Dickinson's memorandum were obtained from the office of Mr. Louis Levine, Chief of the Labor Market Division, Bureau of Program Planning and Review, War Manpower Commission. The Raw Materials Section of the Labor Production Division of WPB, using information furnished them by War Manpower Commission, shows that 454 gold mine workers were referred to copper mines, but nowhere do they show how many of these workers were actually employed by the copper mines.

A check of the two companies to which over 100 men were referred shows that Anaconda had 238 men referred to them, but on November 13, 1842, only had 119 workers from the gold mines on their payroll. The Gray Eagle Copper Mine had 102 men referred to them, but, according to Mr. Fred Searls, Jr., only have 28 workers from the gold mines on their payroll who were released from the gold mines after the closing order was issued in October. The War Manpower Commission states that 91 men were placed, which it can be seen is incorrect.

In addition to the copper mines to which over 100 men were referred, the Consolidated Coppermines Corporation at Kimberly, Nevada, was contacted, as it was stated that 44 workers from the gold mines were referred to this mine. Mr. Cass Cook, the General Manager, stated over the telephone that they only received 15 workers from the gold mines during the period from October through February, and that several of them have since then been inducted into the Army. The War Manpower Commission states that 36 men were placed, which it can be seen is incorrect.

[fol. 2333] The Climax Molybdenum Company had 125 workers from the gold mines, referred to them, and at present, according to Mr. Coulter of that company, have only 10 of these workers on their payroll. They had 60 workers from the gold mines come to their mine. Six of them failed

to pas- the physical examination, and 44 of them have since then quit working for this company.

On the basis of my checks with the officials of these companies, made this week, it can readily be seen that instead of 1200 workers from gold mines going to copper and other essential nonferrous metal mines, that only between a third and a half of this number are actually working in such mines today; and that of the 1200 referred to these mines, many of them never accepted employment. It should be made clear that these figures refer to workers from gold mines and not just to miners and muckers. No figures were kept of miners and muckers referred to such mines, but such figures would be less than the figures given.

Mr. Louis Levine, Chief of the Labor Market Divison, Bureau of Program Planning and Review, War Manpower Commission, states in a letter of March 22 to Mr. Allen Buchanan that 1577 workers in gold mines were referred to metal mines and that a placement of 1156 in metal mines has been verified. The previous paragraph shows factually that the verification of War Manpower Commission is excessive as well as inaccurate. I have no details of how the 1156 were verified. The only breakdown available, which is in a report prepared by the Raw Materials Section of the Labor Production Division of WPB, on detailed information furnished them by Mr. Levine, can only account for 994 referrals made to specific nonferous mines. No detailed information can be obtained as to where the other 583 workers in gold mines were referred, as Mr. Levine's office states such statistics were not kept by the field offices. On the check basis mentioned previously, we can only assume that between 25% and 50% of the 994 workers in gold mines actually started work at the mines they were referred to. By taking 50%, this would mean that 497 workers in gold mines probably were actually placed in metal mines due to the gold mine closing order, and only a percentage of these workers were miners or muckers. This is the mos optimistic view that can be taken, and it is probable that fewer than this were actually placed by War Manpower Commission in nonferrous metal mines.

Paragraph A-1-b. Figures are given showing how many tons of copper, zinc, lead, and tungsten and pounds of molybdenum have been added to the annual production of these

metals due to the closing of the gold mines. All of these figures must be greatly discounted, as they are based on estimated increases in monthly production due to the 1200 men which it is stated erroneously were transferred to copper and other nonferrous metal mines. It would take some time to make a complete check of each one of the copper mines to which workers from the gold mines were transferred, but on the basis of Anaconda, Gray Eagle, and Consolidated Coppermines, which are credited with 384 men out of 454 men referred to the copper mines, only 42% were employed. It can be seen that only a fourth to a half of the production of 11,000 tons of copper, which it is [fol. 2334] stated has been added to the annual production, might be credited to the work of gold miners, and only at present to the first four months of 1943; but this is not the entire picture, for the mechanics of figuring the tons of copper produced by each of these men per month is open to criticism. Figures prepared by Mr. J. J. Beeson of OPA on tons of copper per month per employee for the leading copper mines show a considerably less tonnage than the estimated increases given by the Labor Production Division. Also, we do not know how many of these men worked in the mines, or whether they were employed in the mill or smelter. Following these lines of reasoning, I doubt if more than two or three thousand to copper could be credited to such workers from the gold mines for the year 1943.

The same reduction should be made in the 4000 tons of zinc and the 2400 tons of lead. The statement that 13,000 tons of tungsten was added to the annual production is recognized as a clerical error, as they mean 13,000 units of tungsten (a unit equals 20 pounds of WO_3; but again, the analysis made of copper would require that this figure be materially reduced. The 6,000,000 pounds of additional molybdenum to be produced by workers from the gold mines was based on the figure of 125 workers from the gold mines working at Climax, whereas only ten such men are working at this mine at the present time. This would reduce this estimate from 6,000,000 pounds to a few thousand pounds of additional molybdenum. The 6,000,000 pounds of additional molybdenum which it is stated will be produced by the workers from the gold mines in 1943 is an absurd figure, as it represents 15% of the annual production of Climax,

and such variation would be impossible. Actually the mine production at Climax for the first three months of 1943 is *10%* below the last quarter of 1942.

I do not know how many more workers from the gold mines that have been transferred to metal mines may leave these jobs before the end of the year, so I cannot credit additional annual production of metals due to the transfer of workers from the gold mines except for the months of 1943 which have already passed. This would mean that only minor amounts of copper, lead, zinc, molybdenum, and tungsten have been produced due to the closing of the gold mines and the transfer of a few hundred gold miners to the nonferrous metal mines. I believe that only between 3000 and 4000 tons of all nonferrous metals can be logically assumed as possible additional production for the year 1943 due to the closing of the gold mines.

Paragraph A-2-a. Of the $1,500,000 in equipment that has been transferred by the Mining Equipment Division from gold mines to other mines, $713,500 went to essential nonferrous mines and the remainder to other operations. About 33⅓% of this equipment came from gold dredging operations, which were limited by the War Production Board before the gold mine closing order was issued; and about 5% came from gold mines which were shut down before the gold mine closing order was issued. Records are available to show that a number of gold mines were planning to shut down in early 1943, even if no closing order was issued.

[fol. 2335] *Paragraph A-2-b.* Mr. Dickinson's memorandum states: "Approximately $15,000,000 worth of strategic material has been released from gold mines that were closed." This is not a correct statement. This figure was taken from a memorandum furnished him by the Mining Equipment Division, and should read as follows: The potential demand of gold mines operating in 1941 in the United States and Alaska for materials for repair, maintenance, and operating supplies, amounting to $15,000,000, was eliminated by the cessation of gold mining. But a considerable percentage of this was eliminated before the closing order was issued, as at that time practically all the large gold mines in the United States except Homestake were operating at about one-third capacity.

The figure of $15,000,000 given by the Mining Equipment

Division is higher than the estimates made by the Homestake Mining Company and other mining engineers in the West who estimate about $11,000,000. However, to keep the larger gold mines on a break-even basis, it is estimated that only a few million dollars worth of operating materials and supplies would be needed, of which explosives would be an important item.

Paragraph *B-1.* The statement in Mr. Dickinson's report in regard to damages incurred is in part correct, but as Order P-56 was administered from the standpoint of keeping the essential mines in operation, it is hard to conceive how any losses could be sustained by a mine operating under this order.

Paragraph B-2. Mr. Dickinson does not consider that Order P-56 was an adequate instrument to curtail gold mining operations, but under this Order before L-208 was issued, gold mines producing no minerals needed in the war effort or which were not producing fluxing ores or diluents needed in smelter operations were required to get all of their supplies by the use of PD-1A forms which had been used for a number of months and had resulted in a definite curtailment of gold mine operations.

The figures given by Mr. Dickinson as to the number of men employed in gold mines in September, 1942, as 12,286 men, does not check with figures I have obtained from state sources. These figures are broken down by states in a letter written by Mr. McNutt on March 25. They credit 3,871 men to gold mining in California, while our figures show 3,496. They credit 2,459 to South Dakota, while our figures show 1,901. These are the two states employing most of the gold miners. Checks have not been made of the other states, but as these figures are in error, it is logical to assume that the others are likewise.

Mr. Dickinson makes this statement: "The inescapable fact is that at the time the gold order was instituted the labor shortage in copper mines made immediate action imperative." This is an incorrect statement, as is shown by his attached chart. The gold mine closing order was issued [fol. 2336] on October 8, 1942, but the mines were given sixty days before they would have to close their operations. The great increase in labor in the Western copper mines, amounting to around 400 miners, was due to the release of

this number of men from the armed services for work in the copper and other nonferrous mines of the Western states in September, October, and November.

Paragraph B-3. Mr. Dickinson states that 3217 laborers were displaced from the gold mines and that they were only from lode mines; while Mr. Paul McNutt in a letter of April 24 states these miners were from both placer and lode mines. This coincides with the statement made by Mr. Wilbur A. Nelson to Mr. W. L. Batt on October 3rd, in which it was estimated that there would be 3,270 men available for release from the lode mines and dredges in the Western states and that of this total number 896 would be experienced miners and muckers.

Paragraph C. Exception must be taken to Mr. Dickinson's conclusions that "there can be no doubt that the contributions made by the gold order are significant. It substantially accomplished the purposes for which it was passed." The actual figures on men who went to work in the nonferrous mines does not permit of this conclusion. Although the amount of manpower released due to the Order coincides with the estimates made prior to its issuance, towit, between 3000 and 4000 men, the number of men that went into nonferrous mining is estimated at less than 500 men, and these men have not been responsible for any important increase in the production of critical nonferrous metals.

Furthermore, attention should be called to the fact that the gold mine closing order, according to Mr. Dickinson's statement at the bottom of page 3, only affected about 6500 workers in gold mines. My analysis indicates a slightly smaller figure.

Wilbur A. Nelson.

Memorandum

To: Mr. William L. Batt, Vice Chairman, War Production Board., Mr. Howard I. Young, Director, Mineral Resources Coordinating Division.

From: Mr. A. S. Knoizen, Director, Mining Equipment Division.

Subject: South African Gold Mines.

Confirming telephone conversation with reference to our thoughts on the South African Gold Mines, after concurrence with my Deputy Administrator of L-208, Mr. Edward H. Rott, we submit the following:

From our contacts with the South African gold mining industry and the information supplied to us by representatives of that industry, there has been no sincere effort on the part of that industry, and apparently none on the part of the Government, to curtail gold mining operations.

The following are some pertinent facts relative to the gold mining industry in South Africa:

During the middle part of 1942, the industry is reported to have reached an all time high in gold production. The records for the full year indicate that there was a 2% decrease in 1942 gold production below that of 1941. However, the average tonnage of ore milled per month during 1942 was slightly more than the average tonnage milled in 1941. That certainly is not curtailed production. The development work for the quarter ending September, 1942, was one foot for every 44.5 tons milled, or a total of 384,190 feet for the three months period. This is less than the same quarter in the previous year, when 665,000 feet of development work was done. However, the variation is believed to be largely due to the fact that during 1941 new mines were being opened up and excessive development work was required. Considering the type of this deposit, it is our opinion that the present rate of development work should be adequate to maintain a sufficient tonnage of ore blocked out in advance of mining operations.

[fol. 2338] We strongly believe that if the war lasts beyond 1943 the continuance of shipments of critical materials, supplies and equipment to Africa for gold mining may be too costly in manpower and ships and will, no doubt, be a handicap to our war effort.

It is strongly recommended that the War Production Board limit the amount of materials to be supplied to South Africa for gold mining to a percentage of their anual 1943 requirements comparable to that allowed in the cases of Nicaragua and Colombia. The magnitude of this industry in South Africa may justify leniency up to allowing 50% of their 1943 requirements to be selected by a vertical cut of those requirements from the United States as set forth in Exhibit A, attached. This procedure will take care of the deficiency resulting from failure to furnish the industry's future requirements for the last half of 1942. With these additional supplies, the industry may adjust its operations to gracefully bring about curtailment, which it is hoped will stimulate a realization that more can be contributed to the war effort than the production of gold in South Africa.

The Civilian economy in this country, mines and otherwise, is being too greatly restricted due to shortages of materials, to permit us to make any sincere recommendation other than the above. With due consideration to the trend of the war and the effect of the proposed curtailment on South African economy, we can give attention to revision of this policy starting in the Third Quarter of this year.

A. S. Knoizen.

Attachment-1.

Title 32—National Defense

Chapter IX—War Production Board

Subchapter B—Director General for Operations

Part 3093—Gold Mining

Limitation Order L-208

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary

and appropriate in the public interest and to promote the national defense.

Section 3093.1—Limitation Order L-208

(2) *Definitions.* For the purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P-56.

(b) *Restrictions upon production.*

(1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.

(2) In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.

(3) In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the issuance date of this order, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after the issuance date of this order, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a [fol. 2341] preference rating of A-1-k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P-56.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in subparagraph (b)(3) above.

(e) *Records.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(f) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to: War Production Board, Mining Branch, Washington, D. C. Ref: L-208.

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false

information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

[fol. 2342] (k) *Applicability of Priorities Regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

Issued this 8th day of October, 1942.

Ernest Kanzler, Director General for Operations.

[fol. 2343] PLAINTIFF'S EXHIBIT 58

Title 32—National Defense

Chapter IX—Office of Production Management

Subchapter B—Priorities Division

Part 958—Repairs

Preference Rating Order No. P-22

958.1 Preference Rating Order. For the purpose of facilitating the acquisition of Material for the Repair of the property or equipment of certain industries and services hereinafter specified, a preference rating is hereby assigned to deliveries of Material for such purpose upon the following terms:

(a) *Definitions.*

(1) "Producer" means any individual, partnership, association, corporation, governmental unit, or other organization engaged in one or more of the following industries and services, and such other industries and services as may be added from time to time by supplement to this Order:

(i) The following Federal, State, County, and municipal services: Fire and police services; Highway maintenance.

(ii) Carriers:

(a) Urban, suburban, interurban, and intercity common, contract, and private carriers of passengers or freight by electric railway, electric coach, motor truck, or bus, including terminals.

(b) Railroads, including terminals.

(c) Shipping—Commercial carriers of freight and passengers by ocean, lake, river, or canal, including terminals.

(iii) Chemicals—Plants engaged in producing chemicals by chemical processing of raw materials.

(iv) Coke converting.

(v) Educational institutions (including vocational training).

(vi) Explosives—plants engaged in manufacturing explosives.

(vii) Farm machinery and equipment—plants engaged in manufacturing farm machinery and equipment.

(viii) Food preserving or storing—plants engaged in any of the following: milling, refining, preserving, refrigerating, wholesaling or storing of food for human consumption or livestock feed.

[fol. 2344] (ix) Highway maintenance and equipment—plants engaged in the production of equipment used in highway maintenance.

(x) Hospitals, clinics and sanatoriums.

(xi) Lumber—plants engaged in the production of lumber (including planing, drying, storing, and treating of lumber), cooperage, plywood, and millwork.

(xii) Metallurgy—plants engaged in the production of metals and alloys.

(xiii) Mines and quarries (including ore dressing or processing plants and smelting facilities).

(xiv) Newspapers—plants engaged in the publication of newspapers.

(xv) Petroleum production, refining and transportation —plants and equipment used in petroleum production, refining and transportation.

(xvi) Radio—Commercial broadcasting and communication (not including home receiving sets).

(xvii) Research laboratories—industrial and academic.

(xviii) Rubber and rubber products—plants engaged in the production of rubber and rubber products including reclaimed and synthetic rubber.

(xix) Shipyards and Ship Repair Yards engaged in building and repairing ships (excluding yards devoted principally to pleasure craft).

(xx) Telephone and telegraph communications.

(2) "Material" means any commodity, equipment, accessories, parts, assemblies, or products of any kind.

(3) "Repairs" means only repairs needed because of an actual or imminent breakdown, from whatever cause, of a Producer's property or equipment.

(4) "Emergency Inventory" means minimum inventory of Material required to provide for Repairs to meet an actual or imminent breakdown, from whatever cause, of a Producer's property or equipment.

(5) "Supplier" means any person with whom a purchase order or contract has been placed by a Producer or any Supplier for

(i) Material to be used for Repairs;

(ii) Material required for a Producer's Emergency Inventory;

(iii) Material to be physically incorporated in other Material which is to be used for Repairs or which is required for a Producer's Emergency Inventory.

[fol. 2345] (b) *Assignment of Preference Rating.* Subject to the terms of this Order, Preference Rating A-10 is hereby assigned

(1) to deliveries to a Producer of Material required by him for Repairs or for his Emergency Inventory;

(2) to deliveries to a Supplier of Material which is, in turn, to be delivered to a Producer for Repairs or for his

Emergency Inventory or to be physically incorporated in Material to be so delivered.

(c) *Persons Entitled to Apply Preference Rating.* The preference rating hereby assigned may be applied by

(1) a Producer;

(2) a Supplier, provided that he requires the Material so purchased in order to make deliveries duly rated pursuant to paragraph (b).

(d) *Application of Preference Rating.*

(1) A Producer in order to apply the preference rating to a delivery of material to him must endorse the following statement on the original and all copies of the purchase order or contract for such Material signed by a responsible official duly designated for such purpose by such Producer.

> "Purchase Order for Repair or Emergency Inventory —Preference Rating A-10 under Preference Rating Order P-22."

Such endorsement shall constitute a certification to the Office of Production Management that such Material is required for the purposes stated therein. Any such purchase order or contract shall be restricted to material the delivery of which is rated in accordance herewith.

(2) A Supplier in order to apply the preference rating to a delivery of Material to him must endorse the following statement on the original and all copies of the purchase order or contract for such Material signed by a responsible official duly designated for such purpose by such Supplier:

> "Purchase Order for Material required to fill a duly rated order for Repair or Emergency Inventory. This purchase order bears Preference Rating A-10 under Preference Rating Order P-22."

Such endorsement shall constitute a certification to the Office of Production Management that such Material is required to fill an order placed by a Producer or Supplier duly rated in accordance herewith. Any such Supplier's purchase order or contract shall be restricted to Material the delivery of which is rated in accordance herewith.

[fol. 2346] (3) A Producer or Supplier placing any such rated purchase orders or contracts and the Supplier selling the Material covered thereby, must each retain endorsed copies of such purchase orders or contracts segregated from all other purchase orders, or contracts for a period of two years from the date thereof for inspection by authorized representatives of the Office of Production Management.

(e) *Restrictions on Application of Rating.* The Preference Rating hereby assigned shall not be applied

(1) by a Producer to obtain Material in excess of his requirements for Repairs or for his Emergency Inventory;

(2) unless the Material to be delivered cannot be obtained when required without such rating;

(3) by a Supplier to obtain Material in excess of the amount necessary to make rated deliveries.

(f) *False Statements and Penalties.* Any person who applies the preference rating hereby assigned in wilful violation of the terms and provisions of this Order, or wilfully falsifies records required to be kept or information to be furnished pursuant to this Order, or who obtains a delivery of Material by means of a material and wilful misstatement, will be prohibited from further applying said rating. Such person may also be prohibited from obtaining further deliveries of Material under allocation and be deprived of any other priorities assistance. The Director of Priorities may also take any other action deemed appropriate, including the making of a recommendation for prosecution under Section 35A of the Criminal Cole (18 U.S.C. 80).

(g) *Revocation or Modification.* This order may be revoked or amended by the Director of Priorities at any time in whole or in part or in its application to any Producer or any Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, unless the rating has been specifically revoked. No additional applications of this rating to any other deliveries shall thereafter be made by any Producer or Supplier affected by said revocation or expiration.

(h) *Effective Date.* This Order shall take effect on the

9th day of September, 1941, and unless sooner revoked shall expire on the 28th day of February, 1942.

Chapter IX—Office of Production Management

Subchapter B—Priorities Division

Part 958—Repairs, Maintenance, and Operating Supplies

Preference Rating Orders No. P-100

Section 958.2 Preference Rating Order. For the purpose of facilitating the acquisition of Material for (1) the maintenance and repair of the property and equipment of producers as hereinafter defined, and (2) the continued operation of the property and equipment of such producers, a preference rating is hereby assigned to deliveries of such Material upon the terms hereinafter set forth. Such terms shall control until such time as the Office of Production Management certifies specific quantities of such Material to which the preference rating herein assigned may be applied, or until the Office of Production Management may specifically limit production by any type of producer or withdraw any type of Material from use by such pro-

ducer, or until the Office of Production Management may issue an order specifically relating to the maintenance, repair and operation of the property and equipment of any type of producer.

(a) *Statement of Policy.* It is the purpose of this Order to effectuate the policy of the Supply Priorities and Allocations Board in maintaining governmental, charitable, and industrial property located in the United States, its territories and possessions, including the Philippine Islands, upon an adequate operating basis, without expansion or improvement of facilities except where duly authorized or approved. The terms and conditions of this Order are to be interpreted in conformity with this expressed policy.

(b) *Definitions.*

(1) "Producer" means:

(i) any governmental unit;

(ii) any individual, partnership, association, corporation, or other form of enterprise engaged in one or more of the following capacities to the extent that it is so engaged or so acts;

(a) manufacturing, processing, or fabricating;

(b) warehousing—maintaining warehouses for storage or distribution of any Material;

(c) wholesaling—acting as a distributor of products sold to manufacturers, wholesalers, retailers, or other persons not consumers;

(d) charitable institutions—any charitable or eleemosynary institution which is recognized as such for purposes of the Internal Revenue Laws of the United States;

(e) carriers—urban, suburban, and interurban common or contract carriers of passengers or freight by electric railway, electric coach, motor truck, or bus, including terminals of any of the foregoing; railroads, including terminals; shipping—commercial carriers of freight and passengers by ocean, lake, river, or canal, including terminals; [fol. 2348] (f) educational institutions (including vocational training),

(g) printers and publishers.

(h) radio—commercial broadcasting and communication,

(i) telephone and telegraph communication, including wire services,

(j) hospitals, clinics, and sanatoriums,

(k) irrigation systems, whether publicly or privately owned; toll bridges and toll canals.

(iii) any person located in the United States, its territories and possessions, using tools or equipment to repair or maintain agricultural machinery or the property of any Producer as defined in (b)(1)(i) and (ii).

(iv) any person located in the Dominion of Canada, to whom and in whose name a copy of this Order is specifically issued.

(2) "Material" means any commodity, equipment, accessories, parts, assemblies, or products of any kind.

(3) Subject to subparagraph (p), "Maintenance" means the upkeep of a Producer's property and equipment in sound working condition.

(4) Subject to subparagraph (6), "Repair" means the restoration of a Producer's property and equipment to a sound working condition when such property or equipment as been rendered unsafe or unfit for service by wear and tear, damage, destruction of parts, or similar causes.

(5) Subject to subparagraph (6), "Operating Supplies" means any Material which is essential to the operation of the Producer's business and which is consumed in the course of such business including, but not limited to, lubricants, catalysts, small perishable tools, and ferrous material necessary for the fabrication of containers; *Provided*, it shall not include

(i) any Material which is physically incorporated, in whole or in part, into any material which the producer manufactures, distributes, sells, stores, or transports, excepting Material used by a Producer to repair or maintain agricultural Machinery or the property of another Producer; or

(ii) any Material that is to be used as fuel, or

(iii) any non-ferrous Material to be used as packaging supplies.

[fol. 2349] (6) The terms "Maintenance," "Repairs," and "Operating Supplies" *do not* include the following:

(i) The replacement of an item carried on the Producer's books as a fixed asset,

(ii) Material which would not be carried on the Producer's books as Maintenance, Repairs, Operating Supplies, or the equivalent, in the Producer's established method of bookkeeping,

(iii) Material for the improvement of a Producer's property or equipment through the replacement of Material in the existing installation unless such equipment is beyond economic repair.

(iv) Material for additions to, or expansions of, such property or equipment.

(7) "Supplier" means any person with whom a purchase order or contract has been placed for delivery of Material to a Producer or another Supplier.

(c) *Assignment of Preference Rating.* Subject to the terms of this Order, Preference Rating A-10 is hereby assigned:

(1) to deliveries, to a producer, of Material required by him as Operating Supplies or for the maintenance or repair of his property or equipment;

(2) to deliveries to any Supplier, who has received purchase orders rated under this Order from a Producer or from another Supplier, of Material which will be delivered by him or by another Supplier to the Producer to fill such rated orders, or which will be physically incorporated into Material which will be so delivered; or which will be used within the limitations of paragraph (f)(2) hereof, to replace in such Supplier's inventory Material delivered to fill orders rated pursuant to this Order or pursuant to Preference Rating Order No. P-22, as heretofore amended.

Provided, That when any General Preference ("E" or "M") Order assigns a specific preference rating to deliveries of any particular Material to be used by a particular industry or for a specific purpose, such preference rating shall control and the A-10 rating hereby assigned may not be applied; and *provided further,* that the preference rating hereby assigned may not be applied to deliveries of any Material to be used for purposes prohibited by any Order or Regulation issued by the Director.

[fol. 2350] (d) *Persons Entitled to Apply Preference Rating.* The Preference Rating hereby assigned may be applied by:

(1) a Producer;

(2) any Supplier provided deliveries to a Producer or another Supplier are to be made by him, which are of the kind specified in paragraph (c) and have been rated pursuant to his Order.

(e) *Application of Preference Rating.*

(1) A Producer or Supplier, in order to apply the preference rating to deliveries of Material to him, must endorse the following statement on the original and all copies of the purchase order or contract for such Material manually signed by a responsible official duly designated for such purpose by such Producer or Supplier:

> "Material for Maintenance, Repair, or Operating Supplies—Rating A-10 under Preference Rating Order P-100 with the terms of which I am familiar."
>
> "—— ——" (Name of Producer or Supplier and Serial No. of Producer if located in Canada.)
> "—— ——" (Signature of Designated Official)

Such endorsement shall constitute a representation to the Director that such Material is required for the purpose stated and that the application of the rating is authorized by this Order. Any such purchase order or contract for such Material shall be restricted to Material the delivery of which is rated in accordance herewith.

(2) The Producers and each Supplier placing or receiving any purchase order or contract rated hereunder shall each retain, for a period of two years, for inspection by representatives of the Director, endorsed copies of all purchase orders or contracts, whether accepted or rejected, segregated from all other purchase orders or contracts or filed in such manner that they can be readily segregated for such inspection.

(f) *Restrictions on Use of Rating.*

(1) *Restrictions on Producer and Supplier.* No Producer or Supplier may apply the rating hereby assigned to obtain scarce Material, the use of which could be eliminated without

serious loss of efficiency by substitution of less scarce Material or by change of design.

[fol. 2351] (2) *Restrictions on Supplier:*

(i) No Supplier may deliver Material pursuant to a rating applied to him by a Producer located in the Dominion of Canada, unless the endorsement on the purchase order placed with such Supplier includes a Serial number.

(ii) No Supplier may apply the rating to obtain Material in greater quantities or on earlier dates than required to enable him to make on schedule a delivery rated hereunder or, within the limitations of (iii) and (iv) below, to replace in his inventory Material so delivered. He shall not be deemed to require such Material if he can make his rated delivery and still retain a practicable working minimum inventory thereof; and if, in making such delivery, he reduces his inventory below such minimum, he may apply the rating only to the extent necessary to restore his inventory to such minimum.

(iii) A Supplier who supplies Material which he has in whole or in part manufactured, processed, assembled, or otherwise physically changed may not apply the rating to restore his inventory to a practicable working minimum unless he applies the rating before completing the rated delivery which reduces his inventory below such minimum.

(iv) A Supplier who supplies Material which he has not in whole or in part manufacured, processed, assembled, or otherwise physically changed may defer application of the rating hereunder to purchase orders or contracts for such Material to be placed by him until he can place a purchase order or contract for the minimum quantity procurable on his customary terms; *Provided*, that he shall not defer the application of any rating for more than three months after he becomes entitled to apply it.

(g) *Restrictions on Withdrawls and Inventory.*

(1) Except as provided in paragraphs (g)(3) and (4), no Producer who has applied the ratings assigned hereby shall, at any time, accept deliveries (whether or not rated pursuant to this Order) of any Material to be used as Operating Supplies or for Maintenance or Repair until the

Producer's inventory and stores of Material to be used for these purposes have been reduced to a practicable working minimum. Such practicable minimum shall in no event exceed one hundred ten percent (110%) of the maximum dollar volume of Material to be used as Operating Supplies [fol. 2352] and for Repairs and Maintenance in inventory and stores during the corresponding calendar quarter of 1940.

(2) Except as provided in paragraphs (g) (3) and (4), no Producer who has applied the ratings assigned hereby shall, during any Calendar Quarterly Period, make withdrawals from stores or inventory of any Material to be used as Operating Supplies or for Maintenance or Repair the Aggregate dollar volume of which shall exceed one hundred ten percent (110%) of the aggregate dollar volume of the withdrawals of such Material during the corresponding quarter of 1940, or, at the Producer's option, twenty-seven and one-half percent (27½%) of the aggregate dollar volume of the withdrawals of such Material during the calendar year 1940.

(3) From time to time, the Director may determine that certain Producers or classes of Producers are exempt, in whole or in part, from the restrictions contained in paragraphs (g) (1) and (2).

(4) Restrictions contained in paragraphs (g) (1) and (2) shall not apply to any Producer during any Calendar Quarterly Period in which

(i) the total volume of his purchases of Material for Maintenance, Repairs, and Operating Supplies does not exceed five thousand dollars ($5,000); and

(ii) the total volume of his withdrawals of Material for such purposes does not exceed five thousand dollars ($5,000).

(h) *Audits and Reports.*

(1) Each Producer or Supplier who applies the preference rating hereby assigned, and each person who accepts a purchase order or contract for Material to which the preference rating is applied, shall submit from time to time to an audit and inspection by duly authorized representatives of the Director.

(2) Each such Producer or Supplier shall execute and file with the Director such reports and questionnaires as said Office shall from time to time request. No such reports shall be filed until such time as the proper forms are prescribed by the Director.

Title 32—National Defense

Chapter IX—War Production Board

Subchapter B—Division of Industry Operations

Part 958—Repairs, Maintenance, and Operating Supplies Preference Rating Order No. P-100 as Amended February 10, 1942

Section 958.2 (Preference Rating Order No. P-100) is hereby amended so as to read as follows:

(a) For the purpose of facilitating the acquisition of Material for (1) the maintenance and repair of the property and equipment of producers as hereinafter defined, and (2) the continued operation of the property and equipment of such producers, a preference rating is hereby assigned to deliveries of such Material upon the terms hereinafter set forth. Such terms shall control until such time as the Director of Industry Operations (hereinafter referred to as the "Director") certifies specific quantities of such Material to which the preference rating herein assigned may be applied, or until he may specifically limit production by any type of producer or withdraw any type of Material from use by such producer, or until he may issue an order specifically relating to the maintenance, repair, and operation of the property and equipment of any type of producer.

(b) *Definitions.*

(1) "Producer" means:

(i) any governmental unit of the United States of America,

(ii) any individual, partnership, association, corporation, or other form of enterprise located in the United States, its territories and possessions, engaged in one or more of the following capacities to the extent that it is so engaged or so acts:

(*a*) manufacturing, processing, or fabricating,

(*b*) warehousing—maintaining warehouses for storage or distribution of any Material,

(*c*) wholesaling—acting as a distributor of products sold to manufacturers, wholesalers, retailers, or other persons not consumers,

(*d*) charitable institutions—any charitable or eleemosynary institution which is recognized as such for purposes of the Internal Revenue Laws of the United States,

(*e*) carriers—urban, suburban, and interurban common or contract carriers of passengers or freight by electric railway, electric coach, motortruck, or bus, including terminals of any of the foregoing; railroads, including terminals; shipping—commercial carriers of freight and passengers by ocean, lake, river, or canal, including terminals, [fol. 2355] (f) educational institutions (including vocational training);

(g) printers and publishers;

(h) radio—commercial broadcasting and communication;

(i) telephone and telegraph communications, including wire services;

(j) hospitals, clinics, and sanatoriums;

(k) Petroleum and Natural Gas—discovery, development and depletion of pools of petroleum and associated hydrocarbons, and derivatives thereof, and transportation of petroleum, associated hydrocarbons and derivatives thereof;

(l) irrigation systems, whether publicly or privately owned; toll bridges and toll canals.

(iii) Any person using tools or equipment to repair or maintain the property of any Producer as defined in (b)(1)(i) and (ii)

(2) "Material" means any commodity, equipment, accessories, parts, assemblies, or products of any kind.

(3) Subject to subparagraph (6), "Maintenance" means the upkeep of a Producer's property and equipment in sound working condition.

(4) Subject to subparagraph (6), "Repair" means the restoration of a Producer's property and equipment to a sound working condition when such property or equipment has been rendered unsafe or unfit for service by wear and tear, damage, destruction of parts, or similar causes.

(5) Subject to subparagraph (6), "Operating Supplies" means any Material which is essential to the operation of

the Producer's business and which is consumed in the course of such business including, but not limited to, lubricants, catalysts, small perishable tools, and ferrous material necessary for the fabrication of containers: *Provided*, it shall not include

(i) any Material which is physically incorporated, in whole or in part, into any material which the producer manufactures, distributes, sells, stores or transports; or

(ii) any material that is to be used as fuel; or

(iii) any non-ferrous material to be used as packaging supplies.

(6) The terms "Maintenance", "Repairs", and "Operating Supplies" *do not* include the following:

(i) The replacement of an item carried on the Producer's books as a fixed asset;

[fol. 2356] (ii) material which would not be carried on the Producer's books as Maintenance, Repairs, Operating Supplies, or the equivalent, in the Producer's established method of bookkeeping;

(iii) material for the improvement of a Producer's property or equipment through the replacement of Material in the existing installation, unless such equipment is beyond economic repair;

(iv) material for additions to, or expansions of, such property or equipment.

(7) "Supplier" means any person with whom a purchase order or contract has been placed for delivery of material to a Producer or another Supplier.

(c) *Assignment of Preference Rating.* Subject to the terms of this Order, Preference Rating A-10 is hereby assigned:

(1) to deliveries, to a producer, of Material required by him as Operating Supplies or for the Maintenance or Repair of his property or equipment;

(2) to deliveries to any Supplier, who has received purchase orders rated under this Order from a Producer or from another Supplier, of Material which will be delivered by him or by another Supplier to the Producer to fill such rated orders, or which will be physically incorporated into Material which will be so delivered; or which will be used

within the limitations of paragraph (f)(2) hereof, to replace in such Supplier's inventory Material delivered to fill orders rated pursuant to this Order or pursuant to Preference Rating Order No. P-22, as heretofore amended.

Provided, that when any General Preference ("E" or "M") Order assigns a specific preference rating to deliveries of any particular Material to be used by a particular industry or for a specific purpose, such preference rating shall control and the A-10 rating hereby assigned may not be applied; and *provided further*, that the preference rating hereby assigned may not be applied to deliveries of any Material to be used for purposes prohibited by any Order or Regulation issued by the Director of Priorities.

(d) *Persons Entitled to Apply Preference Rating.* The Preference Rating hereby assigned may be applied by:

(1) a Producer;

(2) any Supplier provided deliveries to a Producer or another Supplier are to be made by him, which are of the kind specified in paragraph (c) and have been rated pursuant to this Order.

(e) *Application of Preference Rating.*

(1) A Producer or Supplier, in order to apply the preference rating to deliveries of Material to him, must endorse the following statement on the original and all copies of the purchase order or contract for such Material manually signed by a responsible official duly designated for such purpose by such Producer or Supplier:

> [fol. 2357] "Material for Maintenance, Repair, or Operating Supplies—Rating A-10 under Preference Rating Order P-100 with the terms of which I am familiar."
>
> —— ——, Name of Producer or Supplier, —— ——, Signature of Designated Official.

Such endorsement shall constitute a certification to the Office of Production Management that such Material is required for the purpose stated and that the application of the rating is authorized by this Order. Any such purchase order or contract for such Material shall be restricted to

Material the delivery of which is rated in accordance herewith.

(2) The Producers and each Supplier placing or receiving any purchase order or contract rated hereunder, shall each retain, for a period of two years, for inspection by representatives of the Office of Production Management, endorsed copies of all purchase orders or contracts, whether accepted or rejected, segregated from all other purchase orders or contracts or filed in such manner that they can be readily segregated for such inspection.

(f) *Restrictions on Use of Rating.*

(1) *Restrictions on Producer and Supplier*—No Producer or Supplier may apply the rating hereby assigned to obtain scarce Material, the use of which could be eliminated without serious loss of efficiency by substitution of less scarce Material or by change of design.

(2) *Restrictions on Supplier.*

(i) No Supplier may apply the rating to obtain Material in greater quantities or on earlier dates than required to enable him to make on schedule a delivery rated hereunder or, within the limitations of (ii) and (iii) below, to replace in his inventory Material so delivered. He shall not be deemed to require such Material if he can make his rated delivery and still retain a practicable working minimum inventory thereof; and if, in making such delivery, he reduces his inventory below such minimum, he may apply the rating only to the extent necessary to restore his inventory to such minimum.

(ii) A Supplier who supplies Material which he has in whole or in part manufactured, processed, assembled or otherwise physically changed may not apply the rating to restore his inventory to a practicable working minimum unless he applies the rating before completing the rated delivery which reduces his inventory below such minimum.

(iii) A Supplier who supplies Material which he has not in whole or in part manufactured, processed, assembled or otherwise physically changed may defer application of [fol. 2358] the rating hereunder to purchase orders or contracts for such Material to be placed by him until he can place a purchase order or contract for the minimum quantity procurable on his customary terms; *provided*, that he

shall not defer the application of any rating for more than three months after he becomes entitled to apply it.

(g) *Restrictions on Withdrawals and Inventory.*

(1) Except as provided in paragraph (g)(3) and (4), no Producer who has applied the ratings assigned hereby shall, at any time, accept deliveries (whether or not rated pursuant to this Order) of any Material to be used as Operating Supplies or for Maintenance or Repair until the Producer's inventory and stores of Material to be used for these purposes have been reduced to a practicable working minimum. Such practicable minimum shall in no event exceed one hundred ten percent (110%) of the maximum dollar volume of Material to be used as Operating Supplies and for Repairs and Maintenance in inventory and stores during the corresponding calendar quarter of 1940.

(2) Except as provided in pargaraph (g)(3) and (4), no producer who has applied the ratings assigned hereby shall, during any Calendar Quarterly Period, make withdrawals from stores or inventory of any Material to be used as Operating Supplies or for Maintenance or Repair the aggregate dollar volume of which shall exceed one hundred ten percent (110%) of the aggregate dollar volume of the withdrawals of such Material during the corresponding quarter of 1940, or, at the Producer's option, twenty-seven and one-half percent (27½%) of the aggregate dollar volume of the withdrawals of such Material during the calendar year 1940.

(3) From time to time the Director of Priorities may determine that certain Producers or classes of Producers are exempt, in whole or in part, from the restrictions contained in paragraph (g)(1), and (2).

(4) Restrictions contained in paragraph (g)(1) and (2) shall not apply to any Producer during any Calendar Quarterly Period in which

(i) the total volume of his purchases of Material for Maintenance, Repairs and Operating Supplies does not exceed five thousand dollars ($5,000); and

(ii) the total volume of his withdrawals of Material for such purposes does not exceed five thousand dollars ($5,000).

(h) *Audits and Reports.*

(1) Each Producer or Supplier who applies the preference rating hereby assigned, and each person who accepts a purchase order or contract for Material to which the preference rating is applied, shall submit from time to time to an audit and inspection by duly authorized representatives of the Office of Production Management.

[fol. 2359] (2) Each such Producer or Supplier shall execute and file with the Office of Production Management such reports and questionnaires as said Office shall from time to time request. No such reports shall be filed until such time as the proper forms are prescribed by the Office of Production Management.

(i) *Utilities and Mines Excepted.* This Order is not applicable to any Utility defined as a Producer in Preference Rating Order No. P-46 (section 978.1 as amended from time to time, nor to any Operator as defined in Preference Rating Order No. P-56 (section 982.1). The Director of Priorities may from time to time specifically except further classes of Producers from this Order by specific direction.

(j) *False Statements and Penalties.* Any person who applies the preference rating hereby assigned in wilful violation of the terms and provisions of this Order, or wilfully falsifies any records which he is required to keep by this Order, or who obtains a delivery of Material by means of a material and wilful misstatement will be forbidden to further apply said rating. Such person may also be prohibited from obtaining further deliveries of Material under allocation and be deprived of any other priorities assistance. The Director of Priorities may also take any other action deemed appropriate, including the making of a recommendation for prosecution under section 35 A of the Criminal Code (18 U.S.C. 80).

(k) *Revocation or Modification.* This Order may be revoked or amended by the Director of Priorities at any time as to any Producer as Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, but no applications of this rating to any other deliveries shall thereafter be made by the Producer or Supplier affected by said revocation or expiration.

(l) *Effective Date.* This Order shall take effect immediately. (P.D. Reg. 1, Aug. 27, 1941, 6 F.R. 4489; OPM Reg. 3 Amended, Sept. 2, 1941, 6 F. R. 4865; E. O. 8629, Jan. 7, 1941, 6 F. R. 191; E. O. 8875, Aug. 28, 1941, 6 F. R. 4483; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session; sec. 9, Public No. 783, 76th Congress, Third Session.)

Issued this 18th day of December, 1941.

Certified to be a true copy of Original.

——. ——, Assistant Deputy Director of Priorities.
Donald M. Nelson, Director of Priorities.

[fol. 2360] (i) *Order Not Applicable.* This Order is not applicable to persons whose maintenance, repair, and operating supply requirements are specifically provided for by any other Order.

(j) *False Statements and Penalties.* Any person who applies the preference rating hereby assigned in willful violation of the terms and provisions of this Order, or willfully falsifies any records which he is required to keep by this Order, or who obtains a delivery of Material by means of a material and willful misstatement will be forbidden to further apply said rating. Such person may also be prohibited from obtaining further deliveries of Material under allocation and be deprived of any other priorities assistance. The Director may also take any other action deemed appropriate, including the making of a recommendation for prosecution under section 35 (A) of the Criminal Code (18 U.S.C. 80).

(k) *Revocation or Modification.* This Order may be revoked or amended by the Director at any time as to any Producer or Supplier. In the event of revocation, or upon expiration of this Order, deliveries already rated pursuant to this Order shall be completed in accordance with said rating, but no applications of this rating to any other deliveries shall thereafter be made by the Producer or Supplier affected by said revocation or expiration.

(l) *Effective Date.* This Amendment shall take effect immediately.

(P.D. Reg. 1, amended December 23, 1941, 6 F. R. 6680; W.P.B. Reg. 1, Jan. 26, 1942, 7 F.R. 561, E. O. 9024, Jan. 16, 1942, 7 F.R. 329; E.O. 9040, Jan. 24, 1942, 7 F.R. 527; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session.)

Maintenance, Repair and Operating Supplies

[¶ 33,228]

CMP Regulation No. 5: Maintenance, repair and operating supplies under the Controlled Materials Plan. C. F. R., Title 32, Ch. 9, Part 3175, Section 3175.5. Issued February 9, 1943. Amendment No. 1 issued April 6, 1943, WPB-3080. Revised regulation issued May 14, 1943, WPB-3542. Amendment No. 1 issued June 18, 1943; No. 2 issued July 10, 1943; No. 3 issued August 23, 1943, WPB-4106. Revised schedules issued September 13, 1943. Amendment No. 1 issued October 30, 1943, WPB-4538; No. 2 issued November 19, 1943, WPB-4598; No. 3 issued January 8, 1944, WPB-4805. Revised regulation issued February 26, 1944, WPB-5064. Schedules as amended May 18, 1944, WPB-5721. Amendment No. 1 issued July 12, 1944, WPB-6144. Order as amended September 28, 1944. Amendment No. 1 issued October 18, 1944. Amendment No. 2 issued March 1, 1945. Amendment No. 3 issued March 12, 1945. Amendment No. 4 issued May 16, 1945. Amendment No. 5 issued July 5, 1945.

3175.5 *CMP Regulation 5*—(a) *Purpose and scope.* (1) The purpose of this regulation is to provide a uniform procedure for obtaining maintenance, repair and operating supplies, both in the case of controlled materials obtained by use of allotment symbols under the Controlled Materials Plan and in the case of materials or products obtained by preference ratings. Persons requiring maintenance, repair and operating supplies, in any form, in such quantities as are available from warehouses or distributors under CMP Regulation No. 4, or at retail without preference ratings or allotments, may obtain the same without using the procedure provided in this regulation, but subject to all applicable limitations in War Production Board regulations and orders.

(2) The provisions of this regulation shall not apply to any governmental agency (other than Claimant Agencies) or to any institution, as the same are defined in paragraphs (b) (1) and (b) (2) of CMP Regulation No. 5A, regardless of whether it is engaged in the production of any product or in any activity or service listed in any schedule attached to this regulation or not. Procedures for the obtaining of maintenance, repair and operating supplies by such governmental agencies and by such persons and institutions are provided under CMP Regulation No. 5A. This regulation is also inapplicable to certain purchases by Claimant Agencies or for export as more fully provided in paragraph (g).

NOTE: Canadians will obtain MRO in the United States under Canadian Order PO 5 B.

(b) *Definitions.* Maintenance, repair and operating supplies and minor capital additions (which are sometimes collectively referred to as "MRO") have the following meanings in this regulation and in other War Production Board regulations and orders unless otherwise indicated:

(1) "Maintenance" means the minimum upkeep necessary to continue a facility in sound working condition, and "repair" means the restoration of a facility to sound working condition when the same has been rendered unsafe or unfit for service by wear and tear, damage, failure of parts or the like: *Provided,* That neither maintenance nor repair shall include the improvement of any plant, facility or equipment, by replacing material which is still usable, with material of a better kind, quality or design, except as provided in paragraph (b) (3) of this regulation.[1]

(2) "Operating supplies" means any materials or products which are normally carried by a person as operating supplies according to established accounting practice and are not included in his finished product, except that materials included in such product which are normally chargeable to operating expense may be treated as operating supplies.

The term shall also include such items as hand tools pur-

[1] See also Interpretation No. 8; Repairs which are capitalized must be treated as capital additions.

chased by their employer for sale to his employees for use only in his business, in those cases where they would constitute operating supplies under established accounting practice if issued to employees without charge.[2] [(2) *as amended July* 10, 1943.]

(3) Minor capital additions may be obtained under the procedures provided for in this regulation for obtaining maintenance, repair and operating supplies where the cost of the minor capital addition does not exceed $500 (excluding the purchaser's cost of labor[3] for any one complete capital addition. The term "one complete capital addition" includes a group of items customarily purchased together and all items which would normally be purchased as part of a single project or plan. No capital addition shall be subdivided for the purpose of coming within this paragraph, and where the capital addition involves construction, authorization to construct must be obtained to the extent required by Conservation Order L-41 or by any other appli- [fol. 2363] cable order or regulation of the War Production Board.[4]

(4) Production materials required by a manufacturer for physical incorporation in his products, which products he sells for use as maintenance, repair or operating sup-

---

[2] See also Direction No. 2: Steel shoe wire is to be treated as an operating supply; Direction No. 4: Stitching wire is to be treated as an operating supply; Direction No. 7: Welding rod is not an operating supply when used in manufacturing; Direction 16: Broom wire is to be treated as an operating supply; Direction No. 19: Blueprint materials are to be treated as operating supplies; Direction No. 22: Stevedores may get certain items as operating supplies; Direction No. 4 to Priorities Regulation No. 3: Employees may use their employer's rating to buy hand tools and safety equipment.

[3] See Interpretation 11 explaining what cost of labor can be excluded from the cost of a minor capital addition.

[4] See also Interpretation No. 9: Relationship of L-41 and CMP Regulation No. 5. Direction No. 15: MRO Symbol and Rating may be used to buy installation materials where authorization to construct is not required under L-41.

plies, may be obtained as provided in CMP Regulation No. 1 and in CMP Regulation No. 3, and such production materials shall not be deemed maintenance, repair or operating supplies as to such manufacturer.

(c) *Controlled materials.* (1) Subject to the quantity restrictions contained in paragraph (f) of this regulation, any person engaged in the business of producing any product or conducting any business listed in Schedule A, requiring delivery of any controlled material, for maintenance, repair or operating supplies in the conduct of such business,[5] may obtain the same by placing on his delivery order substantially the following certification, (or the alternative form of certification provided in CMP Regulation No. 7); signed manually or as provided in Priorities Regulation No. 7 [*above paragraph as amended September* 28, 1944.]

CMP allotment symbol MRO—The undersigned certifies, subject to the criminal penalties for misrepresentation contained in section 35(A) of the United States Criminal Code, that the controlled materials covered by this order are required for essential maintenance, repair or operating supplies, to be used for a purpose listed in Schedule I or Schedule II of CMP Regulation No. 5 and that delivery thereof will not result in a violation of the quantity restrictions contained in paragraph (f) of said regulation.

An order bearing such certification shall constitute an authorized controlled material order.

(d) *Preference ratings for maintenance, repair and operating supplies.* (1) Subject to the quantity restrictions contained in paragraph (f) of this regulation, orders calling for delivery of maintenance, repair or operating supplies other than controlled materials (regardless of whether such supplies be Class A products, Class B products, or other products or materials) are hereby assigned preference ratings as indicated in Schedule A for maintenance or repair of facilities required for producing any product or conducting any business listed in that schedule or for necessary operating supplies for such production or business.

---

[5] See also Interpretation No. 5; Conduct of business includes general offices, branch offices, salesrooms, et cetera.

(i) [Deleted September 28, 1944.]

(ii) [Deleted September 28, 1944.]

(iii) [Deleted September 28, 1944.]

(2) A preference rating of AA-5 is hereby assigned for necessary maintenance or repair of facilities required for producing any product or conducting any business not listed in Schedule A, or for necessary operating supplies for any such purpose.

(3) A preference rating assigned under this paragraph (d) shall be applied only by use of the following certification (or the alternative form of certification provided in CMP Regulation No. 7), signed manually or as provided in Priorities Regulation No. 7:

Preference rating . . . (specify rating)—MRO. The undersigned certifies, subject to the criminal penalties for misrepresentation contained in section 35 (A) of the United States Criminal Code, that the items covered by this order are required for essential maintenance, repair or operating supplies; that this order is rated and placed in compliance with CMP Regulation No. 5; and that the delivery requested will not result in a violation of the quantity restrictions contained in paragraph (f) of said regulation.

[(d) *as amended September 28, 1944.*]

(e) *Plants engaged in several activities.* If a single plant or operating unit is engaged in several activities which are not all listed on the same schedule (or if some are so listed and others are unlisted), and it is impracticable to apportion requirements for maintenance, repair and operating supplies between such activities, the principal activity alone shall be considered for purposes of determining whether controlled materials may be obtained under paragraph (c) of this regulation and also for determining which preference ratings may be applied under paragraph (d).

(f) *Quantity restrictions.* A person who uses the MRO rating or symbol assigned by this regulation must not buy any more material and products than is permitted under this paragraph.

(1) *General quota.* A person must not order for de-

livery[6] in any calendar quarter MRO (maintenance, repair and operating supplies) costing more than one-fourth of what he spent for MRO in 1942 (or his fiscal year ending nearest to December 31, 1942).

(2) *Seasonal quota.* A person engaged in a seasonal business must not order MRO for delivery[6] in any calendar quarter in an amount more than the amount he spent for MRO in the corresponding quarter of 1942. A person may choose either the seasonal quota explained in this paragraph or the general quota explained in sub-paragraph (1) above, but he may not afterwards change to the other quota without special authorization by the War Production Board.

[fol. 2364] (3) *Quota for new business.* In the case of a plant or other operating unit which was not in operation during the base periods mentioned in subparagraphs (1) or (2) above, the person operating the plant may take as a quota the amount he spent for MRO during the first quarter of 1943 (or during the part of the quarter the plant was in operation) reasonably adjusted for seasonal or other variable factors. However, he must first notify the War Production Board, in writing, of the base which he is taking, why he is selecting that base, and what adjustments he has made. In the case of a plant starting operations after February 28, 1943, MRO may be bought under this regulation in the minimum amounts necessary for operation up to $5,000 per quarter. If more than this amount is needed, application may be made to the War Production Board as provided in paragraph (f)(8).

(4) *When increased quotas can be used as a base.* If a person's quota has been increased by specific authorization of the War Production Board pursuant to application, he may continue to operate on the basis of the increased quota. However, if a substantial part of the increase was to take care of an abnormal situation, as for example, where he required a large amount of special tools and equipment in order to produce a new product, he may not use that increased quota as a base.[7]

---

[6] See also Direction No. 8: Quota may be determined on a receipt basis.

[7] See also Interpretation No. 12: An increased quota for a seasonal business may be used only in the same quarter.

(5) *How to figure the quota.* In figuring his quota, a person must include every expenditure during the base period which he charged to a maintenance, repair or operating supplies account. He must not include any expenditure which was charged to a capital account. In each quarter he must charge against his quota (i) everything he buys for MRO, whether he uses the MRO rating and symbol, or another rating or symbol, or no rating; and (ii) material and products he buys for minor capital additions for which he uses the MRO rating or symbol. (note, that in deciding whether a single capital addition falls within the cost limits of paragraph (b) (3), the cost of all material and products must be included whether a preference rating or symbol is used or not). In figuring his quota, a person may at his option exclude the cost of his own labor, or the cost of any item on List A or B of Priorities Regulation No. 3 as long as he excludes cost of such items both from the computation of the quota and from charges against the quota.

(6) *Records.* Each person who is subject to this paragraph (f) must figure his quota and must keep his computation and supporting work sheets in his files for two years after his last purchase under the regulation. He must indicate on his computation any election which he makes under this paragraph (f), and in the case of paragraph (f) (3) "Quota for new businesses" or (f) (4) "When increased quotas can be used as a base", he must indicate the base which he selects. He must also maintain a record of his expenditure for a period of not less than two years.

(7) *Treatment of separate plants.* A person who has several plants or other operating units which maintain separate records of maintenance, repair and operating supplies shall treat each of them separately for purposes of complying with the provisions of this paragraph (f).

(8) *Applications for increased quota.* In any case where the quota provided in this paragraph (f) is not enough for necessary operations, a person may apply for a larger quota by letter in triplicate sent to the War Production Board, Washington 25, D. C., Reference: CMP Regulation 5, stating the relevant facts. Direction No. 18 explains what facts should be set forth in the letter of application.

*[(8) *as amended September 28, 1944.*]

(9) *Persons who use less than $5,000 a year worth of MRO not limited.* The quantity restrictions in this paragraph (f) shall not apply to persons whose aggregate requirements of maintenance, repair and operating supplies do not exceed $5,000 per year.

(10) *Further reports and limitations in special cases.* The War Production Board may, by further regulations or orders, require specified persons or classes of persons to file applications or reports regarding their requirements of maintenance, repair and operating supplies and may prescribe specific quantitative limits for the same, either larger or smaller than the limits provided above in this paragraph (f).

(g) *Special provisions for Claimant Agencies, exports and ship repairs.* Maintenance, repair, and operating supplies required for export (except to the extent authorized under Direction 20), or by Claimant Agencies, as regular procurement items covered by specific programs (except for the purposes mentioned in Schedule A), or material required for ship repairs programmed by the Maritime Commission, shall not be obtained under this regulation, but, if they are controlled materials or Class A products, shall be obtained only by the use of allotments in the same manner as production materials under CMP Regulation No. 1, and, if they are other materials or products, shall be obtained [fol. 2365] only by such preference ratings as may be specifically assigned for the purpose. *[(g) *as amended September 28, 1944.*]

(g-1) *Use of customer's or tenant's MRO symbol and rating.* (1) Any person (such as a service repair shop) engaged in the business of doing maintenance or repair work, or the installing of minor capital additions, for others may use the same allotment symbol and preference rating (including any allotment symbol or preference rating assigned for MRO by CMP Regulation 5A or any P or U order) to obtain materials needed in the performance of the work which his customer would be entitled to use if the customer did the work himself. The cost of materials used in the performance of maintenance or repair work, or the installing of minor capital additions, shall be treated as expenditures of the customer for the purpose of computing his

quantity restrictions under pargaraph (f). A person engaged in such business may, instead, request an allotment of controlled materials and a preference rating by applying to the War Production Board on Form CMP-4B, but, if he does so, he must use that method exclusively and may not use a customer's rating or symbol. * [(1) *as amended September* 28, 1944.]

(2) A landlord may use his tenant's allotment symbol and rating to obtain maintenance, repair and operating supplies (including controlled materials) for the leased property if the tenant is engaged in the production of a product or in a business listed in Schedule I or II or if the tenant is assigned a rating or symbol for MRO CMP Regulation 5A or by any P or U order; but if the same property is occupied by several tenants and the supplies are not for the exclusive benefit of a single tenant the landlord may only use a tenant's rating if 75 per cent or more of the leased property is leased to tenants on Schedule I or II and, in such case, if any are on Schedule II, he can only use the AA-2 rating.

(3) A person who leases equipment to others which he agrees to keep in good order may use either his own or his customer's rating and symbol (regardless of whether the rating is assigned by this regulation or CMP Regulation 5A or any order in the P or U series) to get materials needed to repair and maintain the equipment.

(h) *Restrictions on use of MRO symbol, rating, and materials*—(1) *Use of symbol and rating.* No person shall use the MRO symbol or the preference rating assigned to him by this regulation to get anything except materials which he needs for essential maintenance, repair or operating supplies, or minor capital additions as permitted by paragraph (b) (3). If he is assigned different ratings by this regulation for different businesses and it is practicable to segregate his purchases, he must not use a higher rating to get material for a purpose for which he is assigned a lower rating. If it is not practicable for him to segregate his purchases, paragraph (e) explains what rating he may use.

(2) *Use of material.* If a person has bought material under this regulation for MRO and then finds that he has

another use for it, he may use the material for the other purpose if a preference rating or allotment symbol is assigned to him by any certificate or order for that purpose. However, if he uses the material for another use he may not replace it in inventory by use of the rating or symbol assigned by this regulation. If he replaces it, he must use the rating or symbol assigned for the purpose for which the materials were used. Also, if he uses material bought under this regulation for another use, his records must be adequate to show that his purchases of material are substantially proportionate to his authorized uses. For example, a manufacturer has a rating of AA-2 under this regulation for MRO and also has a rating of AA-3 for a construction project. He may take lumber from his MRO inventory which he bought on the AA-2 rating and use it on the construction job, but if he replaces it in his inventory he must use the AA-3 rating for this purpose, so that he will not, in effect, have filled both his MRO and his construction requirements at the AA-2 rating. Exchanges of this kind may be made only where the material is acquired in good faith for use as MRO. The manufacturer may not use the AA-2 ratings to get lumber if he is getting it specifically for use in the construction project.

(i) *Inventory restrictions.* Nothing in this regulation shall be deemed to authorize any person to receive any delivery of maintenance, repair or operating supplies if acceptance thereof would increase his inventory above a practicable working minimum as provided in Section 944.14 of Priorities Regulation No. 1 or would exceed the inventory limitations prescribed for such person by CMP Regulation No. 2, or by any other applicable regulation or order of the War Production Board.

(j) *Additional assistance in individual cases.* Any person requiring maintenance, repair or operating supplies who is unable to obtain them with the rating assigned to him by this regulation, and any person requiring any controlled material for maintenance, repair or operating supplies who is not listed in Schedule A and who is unable to obtain it from a warehouse or distributor under CMP Regulation No. 4 may apply to the nearest local office of War [fol. 2366] Production Board on Form WPB-541 (formerly PD-1A) for a higher rating, or the right to use the MRO

symbol to obtain controlled materials. Application for an increase in the quantity of expenditures for maintenance, repair and operating supplies permitted by paragraph (f) of this regulation shall, however, be filed in the manner specified in subparagraph (8) of paragraph (f).

(k) *Effect on other orders and procedures.* (1) The preference ratings and allotment symbols assigned by this regulation may be used by any person, unless he is engaged in an activity or business which is covered by an order in the P or U series which specifically provide that the ratings assigned by CMP Regulation No. 5 may not be used.

(2) [Deleted February 26, 1944.]

(3) [Deleted February 26, 1944.]

(4) When an order in the "E," "L" or "M" series assigns a specific preference rating to deliveries of any particular material to be used by a particular industry or for a specific purpose, such preference rating shall control and the preference ratings hereby assigned may not be applied.

(5) Nothing in this regulation shall be construed to relieve any person from complying with any applicable priorities regulation or order of the War Production Board (including orders in the "E", "L" and "M" series) or with any order of any other competent authority.

(l) *Industry reclassification.* Any person who is of the opinion that the business activity in which he is engaged should be assigned a higher preference rating for its MRO than it is assigned by this regulation may apply to have such higher rating assigned by filing a letter, in triplicate, with the appropriate Industry Division setting forth the relevant facts and the reasons why he considers such requests should be granted.

The War Production Board may assign the higher rating to such activity by appropriate amendment to Schedule A or, in special cases, may permit the applicant to operate under this regulation to the same extent as though his business activity were so listed in Schedule A. ☆[(l) *as amended September* 28, 1944.]

(m) *Records.* Each person acquiring maintenance, repair or operating supplies pursuant to this regulation shall keep and preserve, for a period of not less than two years, accurate and complete records of all such supplies so ac-

quired, and used, which shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(n) *Communications.* All communications concerning this regulation should be addressed to: War Production Board, Washington 25, D. C., Ref: CMP Regulation No. 5.

(o) *Restriction on use of ratings.* The preference rating assigned by this regulation cannot be used to get any of the items shown on List A or B of Priorities Regulation No. 3.

(p) *Penalties for misrepresentation.* The placing of any order bearing a certification or symbol as provided by this regulation shall constitute a representation, subject to the criminal penalties of section 35 (A) of the United States Criminal Code (18 U. S. C. 80), that the person placing the order is entitled, under the terms of this regulation to use of the symbol or preference rating indicated thereon.

[*Revised order issued February* 26, 1944.]

Issued this 9th day of Februay, 1943.

List A

Excluded Items

[*Revoked August* 23, 1943. *See List A or B of Priorities Regulation* No. 3.]

Schedule A

Preference rating AA-1 may be used for MRO by those businesses listed with "AA-1" preceding them, AA-2 by those with "AA-2", AA-3, by those with "AA-3"; others who are not listed may use AA-5.

Manufacture of the following products:

Unfabricated and semi-fabricated metal products

Rating

AA-1 Ferro-alloys (except producers to whom serial numbers have been issued under Order P-68).

AA-1 Iron products including pig iron, pipe, wire, wrought iron and foundry products (except producers to whom serial numbers have been issued under Order P-68).

Unfabricated and semi-fabricated metal products—Continued.

Rating

AA-1 Non-ferrous metal and non-ferrous metal alloy unfabricated and semi-fabricated products, including castings, ingots, shot, bar, forgings, sheet strip tubing, extrusions and wire and wire products.

AA-1 Steel rolling mill and foundry products, including semi-finished steel, bars, pipe, plates, sheets, strip, castings, forgings, structural shapes, piling; tin plate, terne plate, black plate, tubing, rails, track accessories, wheels, tires, axles, wire and wire products (except producers to whom serial numbers have been issued under Order P-68).

Intermediate metal products

AA-1 Bearings, ball and roller.
AA-1 Bolts, nuts, rivets, washers, screws and pins.
AA-1 Bushings, journal bearings and sleeve bearings.

[fol. 2367]

AA-1 Crankshafts.
AA-1 Cylinders, hydraulic actuating.
AA-1 Fittings, pipe.
AA-1 Gaskets, packings and grease retainers.
AA-2 Metal stampings.
AA-1 Nails, brads, staples and tacks.
AA-1 Pipe, fabricated.
AA-1 Plate, fabricated (steel).
AA-1 Railroad frogs, switches and crossings.
AA-1 Screw machine products.
AA-1 Screw machine products.
AA-1 Springs.
AA-2 Strapping, metal, round and flat (including seals).
AA-1 Structural steel (fabricated).
AA-1 Tanks, metal storage.
AA-1 Tubing and hose, flexible (metallic).
AA-1 Valves.

Chemical products

AA-1 Chemicals and allied products for industrial and military use (excluding automobile body polish and top dressing; candles; cleaning and polishing preparations for

Chemical products—Continued

Rating

metal, leather, floors and furniture; household dyes; ink and ink eradicators; incense; toiletries and cosmetics, perfumes, powders and creams, manicure preparations, hair dressings, dyes, shampoos and tonics; dentrifices and depilatories).

AA-1 Colors and pigments.

AA-1 Drugs, medicinals, pharmaceuticals and biologicals.

AA-2 Dry cleaning preparations.

AA-1 Paints, varnishes and lacquers.

AA-2 Printing ink.

AA-2 Soap, soap chips, flakes and powders.

General industrial equipment

AA-1 Air conditioning and refrigeration equipment; industrial and commercial.

AA-1 Boilers, 100 lbs. pressure and over.

AA-2 Boilers, below 100 lbs pressure.

AA-2 Bottling machines.

AA-1 Compressors and dry vacuum pumps.

AA-1 Condensers; steam, surface, jet and barometric.

AA-1 Control valves and regulators, industrial type.

AA-1 Conveyors and conveyor systems.

AA-1 Cranes, hoists, winches and derricks.

AA-2 Dust collecting equipment, industrial.

AA-1 Fans, blowers and exhausters, excluding propeller type and commercial ventilating fans.

AA-1 Furnaces and ovens, industrial.

AA-1 Heat exchanges, as defined in official CMP B Product List.

AA-1 Instruments, industrial types.

AA-1 Lubricating equipment, industrial.

AA-1 Metal working machinery, equipment, attachments and accessories; including machine tools, bending, die casting, die molding, extruding and forging machines; foundry machinery, equipment and supplies; heat treating equipment; hydraulic and mechanical presses; rolling mills and allied equipment; shears, punches and nibblers; welding equipment and apparatus; wire drawing and wire-working machinery; diamond dies; metal cutting tools; and welding rods and electrodes.

General industrial equipment—Continued

Rating

AA-1 Meters, gas and water.

AA-2 Packaging machinery; including packaging machines, bag filling and closing machines, case packers and case sealing machines, wrapping machines.

AA-1 Power transmission equipment, mechanical and hydraulic.

AA-1 Pulverizers, coal.

AA-1 Pumps.

AA-2 Presses, baling.

AA-1 Pressure vessels, as defined in official CMP B Product List.

AA-1 Safety equipment, industrial.

AA-2 Sewing machines, industrial.

AA-1 Speed changers.

AA-2 Spraying equipment, industrial.

AA-1 Stokers.

AA-1 Trucks and tractors, industrial; hand and power operated.

AA-1 Tube cleaners and expanders.

AA-1 Turbo-blowers and turbo-exhausters.

AA-2 Vacuum cleaners, industrial.

Special industry machinery

AA-2 Automotive maintenance equipment.

AA-2 Broom, brush and mop making machinery.

AA-1 Ceramics manufacturing machinery.

AA-1 Chemicals producing machinery.

AA-2 Cooperage machinery.

AA-2 Cotton ginning, compressing and delinting machinery.

AA-2 Distillery machinery (except beverage).

AA-1 Drilling equipment, oil field, including rigs and accessories.

AA-1 Drilling machinery, water well.

AA-1 Drug and pharmaceutical machinery.

AA-1 Dry-kilns and redriers for wood treatment.

AA-1 Fertilizer machinery and equipment.

AA-2 Food and food processing machinery and equipment, except food dehydration machinery.

Special industry machinery—Continued

Rating

AA-1 Food dehydration machinery.

AA-1 Gas generating, conditioning and gas producing equipment and apparatus.

AA-1 Glass container making machinery.

AA-1 Glass making machinery.

AA-2 Hemp, flax and similar fibre decorticating machinery.

AA-2 Leather working machinery.

AA-1 Logging and sawmill machinery and equipment.

AA-2 Metal container and closure making machinery.

[fol. 2368] AA-1 Mining machinery and equipment.

AA-1 Oil machinery and equipment: animal, fish, vegetable.

AA-1 Ore milling machinery and equipment.

AA-2 Optical and opthalmic goods making machinery.

AA-1 Paint and varnish making machinery.

AA-2 Paper and fiber container making machinery.

AA-2 Papermill, pulp mill and paper products machinery.

AA-1 Petroleum refinery machinery and equipment.

AA-1 Plastics molding machinery.

AA-2 Printing trades machinery and equipment.

AA-1 Rubber working and tire making, retreading, recapping and repairing machinery.

AA-2 Sewer cleaning machinery and equipment.

AA-1 Smelting and refining equipment.

AA-1 Stone products manufacturing machinery.

AA-1 Textile machinery.

AA-1 Water conditioning equipment.

AA-2 Wood boxmaking machinery.

AA-1 Woodworking machinery.

AA-2 Special industry machinery not elsewhere listed, excluding tobacco manufacturing machinery and equipment and cosmetics machinery.

[Schedule A *formerly Schedules I and II redesignated and amended September* 28, 1944.]

DIRECTION 1 UNDER CMP REGULATION NO. 5

[¶33,229]

Direction 1 Under CMP Regulation No. 5: Concerning the procedure for obtaining aluminum pattern equipment under CMP. C. F. R., Title 32, Ch. 9, Part 3175. Issued May 13, 1943, WPB-3549. Direction as amended November 19, 1943, WPB-4631, and April 26, 1944, WPB-5622.

[Text of Direction]

The following direction is hereby issued pursuant to section 3175.5, CMP Regulation No. 5:

(a) The word "patterns" as used in the following instructions means only match plates, patterns, core boxes, core driers, flasks and bottom boards made of aluminum. It does not include such items as jigs, dies, molds, fixtures, or other tooling of a type which has only one special use since these are provided for in Direction 35 to CMP Regulation No. 1. [(a) *as amended November* 19, 1943, *and April* 26, 1944.]

(b) Patterns (including finished aluminum patterns) are castings under CMP and hence controlled materials.

(c) When the purchaser of a pattern furnishes the pattern foundry with all the required weight of aluminum in the form of obsolete or defective patterns:

(1) No preference rating or CMP allotment symbol, number or certification is required on the order to the foundry or to the pattern maker;

(2) Any foundry may remelt aluminum scrap in the form of obsolete or defective patterns furnished by the prospective purchaser of the new pattern (and only such type of aluminum scrap) without prior authorization; and

be referred to the CMP Division, War Production Board, Washington, D. C.

[fol. 2372] (3) Wherever possible, old patterns should be used to make new patterns.

(d) When the purchaser of a pattern does not furnish all the aluminum, he may place an authorized controlled material order for aluminum patterns by affixing the symbol MRO on his order and the certification set forth in CMP Regulation No. 7 executed as provided in that regulation. [(d) *as amended April* 26, 1944.]

(e) [Deleted April 26, 1944.]

(f) Pattern manufacturers are hereby authorized to use the MRO symbol endorsed on their customers' orders to obtain aluminum pattern castings. Pattern manufacturers are not required to apply for an allotment of aluminum notwithstanding anything to the contrary in any CMP regulation.

(g) Foundries fill only authorized controlled material orders for aluminum patterns (except as provided in paragraph (c) above), which they may recognize by the symbol MRO and the certification described in CMP Regulation No. 7. [(g) *as amended April* 26, 1944.]

(h) The foregoing direction also applies to a company which makes its own aluminum patterns. Except as provided in paragraph (c) above, every such company places authorized controlled material orders on its own pattern foundry so that the foundry may make delivery of the patterns.

(i) Nothing in this direction shall be construed to relieve any person from complying with the provisions of Supplementary Order M-1-i which requires that only low-grade aluminum ingot (as defined in the order) be used for aluminum pattern equipment, and prohibits contamination of aluminum. Pattern foundries, and not the purchaser or user of patterns, must file Forms WPB-2530 (formerly CMP-19) and WPB-2685 (formerly CMP-24) monthly. Foundries regularly producing aluminum castings have been assigned an AM license number which must be shown on all orders for ingot. Foundries which do not have an AM license may secure ingot for patterns only by indicating on their order "MRO patterns".

This direction supersedes all previous instructions relat-

ing to the acquisition of aluminum for the manufacture of patterns.

[(i) *as amended April* 26, 1944.]

Issued this 13th day of May 1943.

Direction 2 for Steel Shoe Wire

[¶ 33,229.10]

CMP Regulation No. 5 Direction 2: Concerning the treatment of steel wire for footwear as an operating supply. Issued May 24, 1943, WPB-3650. Direction as amended June 26, 1943, and April 22, 1944, WPB-5527. Superseded by Direction 24.

Direction 3 Concerning Rerating of Orders

[¶ 33,229.11]

CMP Regulation No. 5, Direction 3: Down-rating of orders for maintenance, repair, and operating supplies not required where orders were placed prior to May 16, 1943. Issued June 2, 1943, WPB-3825. Obsolete.

Direction 4 Concerning Stitching Wire

[¶ 33,229.12]

CMP Regulation No. 5, Direction 4: Stitching wire for the printing and publishing industry is an operating supply under CMP Regulation No. 5. Issued June 5, 1943, WPB-3796. Superseded by Direction 24.

[fol. 2373] Direction 5 Concerning Use of Ratings by Farmers

[¶ 33,229.13]

CMP Regulation No. 5, Direction 5: Farmers may not use AA-5 rating assigned to unclassified activities by CMP Regulation No. 5. Issued June 11, 1943.

[Text of Direction]

The following direction is hereby issued pursuant to CMP Regulation No. 5 (Section 3175.5):

Farmers may not use the AA-5 rating assigned to unclassified activities by paragraph (d) (1) (iii) of CMP Regulation No. 5. They may obtain their maintenance, repair and operating supplies under Priorities Regulation No. 19.

Direction 6 for Ships of Friendly Foreign Nations

[¶ 32,229.14]

CMP Regulation No. 5, Direction 6: Maintenance, repair and operating supplies for ships of friendly nations. Issued June 21, 1943. Direction as amended October 21, 1943, WPB-4464.

[Text of Direction]

The following direction is issued pursuant to CMP Regulation No. 5 (Section 3175.5):

(a) Persons operating ships (except pleasure vessels) of foreign nations flying flags of the United Nations may obtain maintenance, repair and operating supplies essential for the operation of such ships under CMP Regulation No. 5 as though such activity were listed in Schedule I of the regulation. [(a) *as amended October* 21, 1943.]

(b) Persons operating ships (except pleasure vessels) under the flags of neutral nations, not United Nations, may obtain maintenance, repair and operating supplies essential for the operation of such ships under CMP Regulation No. 5 as though such activity were listed in Schedule I of the regulation, if, but only if, the purchase order to which a [fol. 2374] preference rating or MRO symbol is applied under this paragraph is countersigned by a representative of the War Shipping Administration. [(b) *as amended October* 21, 1943.]

(c) The quantity limitations of paragraph (f) of CMP Regulaiton No. 5 shall not apply to purchases made under this direction.

(d) Material for repair of ships in ship repair yards may not be obtained under this direction. Such repair is under the direction of the Coordinator of Ship Repair and Conversion.

(e) This direction does not apply to purchases of food and fuel, or to any item set forth in Lists A, B, or C at-

tached to Priorities Regulation No. 3 as amended from time to time.

Issued this 21st day of June 1943.

Direction 7 for Welding Rod

[¶ 33,229.15]

CMP Regulation No. 5, Direction 7: Concerning the treatment of welding rod as operating supplies. Issued June 26, 1943.

[Text of Direction]

The following direction is issued pursuant to CMP Regulation No. 5 (Section 3175.5):

Welding rod (arc welding electrodes and gas welding rod) used for manufacturing purposes may not be treated as an operating supply under CMP Regulation No. 5 even though it is carried as an operating supply under established accounting practice.

A manufacturer may use the rating assigned to him by CMP Regulation No. 5 to get his requirements of welding rod for repairing his own equipment. He may not use the rating to get his requirements of welding rod for welding operations in the course of producing his product.

Issued this 26th day of June 1943.

Direction 8 Concerning Quantity Restrictions Under CMP Regulation No. 5

[¶ 33,229.16]

CMP Regulation No. 5, Direction 8: Concerning the determination of quantity restrictions on a receipt basis. Issued June 29, 1943.

[Text of Direction]

The following direction is issued pursuant to CMP Regulation No. 5 (Section 3175.5):

(a) The quantity restrictions provided in paragraph (f) of CMP Regulation No. 5 are on an "order" rather than a "receipt" basis—that is, expenditures for maintenance, repair and operating supplies are computed on the basis

of orders for supplies calling for delivery during a quarter rather than on the value of supplies received during the quarter.

(b) If a person prefers to keep his records on maintenance, repair and operating supplies on a "receipt" rather than an "order" basis, he may do so. However, he cannot use one method for a part of the supplies and another method for the remainder.

Issued this 29th day of June 1943.

Direction 9 for Hand Tools

[¶ 33,229.17]

CMP Regulation No. 5, Direction 9: Concerning the purchase of hand tools by employees on their employer's ratings. Issued July 9, 1943. Direction revoked December 20, 1943, WPB-4700. Employees may obtain hand tools under Direction 4 to Priorities Regulation No. 3.

Direction 10 Concerning Welding Rod for Repair Shops

[¶ 33,229.18]

CMP Regulation No. 5, Direction 10: Concerning the rating assigned to welding rod for repair shops. Issued July 28, 1943. Direction revoked January 28, 1944. Repair shops may obtain welding rod by the use of the rating assigned by CMP Regulation No. 9A.

[fol. 2375] Direction 11 for Safety Equipment

[¶ 33,229.19]

CMP Regulation No. 5, Direction 11: Concerning safety equipment purchased by employees. Issued August 13, 1943, WPB-4045. Direction as amended September 18, 1943, WPB-4272. Direction revoked December 20, 1943. Employees may obtain safety equipment under Direction 4 to Priorities Regulation No. 3.

Direction 12 for Rerating of Orders

[¶ 33,229.20]

CMP Regulation No. 5, Direction 12: Concerning the rerating of orders for maintenance, repair and operating supplies, for delivery in the third and fourth quarter of 1943. Issued September 13, 1943. Obsolete.

Direction 13 for Quota and Expenditure Records

[¶ 33,229.21]

CMP Regulation No. 5, Direction 13: Concerning quota computation and expenditure records for maintenance, repair and operating supplies. Issued September 21, 1943. Direction 13 revoked, February 26, 1944. The provisions of the direction are included in paragraph (f) of CMP Regulation No. 5 as amended, February 26, 1944.

Direction 14 for Roll Roofing, Shingles and Cork Board

[¶ 33,229.22]

CMP Regulation No. 5, Direction 14: Concerning the use of MRO symbol by manufacturers of roll roofing, shingles, cork board and metal weather stripping. Issued December 2, 1943, WPB-4638. Direction as amended August 28, 1944, WPB-6368.

[Text of Direction]

(a) A manufacturer of asphalt shingles, asphalt roll roofing, asphalt siding, asbestos shingles, asbestos siding, cork board or metal weather stripping may use the MRO symbol to buy steel nails which he will deliver along with such products for use in applying them. He may not use the MRO symbol to buy more steel nails than needed to apply the asphalt shingles, asphalt roll roofing, asphalt siding, asbestos shingles, asbestos siding, cork board or metal weather stripping with which he delivers them, and he must not increase the quantity of steel nails delivered with any unit of such product over the quantity he delivered with such unit during the year 1943. [(a) *as amended August* 28, 1944.]

(b) A manufacturer buying steel nails under this direction does not have to charge them against his MRO quota.

(c) A manufacturer who can purchase his steel nail requirements under this direction must not get them under Order M-21-b-2 relating to steel warehouses and dealers, or under any other regulation or order. The provisions of Order M-21-b2 or of CMP Regulation No. 4 shall not apply to such a manufacturer so far as the purchase and sale of steel nails bought under this direction are concerned. [(c) *added August* 28, 1944.]

(e) After December 31, 1943, a manufacturer who can purcha e his steel nail requirements under this direction must not get them under Order M-21-b-2 relating to steel warehouses and dealers, or under any other regulation or order. The provisions of Order M-21-b-2 or of CMP Regulation No. 4 shall not apply to such a manufacturer after December 31, 1943, so far as the purchase and sale of steel nails bought under this direction are concerned.

Issued this 2d day of December 1943.

[fol. 2376] Direction 15 for Installation Materials

[¶33,229.23]

CMP Regulation No. 5, Direction 15: Concerning the use of MRO symbol and rating to buy installation materials where authorization to construct is not required under L-41. Issued December 9, 1943, WPB-4656. Direction amended August 19, 1944, September 23, 1944, November 4, 1944, and May 24, 1945.

[Text of Direction]

(a) (1) Any person who has obtained machinery or equipment which he is permitted to install or relocate under Direction 2 to L-41 and who needs priorities assistance to get building materials to install or relocate the machinery or to make building alterations required in connection with the installation or relocation may use the MRO symbol and rating assigned to the business or the manufacture of the product for which he will use the machinery or equipment. This includes the MRO symbol and rating assigned by CMP Regulation 5, 5A, or a "P" or "U" order.

(2) Any person who has obtained machinery or equipment for use in a business which is not listed on Schedule A of CMP Regulation 5 or Schedules I and II of CMP Regulation 5A may use the MRO symbol and a preference rating of AA-3, to get up to $500 worth of building materials (including controlled materials) needed to install or relocate any piece of machinery or equipment which Direction 2 to L-41 permits him to install or relocate without getting an authorization under that order and to make a building alteration allowed in connection with the installation or relocation.

(3) If construction as defined in L-41 is not involved in an installation, for example in installing an engine in a boat, a person may use the priorities assistance assigned to the business or product for which he will use the machinery or equipment by CMP Regulation 5, 5A, or any "P" or "U" order to get $500 worth of materials required for such an installation of any piece of machinery or equipment.

★ [(a) *as amended September* 23, 1944, *November* 4, 1944, *and May* 24, 1945.]

(b) [Deleted August 19, 1944.]

(c) *MRO quota need not be charged:* A person buying installation materials under this direction need not charge the amount he spends for them against his MRO quota under paragraph (f) of the regulation.

(d) *Relation to minor capital addition provision of CMP No. 5.* The purchase of installation materials under this direction is not affected by the restrictions on purchases of minor capital additions under paragraph (b) (3) of CMP Regulation No. 5. This direction applies only in cases where machinery or equipment which is installed or relocated is acquired without using the MRO rating for a minor capital addition under paragraph (b) (3) of the regulation. Under this direction, it does not matter whether the machinery or equipment costs more than $500. However, if machinery or equipment is acquired with the MRO rating under paragraph (b) (3) of the regulation, installation materials are considered part of the same capital addition, in which case the total must not exceed $500 and the cost of the installation materials as well as cost of the machinery or equipment must be charged to the MRO quota.

(c) *Applications.* Where permission to install or relocate machinery is required by Order L-41, application for such permission should be made on the appropriate form indicated on Schedule C of Order L-41. Also, such form should be used in applying for priorities assistance to buy installation materials where they cannot be bought under this direction, even if permission to install or relocate is not required by Order L-41.

Issued this 9th day of December 1943.

Direction 16 for Broom Wire

[¶33,229.24]

CMP Regulation No. 5, Direction 16: Concerning steel wire used in making brooms. Issued February 15, 1944, WPB-4997. Superseded by Direction 24.

[fol. 2377] Direction 17 for Motion Picture Theatres

[¶33,229.25]

CMP Regulation No. 5, Direction 17: Concerning the use of ratings by motion picture theatres. Issued February 19, 1944, WPB-5015.

[Text of Direction]

Motion picture theatres may use the preference rating AA-2 and the allotment symbol MRO for the minimum necessary maintenance and repair of electronic equipment already installed in the theatre. The AA-2 rating may not be used for repair of projection equipment (except soundheads) or other theatre equipment or to obtain minor capital additions.

Issued this 19th day of February 1944.

Direction 18 for Quota Increase

[¶33,229.26]

CMP Regulation No. 5, Direction 18: Concerning applications for an increase of quota. Issued March 17, 1944. WPB-5237.

[Text of Direction]

(a) A person applying for an increase in his quota under paragraph (f) (8) of CMP Regulation No. 5 should show in his letter of application the following information:

(1) Name of product(s) manufactured or description of services rendered;

(2) Show what quarterly quota you were authorized under paragraph (f) in 1943. (If operating on a seasonal basis, show for each quarter of 1943). If you received a special authorization for any quarter, show that for each such quarter in addition to the "base" quota;

(3) Statement of total dollar value of deliveries of your product in 1942, and first and subsequent quarters of 1943, by quarters. Show deliveries for each quarter by principal Claimant Agencies;

(4) Statement of total amount of MRO requested to be authorized per quarter. This should include the base quota already permitted by paragraph (f) (1), (2), or (3) plus the increase requested;

(5) Statement of total amount expended during 1943 for minor capital additions under paragraph (b) (3) of the regulation;

(6) Statement of deliveries of your product scheduled for quarters for which MRO increase is requested.

(7) Any additional information which may be pertinent to proper evaluation of the application.

(b) If any of these questions do not apply to your operations, substitute equivalent information describing the circumstances.

(c) The application should be filed with the War Production Board, Washington 25, D. C., Reference: CMP Regulation No. 5.

Issued this 17th day of March 1944.

Direction 19 for Blue Print Materials

[¶ 33,229.27]

CMP Regulation No. 5, Direction 19: Concerning ratings for blue print materials. Issued May 11, 1944, WPB-5661. Superseded by Direction 24.

[fol. 2378] Direction 20 for MRO for Persons Abroad

[¶33,229.28]

CMP Regulation No. 5, Direction 20: Concerning MRO for persons abroad producing for the United States Government. Issued July 1, 1944.

[Text of Direction]

A person producing material in foreign areas on contract with or for sale to the United States Government may get maintenance, repair and operating supplies under CMP Regulation 5, but only upon specific authorization and within a quota issued by the War Production Board upon the recommendation of the Foreign Economic Administration. An application for issuance of an authorization and quota should be made by letter in triplicate, addressed to the War Production Board but filed with the Foreign Economic Administration, Requirements and Supply Branch, Washington, D. C., which will forward the application to the War Production Board with appropriate recommendations for action. This direction does not apply, however, to an operator in the petroleum industry or to any person for whom Order P-56 ("Mines and Smelters") prescribes the procedure for obtaining maintenance, repair and operating supplies.

Issued this 1st day of July 1944.

Direction 21 for Tobacco, Chewing Gum and Beverage Industries

[¶33,229.29]

CMP Regulation No. 5, Direction 21: Concerning MRO for tobacco, chewing gum, and beverage industries. Issued July 26, 1944, WPB-6172. Revoked September 28, 1944. Items formerly appearing in this direction are included in CMP Regulation 5 as amended September 28, 1944.

Direction 22 for Stevedores

[¶33,229.30]

CMP Regulation No. 5, Direction 22: Concerning the use of the MRO symbol for stevedores and stevedoring com-

panies. Issued July 26, 1944, WPB-LD-777. Superseded by Direction 24.

Direction 23 for Radio Communication Carriers

[¶33,229.31]

CMP Regulation No. 5, Direction 23: Concerning special MRO rule for international, point-to-point radio communication carriers. Issued September 26, 1944.

[Text of Direction]

(a) Any person engaged in international point-to-point radio communication as a commercial operation may use the preference rating AA-1 and the CMP allotment symbol MRO to rearrange, modify or expand existing facilities and equipment (but not buildings) either to maintain his regularly established services, or to provide whatever new or modified services may be necessary to render services by or for the account of the United States Army, the United States Navy, any agency of the United States Government, or any agency of any foreign government.

(b) The cost of materials for any one project undertaken under this direction must not exceed $2,500.00. In such cases the restrictions and limitations of CMP Regulation 5 (including the prohibition of paragraph (g) against getting maintenance, repair and operating supplies for export) and the rules of Conservation Order L-41 shall not apply; and an authorization to begin construction shall not be necessary.

Issued this 26th day of September 1944.

[fol. 2379] Direction 24 for Purchase of Certain Materials

[¶33,292.32]

CMP Regulation No. 5, Direction 24: Concerning the purchase of certain materials as MRO irrespective of accounting practices. Issued October 16, 1944. Direction as amended November 18, 1944, April 3, 1945, and May 11, 1945.

[Text of Direction]

(a) Persons who manufacture products, or who engage in activities listed below may buy the materials indicated

for use in such activities or in manufacture of such products by use of their MRO rating and symbol irrespective of whether such material is charged to operating expense under a particular manufacturer's accounting practice.

Product or activity	Material that may be purchased under this direction
Footwear	Steel toe lasting wire, steel staple wire, steel grip tacker wire, steel slugging wire, steel taper nail wire, steel wire used for similar purposes and all types of steel staples.
Products of printing and publishing business.	Steel stitching wire.
Brooms	Steel wire.
Commercial blueprint and allied reproductions including white prints, and all intermediate processes and photo - copy reproductions (Photostat, Rectigraph, etc.) but not photograph prints for amateurs or commercial photographs, or mass produced photographic copies for business or professional use.	All materials.
Stevedores and Stevedoring companies.	Steel wire rope, steel rods, steel nails, steel angles, other steel in controlled material form and steel metal strapping needed for lashing cargoes only.
Paperboard products	Steel stitching wire.
All persons conducting businesses listed in Schedule A.	Aluminum foil (plain, printed, embossed, laminated or otherwise processed) for their own use for wrapping purposes.

(b) Such purchases need not be charged to the purchaser's MRO quota under CMP Regulation No. 5, or other WPB order assigning blanket MRO ratings (as defined in Priorities Regulation No. 3).

(c) This direction supersedes Directions 2, 4, 16, 19 and 22 to CMP Regulation 5.

Note that processed foil (printed, laminated, embossed, etc.) is a Class B product and manufacturers of it must obtain their requirements of plain foil (controlled material) by filing Form CMP-4B with the War Production Board. They may not use their customers, or their own, MRO symbol to get plain foil. However, some processed foil sold for wrapping Army or Navy products will be treated as a Class A product, and the Army or Navy allots aluminum identified by the appropriate symbol.

[Direction as amended April 3, 1945, and May 11, 1945.]

Issued this 16th day of October 1944.

Direction 25 for Purchase of Controlled Materials

[¶33,229.33]

CMP Regulation No. 5, Direction 25: Concerning the purchase of controlled materials required for jigs, dies, special tooling, and fixtures to be used for a product not now being produced. Issued November 4, 1944. Revised direction issued May 24, 1945.

[Text of Direction]

(a) *What this direction does.* This direction permits the use of MRO ratings assigned by CMP Regulation 5 to get maintenance, repair and operating supplies and jigs, dies and fixtures for reconversion where a person proposes to start manufacturing a product he is not now making.

(b) *Use of ratings and MRO symbol for maintenance, repair and operating surplus.* Any person who is planning to make any product may use the preference rating and MRO allotment symbol (if any) assigned to the manufacturer of that product under CMP Regulation 5 to get maintenance, repair and operating supplies and minor capital additions which he requires before actually beginning production of such product.

(c) *Jigs, dies, fixtures, special tooling and minor hand tools.* Any person who needs jigs, dies, fixtures, special tooling or minor hand tools for the manufacture of a product which he is not presently manufacturing may get them as follows:

[fol. 2380] (1) He may use the preference ratings assigned by CMP Regulation 5 to the product for which he is going to use the items to get the complete jigs, dies, fixtures, minor hand tools and special tooling.

(2) If he wants to make the items himself, or furnish material to another person to make special tooling for him (under Direction 35 to CMP Regulation 1) he may use the MRO allotment symbol to get the controlled materials (whether or not the product is listed on Schedule A of CMP Regulation 5) and may get the other materials by use of the preference rating assigned by CMP Regulation 5 to the production of the product for which he will use the jigs, dies, fixtures, special tooling, or minor hand tools.

(d) *MRO quotas.* Any purchases made under the provisions of this direction must be charged against the MRO quota provided in CMP Regulation 5. Persons who are setting up completely new businesses or plants after February 28, 1943, and who were not in business in 1942, are automatically entitled to a quota of $5,000 per quarter, under the provisions of paragraph (f) (3) of CMP Regulation 5. Thus special quota does not apply when an established plant starts producing a new product since the quota restrictions (unlike the preference ratings assigned) are on a plant basis, and not a product basis. If an MRO quota is inadequate, an application for an increased quota may be made under paragraph (f) (8) of CMP Regulation 5.

★ [*Revised direction issued May* 24, 1945.]

Issued this 4th day of November 1944.

[fol. 2381] Direction 26 for Steel

[¶ 33,229.34]

CMP Regulation No. 5, Direction 26: Concerning temporary limitation on the purchase of steel for MRO during the second quarter of 1945. Issued March 28, 1945.

[Text of Direction]

(a) No person shall use the MRO symbol to place authorized control material orders for steel in any controlled material form for delivery in the second calendar quarter of 1945 in excess of 80% (by weight or dollar value, whichever he prefers) of the steel he purchased for MRO during the second calendar quarter of 1944. Any person who has already placed authorized controlled material orders by use of the MRO symbol for delivery in the second quarter of 1945 in excess of 80%, must cancel or reduce the authorized controlled material orders by the amount of the excess.

(b) This direction is required because of a severe shortage in steel anticipated during the second calendar quarter. In the absence of circumstances which cannot now be foreseen, this limitation will apply only in the second quarter and will not be extended beyond. The War Production Board urges all persons to defer all MRO that is possible in order to conserve steel, and in doing necessary MRO to use steel out of existing inventories to the greatest extent possible.

(c) Any person who has to do essential MRO during the second quarter, which cannot be feasibly postponed, and who is prevented from doing so by this direction, may apply to his local Field Office of the War Production Board for permission to buy additional quantities of steel. The application may be made by letter, Ref: Direction 26 to CMP Regulation 5, and should state (1) the amount of steel he is permitted to buy, the amount and type of steel he requires, in addition (2) the reasons why the maintenance, repair or operation must be continued, cannot be deferred, and cannot be supplied out of inventory, and (3) why other maintenance, repair or operation cannot be deferred to provide the needed steel.

(d) Any person whose quota has been increased since the second quarter of 1944 by an application under paragraph (f) of CMP Regulation 5 may adjust the amount of steel that he can buy as follows: He may increase his percentage of steel over the amount purchased in the second quarter of 1944 by the proportion that his present quota bears to the quota that he had in the second quarter of 1944. For example: a manufacturer had a quota of $100,-

000 in the second quarter of 1944 and purchased 10 tons of steel for essential MRO. He has since received an increase in quota applicable to the second quarter of 1945 which raises his quota to $130,000 (or 30% increase). In determining how much steel he can buy, he can increase his base period consumption of steel by the same percentage, i.e., his base period consumption of steel will be 10 tons plus 30% of 10 tons or 13 tons. Thus he will be permitted to order for the second quarter of 1945, 80% of 13 tons or 10.4 tons of steel.

(e) This direction does not apply to any person who will order for delivery less than 10 tons of carbon and 2 tons of alloy steel during the second quarter of 1945.

Issued this 28th day of March 1945.

Direction 27 for Aluminum Foil

Revoked May 11, 1945.

[¶ 33,229.35]

CMP Regulation No. 5, Direction 27: Concerning aluminum foil for wrapping. Issued April 3, 1945. Direction 27 to CMP Regulation 5 revoked May 11, 1945. This revocation does not affect any liability incurred under the direction.

[Text of Direction]

(a) No person may use his MRO symbol to get aluminum foil in controlled material form for wrapping any product except cheese (Liederkranz, Camembert, Erie, Bleu, and Roquefort only), yeast and suppositories. Any order for aluminum foil already placed for wrapping any other product must be cancelled.

(b) Note that processed foil (printed, laminated, embossed, etc.), is a Class B product and manufacturers of it must obtain their requirements of plain foil (controlled material) by filing Form CMP-4B with the War Production Board. They may not use their customers' or their own, MRO symbol to get plain foil. However, some processed foil sold for wrapping Army or Navy products will be treated as a Class A product, and the Army or Navy allots aluminum identified by the appropriate symbol.

(c) This direction does not forbid the use of the MRO rating (as distinguished from the MRO symbol used on an authorized controlled material order) to get processed foil.

Issued this 3d day of April 1945.

[fol. 2382] PLAINTIFF'S EXHIBIT 64

Title 32—National Defense

Chapter IX—Office of Production Management

Subchapter B—Priorities Division

Part 982—Mines

Maintenance, Repair, and Supplies

Amendment to Preference Rating Order No. P-56

(a) Section 982.1 (Preference Rating Order No. P-56) is hereby amended as follows:

(1) Paragraph (a)(2) is amended to read as follows:

"(a)(2) "Mine" means any plant actually engaged in the extraction by surface, open-pit or underground methods, or in the beneficiation, con ntration or preparation for shipment of the products of mining activity. It does not include that form of mining known as "gold placer mining."

(2) Paragraph (b) is amended to read as follows:

"(b) Certification of Mines.

(1) Domestic Mines. The agency designated by the Governor or other chief executive officer of each state, territory or possession of the United States shall furnish in duplicate to the Office of Production Management a certificate setting forth the names of the persons operating Mines within such state, territory or possession. The Office of Production Management will thereupon issue a Mine Serial Number, through such state agency, to each such person who may be approved by the Director of Priorities.

Any person aggrieved by failure or refusal of a state agency to certify him as a Mine Operator may apply in writing to the Director of Priorities for issuance of a Mine Serial Number. The Director of Priorities may thereupon take such action as he deems appropriate.

(2) Foreign Mines. The Director of Priorities may, in his discretion, issue a Mine Serial Number to a person operating a Mine outside the limits of the United States, its territories and possessions."

(3) Paragraph (e) is amended to read as follows:

"(e) Assignment of Preference Ratings. Subject to the terms of this Order, the following preference ratings are hereby assigned, but nothing herein contained shall prevent the use of any other or higher rating to which any person may be entitled by reason of any other Preference Rating Certificate or Order.

[fol. 2383] (1) A-1-a to deliveries to a Mine Operator of material essential for emergency repair of a Mine, as approved by the Office of Production Management pursuant to paragraph (e)(1).

(2) A-8 to deliveries to a Mine Operator of material required for emergency inventory or for operating supplies or for maintenance of a Mine.

(3) A-8 to deliveries to a Supplier.

(a) of material required by a Mine Operator for maintenance, emergency repair, emergency inventory or operating supplies of a Mine, and

(b) of material to be physically incorporated in other material so required by a Mine Operator."

(4) Paragraph (e)(2) is amended to read as follows:

"(e)(2) A Mine Operator or a Supplier, in order to apply the A-8 preference rating assigned by paragraph (e)(2) and (3), must endorse the following statement on the original and all copies of each purchase order or contract for material, the delivery of which is entitled to such preference rating:

"Purchase order for Materials for a Mine rated pursuant to Preference Rating Order P-56, Mine Serial No. . . . Rating A-8. This application of the rating is made pur-

suant to the terms and conditions of that Order, with which the undersigned is familiar.

—— ——, (Name of Mine Operator or Supplier),
By: —— ——, (Authorized Signature)"

Such purchase order or contract so endorsed shall be delivered to the seller of such material. Such endorsement shall constitute a certification to the Office of Production Management that the Mine Operator or Supplier is entitled to apply such rating to such delivery pursuant to this Order. Such purchase order or contract must be in writing and shall not include any material the delivery of which is not rated pursuant to this Order."

(5) Paragraph (n) is amended to read as follows:

"(n) Amendment of Prior Order. The provisions of Preference Rating Order P-22 shall not apply to deliveries to which a preference rating is assigned by this Order."

(b) This amendment shall take effect immediately. [fol. 2384] (P.D. Reg. 1, Aug. 27, 1941, 6 F.R. 4489; OPN Reg. 3, March 8, 1941, 6 F.R. 1596; E.O. 8629, Jan. 7, 1941, 6 F.R. 191; E.O. 8875, Aug. 28, 1941, 6 F.R. 4483; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session; sec. 9, Public No. 783, 76th Congress, Third Session.)

Issued this 22 day of September, 1941.

Donald M. Nelson, Director of Priorities.

Address before Training Group of the Priorities Field Service

By

Wilbur A. Nelson, PH.D., Administrator of Mine Priorities, Mining Division

Subject

THE MINING ORDER

November 10, 1941.

[fol. 2386] There has been considerable confusion in regard to the application of P-22 to mines. The order P-22 was amended several weeks ago and the amendment incorrectly stated that all mines were excepted from the order P-22. What should have been said was that they were excepted until they received a P-56 order. The P-22 order was amended and it now makes clear that mines, including placer mines, may utilize P-22 until they receive a serial number under order P-56. This procedure gives them an A-10 rating.

In addition, we tell a placer mine operator that if he is in dire need of any particular item he may send to our office a filled-in PD-1 form which we will expedite as promptly as possible, provided he is not asking for an unreasonable quantity of material. In other words, we wish to keep the mines going on a restricted basis and not to dislocate any more labor than it is necessary.

Placer mines are divided roughly into three types: 1. the regular placer who washes the gravel out of a streambed; 2. the hydraulic type of placer where they wash it out of the side of the mountain or hill under a heavy force of water through a nozzel and 3. the type where they impound water by building a dam across the stream of water, or float it around, or dredge the gravel and treat it, on this dredge itself, to recover the gold. Many of the people operating the latter two types of placers insist that they are not the type of placer mines we referred to in our restriction in order P-56. They are incorrect. We refer to all three types.

SEC-4
Rev. 1/30/42

WAR PRODUCTION BOARD
Division of Industry Operations

RECOMMENDATION FOR ACTION BY DIVISION OF INDUSTRY OPERATIONS
(Applicable to General or Special Order, or other Authorization but excluding Allocations made pursuant to an Order and Individual Preference Rating Certificate)

(If additional space is required, use reverse side)

A. Identification of New or Previous Related Order P-56
(Order Number)

B. Reasons for proposed Action (in sufficient detail to make understandable):

The definition of "Mining enterprise" formerly excluded any mine 50 percent or more of the production of which was in gold or silver. It has been urged that this language has had a bad psychological effect in the mining states. Elimination of the language will have no practical effect as no person can use the ratings assigned unless a serial number is assigned by the Director of Industry Operations, and gold and silver mines which produce no substantial quantities of critical materials have not been and will not be issued serial numbers.

FILED
MAR 10 1943

C. Action Recommended:

Issuance of attached amendment.

1/13 Nelson

The type of operator with which we have had the most trouble is the one who operates the dredge and who insists that he does not come under the provisions of P-56. But he *does* come under those provisions.

United States Senators from several western states and the Governor of one state have come to Washington to try to have the order changed. As far as I know there is no desire on the part of the Office of Production Management to change the order. We feel that we can take care of their needs where it is necessary through order P-22, or through a PD-1 in special cases. So much for the exceptions to the definition of the word "mine."

The broad term "mine" and the type of operations included under this term are as follows: Outside of the regular underground mines there are the open-pit operations. These operations are divided into two types:

[fol. 2387] PLAINTIFF'S EXHIBIT 71

War Production Board

February 18, 1942.

Office Memorandum

To: Mr. C. H. Matthiessen, Jr.

From: John P. Gregg.

Subject: P-56 and P-56-a.

These two orders are revisions of the existing "P" orders covering requirements for mining operations and manufacturers of mining machinery. The orders were discussed at length with Dr. Wilbur Nelson. The following objections were made to the orders as drafted:

1. The A-1-b for deliveries of essential machinery and equipment to mines and to the producers of mining machinery was objected to. This proposed rating will be applied upon specific request by the applicant for deliveries which he is unable to obtain under the blanket A-3, and will be subject to check by the administrator of mining orders, and by Review and Approval with concurrence or consulta-

tion with the ANMB. The ANMB representatives on the Committee refused to concur. The recommendations of the whole Committee were, first, that the order be drafted to provide that instead of A-1-b on such requirements, a rating should be permitted in such cases above A-3 but in no case higher than A-1-b, and second, that reconsideration be given to Schedule "A" with a view to drastic reduction in the number and type of machinery equipment and tools to which the higher rating should be applicable.

2. The provision with respect to prohibiting ratings for the purpose of reducing costs should include A-3 ratings as well as A-1-b ratings.

3. P-56 remains an open-end order as far as the A-8 ratings are concerned (not the quota form) and as far as the A-3 ratings are concerned, does not require the applicant to submit Form 25-a, but under paragraph (a)(3) merely requires the operator to communicate with the War Production Board describing machinery and equipment needed and the reasons why such machinery and equipment is necessary for the proper operation of the mining enterprise. A requirement for a report of this character should be covered in a form if it is found impossible to handle it through Form 25-a. The Committee pointed out that when this order was last considered and pursuant to directions from Mr. Knowlson, P-56 was to be placed under 25-a in so far as the comparatively small number of mining enterprises producing by far the major production of mines in the United States were concerned, and that this revised order does not accomplish this purpose.

[fol. 2388] 4. The Committee is of the view that the restrictions with respect to materials to be used in the mining of gold and silver are not sufficiently restrictive and that a limitation order should be drafted forthwith to stop production of gold and silver in the United States, appropriate consideration being given to the continuance of such production in Canada, Mexico, South Africa, and other areas now permitted to obtain materials and equipment from this country under Lend-Lease or direct purchase.

Mr. Gaddess of Civilian Supply was unwilling to pass upon the order, his division not having been consulted with respect thereto. The Labor Division indicated they had no desire to be consulted in this matter. The Production Division was not consulted, but certain producers of mining ma-

chinery such as Allis Chalmers are very large producers of turbines and other critical equipment needed by Navy, shipbuilding and essential power requirements. The Committee therefore felt that that Division should be consulted.

John P. Gregg.

[fol. 2389] PLAINTIFF'S EXHIBIT 72

War Production Board

Washington, D. C.

Mining Branch

March 16, 1942.

Memorandum

To: Mr. A. I. Anderson, Deputy Director, Materials Division.

From: Mr. Wilbur A. Nelson, Administrator of Mining Branch.

Subject: Meeting, Reno, Nevada, March 12, 1942. Meeting, Denver, Colorado, March 14, 1942.

The Reno, Nevada, meeting on March 12 was made a part of Secretary Ickes' meeting on his development program. It followed their presentation of their program. Discussion of Order P-56 started at 3:30 p. m. with five governors in attendance—Governor Carville of Nevada presiding, Governor Osborn of Arizona, Governor Carr of Colorado, Governor Maw of Utah, and Governor Clark of Idaho, with Mr. John M. Kelly, the State Geologist of New Mexico representing the Governor of New Mexico, and some mine operators from California stating that they represented the Governor of California.

Each Governor made about a thiry-minute general talk on the importance of his state. I spoke for about the same length of time on Order P-56, reviewing the history of mining priorities since the establishment of the Mining Branch on September 22, 1941. I explained in detail the Order as amended March second and made the statement that any mines producing amounts of copper, lead, or zinc needed in

our War Effort, irrespective of the amounts of gold or silver they might produce, would have their cases reconsidered and that priorities would be restored to them which would permit them to work on the same basis as mines not producing any gold or silver.

I also stated that where a siliceous ore was essential as a flux in a smelter operation and where it was proven that this smelter could not continue to produce the same amount of copper and lead without the siliceous ore, that such a mine, irrespective of the gold or silver it produced would continue to receive priorities under P-56 after each case had been reviewed on its merits. I also stated that mines not in the categories above mentioned which produced nothing but gold or silver would have to work under lower [fol. 2390] priorities such as were given in Order P-100, plus the use of PD-1A forms where any special items were needed on higher ratings. Where PD-1A forms were used I stated that if the items needed were not needed in our most important War Efforts that they would be given sympathetic consideration.

I also called attention to the fact that public utilities, newspapers, manufacturers, and railroads operated under an A-10 rating. The meeting adjourned for dinner and reconvened at eight o'clock p. m. and finally adjourned between 10:30 and 11:00 p. m.

Governor Maw of Utah stated that he had listened to my presentation and that as far as Utah was concerned they had nothing to worry about and were satisfied that the mines of Utah could continue to operate in a satisfactory manner.

Governor Clark of Idaho made similar statements.

Governor Osborn of Arizona felt the Order should be amended, but later on after the meeting was over, stated to me that he was certain they could get along all right.

Governor Carville of Nevada was emphatic in his statement that the Order should definitely be amended, as it would work a hardship on the mines in Nevada.

Governor Carr of Colorado was also emphatic in his statement that the Order would ruin the mining industry of the West, as at present drawn. Senator McCarran and Senator Bunker of Nevada, particularly the former, brought in the silver question and considered that this was a cir-

cuitous attack on the silver mines of the West, to help Secretary Morgenthau on his new silver policy.

Newspaper publicity in the Reno papers on the account of the meeting all played up the statements of the people opposing the Order, and barely mentioned the statements made by Governor Maw and Governor Clark. The editorial comments in the same papers, however, were of a satisfactory nature, stating that there seemed to be no doubt but that the matter could be handled without any trouble for the mines of the West.

The Denver meeting on March 14 was held in the House of Representatives at the State Capitol, Governor Carr presiding. Governor Carville of Nevada and Senator Pat McCarran were present. The other Governors who were present at the Reno meeting, who felt that the amended Order as interpreted by me would not hurt their mining industry, did not attend the Denver meeting. Governor Carr had representatives from the mining interests in the other three states speak to show how the mining industries of those [fol. 2391] states would be hurt.

The Denver meeting was more or less a repetition of the Reno meeting with the exception that Governor Carr had a program arranged and the entire meeting was taken up with prepared speeches by men who were informed they would be on the Program in advance.

Senator McCarran did not talk about Order P-56, but made a speech on the silver question.

The Denver meeting started at ten o'clock, adjourned for luncheon, and I attended the meeting until 3:30 in the afternoon, at which time I left for the train. The meeting lasted about ten minutes after I left, at which time it adjourned without taking any formal action. It is my understanding that the Colorado mining people, due to the influence of the Colorado Mining Association, have stated that probably they are going to send a delegation to Washington to request that this Order be amended.

The publicity in the Denver papers was all in accordance with Governor Carr's wishes, while the publicity in the Utah papers was all favorable to our interpretation of how Order P-56 would be operated.

Wilbur A. Nelson.

July 3, 1942.

Memorandum

Received, July 3, 1942. A. I. Henderson.

To: Mr. A. I. Henderson.

From: H. O. King.

Subject: Materials Division Circular #122; Loss of Production Due to Loss of Man Power.

1. The Tacoma Plant of the American Smelting and Refining Company report they will lose production of 2,000 tons of copper per month due to the loss of men. Approximately 200 have left already. There are two reasons for leaving,—one is higher wages in ship building and other defense plants on the Pacific Coast, and, secondly, wage disputes between the company and the union, which we believe have been referred to the War Labor Board.

2. The Butte operations of the Anaconda Copper Mining Company; this company is having difficulty maintaining a full working force and have transferred men from their zinc operations to their copper operations in order to maintain production. During the summer there is a great falling off,—many of the miners go into camps in the mountains for a month or two.

3. At the Kennecott Copper operations in Utah, namely, their mine at Bingham and the smelter at Garfield, difficulties are arising as far as maintaining a full working force is concerned. The same condition exists at the Morinci, Bisbee and Douglas operations of the Phelps-Dodge Company.

All of the copper producers anticipate increased difficulty in the future. We have heard reports of labor scouts working all through the West, employed by the airplane and ship building plants of the West, working through the mountain states offering higher wages and inducing men to leave the mines and go to the West Coast. This is a very serious situation and the indications are that it will be much more serious in the months to come. Anything that

can be done to keep the men where they are, and in fact bring other men into these mining camps, will help production.

H. O. King.

July 8, 1942.

Committee Program for Increasing Production in the Copper Mining Industry *

The growing productive capacity of the country's factories and the tremendous demands for ammunition have already exceeded the capacity to produce war-essential copper. There are now in operation copper smelters and refineries, brass foundries, rolling mills, and fabicating plants whose capacity to process copper and copper base alloys exceeds the capacity of the nation's copper mines plus the capacity of foreign mines available to us.

Planned increases in small arms ammunition plants have been held in abeyance because it seems improbable on the basis of present copper output that enough of this material to keep present facilities in operation can be made available. It is estimated that if small arms ammunition were produced next December at the optimum rate of the supply program these items *alone* would consume more copper than the country is expected to produce.

Since February of this year, the amount of copper allocated to mills to fill the orders of the Army and Navy has steadily fallen below the amount required for these orders; increasing from a net shortage of 9,000 tons in March to a net shortage of 23,000 tons in June.

The success of our armament program, consequently, is basically dependent on our ability to increase the produc-

---

* Although the efforts of this Committee will be directed toward increasing the production of all types of critical non ferrous metals, special emphasis is placed herein on the copper mining industry, since the greatest stringency exists in the output of this metal.

tion of basic raw materials such as copper and other non-ferrous metals.

The basic factors preventing or seriously hampering the desired increase in output in the copper mining industry are out-migration of the present labor force to other war industries because of more attractive wages and working conditions, excessive labor turnover within the industry, low morale of workers, the tendency of miners to work a short week, the effects of Selective Service withdrawals, and the lack of an organized program of recruitment of workers for this industry. In some important districts of Utah, Idaho, and Montana, the replacement of miners has been virtually impossible. In Arizona, Montana, and Utah, production schedules have already been retarded as a result of labor stringency.

In the 50 or so establishments for which data were received by the Bureau of Employment Security in May, total employment actually decreased about 340, although more than 4,000 workers are known to have been hired in the 60 day period preceding the dates of the reports. In this [fol. 2395] period, withdrawals amounted to 13 per cent of total employment. On an industry-wide basis, there were approximately 11 withdrawals for every 10 hires. Reports indicate that there is an urgent need now in copper mines for 1,000 more workers, while the expansion of present mining facilities now in progress will require 3,000 additional. In addition, lead and zinc mines report a current shortage of 2,000 workers.

In short, in this industry which must expand rapidly to keep pace with the mounting demands of war production, the effective labor force is actually decreasing rather than increasing.

Immediate action is necessary to avoid a manpower crisis in the copper mine.

Realizing that a serious labor situation exists in the copper and other non-ferrous mines, the following recommendations for remedial action are proposed:

A. Responsibility of the War Manpower Commission

1. Recruitment of Additional Mine Labor

The existing facilities, funds and personnel of the U. S. Employment Service in the Mining areas are inadequate

because the Service has not been utilized in the past to any large extent by the mine operators, and hence, has not been able to build up an organization capable of meeting the current emergency. It will be necessary to expand the offices and personnel of the U.S.E.S. in the mining areas to carry out the following program:

a. To institute at once a concerted recruitment drive to obtain workers from outside areas, providing the necessary clearance centers and machinery.

b. To prevent the recruitment by other war industries of workers now living in the mining areas.

c. To carry out a program for the orderly transfer of workers in gold mines and other non-essential industries to the non-ferrous mines.

d. To explore the possibility of transferring unemployed iron miners and unemployed coal miners to the copper mining regions.

e. To explore the possibility of utilizing aliens and Mexicans in agricultural regions of the West in order to release additional workers for employment in these mines.

2. Selective Service Deferments for Mining Occupations.

a. A special list of mining occupations should be prepared indicating those categories for which deferments should be recommended.

b. Many miners have left the mines to take jobs in other war industries thinking that deferment in such industries may be more certain. This misapprehension should be clarified by proper publicity to the effect that miners who change occupations are less likely to secure deferment.

[fol. 2396] B. Responsibility of the War Production Board

1. Labor-management Production Drive Committees.

a. Maximum output of copper and other non-ferrous metals can be attained only through better morale and increased efficiency of the working forces coupled with the securing of their cooperation in all phases of the program outlined herein. Workers in the mines must fully understand the strategic importance of copper and other non-ferrous metals in the war effort. They must also feel a sense of participation in speeding the war production pro-

gram. For this reason the formation of labor-management production committees in the mines should be actively pushed by the War Production Drive.

b. The Materials Division in cooperation with the Labor Production Division, should impress upon the mine operators and the labor organizations the importance of cooperating with the labor-management committee program in an effort to raise worker morale and increase production.

2. Production of gold, with the exception of required amounts of essential silicious gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the non-ferrous mines which are essential to the war effort. In special cases where smelter operations may be severely handicapped by lack of sufficient fluxing ores or diluents, it may be necessary to permit limited production of silicious gold-bearing ores.

3. The Materials Division should impress upon the mine operators the necessity of cooperating with the U. S. Employment Service and the War Manpower Commission in recruiting the additional manpower required.

C. Responsibility of the War Labor Board

Important labor relations problems are closely interwoven with the problems heretofore mentioned. Serious disputes over wages, hours and working conditions are presently threatening continued production in numerous places, affecting worker morale, and hampering orderly treatment of labor supply. Approximately 30 cases involving principally wages and union security, and covering approximately 50% of the industry and including substantially all the Idaho and Utah non-ferorus mining facilities, are presently before the War Labor Board, and a large number of additional cases in other areas, having approximated the breaking point, will probably soon be certified. Over 50 collective bargaining agreements in this industry are now up for renegotiation.

The solution of the wage issue is of primary importance. Further out-migration of workers from the mines can only be handled if proper consideration and treatment is given to the wage differential problem. One thing is obvious—the wage problem must be treated on a general as distinguished from a case by case basis. This can be done in

either of two ways: (a) by the War Labor Board assuming immediate jurisdiction of the remaining cases and treating such cases on a similar basis, or (b) by calling a stabiliza- [fol. 2397] tion conference. Decision as to which method should be used must be made immediately and the procedure adopted accelerated, tied in with other aspects of the program outlined herein. Because time will inevitably lapse before a complete solution of the wage problem is effected, and because the intervening period is of the utmost importance, some arrangement should be made now to apply wage adjustments retroactively.

D. Responsibility of the War Department, the Navy, and the Army and Navy Munitions Board

1. The Public Relations Branch of the Services of Supply should continue to cooperate with the various divisions of the War Production Board in a morale building program for the mines, sponsoring where necessary Army parades and demonstration, rallies, displays and other programs to make the mines "war conscious".

2. Liaison Officers of the Civilian Personnel Division, Services of Supply, should assist in securing employer, labor and community backing on the regional level for the program set forth above, and make reports to headquarters on its progress and development.

3. The Army, Navy and Maritime Commission, in cooperation with the War Manpower Commission, should use their influence to have their contractor desist from further recruitment of workers in the non-ferrous mining areas.

4. The Services and the Army and Navy Munitions Board should transmit to the other agencies of government mentioned such information and data as are necessary to the successful attainment of the objective set forth above. In addition, the Services and the Army and Navy Munitions Board should give formal endorsement and backing to the program outlined above.

[fol. 2398] PLAINTIFF'S EXHIBIT 77

Interdepartmental Committee on Non-Ferrous Metals
Meeting August 18, 1942

H. O. King, Chairman

The following were present:

Mr. H. O. King, Chairman, War Production Board.
Mr. Allen Buchanan, War Production Board.
Lieutenant Hetzel, War Production Board.
Mr. James Newman, War Production Board.
General McSherry, War Manpower Commission.
Mr. Wm. H. McPherson, War Manpower Commission.
Mr. Frederick H. Harbison, Services of Supply, U. S. Army.
Captain Long, Service of Supply, U. S. Army.
Robert Abelow, War Labor Board.
Major Coons, Selective Service.

By invitation:

Dean Lloyd K. Garrison; Mr. Almon Roth, and Mr. A. E. Stevenson, of the War Labor Board.

Mr. King opened the meeting and reported that the available supply of copper on a basis of all-out production was far below the amount necessary to meet total requirements for military and essential civilian purposes, and that further loss of production due to a shortage of manpower would greatly aggravate this critical shortage. Mr. King also explained that a critical shortage existed in [fol. 2399] high grade zinc. Reports on the labor situation and requirements for 1942 indicated a shortage of approximately 6,000 men in copper, zinc and lead mining and milling operations. Less than 60,000 men are presently employed in these operations.

Mr. King distributed to the members of the committee a statement of the loss of production of copper in July as compared with June, which showed a reduction of about 6,000 tons. Two tables indicating present employment and additional labor requirements by properties and a summary showing this shortage by states were also submitted to the committee. A set of six tables on the employment and production effected by labor cases now before the War Labor

Board was also distributed to the committee. A general discussion followed and particular inquiries on the significance of this information were made by members of the War Labor Board Panel.

It was brought out that while the present shortage of 6,000 workers (10 percent of the present employment in mines and mills) was small in comparison with the total manpower engaged in war production, nevertheless the effects of this shortage and the resultant decline in output of base metals from mines would be magnified one hundredfold in terms of future reductions in the output of ammunition, planes, tanks and other war material.

The meeting then turned to a discussion of the particular measures that could be taken to alleviate this manpower shortage.

It was agreed that a set of four letters would be prepared, addressed to the mine workers in the non-ferrous fields, and signed by Mr. Donald M. Nelson, Paul V. McNutt, General Hershey and Wm. H. Davis. These letters would emphasize the importance of miners to the whole war program and critical effects of any loss of production in this field and they would also describe what each [fol. 2400] of the governmental agencies involved was doing to keep the men on their jobs and to provide the additional workers required. It was agreed that the War Production Board would distribute copies of these letters to all the operators and to the labor unions involved. General McSherry was to send copies of these letters to the mayors of communities in the mining areas and Selective Service would distribute the letters to the various local and state draft boards in mining regions.

Before proceeding to a consideration of actions which might be taken, Mr. King raised the question of publicity and press releases on the work of the committee. It was agreed that the discussions of the committee were to be considered as secret and confidential and no representative on the committee should make any statement to the press as to actions taken or contemplated by the committee unless it was specifically agreed, as in the case of the letters mentioned above, to give out such information.

Mr. King then introduced the question of the issuance of a gold curtailment order, and distributed to the members of the committee a statement by Dr. Wilbur Nelson of the

Mining Branch, W.P.B. on the subject. The matter was discussed at some length and it was the sense of the meeting that no time should be lost in taking effective action to curtail nonessential gold mining operations and that along with this action steps should be taken by the United States Employment Service, in cooperation with mine operators, to see that miners released from gold mining operations are made available for employment in base metal mining.

General McSherry explained the procedure for companies to follow in using the United States Employment Service to meet their labor shortages. He stated he would draft a letter outlining this procedure so that the committee [fol. 2401] could distribute it to all interested parties. It was suggested that Mr. King write all producers recommending that they use the facilities of the United States Employment Service in procuring workers to meet shortages.

Major Coons outlined the procedure for obtaining deferments and agreed to send to the committee an outline of this procedure for distribution to the companies involved.

General McSherry and Mr. Harbison outlined certain measures which are being considered by the Army, Navy and Maritime Commission to prevent the recruiting of miners for Army and Navy construction projects in the mining areas. General McSherry agreed to report to the Committee the result of conferences he expected to have looking to definite action in this regard.

Mr. Harbison reported on the activities and program of the Labor Morale Division of the War Department and submitted a photostatic copy of the material to be used by them in conjunction with the Production Drive of the War Production Board.

Dean Garrison asked if it would be proper for him to attend future meetings of the committee so as to keep informed of the various actions taken by the committee as it related to the questions before them.

Major Coons reported that Selective Service had certain data on the question of recruitments in all these mining districts and the employees who had volunteered for service and stated he would make such material available.

It was agreed to hold meetings regularly on Tuesdays, at 2:00 P. M. The next meeting will be held on Tuesday, August 25.

[fol. 2402] PLAINTIFF'S EXHIBIT 79

Meeting XXX

September 1, 1942

Present: Board Members, Alternates and Staff

Mr. Donald M. Nelson, Chairman.

Vice President Henry A. Wallace, Chairman, Board of Economic Warfare.

Mr. Robert P. Patterson, Under Secretary of War, acting for Mr. Henry L. Stimson, Secretary of War.

Rear Adm. S. M. Robinson, Chief of the Office of Procurement and Material, Navy Department, acting for Mr. Frank Knox, Secretary of the Navy.

Mr. Jesse H. Jones, Secretary of Commerce.

Lt. Gen. William S. Knudsen, Director of Production, War Department.

Mr. Isador Lubin, acting for Mr. Harry L. Hopkins, Special Assistant to the President supervising the Defense Aid Program.

Mr. Donald Wallace, acting for Mr. Leon Henderson, Administrator, Office of Price Administration. (For discussion of a portion of Item 1.)

Mr. John Lord O'Brian, General Counsel, War Production Board.

Mr. William L. Batt, Vice Chairman, War Production Board.

Mr. G. Lyle Belsley, Executive Secretary, War Production Board.

By Invitation

Mr. Ralph A. Bard, Assistant Secretary of the Navy.

Mr. Ferdinand Eberstadt, Chairman, Army and Navy Munitions Board.

Mr. Will Clayton, Special Assistant to the Secretary of Commerce.

Mr. A. I. Henderson, Deputy Director General for Indus-

try Operations, War Production Board. (For discussion of Item 1.)

Mr. Wendell Lund, Director, Labor Production Division, War Production Board. (For discussion of Item 1.)

Mr. Stacy May, Director of Statistics, War Production Board. (For discussion of a portion of Item 1 through Item 4.)

Mr. H. O. King, Chief, Copper Branch, Industry Operations, War Production Board. (For discussion of Item 1.)

Mr. Allan Buchanan, Chief, Non-Ferrous Metals Section, Industry Branch Consultant Service, War Production Board. (For discussion of Item 1.)

Mr. Samuel Lipkowitz, Labor Consultant, Non-Ferrous Metals Section, Industry Branch Consultant Service, War Production Board. (For discusion of Item 1.)

1. Labor Supply for Copper, Lead, and Zinc Industries

The Chairman stated that since the labor supply in the copper industry had reached a critical stage and already had resulted in a decline in the production of copper, he had asked the Labor Production Division and the Copper Branch to report to the Board on the manpower problem in the non-ferrous metals industries (Doc. 135).

Mr. King reported that 6,000 miners have been lost by the [fol. 2403] copper, lead, and zinc mines to other industries during the past several months and that the shortage of labor will become increasingly acute next year when new facilities will require 2,000 additional miners. Preliminary reports indicate a shortage of 2,100 workers in smelters and refineries. Mr. King pointed out that the loss of 5 or 6 thousand workers at the copper mines might so influence the subsequent fabricating processes that 100 thousand workers in war plants at the end product stage would be affected. Although monthly production of copper increased steadily from early 1941 to a peak of 95,000 tons in May and June 1942, output in July dropped 5,000 tons to 90,000. The copper outlook is even more critical than shown by the drop in production, since at many mines labor is being transferred from developmental and stripping operations, necessary to provide for future production, to current ore extraction. The position of the smelters and refineries is exemplified by a smelter at Tacoma where output of 2,000

tons of copper per month is being lost for lack of only 300 unskilled common laborers. Mr. King emphasized that production at the mines, smelters and refineries will continue to fall unless the exodus of labor is checked and the supply of workers augmented. Output of lead and zinc likewise declined in July, and the labor-production situation in these metals is similar to that in the copper industry.

Mr. Lund pointed out that there is general agreement that the higher wages paid to workers in competing occupations in other industries are the prime factor causing the out-migration of labor from the mines and mills. Average weekly earnings in April of 37.28 dollars for mine workers and 35.18 dollars for smelting and refining workers compared with an average of 53.30 dollars in shipbuilding and 45.94 dollars in aircraft, the principal competing industries. Corollary factors in the out-migration of workers have been rumors of ceilings on wages and proposals to confine workers to their present jobs, the hazards of mining, and inadequate housing and transportation facilities.

Mr. Lund pointed out that the decision of the War Labor Board, expected within a month on 30 or 40 cases involving higher wages for copper miners, will have an extremely important bearing on the out-migration problem.

Mr. King reported that following a resolution of the War Production Board (See WPB Minutes, March 3, 1942, Item 7), labor-management committees were established in the metal mining areas and the importance of having mine workers stay at their jobs was publicized. On June 13, 1942 the Chairman of the War Production Board formally launched the War Production Drive in the non-ferrous metals industries by a radio address to the miners at Butte, Montana.

As further steps in halting out-migration, the Inter-Departmental Committee on Non-Ferrous Metals was established on August 11 and various letters and literature have been prepared for distribution to mine operators and labor unions; an order has been prepared to prohibit the use of materials in non-essential gold mines, which may free about 8,000 workers; plans to prevent employment of miners on Army and Navy construction projects are being considered; and training programs are being introduced into mining properties. To increase the efficiency of present working forces, mine equipment is being accorded high priority

ratings, and labor is being trained and up-graded by improving working and living conditions, and by lowering age and other restrictions on hiring. Mr. Lund observed that in many cases labor standards have shown no change from those existing in normal times when a surplus of labor is available. He suggested that the pooled employment interviews which the War Manpower Commission is now conducting in some parts of the country should be pursued with increasing vigor.

Mr. Lubin inquired if the order to prohibit the use of materials in non-essential gold mines had actually been issued and, if not, what steps are being taken toward its issuance. Mr. King replied that a first problem is to define a non-essential gold mine since gold is frequently found in association with other metals and it is necessary to avoid denying materials to mines that produce important quantities of critical metals jointly with gold. It is hoped that an appropriate definition can be developed very shortly and an order issued promptly thereafter.

At this point, Mr. Stacy May entered the meeting.

The Chairman remarked that since other uses have been cut to a minimum, the major use of copper is in munitions, especially small arms ammunition, and any reduction in the copper supply will be reflected in a reduced output of ammunition. He expressed the belief that the War Production Board must take an active and leading role in assuring an adequate supply of copper and Mr. Lubin added the suggestion that the concern of the War Production Board in this problem is sufficiently great to establish its own employment offices, if this is necessary to obtain additional copper miners.

At this point, Mr. Donald Wallace entered the meeting.

After further discussion it was agreed that:

Inadequate production of copper, lead, and zinc will result inevitably in reduced output of munitions, including small arms ammunition needed by the fighting forces. The output of these metals is now being reduced by a shortage of manpower in mines, smelters and refineries.

The War Production Board is charged with the primary responsibility for providing the maximum possible production of critical metals, but the solution of the problem of assuring a sufficient supply of labor involves the responsibilities of other agencies of the Government as well. The

coordination of the efforts and activities of other agencies of the Government with those of the War Production Board [fol. 2404] is needed, therefore, to ensure an adequate supply of critical metals.

The War Production Board urges all agencies involved to promote and support such actions as may be necessary to provide to non-ferrous mines, smelters, and refineries a supply of labor adequate for the maximum possible output of such metals. It is especially important that the facilities of the United States Employment Service be expanded and strengthened to meet this particular need.

At this point, Messrs. A. I. Henderson, Lund, King, Buchanan, Lipkowitz, and Donald Wallace left the meeting.

2. Rationing of Fuel Oil

The Chairman reported that pursuant to the action of the War Production Board (See WPB Minutes, August 18, 1942, Item 2), he had designated the Petroleum Coordinator for War, the Administrator of the Office of Price Administration, and the Under Secretary of War as members of the Committee to consider the problem of the shortage of fuel oil in District No. I. He was submitting now the findings of this Committee to the Board so that the members might discuss the actions taken and express any agreement or disagreement with them. He stated that it was the unanimous conclusion of the Committee that the consumption of fuel oil in District No. I and, to some extent at least, in District II must be curtailed, probably by not less that 25 percent.

The Petroleum Coordinator for War had favored the issuance of a limitation order as the best method of achieving this objective, believing that the competitive relationships of fuel oil distributors should be maintained unchanged and that it should be made impossible for dealers to assume responsibility for supplying new customers. The Committee, however, reaffirmed the previously stated policy of the War Production Board that the adoption of any curtailment program should not be based on an effort to crystallize the competitive business structure (See WPB Minutes, July 14, 1942, Item 4). The Administrator of the Office of Price Administration had advocated a coupon rationing plan, and the Committee determined that such a plan should be adopted to limit consumption of fuel oil to the available supply.

Extension of the rationing area beyond District No. I was approved by the Committee in view of the inventories in District No. II which were sufficiently large to permit withdrawals for tank-car delivery to the East with greater economy of turn-around time than if an equal quantity of oil were moved there from the West or Southwest. The imposition of fuel oil rationing upon the Mid-West may come as a shock to residents of that area, but is necessitated by the extremely critical fuel oil situation. If a severe winter ensues, it may be necessary to curtail fuel oil consumption by 35 percent.

Mr. Patterson stated that while consumers have accepted the prospect for rationing fuel oil in District No. I, the need for extending rationing into District No. II should be carefullly explained to the population of that area. He expressed the belief, which was concurred in by all members of the Board, that the Office of the Petroleum Coordinator for War should issue appropriate information clearly showing that unless the Mid-West shared in the rationing program, consumption of fuel oil in the Eastern Area would have to be curtailed below a minimum required for maintenance of health and workers' efficiency.

To Mr. Jones' inquiry whether this decision extended the rationing of gasoline to the Mid-West, the Chairman replied that it involved only the rationing of fuel oil in Districts Nos. I and II, and that determination of the need for extension of gasoline rationing beyond the present rationing area would await the report of the Baruch Committee.

The Chairman stated that announcement of the rationing program at the earliest possible moment was advisable to permit the populations of Districts Nos. I and II to make appropriate arrangements promptly. Owners of about 18 percent of present oil burners have retained the grates, doors and other parts from the earlier conversion to oil burning equipment and can reconvert to coal consumption without additional materials. It may be more difficult to serve these home-owners with coal after the cold weather sets in than now.

The Petroleum Coordinator for War believed strongly that conversion of furnaces from oil to coal should be stimulated by announcing promptly that oil would be denied those who could convert but failed to do so. The Committee felt that such action was too drastic and preferred to in-

form those who could convert that although they would receive a basic ration of fuel oil, supplemental rations would be denied them because they had failed to convert.

After further discussion it was agreed that:

The action of the Committee designated by the Chairman of the War Production Board to select a plan for curtailing consumption of fuel oil in the East Coast Area is approved, that a coupon rationing system be instituted in District No. I and in such part of District No. II as is deemed advisable which will limit the distribution of fuel oil in the rationed area to the available supply, and that the Office of the Petroleum Coordinator for War shall issue promptly appropriate announcements and information to explain to the population of the proposed extended rationing area the need for the curtailment of fuel oil distribution.

3. Anti-Trust Actions

The Chairman referred to the increasing difficulty of obtaining the best men available for service with the War Production Board because of certain activities of the Anti-Trust Division of the Department of Justice. He said that recently there had been several instances in which men had declined to come with the Board because they feared they [fol. 2405] would be wrongly subjected to attack by the members of the staff of the Department of Justice. He said that he, himself, had no recommendation to make, but he would like the members of the War Production Board to think over the matter in the hope that some helpful suggestions might result which would obviate these difficulties.

4. Visits of War Production Board Officials to Army Camps

The Chairman called attention to a letter received *from* Under Secretary of War Patterson dated August 19, 1942, in which members of the Board and its key personnel were invited to visit certain Army camps to inspect the equipment being used in the cantonments and for training purposes. He suggested that any members of the Board wishing to take advantage of this offer should let him know as soon as possible so appropriate arrangments can be made.

G. Lyle Belsley, Executive Secretary.

Approved: D. M. Nelson, Chairman.

Samuel Lipkowitz, Labor Production Division, War Production Board.

Joseph Tufts, Housing & Transportation Section, War Manpower Commission.

F. D. Cannon, Copper Branch, War Production Board.

Lousi Lister, Labor Production Division, War Production Board.

Bela Low, Labor Production Division, War Production Board.

William J. Hoff, Legal Division, WPB.

Mr. Harry King was absent due to illness and Dr. Wilbur Nelson acted as chairman.

Dr. M. Stow presented a report on the proposed order to curtail gold mining operations. He distributed a copy of

the proposed order which, he said, had been brought up for consideration before the Clearance Committee.

[fol. 2407] Dr. Stow explained that the persons responsible for drafting the order favored the method of curtailing gold mines by denying them serial numbers under P-56, rather than the type of blanket order which would shut down any gold mine whose gold ore production was above a stipulated proportion of its total production by dollar value. Under the former type of order the gold mines would be closed by being denied serial numbers under P-56, as a result of which they would be unable to obtain either supplies or equipment and would be prohibited from using their present supplies and equipment.

Mr. Harbison expressed some concern over the delay in issuing the gold order. He outlined the steps that various agencies had taken to meet the manpower shortage in nonferrous metal mines, and pointed out that the transfer of gold miners to essential mining was being held up by the lack of a gold curtailment order. He pointed out that the U. S. Employment Service had been unable to obtain many recruits at Rapid City, South Dakota, because the gold mines had not been closed down, although Anaconda Copper Mining Company had agreed to pay transportation costs. He made it clear that the War Department was impatient at the delay.

Mr. Lester of the War Manpower Commission asked that his organization be kept informed of which mines would be affected by the directive, in order that representatives of the Employment Service might be on the spot beforehand.

In this connection, since the primary purpose of the order was to free manpower rather than to curtail materials, Mr. Lipkowitz suggested that an advisory committee be established with representatives from Labor Production Division and War Manpower Commission. The func-

[fol. 2408] tions of the committee were designated as follows: (1) to review the extension of serial numbers to gold mines, in order to close as many of them as possible for the purpose of freeing the maximum number of men, and (2) to recommend the establishment of machinery for transferring gold miners. Dr. Nelson, and the other members of the committee, agreed to this suggestion and the committee created a sub-committee of six members; one from War Manpower Commission to be designated by General

McSherry; one from Labor Production Division to be designated by Wendell Lund; one each from the Copper Branch; one to represent both the Lead and Zinc branches; one from the various Ferro-Alloys Branches, and one from the Mining Branch. The first meeting of this sub-committee was called for Wednesday, September 16, at 10 o'clock.

It was suggested that even if the gold miners were not directly transferred to other essential mines, they still would be serving a more useful function in the aircraft or shipbuilding industries than they would in gold mining.

Mr. Joseph Tufts, of the War Manpower Commission, then outlined the steps that could be taken to meet housing and transportation problems in mining areas. He distributed a statement summarizing the machinery that was being set up to secure adequate housing at mining camps. (See Exhibit A). A copy of this statement is attached hereto.

He then asked the committee members whether they could supply him with any data on specific housing shortages. It was agreed that the committee would advise him of any situation that required action. Mr. Tufts indicated [fol. 2409] that he was attempting to establish a working crew composed of one representative from the National Housing Agency, one from the War Manpower Commission, and one from War Production Board, who would be empowered to give AA-3 ratings. This crew would go into the field with authority to allocate between 10,000 and 15,000 dwelling units. National Housing Agency, however, had not yet replied to his proposal. Mr. Tufts indicated that he would have a report at a future meeting on the progress he had made in establishing a working crew.

Mr. Bela Low, who had recently returned from a trip to mining properties in Utah, Nevada, Arizona, and New Mexico, then reported on his observations concerning the labor supply problem. He and Mr. George Holderer of the Copper Branch had embarked on this field trip in order to investigate the possibility of increasing the production of copper, lead and zinc, and to establish labor management committees. However, upon reaching these states, they found that due to the shortage of labor, the problem rather was to keep production from declining further. The underground mines, he indicated, had been much more severely affected by the shortage of labor than the open pits.

In order to overcome this shortage of labor, some of the mines had embarked on a training program. As a result of having hired untrained men, labor productivity had decreased from fifteen to twenty percent this summer. A sixty to seventy percent turnover of the working force every three months was not at all unusual.

[fol. 2410] Dr. Nelson reported that the several metals branches had given the following estimates concerning the affect of labor shortage upon production. If adequate labor were available, the output of copper could be increased by 6 to 10%, that of lead by 10%, that of zinc by 20%, that of magnesite by 20%, that of tungsten by 20%, that of molybdenum by 25%, that of manganese by 30%, that of fluorspar by 20%. He also indicated that there would be a precipitous drop in production early in 1943, because of the curtailment of development and exploration work.

Problems concerning draft deferment were discussed next. One concerned the recent order by the head of the Selective Service System requiring the local draft boards to reclassify mine workers who had been given occupational deferments. Major Coon explained that this applied only to those employees who otherwise would have been eligible for induction. Another problem concerned the question of reducing the induction quota in areas where a great proportion of the residents are engaged in mining or smelting industries. This problem had arisen in Carteret, New Jersey where most of the inhabitants are engaged in smelting and refining activities. Major Coon agreed to look into that specific situation and to report at a subsequent meeting.

Difficulties over the interpretation of the employment stabilization order came up for discussion. It was reported that in several areas the employment service was faced with the problem of ascertaining which of the non-ferrous metals are included under its terms, since they were not sure whether it included all of them, or whether non-metallic minerals were included. An additional problem of this nature was whether the order applied to both primary [fol. 2411] and secondary refining establishments or whether it was restricted only to the first type. Representatives of the War Manpower Commission agreed to

obtain some clarification and to report at a subsequent meeting.

Mr. Harbison expressed his belief that the Employment Service officers in Regions X, XI, and XII, should be supplied with a uniform policy concerning the extension or denial of certificates of separation. He urged the necessity of supplying mining areas with uniform statements concerning the policy which was being followed. He considered it advisable to present the employees with statements concerning the necessity of the stabilization order to bolster their morale. He suggested that the Morale Section, and the Services of Supply of the War Department, the Mining Branches, the Labor Production Division of the War Manpower Commission draw up a statement explaining the procedure, and that this be distributed to the miners.

On the problem of releasing miners from the Army for work in the mines, Mr. Harbison indicated that the War Department was unequivocally opposed in principle to any such measure.

The meeting was then adjourned. The next meeting was called for Tuesday, September 22, at 2 P. M.

Received, Sep. 18, 1942.

Memorandum

To: Dr. M. H. Stow

From: J. M. Scribner

Subject: Gold Limitation Order

Acting in accordance with instructions received from Mr. Donald Nelson's office this morning, please be advised that the gold order is to be cleared with all of the branches involved as promptly as possible, but it is not to be presented to the Clearance Committee for clearance until further word is received from Mr. Nelson's office.

The order is to be held in the branch in such shape that it may be presented to the Clearance Committee for action immediately upon advice from Mr. Nelson's office that it is to go through.

cc: D. M. Nelson, A. I. Henderson, Dr. W. A. Nelson, James Cooley, Kenneth Berkey, Churchill J. Owen.

Memorandum

To: Mr. A. I. Henderson

From: W. L. Batt

I have told the Chairman that my judgment is that the limitation order on gold mining should be released at the appropriate time, and he has agreed. It was the concensus of opinion that we should wait until the War Labor Board had acted on certain wage matters, and I shall expect to be advised when the situation is clear on this point.

It seems to me imperative that we very carefully word our press release so that the predominant objective, namely of releasing less essential labor for more essential requirements, shall be clearly evident. And I particularly direct the attention of those who have to do with this matter at this point.

It is also important that General McSherry be notified several days in advance in order that he may take such steps as he outlined.

I shall advise Senator Gurney a day or so in advance so that he learns it from us and not in the newspapers. Please see that I am protected on this point.

Copy to: Mr. J. M. Scribner, Dr. Wilbur Nelson, Mr. Steve Fitzgerald.

War Production Board

Interbranch Meeting of Branches Concerned with Mineral Production

Monday, September 28, 1942. 9 A.M.

Present:

Mica-Graphite, M. H. Billings, S. A. Montague, H. F. Wierum, E. H. Dawson.
Mining, M. H. Stow, J. J. McCabe
Copper, Frank Ayer, F. H. Hayes.
Tin-Lead, C. A. Wright.
Zinc, G. C. Heikes, W. C. Page.
Ferro-Alloys, E. F. Hatch, Miles K. Smith, O. N. Rove.
Misc. Minerals, J. S. Macgregor, R. J. Lund.
Office of Deputy, Director General Wilbur A. Nelson.
Presiding: Wilbur A. Nelson.

Resolution on the Gold Mining Limitation Order Mr. Nelson opened the meeting with the announcement that the Joint Resolution adopted by this group last Friday, September 25, was turned down by Mr. William Batt. The Resolution reads as follows:

Resolved that before the Gold Mining Limitation Order L-208 is sent to clearance that:

1. Representatives of the gold mining companies be called to Washington immediately to confer with Government officials on the gold order so that:

A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort.

B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production.

The above resolution was extensively discussed by the group. It was the consensus of opinion that by calling together the leaders of the large gold mining companies, we could ask them to work as a unit, both management and miners, to produce strategic metals so necessary to the war

effort. We want to give management a chance to talk to the workers and ask them to cooperate and work systematically as one unit. We want to point out to the men that we feel that gold mining will come back after the war, and that by sticking together now they will be able to have their jobs back after this war is over.

Mr. Nelson advised that Mr. Batt was of the opinion that the Gold Mining Limitation Order was primarily a War Labor Board problem and they were handling it. Also, Mr. Batt said that he would not issue the Limitation Order to close down the gold mines, until the matter of a wage increase for miner's was decided. The decision on the wage increase is expected in a few days. The Order, now under consideration, allows the mines 30 days to shut down.

General McSherry, at last Saturday's meeting, said that the machinery was already set up so that the gold miners would go over and work the mines producing strategic metals. The U. S. Employment Service will have their men at the gold mines the day the mine is scheduled to shut down. The ship yards, and all Government projects were forbidden to hire gold miners. In this way, General McSherry felt, the gold miners would go to work in other mines. Mr. Nelson pointed out that the nearest cities to the largest gold mines were Des Moines and Kansas City. [fol. 2415] Mr. Miles K. Smith advised that so many Climax Molybdenum Company miners were employed by the contractors erecting the ski line for the U. S. Army at Panda, Colorado, that Climax complained to the WPB saying that these miners were needed to produce strategic metals. We complained to the ANMB and ANMB issued an order forbidding the contractors from hiring miners. Yet, even after this oder was issued by the ANMB, since September 1st, ten Climax miners whose identity are known, were hired by these contractors, and the chances are many other Climax miners were hired for this work.

It was the consensus of opinion of the group that they should have a hearing with Mr. William Batt on the Resolution adopted Friday, September 25th.

It was suggested that everyone have a list of the properties he would like to have worked by gold miners.

Freeze Order—Mr. Nelson said that he was advised by Mr.

Adams of the United Mine Workers that the "freeze order" was not very effective. Mr. Adams said that if a miner wanted to change over into another industry all he had to do was change his name.

Discrimination—Mr. Adams of the UMW charged that the Mining Branch was discriminating against one shift mines, and the matter would be brought up on the floor of the UMW's Convention next week. Mr. Nelson said that that was not so, and that materials are allocated to the mines according to their production records. Mr. Nelson will write a letter to that effect, and Mr. Adams feels that this will close the matter.

Draft Boards—It was brought out at the meeting that recently some experienced copper wheel casters in the New Jersey area were drafted. Their Local Draft Board was not informed that the plant was a 100% essential war plant.

It was suggested that we write a memorandum to the King committee stating that this group is unanimously in favor of having them appoint field men to inform the Local Draft Boards and State Boards that mining districts, smelters, refiners of non-ferrous metals are 100% essential war plants.

The meeting was adjourned at 10:10 A.M. until Friday, October 2nd, at 9 A.M.

War Production Board

Class No. 2934

Interbranch Meeting of Branches Concerned With Mineral Production

Friday, October 2, 1942. 9 A.M.

Present:

Tin-Lead, Erwin Vogelsang, C. A. Wright.
Zinc, George C. Heikes, W. C. Page.
Copper, Frank A. Ayer, Frank H. Hayes.
Ferro-Alloys, Olaf N. Rove.
Misc. Minerals, J. S. Macgregor, R. J. Lund.
Mining, L. W. Hildreth, F. S. Miller.
Cork-Asbestos, W. T. Meloy.
Presiding: George C. Heikes.

Mexican Labor. Mr. Ayer suggested that since the lack of labor in the southwestern area is holding up copper production Mr. Nelson vigorously follow up the possibility of getting some 4,000 to 5,000 miners and laborers from Mexico. Mr. Ayer pointed out that yesterday General McSherry stated arrangements had been completed for recruiting 3,000 Mexican laborers from Mexico for the California farms, and that if this can be done it should be possible to get labor for the copper mines. He mentioned that these Mexican laborers would be easily assimilated in the border states since there are so many Mexicans there now. Most of the Mexicans in the southwest are American citizens.

Gold Miners. Mr. Heikes discussed yesterday's gold miners meeting and mentioned that some of the operators expressed their pleasure that a meeting had been called. Some expressed a willingness to move their workmen as a unit to other mines. Other gold mine operators were not as optimistic as to this possibility. One gold mine at Grass Valley, California, closed down and out of 267 men, were able to transfer 20 men to a copper mine operated by the company 350 miles away.

A survey was made of all gold mining states. In a total of 19 states where there are gold mines there were only 2,020 deep mine workers, and 700 dredge workers who would be released if the gold mines were shut down, of these only 696 were miners and muckers.

We came to the conclusion that there would be only 700 miners with no assurance that they would go to other mines.

Gold mine operators present at the meeting represented approximately 75% of the industry according to the tonnage of ore hoisted or treated.

National Service Act. Mr. Frank H. Hayes made a motion, which was seconded by Mr. Frank A. Ayer, and unanimously adopted, that a resolution be sent to the top authorities of the W.P.B. advising that this group is unanimously in favor of a National Service Act that will control manpower in all industries for the duration of the War.

Resolutions. It was the unanimous opinion of the group that each resolution adopted at these meetings be presented by Mr. Wilbur A. Nelson as a separate communication or memorandum to the higher officials in the W.P.B.

[fol. 2417] "*Freeze Order*". Mr. R. J. Lund made a motion, seconded by Mr. J. S. Macgregor and unanimously adopted, that a resolution be sent to General McSherry requesting that steatite talc, kyanite, and spodumene be added to the list of critical minerals to be covered by the labor "freeze order". An amendment is being drawn up by Mr. Lester adding mica, fluorspar, magnesite, tantalum and graphite. (See Minutes of 9/18/42).

Block Leasing. Mr. Heikes advised that he attended a meeting at Internal Revenue office. This office agreed to hold off the collection of certain taxes. An effort will be made to have state legislation altered in regard to block leasing as said legislation is impeding the discovery of new ore deposits.

The meeting was adjourned at 10 A.M. until Monday, October 5, 1942, at 9 A.M.

[fol. 2418] PLAINTIFF'S EXHIBIT 92

Minutes of War Production Board

Meeting XXXIV

October 6, 1942.

Present: Board Members, Alternates and Staff

Mr. Donald M. Nelson, Chairman.

Vice President Henry A. Wallace, Chairman, Board of Economic Warfare.

Mr. Robert P. Patterson, Under Secretary of War, acting for Mr. Henry L. Stimson, Secretary of War.

Vice Adm. S. M. Robinson, Chief of the Office of Procurement and Material, Navy Department, acting for Mr. Frank Knox, Secretary of the Navy.

Mr. Jesse H. Jones, Secretary of Commerce.

Lt. Gen. William S. Knudsen, Director of Production, War Department.

Mr. Isador Lubin, acting for Mr. Harry L. Hopkins, Special Assistant to the President supervising the Defense Aid Program.

Mr. Leon Henderson, Administrator, Office of Price Administration.

Mr. John Lord O'Brian, General Counsel, War Production Board.

Mr. W. L. Batt, Vice Chairman, War Production Board.

Mr. Ferdinand Eberstadt, Vice Chairman, War Production Board.

Mr. Milton Katz, Solicitor, War Production Board, acting for Mr. J. S. Knowlson, Vice Chairman, War Production Board.

Mr. Charles E. Wilson, Vice Chairman, War Production Board.

Mr. Ernest Kanzler, Director General for Operations, War Production Board.

Mr. G. Lyle Belsley, Executive Secretary, War Production Board.

By Invitation

Lt. Gen. Brehon B. Somervell, Commanding General, Services of Supply, War Department.

Rear Adm. H. L. Vickery, Vice Chairman, U. S. Maritime Commission.

Brig. Gen. Oliver P. Echols, Assistant for Procurement Services, Office of Chief of Air Corps, War Department.

Mr. Will Clayton, Assistant Secretary of Commerce.

Mr. Paul V. McNutt, Chairman, War Manpower Commission.

Lt. William A. Weber, Assistant to the Vice Chairman, U. S. Maritime Commission.

Mr. Wayne Coy, Assistant Director, Bureau of the Budget.

Mr. Donald R. Belcher, Assistant Chief in Charge of Planning and Statistics, Navy Department.

Mr. A. I. Henderson, Deputy Director General for Industry Operations, War Production Board.

Mr. Robert R. Nathan, Chairman, Planning Committee, War Production Board.

Mr. Simon Kuznets, Chief, Program Analysis and Research Section, Planning Committee, War Production Board.

Mr. Wilbur Nelson, Administrator, Mining Branch, War Production Board.

Mr. Stacy May, Statistics Division, War Production Board.

Mr. Joseph L. Weiner, Deputy Director, Office of Civilian Supply, War Production Board.

Mr. Thomas C. Blaisdell, Jr., Member, Planning Committee, War Production Board.

Mr. Fred Searls, Jr., Member, Planning Committee, War Production Board.

Mr. Frederick Roe, Assistant Executive Secretary, War Production Board.

1. Gold Mining

Mr. Batt reported that the matter of shutting down United States gold mines had been receiving detailed attention. On conferring with Brigadier General McSherry of the War Manpower Commission and representatives of the gold mining companies, it had been found that at present the gold mining industry employs 3,270 workers; 750 are engaged in dredging and only 896 are hard-rock miners. Loss of labor to the Services and to war industries, and

higher costs have already sharply curtailed operations of all domestic mines except Homestake. Homestake's labor force has dropped from a peak of slightly over 2,000 workers to 1,876, including lumbermen and machine shop workers. If Homestake were shut down except for standby operations, all but 500 of these workers could be released for work elsewhere. Lead and Deadwood, South Dakota, with aggregate populations of 16,000 are totally dependent on the mine's operation.

Although it has recently emphasized other forms of production, the State Department, because of broad international considerations, heretofore has urged that gold mining in South Africa and Honduras be maintained. The South African economy and the stability of the present government are largely dependent on gold mining. The basic industries of Honduras are the cultivation of bananas, of which exportation to the United States has been reduced to 20 percent of normal, and gold mining. Mr. Leon Henderson reported that Canadian gold mining is being curtailed very sharply. The Vice President pointed out that questions pertaining to production of gold abroad should appropriately be discussed with the Board of Economic Warfare.

[fol. 2419] Mr. Batt stated that after investigation he recommends that: (1) all non-essential domestic mining of gold other than that incident to the mining of critical metals be stopped as soon as possible and not later than within 60 days; and (2) gold mines not producing critical metals be allowed to continue standby maintenance operations lest it be impossible to reopen them at the close of the war.

General Somervell stated that because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, failure to stop gold production immediately would be inexcusable.

After further discussion it was agreed that:

An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition.

2. Feasibility of the War Production Program

In reviewing the development of the war production program, Mr. Nathan pointed out that appropriated funds increased during 1941 from 20 billion dollars in March to 50 billion dollars in June and to 80 billion dollars in December. After Pearl Harbor, the acceleration increased and by the middle of 1942, appropriated funds have mounted to approximately 225 billion dollars. The magnitude of the increase has, of course, created serious problems.

Mr. Nathan emphasized that in reviewing the feasibility of the war production program, the Planning Committee has assumed that: (1) the country must engage in an all-out war effort and do everything possible to attain maximum production of munitions; and (2) the civilian economy must be reduced to the lowest level consistent with the largest possible production of munitions.

He pointed out that an overly large program has the advantage of acting as an incentive to total production and heretofore it has compelled curtailment in civilian economy and conservation in war production. However, as far as metal consumption is concerned, most of the possible curtailment in the civilian economy already has been accomplished and there is not the continued need for the same degree of pressure in this direction as prevailed many months ago. Much pressure for conservation can now be expected from the fact that some plants will be operating below capacity. On the other hand, an overly large program has these disadvantages:

(1) Creation of lack of balance in end items, complementary items, and components. This is already in evidence.

(2) Creation of excess fabricating capacity. This results, in turn, in wastage of materials entering into construction and impairment of the morale of labor and management as plants slow down and close down.

(3) Failure to meet the objectives of the most important segments of the program while meeting less urgently needed items, relatively easy to produce. An outstanding example at present is the aircraft program which is not receiving all the machine tools and metals required to meet the objective; merchant shipbuilding is being similarly restricted.

(4) Lack of flexibility with consequent difficulty in introducing new items whose needs are dictated by battle experience.

(5) Increased difficulty in effectively controlling the flow and distribution of materials.

(6) Inability to coordinate and integrate the production program of the United States with those of other nations.

Mr. Nathan pointed out that the study of the Planning Committee (WPB Doc. 146), although necessarily not precise as to every detail, does indicate some serious basic problems. Existing schedules for 1942 call for over 14 billion dollars of construction and over 40 billion dollars of munitions. It is currently estimated that the construction program (based on schedules) will be met, but that munitions production will fall short of schedules by 7 billion dollars, or 17 percent. Objectives call for munitions production to a value of 22 billion dollars during the last four months of 1942; it is estimated that only 15 billion dollars will be produced.

For 1943, objectives shown in the report call for war construction and munitions production of 87½ billion dollars of present purchasing power. Recent reviews of these objectives indicate they underestimate the actual program by several billion dollars. If the deficiency in 1942 production were carried over to 1943, another 7 billion dollars would be added. In addition, present plans call for 18 billion dollars of non-munitions items such as pay, food, et cetera, so that the total outlay for war purposes in 1943 would have to aggregate 115 billion dollars, requiring average monthly expenditures of 9½ billion dollars. Because total war expenditures in December 1942 are estimated at not over 6½ billion dollars, expenditures in December 1943 would have to amount to well over 12 billion dollars to achieve this average. For war construction and munitions alone, expenditures next year would have to average 8 billion dollars per month. Since expenditures for these items in December 1942 are estimated at not over 5½ billion dollars, they would have to rise to 10½ billion dollars in December 1943.

Studies of the Planning Committee indicate that a rate of gross national output of about 148 billion dollars prevailed in the first half of 1942 and that a level of 168 bil-

lion dollars might be reached in December 1942. Admitting that comparisons of the national product of various countries are imperfect, Mr. Nathan pointed out that with total war expenditures of 115 billion dollars in 1943 and civilian outlays reduced to the 1932 level, gross national product [fol. 2420] would have to reach 183 billion dollars and war expenditures would amount to 63 percent of the total. The total might be accomplished, but the composition appears wholly impossible. To achieve this level of war expenditures for the year as a whole, monthly outlay would have to rise throughout the year to a level of 196 billion dollars in December 1943, of which war expenditures would represent 147 billion dollars. Consumer outlays would fall to the wholly untenable level of 35 billion dollars, or one-third below the 1932 figure. If the 1932 level of consumers' outlays were to prevail in December 1943, the gross national product would have to reach 213 billion dollars. This means war expenditures would absorb not less than 75 percent of the national product in December 1943, an impossible portion. This compares with 27 percent in the first half of 1942, and a likelihood of 46 percent in December 1942. It is estimated that 1942 war outlay in the United Kingdom will be 44 percent of that country's national product. For Canada, this figure is estimated at 43 percent and for Germany, 50 percent. Whether any economy can devote much more than one-half of its output to war production is extremely doubtful. The Planning Committee regards as an outside and all-out and stimulating objective a total of 75 billion dollars of munitions and war construction and 18 billion dollars of non-munitions expenditures in 1943.

Exhibiting charts on the supply and requirements of metals (Doc. 149), Mr. Nathan forecast that on the basis of present schedules, there would be a serious shortage of alloy steel and copper, which will increase cumulatively through 1943. He pointed out that the estimates in these charts reveal large deficits in the next two or three quarters in these metals and in carbon steel and aluminum and, therefore, indicate that scheduling of production has not been closely correlated with available supplies. He stated further that although the overall shortage of key metals is serious, it is even more severe when considered in specific shapes and sizes, such as aluminum extrusions and forgings.

Moreover, supplies already had been estimated optimistically, especially in view of delays now being encountered in completing expansion projects.

Discussing the feasibility of the present war production program from the point of view of labor requirements, Mr. Nathan pointed out that analysis is complicated by lack of authoritative information on the proposed size of the Army. Assuming a total armed strength of 10 million by the end of 1943 and a war production during the year of 75 billion dollars, a labor deficiency by the end of 1943 of 7 million workers, relative to the normal labor force, is indicated. To achieve objectives, not what is feasible, would necessitate a steady rise in production to a rate in December 1943 of 126 billion dollars, which would call for an additional labor force of at least 7 million, making a total labor deficiency of 14 million, a gap that is probably impossible to fill. The potential reserve of labor in women, older people, and others is considerable, but while the overall shortage may be partially overcome, labor problems in specific occupations, industries and areas are certain to be acute and prevent the attainment of present objectives. Mr. Lubin pointed out that if munitions production and war construction aggregate not more than 75 billion dollars in 1943, the labor supply probably would be adequate. Mr. Nathan again emphasized that the shortage in special areas would be more serious than revealed by the overall analysis.

Examining the feasibility of the program in terms of available facilities, Mr. Nathan pointed out that the question can hardly be answered from an overall analysis, but inadequacies of facilities in specific areas are already indicated and will impose major limitations upon production. In machine tools, for example, critical items of high quality and special type tools will be in inadequate supply for most of the 18-month period ending December 1943. Scheduled completion dates for 30 percent of all facilities projects have been postponed by an average of 3 months. Even with the scarcity of statistical data on facilities, Mr. Nathan stated, it is clear that inadequacy of facilities will limit production in specific and important areas in 1943, especially during the early part of the year.

In concluding his presentation, Mr. Nathan urged the development of better scheduling and the provision of an

administrative mechanism to combine strategy and production.

Mr. Weiner pointed out that if a national product of 183 billion dollars a year is feasible at all, it could be achieved only by moving large masses of the population into areas of intensive production. This would require substantial increases in housing, transportation, and other facilities which would absorb large amounts of materials and therefore restrict, for an extended period, the proportion of national product originally conceived for direct war expenditures, probably nullifying for the time being the benefits of the increase in output.

Mr. Coy inquired whether the Army and Navy admit that the present program is too large to be feasible. General Somervell replied that while the report of the Planning Committee demonstrates the absolute necessity of utilizing all possible means to achieve the program, he believes that 90 percent of the munitions program for 1942 will be completed by the end of the year, in contrast to only 81 percent as estimated by Mr. Nathan and, consequently, it will be necessary to carry over a smaller deficiency into 1943 than that estimated by Mr. Nathan. Moreover, excluding the deficiency to be carried over from 1942, the program next year is not materially larger than the Planning Committee estimated as feasible. General Somervell said he is not so despondent about the War Production Board as to feel that with more effective controls over the distribution of materials to be attained through the quota system of allo- [fol. 2421] cating materials to each agency, production goals cannot be met. Because of continuing changes in specifications which are being effected daily, it is unwise to assume that the supply of alloys will be inadequate. The amount of copper which can be used through the substitution of steel cartridge and shell cases may well be larger than estimated. The production and fabrication of aluminum, too, may exceed expectations.

In General Somervell's opinion, requirements, which are the needs of the soldiers and sailors, should not be reduced, and all efforts must be concentrated on increasing supply. It would be most difficult, involving millions of recomputations, to reduce the requirements program or change the schedule prepared by the Joint Chiefs of Staff in any way,

since all items in the program are important. Military requirements have been computed realistically, not theoretically; they have been fully coordinated.

To a comment by General Somervell that he was not impressed with the dollar figures in the Planning Committee report, Mr. Henderson replied that the dollar and national income figures seem to be the best common denominators of capacity. General Somervell predicted that it will be possible to reduce dollar costs by 10 percent from existing prices.

General Somervell saw no need for the creation of a new organization in which strategy and production possibilities could be correlated as recommended by Mr. Nathan. Already there are the Combined Chiefs of Staff, the Joint Chiefs of Staff, the Combined Production and Resources Board, the Munitions Assignments Board, the Army and Navy Munitions Board, and the War Production Board. He failed to see what benefit would be derived from a board composed of an economist, a politician, and a soldier who does not know production. Mr. Nathan emphasized that the production authorities should not and could not question strategy, but he inquired whether the Joint Chiefs of Staff, in establishing military requirements, had taken full account of feasibility.

General Somervell said the supply programs submitted to the War Production Board adequately represent the material expressions of strategy, and he saw no need for the Board concerning itself with strategic considerations. In reply to a question from Mr. Coy as to what steps should be taken if production falls below the strategic requirements set by the Chiefs of Staff, General Somervell stated that all that need be done is to change the supply programs presented to the War Production Board.

Admiral Robinson stated that the Army and Navy will be able to keep the production program in balance and expressed confidence that the entire munitions program will be more effectively scheduled. Mr. Henderson said that for a long time better scheduling of production had been promised, and he wondered just when this would be accomplished.

Mr. Patterson expressed the view that a body consisting of production and strategy authorities would not be more fruitful in adjusting the program than the existing mecha-

nism, and he urged that no new agency be created for this purpose. However, he stated that it would be beneficial to have the officials of the War Production Board meet with the Joint Chiefs of Staff from time to time for an exchange of attitudes. Mr. Lubin pointed out that failure to meet the production schedules on time means that the Joint Chiefs of Staff will not have the munitions available in the time required by them, and the Joint Chiefs of Staff should be informed of this.

Mr. McNutt pointed out that despite repeated efforts, the War Manpower Commission has not been able to obtain reliable data on the manpower needs of the Army and Navy. He inquired of Admiral Robinson and Mr. Belcher whether they could inform him of the number of men which it is planned will be in the Navy at the end of 1943, but they were unable to give him this information. Mr. McNutt said that as far as manpower is concerned, the existing Boards referred to by General Somervell have not been fully coordinated. General Somervell promised Mr. McNutt that the War Manpower Commission would be informed of the Army's manpower needs. Mr. McNutt pointed out that already there is a serious general shortage of manpower and that the specific shortages are even more critical; although labor shortages exist in 35 areas, 500,000 workers are idle in New York City. The Chairman observed that the War Production Board had not been informed of the recent proposal to increase the size of the Army, although this proposal vitally affects the production program.

Mr. Henderson pointed out that he had been one of the first to advocate the largest possible military program, but that in order to meet the established program, the nation has been forced to sacrifice expansion of certain basic materials such as steel and copper. In his opinion, it is most unlikely that the nation can support a war outlay in 1943 of more than 90 billion dollars, and he inquired whether such an outlay, involving a production of 90 million tons of steel and a supply of over 2,600,000 tons of copper, is not enough to defeat our enemies who have limited resources. Mr. Patterson pointed out that comparisons with our enemies have limited significance because we were forced to start our armament program at zero and, in addition, we now have to supply not only the needs of our own Armed Forces,

but also those of the other United Nations. He recommended giving the Armed Services all the materials they request and ensuring that the materials are not wasted.

Mr. Coy inquired whether the size of the Army should not be determined by the probable supply of available equipment and whether the men who could not be fully supplied should not be retained in production. General Somervell replied that the size of the Army should not be determined [fol. 2422] by the availability of equipment and that it would be useful to train, even with partial equipment, all the men the Army can induct. Mr. Coy inquired as to the magnitude of probable future increases in the program. As recently as September 17, the President had indicated that he contemplates raising the 1943 airplane objective by 6,000 airplanes and 8,000 gliders, and Mr. Coy predicted that further additions to the munitions program would be made from time to time.

The Chairman stated that his policies and actions had been based on the strong conviction that the most the country can produce is the least with which it can be satisfied. Every effort must be made to obtain the maximum production, provided the program is not thrown out of balance. Giving effect to the recent proposal for augmentation, the airplane program alone would call for an expenditure of over 30 billion dollars in 1943 or 40 percent of what the Planning Committee regards as a feasible total for munitions and war production. A program of this magnitude is bound to impinge on other items and appropriate adjustments will have to be made. In addition, if essential civilian functions, such as transportation, communication, repairs and maintenance, are curtailed too severely, it will be impossible to support the maximum war production program.

The Vice President pointed out that to accomplish a 115 billion dollar production program next year, it would be necessary to have a national product of 183 billion dollars and to cut consumers' expenditures progressively so that by the end of 1943 they will be at a rate 40 percent below the 1932 level. He asked if Mr. Jones thought that the public could be brought to accept such a reduction in consumer expenditures in any one year. Mr. Jones replied

that in his opinion, the largest cut that could be imposed in one year is 25 percent.

Mr. Jones observed that if the munitions program were properly balanced, it would be more advisable to be two or three months behind schedule than to cut the program. Mr. May stated that the program could be met if it is redesigned to produce in 15 months what is now scheduled for 12 months. The Vice President and Mr. Patterson pointed out that it is most important that the President be informed of any rescheduling that deferred accomplishment of presently stated objectives.

G. Lyle Belsley, Executive Secretary.

Approved: D. M. Nelson, Chairman.

[fol. 2423] PLAINTIFF'S EXHIBIT 94

War Production Board

Friday, October 9, 1942. 9 A.M.

Interbranch Meeting of Branches Concerned with Mineral Production

Present:

E. H. Dawson, S. A. Montague, Mica-Graphite.
C. A. Wright, E. Vogelsang, Tin-Lead.
E. F. Hatch, Ferro-Alloys.
Wilbur A. Nelson, Marcellus H. Stow, Mining.
Frank A. Ayer, H. O. King, Copper.
James S. Macgregor, R. J. Lund, Misc. Minerals.
Fred W. Gardner, Cork-Asbestos.
Samuel Weiss, F. E. Vigor, Iron & Steel.
T. E. Covil, Aluminum.
H. T. Mudd, Fluorspar.
George C. Heikes, Zinc Branch.
A. I. Henderson, Director.
H. W. Dodge, Deputy Director.
W. J. Keary, Special Assistant.
J. Reed Lane, Theodore A. Peck, Executive Assistants.
C. Stocking, D. Amato, War Manpower Comm.
Joe Tufts, Housing, War Manpower.
Henri Sokolove, War Manpower Comm.
Allen Buchanan, Samuel Lipkowitz, Irving Lipkowitz. Labor Prod. Div.
L. S. Thompson, E. Kanzler's office.
D. D. Davis, B. Smith, Program Determination.
And others who failed to sign register.
Presiding: Wilbur A. Nelson.

Lack of Cooperation—Mr. E. H. Dawson reported that he was unable to secure a report from a Bureau of Mines man. Mr. Dawson will have the complete story at our meeting next Friday.

Extension of Labor "Freeze Order"—Mr. E. F. Hatch made a motion, seconded by Mr. E. Vogelsang, and after a brief discussion, unanimously passed, that a resolution be sent to General McSherry requesting that the "freeze

order" be extended to cover all the mines of the United States producing strategic metals.

Copper, Lead, and Zinc Prices—Mr. Frank A. Ayer stated that most of the members of the Interbranch Group are not in favor of recommending any change in the base prices immediately. Mr. Ayer is of the opinion that the situation will be handled as well as possible, and as judiciously as possible, by changing the quota price. The Quota Committee can adjust quotas to take care of increased mining costs due to increases in wages which have been authorized by the War Labor Board.

There is also the question of extending the period.

Mr. Ayer mentioned that a higher premium price would no doubt attract some new properties into production.

Block Leasing—Mr. George Heikes advised that the Internal Revenue office agreed to hold off the collection of certain taxes in Utah, for the present, until the Courts in Utah decide whether Block Leasing is going to be permitted or not.

Re-Negotiation of Contracts—Mr. E. Vogelsang said that he attended a Lead Industry Advisory meeting yesterday. The lead producers said that they did not understand the re-negotiation clause, but they were quite disturbed over it. There is a legal question involved, and the matter has not as yet been settled.

[fol. 2424] Mr. H. W. Dodge then introduced Mr. Theodore A. Peck to the meeting. Mr. Peck has been asked by Mr. Donald Nelson to look at the labor situation and see what the needs of industry and the mines are.

Mr. Peck said that first we should direct our attention to the fact that the U. S. Employment Service has some 1500 officers, and that a great many of them are rotating officers. The U. S. E. S. has a good opportunity to mobilize labor, and we will want to exhaust our present means before adopting new measures.

Mr. Peck went on to say that the labor shortage in copper production has received an undue amount of attention.

Mr. Peck mentioned the wage question. He said that we live in a free society and a man can look around and work where he wants to. The fact is the men are not staying in the mines. Mr. Peck said that he did not think that miners

should be paid less than other workers. The mining community is not the best place to live in, and now that they have an opportunity to get out, many of them are doing it. We should try to handle the problem in a comprehensive way, and stress the problem of housing.

Then Mr. Peck mentioned the Selective Service Act. When you take a miner from his work you cannot substitute a woman in his place. We can substitute women for men in some industries, but in mining it looks very doubtful. General Hershey has instructed the Local Draft Boards to select the miner for mining rather than for the infantry.

We all have a tendency, Mr. Peck remarked, to think that our problem is the most important. If we are short of men we will have to ration the supply. If we cannot develop additional labor we will have to make up our minds, or rather the Labor Committee of the W.P.B. or somebody, will have to tell us which work is the most important. Lead and silver are not as important as tungsten or copper, but someone has to make that decision.

Mr. Peck said there are all sorts of proposals that come up. We may have to take drastic means, but before we do that we have got to go into the problem and handle our resources the best way we can.

Labor Shortage in Copper, Lead and Zinc—Mr. H. O. King of the Copper Branch said that the indications are that in the Western states producing copper, lead and zinc, there is a shortage of approximately 7,000 men. This figure does not include smelters, or refineries. The situation is rapidly becoming worse.

Mr. George Heikes reported that the situation is so serious in Butte that the Anaconda Copper Company practically cut out important development work to find men to work in stopes. Mr. Heikes said that there were still many places in the country where they do not consider a zinc mine a war plant or a man working in a zinc or smelter as a war worker.

In order to bring copper, lead and zinc production up to normal, and to provide for the necessary increased development work, it is necessary that they employ 9,000 to 10,000 more men.

Aluminum Labor Shortage—Mr. T. C. Covel of the Aluminum Branch said that we are planning to expand very

rapidly and that our problems will come when we try to expand. The housing problem in the Arkansas area is terrible, Mr. Covel said. We are trying to work low grade ore for the first time. We fear that we will have to attract workers from the Tri-State area, and there is already a serious labor shortage in the zinc mines of that area. Mr. Covel said that there is not much of a labor shortage in aluminum right now, but there will be a terrific shortage when we start to expand. The expansion program has just started.

[fol. 2425] *Tungsten and Molybdenum Labor Shortage*—Mr. E. F. Hatch of the Ferro-Alloy Branch advised that we are short about 750 men to bring the tungsten and molybdenum production up to normal, and we need another 750 men for the expansion program. In all, we need approximately 1,500 men.

Mica Problem—Mr. Montague advised that it was not so much a specific labor shortage in mica production. We want them to go on two or three shift operations, and there does not seem to be an available labor supply for that expansion.

Graphite—Mr. E. H. Dawson reported that there is no labor shortage in the graphite operations.

Labor Shortage in Fluorspar Industry—Mr. H. T. Mudd of the Fluorspar Section reported that there are 2,500 men presently employed in fluorspar operations. Some 250 men are needed at once to bring operations up to capacity, and 1,500 men will be needed within the next six months. Mr. Mudd said that the principal shortages are in Illinois and Kentucky, although smaller shortages are making themselves apparent in Colorado and New Mexico.

Mercury Labor Shortage—Mr. R. J. Lund reported that we need 350 men to bring production up to capacity. Mr. Lund said there are some 70 mines employing 2,100 men at the present time. The labor shortage has affected production locally, the biggest problem is that the labor shortage is holding up important development work. About two-thirds of production is in California. The ship yards have drawn heavily on the mercury workers in that area.

Mr. Lund went on to say that we have a fairly good Government stockpile, and at the present time production is running ahead of consumption. But that does not tell the whole story because mercury is very erratic in the ground.

Many of the mines will be depleted unless we get the men necessary to carry on a very lively exploration and development program.

U. S. Employment Service—Mr. C. Stocking of the U. S. Employment said that this meeting was very enlightening as well as astonishing. He said that he could not understand why we do not have more cooperation, and unless we get closer cooperation we will have confusion. Mr. Stocking asked if we do not have cooperation here in Washington how are we going to have cooperation out in the fields.

Mr. Stocking said that when the U.S.E.S. advertises for men in newspapers, as they did in Joplin, Missouri, the ad specifically mentions that "those engaged in war work are not considered eligible for positions listed by the U.S.E.S." However, Mr. Stocking mentioned that sometimes mistakes are made as to the relative importance of zinc and other metals.

Mr. Stocking remarked that the Gold Limitation Order was effective October 8, 1942. Gold mining operations are being closed in the twelve western states, west of the Mississippi River, and no employer may hire any of these gold miners except by being referred to them by the U.S.E.S. Mr. Stocking said that since we have the necessary funds to transport some 5,000 workers, their dependents and household belongings, we expect to overcome some of the difficulties.

[fol. 2426] Mr. Stocking also said that the U.S.E.S. has arranged for pool interviewing. They get the gold miners together and the representatives of the mines producing critical metals, and the gold miners may be hired on the spot. If the mine producing critical metals cannot have a representative on the spot, he can give the U.S.E.S. the power of attorney, and U.S.E.S. can hire them. If the gold mine is not situated near a local U.S.E.S. office we send out a register to list these miners since they are eligible for employment benefits.

Mr. Dodge asked Mr. Stocking "assuming that the problem is wages and living conditions, how long do you think it would take to settle these problems and get some of the miners back to the mines?" Mr. Stocking said that he

could not answer that question since it depended on how long it would take for the construction plants to taper off.

Mr. Stocking advised that the U.S.E.S. labor figures are very complete. Their labor shortage figures are not merely estimates but actual orders from the mine operators for more men. The U.S.E.S. has specific figures showing how many men are needed, in exactly what category or particular skill they are needed, and in what location. Consequently, the U.S.E.S. figures have a very definite relation to production.

In reply to a question Mr. Stocking stated that no arrangements are made for a physical examination of the gold miners before hiring them. When they are hired, they sign a contract for 90 days regardless.

Two Main Points—Mr. Peck said that since Mr. Alex Henderson was here he would like to turn the discussion into two directions.

1. Present the whole picture to the W.P.B. Chief statistically, so that he can, in his dealings with General Hershey and Mr. McNutt, show why it is so important. We should be able to have figures to present to Mr. Donald Nelson to show that because of a shortage of so many men approximately so many tons of such critical metal is being lost. Also, we should be able to show that with an additional labor supply of so many men we would be able to increase production so much, without new machinery or equipment.

2. If we have to resort to rationing, somebody has got to decide what metals are most important.

Mr. Alex Henderson said that he agrees with Mr. Dodge inasmuch as we should present significant figures to Mr. Donald Nelson. Mr. Henderson went on to say that he would like to confirm even more his own views that we exhaust every other possible means. We have got to be sure that we are doing everything we can, before we can start ordering people to other places. W.P.B.'s job is to go after the employers and the unions to make every effort to get rid of prejudices and precedents that have existed in peace times, without taking into consideration the post-war problems. Mr. Henderson said that he thinks we need a field organization to go out in the fields and try to iron out these difficulties.

Each Branch present at this meeting should have an estimate of the number of men needed to bring production up to capacity, and the number of men required to carry out the needed expansion program. Also, if possible, we would like figures showing the amount of ore that we are being deprived of on account of the lack of men.

The meeting was adjourned at 11:30 A.M. The Interbranch Group meets every Monday and Friday morning at 9 A.M. in room 1057, Tempo. R.

James J. McCabe, Ext. 5892.

[fol. 2427] PLAINTIFF'S EXHIBIT 95

War Production Board

Interbranch Meeting of Branches Concerned with Mineral Production

Friday, October 16, 1942. 9 A.M.

Present:

David Amato, War Manpower Comp.
F. D. Cannon, F. H. Hayes, G. B. Holderer, Copper Branch.
C. A. Wright, E. Vogelsang, Tin-Lead.
Olaf N. Rove, Ferro-Alloys.
James S. Macgregor, R. J. Lund, Misc. Minerals.
E. F. Hatch, Ferro-Alloys.
Marcellus H. Stow, L. W. Hildreth, Mining Branch.
H. T. Mudd, Mica Graphite.
W. C. Page, Zinc Branch.
Presiding: E. F. Hatch.

Transportation Problem—Mr. Hatch opened the meeting by calling for a discussion of the transportation problem. Dr. Stow mentioned the fact that Mr. Gillinghan of the Transportation Unit said that since tank cars are being rationed and box cars are getting scarce, we ought to set up committee to deal with the Office of Defense Transportation. Mr. Gillinghan said that we ought to have committees dealing with ODT instead of individuals. Mr. Lund mentioned that his branch is setting up a transportation com-

mittee. Mr. Mudd advised that there is a box car shortage in some of the fluorspar regions.

Draft Deferments—The next topic Mr. Hatch brought up for discussion was the Draft and Draft Deferment. Mr. Hatch remarked that many people in industry have no idea as to the correct procedure to follow in taking up the matter of draft deferment of essential employees.

Mr. Wright mentioned the fact that the Zinc industry, worried over the induction of many of their workers, was instrumental in securing a telegraphic notice from General Hershey instructing local draft boards to defer all skilled or unskilled employees of the non-ferrous metal mining industry. Mr. Wright then read excerpts from his letter to Mr. W. Earl Greenough, which reads as follows:

Telegrams to the State Directors of Selective Service of the twelve states that were specified in the freeze order of the Manpower Board were sent out by General Hershey, Director of the Selective Service System, on October 8, instructing all local boards in their respective states to defer all employees, skilled or unskilled, of the non-ferrous metal mining industry whose removal would in any way affect the productivity of the operations.

It was explained that this also applied to men who were not actually working at the time but had made definite arrangements to do work in the mines and that any pending cases not previously decided upon would come under this same order.

If cooperation on the part of the local boards is found to be unsatisfactory or there is a misinterpretation of the telegram sent out by General Hershey, it would be well to let us know so that we can take the necessary action with the National Headquarters here in Washington.

Occupational Deferment Procedure—Mr. Hatch read a memorandum from Mr. Miles K. Smith addressed to the Non-Ferrous Metal Mine Operators recommending a procedure to secure the occupational deferment of key men essential to non-ferrous metal mining operations. (A copy of the memorandum is attached to these minutes).

[fol. 2428] Mr. Hayes remarked that the Copper Branch arranged with General Hershey a procedure to handle deferments. The idea was to have every mine, which included mining operations, milling, smelting and refinery opera-

tions, submit form 42A for every man they wanted to get occupational deferment. The form is sent to the local board, and every company is responsible for putting it in. If the local board denies the deferment request, the company must make an immediate appeal to the local board and the State Director. If that appeal is denied we take the matter up here in Washington.

Mr. Hayes said that an appeal from the local decision of the local draft board would tend to delay the induction of the man into the service, but that is not always the case. The local board sets a date for induction even though the appeal is pending.

Mr. Vigor of the Iron and Steel Branch remarked that as far as draft deferments were concerned in the Iron and Steel industry, practically everybody stopped at the local board, and then sent a man down to Washington. We have no case, Mr. Vigor went on to say, where we requested a deferment for a man and he was turned down after going to the State Board. In some cases we get actual deferments and in others the man is deferred for three to six months to give us time to train a new man.

It was brought out at the meeting that as yet we have no definite procedure as to what to do when the State Director denies a deferment request, and the matter is brought to Washington. Some members of the group get in touch with Lt. Col. George H. Baker, Chief of the Manpower Division of Selective Service, Ext. 40. Col. Baker's address is 21 & C Sts., Room 700.

It was the consensus of opinion of the group that we invite Col. Baker to our next meeting to discuss deferment procedures.

War Manpower Commission—Mr. Amato representing W. M. C. discussed a procedure for more cooperation by the mine operator with the U. S. Employment Service.

Mr. Hatch said that he disagreed with Mr. Stocking's position of last Friday. (See minutes of October 9), and remarked that he is of the opinion that Mr. Stocking's position was unjustified. However, Mr. Hatch remarked that some of our miners and smelters are not cooperating with the U.S.E.S. as well as they should.

Mr. Amato said that the same picture of lack of cooperation with the local draft board prevailed as far as the

U.S.E.S. is concerned. The U.S.E.S. works hand-in-hand with the draft boards. For example, the draft boards ask U.S.E.S. if the particular worker is replaceable in the area. Mr. Amato is of the opinion that a letter should be sent to the mine operators advising them of the importance of cooperating with the U.S.E.S.

Mr. Hatch said that he thinks the U.S.E.S. has done an excellent job in getting figures on labor in many mines.

Mr. Amato advised that the reports received by the W.M.C. indicate that there is some misunderstanding and lack of cooperation by both the workers and the operators in achieving the objectives of the employment stabilization plan. The Armed Services have issued directives to shipbuilding yards, construction projects, etc., not to hire workers who have left the mines.

Mr. Amato went on to say that we all have the same goal. With closer cooperation we can make the plan work more efficiently. It is obvious that many operators do not understand the plan, some employers seem to think they can issue certificates of separation. The U.S.E.S. has issued copies of the Stabilization Order, but coming from the U.S.E.S. the operator, in many instances, may not give it the attention it deserves. The same instructions coming from the industry Branch of the W.P.B. might have a better psychological effect. Mr. Hatch suggested that Mr. Amato prepare a one-page letter of explanation and discuss it at our next meeting.

[fol. 2429] PLAINTIFF'S EXHIBIT 96

War Production Board

Interbranch Meeting of Branches Concerned with Mineral Production

Monday, October 19, 1942, 9 A. M.

Present:

E. F. Hatch, Ferro-Alloys.
W. S. Papworth, Information.
W. C. Page, George C. Heikes, Zinc Branch.
Frank Ayer, F. H. Hayes, Copper Branch.
E. H. Dawson, Mica-Graphite.
David Amato, War Manpower Comm.
Wilbur A. Nelson, Marcellus H. Stow, L. W. Hildreth, Mining Branch.
R. J. Lund, James S. Macgregor, Misc. Minerals.
E. Vogelsang, C. A. Wright, Tin-Lead.
Presiding: Wilbur A. Nelson.

Draft Deferment Procdure—Dr. Marcellus H. Stow announced that Col. Baker, Chief of the Manpower Division of Selective Service, is out of town and will not be back until November 1st.

Mr. E. F. Hatch, who had previous dealings with Col. Baker's office, will contact Col. Baker's office and ask that a man be present at our next meeting to discuss a procedure to follow when the State Board turns down a request for re-classification and the matter is brought to Washington.

Additional Stabilization Order—Mr. Wilbur A. Nelson announced that on October 9th he wrote General McSherry requesting that he add those eight metals to the stabilization order. (See minutes of October 2) Mr. Nelson was advised that Mr. Sam Hill is working on such a stabilization order. At Mr. Nelson's request Mr. Amato, of the War Manpower Commission, will report the latest developments on this matter at our next Friday's meeting.

Labor "Freeze Order"—On October 12th, Mr. Nelson wrote General McSherry requesting that the labor "freeze order" be extended to cover all the mines of the United

States producing strategic metals. Mr. Amato will follow up the matter and report at our next Friday's meeting.

Mexican Labor—Mr. Nelson advised that Mr. Lane of Mr. Dodge's office is working on the Mexican labor situation. Mr. Nelson will check with Mr. Lane and report at our next Friday's meeting.

New Tax Bill—Mr. Nelson remarked that the new tax bill, as it passed the Conference Committee, includes a 3% tax on freight. That means that the mine operator who ships ore to the smelter will have to absorb that tax and that will effect the premium prices. This means that we will have to reduce the quotas again.

Silver Prices—Mr. R. J. Lund announced that he appeared before a Senate Committee last week. Passage of the Greene Bill was approved if a change were incorporated into the Bill which would authorize sales of Treasury silver only upon the recommendation of the Chairman of the War Production Board.

Mr. Nelson asked Mr. Lund what was the policy of the Misc. Minerals Branch concerning mines producing gold and silver. In general, Mr. Lund said we need the silver until legislation is passed opening up the Treasury stocks. Therefore, until such legislation is passed, our informal policy should be to recommend keeping such mines open.

[fol. 2430] Mr. Nelson said that one gold mine is producing concentrates which produce 10,000 lbs. of copper a month. These concentrates are shipped to the Anaconda Company. We told them that they could continue to operate for 60 days while we investigate.

Mr. Nelson said that some gold mines are producing commercial silicious ore or fluxing ore. At present we are keeping these mines going until we can make a study of the situation. Mr. Nelson advised that Mr. Douglas is making a study in Arizona right now. Mr. Ayer said that we should keep the gold and silver silicious ores out, if we can get silicious ore from other sources.

U. S. Employment Service—In reply to a question Mr. Amato advised the U.S.E.S. has authority to take labor across State lines if necessary. Mr. Amato said that in addition to the local and state offices, the U.S.E.S. has regional offices. The local and state offices report labor

conditions to the regional offices. Consequently, the regional offices have a pretty good idea as to where the labor is needed most.

Mr. Ayer said that at present the U.S.E.S. works rather slowly, and that it would be a good idea to give the U.S.E.S. the authority and the funds to transport workers from one area to another. Mr. Amato advised that the U.S.E.S. has funds to pay for the transportation of gold miners, and they are working on plans to secure funds to pay for transporting other workers.

In reply Mr. Ayer's statement that the slowness of the U.S.E.S. causes a loss of production Mr. Amato replied that the employer has a pretty good idea of his employment picture for the next three months, and he can present the picture to the U.S.E.S.

Mr. Ayer remarked that he was not criticising the U.S.E.S., but that he wanted the U.S.E.S. to be granted more authority and funds necessary to pay the transportation costs of transferring a worker from one area to another. Many workers do not have the funds to move to another community to look for a job, and if the U.S.E.S. will pay the transportation he will be more inclined to go where there is labor shortage.

Mr. Amato passed around copies of a "suggested letter of the War Manpower Commission to be sent by the War Production Board to all mining operators". (See minutes of October 16th). Mr. Nelson asked the group to study the letter, and if there are any suggestions or changes that they give them to Mr. McCabe. We will discuss the letter at our meeting next Friday.

The meeting was adjourned at 10:15 until Friday, October 23, at 9 A. M.

Mr. James J. McCabe—Ext. 5892.

[fol. 2431] PLAINTIFF'S EXHIBIT 98

War Production Board

Interbranch Meeting of Branches Concerned with Mineral Production

Monday, October 26, 1942. 9 A.M.

Present:

F. H. Hayes, G. B. Holderer, F. D. Cannon, Frank A. Ayer, Copper Branch.
Archibald Little, W. C. Page, G. C. Heikes, Zinc Branch.
R. D. Parks, Misc. Minerals.
Wilbur A. Nelson, Marcellus H. Stow, Mining Branch.
Marcellus H. Stow, Mining Branch.
E. Vogelsang, Tin-Lead.
T. E. Covil, Aluminum-Magnesium.
I. Lipkowitz, Labor Prod. Div.
S. A. Montague, M. H. Billings, Mica-Graphite.
L. A. Levensaler, Ferro-Alloys.
David Amato, War Manpower Comm.
Mrs. Ethel Fuller, U.S.E.S.
T. W. Page, Iron and Steel.
Quincy Adams, Statistics Div.
W. J. Keary, Special Asst.
Will Dodge, Asst. Dep. Director.
J. R. Lane, Executive Asst.
Presiding: Wilbur A. Nelson.

W.P.B.—U. S. E. S. Form Letter—The first subject discussed was the form letter prepared by Mr. W. Papworth, WPB Information Division, to be sent by W.P.B. to all mining operators urging closer cooperation with the U.S.E.S. After a few slight modifications the letter was agreed upon. However, a new paragraph informing the operators of the federal funds now available to the U.S.E.S. to transport workers, is being worked on by Mrs. Ethel Fuller and Mr. Amato. The finished form letter will be ready for our Friday meeting, or before.

Furloughing Soldiers—Mr. Wilbur A. Nelson remarked that several hundred soldiers in the West have been furloughed by the Army to allow them to go back to the mines.

Hundreds of them are already back in the mines working.

Coke Labor Shortage—Mr. T. W. Page of the Iron and Steel Branch will make a report listing the labor shortage in the coke ovens.

Labor in the Tri-State Area—Mr. David Amato said that we get reports from operators stating there is a labor shortage in the Tri-State area. Yet, the Local Employment office claims there is no shortage. Mr. W. C. Page stated that that has been his experience too, just last Saturday operators called up Washington for men, and he spent all Saturday afternoon in vain trying to reach some one in the Local U.S.E.S. office. Mr. W. C. Page remarked that there has been a lack of cooperation by the operator and the U.S.E.S.

Mrs. Ethel Fuller of the U.S.E.S. asked if these operators knew of their labor needs before last Saturday, and if so, why did they not make a request before that date.. Mrs. Fuller said that the ideal situation would be to let the Local U.S.E.S. office know of the demands for labor ahead of time and that the operators should maintain a continuous relationship to the end that the U.S.E.S. can give them more service.

Mrs. Ethel Fuller, in answer to Mr. Nelson's request, advised that she would furnish each Branch with a list showing the Local U.S.E.S. offices and the men in charge.

[fol. 2432] Mrs. Fuller also discussed the War Manpower Commission's "Contract of Employment and Transportation Agreement". A contract is attached to these minutes. For additional copies place orders with James J. McCabe, Ext. 5892, Room 1407 Tempo R.

Confidential Statistics—Mr. Quincy Adams of the Statistics Division then read off some confidential figures showing the supply and demand of some of our most critical metals and minerals.

Mr. H. W. Dodge said that we cannot say any one metal is more important than others, and consequently, we must make a horizontal listing. Also, since the W.M.C. wants to know at what mines the labor shortage is most critical we must make a beginning, even though the list may change. With that thought in mind the group decided on the following horizontal listings: in alphabetical order.

List No. 1 "Critical Labor Shortage"—aluminum, coal (metallurgical), copper, fluorspar, magnesium, mercury, molybdenum, tungsten, zinc.

List No. 2 "Serious Labor Shortage"—beryllium, chrome, coal (other than metallurgical), manganese, mica.

List No. 3 "Anticipated Labor Shortage"—*antimony*, iron ore, lead, lithium, magnesite (ref.), spodumene, vanadium.

It should be pointed out that the above listings are very flexible. And as conditions in the various mines change, so will the listings change. It is our job to keep these lists up-to-date.

8,500 Men From Pando—Mr. Wilbur A. Nelson advised that some 8,500 men will soon be released from the U. S. Army Ski-Tow project in Pando, Colorado. Mr. Nelson requested that the U.S.E.S. send a representative from Washington to Pando, Colorado, to be there on the spot, and try to get some of these workers for the mines. It was suggested that a man be sent from the Materials group of the W.P.B. and that he and the U.S.E.S. man stay out there in Pando until November 15th, and try to funnel a large percentage of these men to the right mines, according to our listings. Mr. Nelson pointed out that many of these men have been working in the fresh air for about a year, they are used to working at high altitudes, and many of them have previously worked in the mines. Consequently, in Pando, we have an excellent pilot plant to work on, and the results of this test will serve as a guide in funneling labor from other construction projects to the mines.

Resolution—It was the unanimous opinion of the group that we ask the U. S. Employment Service to extend the Stabilization Order to cover the Pando, Colorado, construction camp, and other construction projects.

It was pointed out to the group that Climax should have first call on these Pando workers, since Climax is also located at a high altitude, and many of the workers previously came from Climax.

It was suggested that Lt. Hall, the ANMB man for the Mining Branch, be sent to Pando, Colorado, also.

[fol. 2433] *From Pando to the Mines*—Mr. Nelson pointed out that since 8,500 men are to be released from the Pando, Colorado, Ski-Tow project, and that it is obvious that we

will not get all of them, we must have a preference list to work from. It was suggested that we include the critical mines in the vicinity of Pando. The group suggested the following mines, in order of importance, but subject to change.

1.	Climax Mining Co.	Climax, Colo.	250 men
2.	Empire Zinc,	Gilman, Colo.	150
3.	Nev.-Mass. Mines, (located near	Winnemucca Office Lovelock, Nev.)	80
4.	U.S. Vanadium,	Pine Creek, Calif.	131
5.	Bradley Mining Co.,	Yellow Pine Idaho	61
6.	Park City District,	Utah.	250
7.	Tacoma Smelters,	Tacoma, Wash.	200
8.	Anaconda Smelters,		320
9.	Basic Magnesium Inc.		450
			1,892

Mr. Nelson requested that all the branches send in a list to James J. McCabe, Room 1407, Tempo. R, Ext. 5892, showing the men they would like to have from Pando. Of course, we cannot guarantee that the men will go to these mines, but we know they will not go, if we fail and do not prepare a list. This is our big chance to get men for the mines. We must have a definite place to send the men, if we expect to make this plan a success. According to the latest check-up, Mr. Frank A. Ayer, Mr. Miles K. Smith, and Mr. T. E. Covil have already submitted such a list. Other Branches are urgently requested to file their "Men from Pando" list promptly.

Recommended Procedure for Occupational Deferment Forms—If any of the Branches would l — some of the above mentioned forms contact James J. McCabe of the Mining Branch.

The meeting was adjourned at 11:30 A.M. until Friday, Oct. 30, 9 A.M., Room 1057 R.

James J. McCabe, Ext. 5892, Room 1407, R.

The secretary of these meetings wishes to thank all Branches concerned for their splendid cooperation last Monday in securing the valuable statistics covering the current "Estimated Labor Shortages in the Mines".

[fol. 2435] Summary of USES Reports on Placement of Gold Miners Displaced by WPB Order 1-208

Reports from only 40 local offices have been received to date (Oct. 30). These indicate that 642 gold mine workers are known to have been displaced at the time of the reports. Of the 642, only 281 have registered with the Employment Service. By the time the reports were sent to Washington, 206 of the 281 registrants had been placed, with 188 of the 206 going to non-ferrous metal mines. A tabulation is attached showing the disposition of the displaced gold miners by State.

The most important development was at Lead, South Dakota, where the great Homestake mine began to close down. As of October 21, Homestake had displaced 334 workers, with 309 of these workers from the mining depart-

ment. Other mines in the area displaced 91 workers. Employment contracts had already been signed by 121 of the displaced miners, with 55 still on referral. The Anaconda Copper Mining Company hired 81 workers and the Climax Molybdenum Company hired 40 more. Many more workers are expected to come from the Lead area, but inasmuch as 60 days has been allowed the gold mines for clean-up operations, the full details will not be available for some time.

Approximately 2,000 workers were employed by Homestake in July.[1] How many of these will be available for other non-ferrous metal mines is unknown. Under the terms of WPB Order L-208, every mine is authorized to retain some men for maintenance purposes. Reports from Lead indicate that Homestake's lumber and timber department will continue to operate at capacity; the company owned coal mine will also remain in operation. The shops [fol. 2436] and foundry will work on war materials and are expected to expand; the power plant will operate to provide power for these other operations, and some men will be transferred to Wyoming to work on another Homestake Company operation in that State.

The regional representative for Region VIII states that the cooperation given by Homestake has been most helpful. His report reads in part:

> "The extent to which the Homestake Mining Company cooperated in effecting the transfers to the copper mines can only be fully realized by those persons who have been closely associated with this company during the past year. In previous negotiations with the Homestake, this office has had informal reports that Washington had the impression that the Homestake Company and the South Dakota Employment Service were not cooperating in effecting transfers to the copper mines at Butte, Montana. Such reports certainly had no foundation in fact. Everything that possibly could be done under the circumstances was done by the Employment Service. The Homestake Mine could not have been expected to close down their operations willingly, but a reading of the statement will reveal that *the company has asked the employees to go to the copper*

[1] Only 850 were underground miners.

mines and to do so by means of the referral system of the United States Employment Service." [1]

A copy of the notice posted by the Homestake Company, notifying the workers of the halting of operations is attached.

One other significant comment made by the regional representative should be mentioned. This relates to the ultimate transfer possibilities of the Homestake workers. The following comment is made:

> "The number of actual contracts between the Homestake miners and the Anaconda Copper Company (to which the Employment Service is attempting to direct all miners) will be much smaller than the figures reported in various news stories from Washington. *The low wage scale, together with the poor working conditions at the Butte, Montana mines, will act as a great handicap in negotiating these transfers.* Special efforts will be made by the local employment office to encourage the miners to go to Butte." [1]

[fol. 2437] Other States have had no significant facts to report concerning operating problems or developments. This is probably due to the limited number of reports which have been received. Another important factor is the 60 day period allowed by the suspension order for tapering off operations and taking protective measures to protect investments.

However, a disturbing factor is the very few displaced gold miners who have registered with the Employment Service in California. Only 7 of 160 known displaced miners have registered. This may be attributable to ignorance of the War Manpower Commission directive, or it may be the result of direct migration to shipyard centers. Later reports may provide an explanation.

[fol. 2438] PLAINTIFF'S EXHIBIT 100

War Production Board

Inter-Division Meeting of Divisions Concerned With Mineral Production

Monday, November 23, 1942, 9 A.M.

Present:

Ethel H. Fuller, U.S.E.S.
E. R. Lerner, W.M.C.
C. A. Wright, Tin-Lead.
Archibald Little, Zinc.
E. F. Hatch, Ferro-Alloys.
W. S. Papworth, W.P.B. Info.
S. H. Ball, Off. of Ind. Oper.
Wilbur A. Nelson, Mining.
Marcellus H. Stow, Mining.
James S. Macgregor, Misc. Minerals.
Olaf N. Rove, Ferro-Alloys.
Presiding: Wilbur A. Nelson.

Strategic Materials Charts—A chart list from Mr. Dodge's office was discussed by the group. Some materials were delated from the list, and a few changes were proposed. The list was then returned to Mr. Dodge's office.

Seven Day Week—Mr. Wilbur A. Nelson mentioned that he talked with a lot of people in the West and he was of the opinion that many of them want to work a seven day week. Mr. E. R. Lerner stated that the matter of a seven day week depends to a large extent on the area and the particular industry. Mr. Nelson said that Climax works a full seven day week, and until just recently, they allowed men who worked five days in some other mine, to work Saturday and Sunday at Climax.

Longer Work Day—Mr. E. R. Lerner suggested that perhaps it might be a better idea to lengthen the hours of labor a day, instead of having a seven day week. Mr. C. A. Wright read part of a telegram from Mr. W. Earl Greenough, dated October 10, which states: "At my solicitation, Governor Maw of Utah October 9, obtained ruling from the Attorney General of Utah holding that because of war,

miners, millmen, and smeltermen may contract with their employers to work longer than eight hours per day, and that women may do certain work in mills and plant offices. The statute, limiting the work of underground miners to eight hours per day, collar to collar, provides that the time may be lengthened 'in cases of emergency where life or property is in imminent danger', and the Attorney declared that the War is such an emergency".

Unequal Mine Wages—Mr. Nelson said that many mines in the West are losing their labor due to the fact that they are prohibited from paying higher wages, even though due to the Panal Agreement mines in the same area producing certain non-ferrous metals were allowed to raise wages.

The Pando Story—Mr. Wilbur A. Nelson stated that the U.S.E.S. fell down terribly in the Pando project. No one was sent to Pando from Washington by the U.S.E.S. as requested by this group. (See minutes of October 26, October 30, and November 6). Mr. Nelson said that the men started to leave Pando at the rate of 500 a day from October 15th. Mr. Nelson explained that he received this information from a sub-contractor on the Pando job, and when he advised Mr. Stockton of this fact, Mr. Stockton said that our information was all wrong and that the men would start leaving November 15th. The men, however, did start leaving October 15th.

[fol. 2439] *Type of U.S.E.S. Office at Pando*—Furthermore, Mr. Nelson went on to say, the U.S.E.S. did not set up an office at Pando until after November 4th. And the type of office they did set up would have had no effect on getting workers. The office looked like a shotgun shack, had a very small Employment Service sign, and was located about 100 yards from the gate. Mr. Nelson explained that the men got into cars or busses at the gate and passed the office without stopping.

The Army did not allow the U.S.E.S. to set up an office within the Pando camp, but, Mr. Nelson remarked, that that is no reason why the U.S.E.S. had to set it up 100 yards from the gate.

No Attempt Made to Get Miners—Mr. Nelson explained that the U.S.E.S. office at Pando was staffed by two men who investigated in a most perfunctory way. No attempt

was made to get miners. Mr. Nelson and others watched the U.S.E.S. men handle about twelve cases. The U.S.E.S. man asked the worker what his occupation was, and if the man said he was a carpenter, the U.S.E.S. man told him where carpenters were needed. No attempt was made to get men for the mines, and the workers were not even asked if they wanted to work in the mines. The U.S.E.S. office was very much like an information bureau and no attempt was made to sell the workers to the jobs.

Mr. Nelson said that the two U.S.E.S. representatives were courteous and were doing the best they could under the circumstances, but the U.S.E.S. men should be trained not just to give information but to talk it up and recruit workers. Mr. Nelson mentioned that the failure at Pando rests not with these two individual men, but with the Regional office and the Washington headquarters.

Mr. W. S. Papworth, in answer to Mr. Nelson's question, stated that he thought the U.S.E.S. missed an opportunity at Pando to sell the mines to the workers. Also, that if the U.S.E.S. had a few pictures of Climax on hand, they would do much towards correcting the wrong impression many workers have about the mines.

Elucidation—Mrs. Ethel Fuller requests that the next to the last paragraph on page 2 of the minutes of November 16, about her realizing that the U.S.E.S. is not perfect, etc., be stricken from the records and the following inserted:

"Mrs. Fuller said that like every other agency there are cases when the U.S.E.S. fails to do a good job on a particular project. However, this is the exception rather than the rule and we feel that on the whole our representatives do extremely well. In many instances they have been known to refuse jobs paying considerably higher salary in order to remain with the U.S.E.S., and it should be remembered that their training and experience makes them sought after by many companies. They are in constant contact with job openings and this plus Selective Service has caused a large percentage of personnel turnover, so that our staff now includes many persons new to the U.S.E.S. These factors should be borne in mind before criticism is aimed too strongly at our field offices".

Absenteeism—Mr. Hatch stated that in one very large mining operation, for the week ending November 7, 10% of the men were off the payrolls due to absenteeism. Mr. Lerner said that according to our figures we find that there is more time being lost by absenteeism than there is being made by the furloughed soldiers.

The meeting was adjourned until next Friday, November 27, 1942, at 9 A.M.

James J. McCabe—5892.

[tol. 2440] PLAINTIFF'S EXHIBIT 101

November 24, 1942.

Memorandum

To: Mr. H. W. Dodge, Deputy Director General for Staff.

From: Wilbur Nelson, Chief Mining Division.

Following your suggestion, F. M. Eaton and I visited the Army Construction Projects at Pando, Colorado, on November 18 to investigate the manner in which the manpower problem has been handled there. The following is a summary of my observations:

1. During the period of October 15 to November 1 when the employment of approximately 7,000 men was terminated in line with the plans for completion of the camp, no representative of the U. S. Employment Service, or Manpower Commission was at the camp.

2. On November 3 two offices of the Employment Service were established outside of the two gates. These gates, however, were some four or five miles from the camp itself and from the termination windows.

3. On November 18 the office at the west gate had already been closed because so few persons stopped there. The office outside the east gate was open.

4. The only transportation the men had was by passenger car or bus and the bus didn't stop near the offices.

5. There was but one small sign on the far end of the east gate office stating it was an employment office but no other sign nor indication of its purpose.

6. The representative of the employment service was courteous and completely cooperative but had very little information. We asked how many men were needed at the Climax Mine which is only twenty miles away and, although the agent searched for some little time in the one volume which had been given to him, this information was not available.

[fol. 2441] 8. There was no effort being made to place placards up indicating that jobs were available in nearby areas nor in any other way was a real atempt being made to place such men as happened into the office.

It is my conclusion that no substantial help was afforded in solving the mine manpower problem from the efforts of the employment service at the Pando Camp, at least up to November 18.

I have a few tentative suggestions to make for study by competent people as a result of this trip:

1. Some government employment agency must be stationed right at the termination windows where the men get their paychecks and are discharged.

2. Mine job opportunities in the immediate area should be posted in conspicuous places at the employment office; this to be broken down by classification and wage scale.

3. There was an indication that most of the men expected to take a two weeks vacation before starting a new job. As an inducement to the men, instead of continuing at the much more profitable carpenter trade, consideration might be given to having an offer made by the mines of a week or ten days free vacation period with pay.

4. The carpenter work available pays high wages $12 to $14 a day) but is short-lived and consideration might therefore be given to having the mines which are badly in need of men offer six months or longer contracts. One mine which we visited indicated it would be willing to make such offer for work seven days a week, eight hours a day, overtime for the sixth day, and double time for the seventh day.

5. Mining is generally looked on as a very unattractive alternative from the type of work which the men have been

doing on the construction projects. Placards, etc., might be posted around the employment service office of such camps at Climax, Utah, etc., to offset the above feeling.

6. Some thought might be given to using women in the employment office rather than men.

The above are intended only as food for thought as I do not feel qualified to speak other than as a matter of impression from a very short stay.

[fol. 2442] PLAINTIFF'S EXHIBIT 125

War Production Board

Washington, D. C.

Copy No. 12

Planning Committee Document 236

April 22, 1943.

Memorandum

To: Mr. William L. Batt, Vice Chairman, War Production Board.

From Edward T. Dickinson, Jr., Executive Director, Planning Committee.

Subject: Effectiveness of Gold Curtailment Order, L-208.

Pursuant to your directive of March 13, 1943, requesting that the Planning Committee prepare a report on the effectiveness of the Gold Curtailment Order, L-208, I asked the branches concerned with the administration of the Order to report on the transfer of manpower from the gold mines to essential war industries and the release of equipment and materials to essential uses.

A. *Summary of Findings.*

1. Displacement of Labor by the Order and Results.

a. The Gold Order was responsible for the transfer of

approximately 2000 gold miners * to war industries, at least 1200 of these going to copper and other essential non-ferrous metal mines.

b. As a result of the labor transferred from gold mines, more than 11,000 tons of copper, 4,000 tons of zinc, 2,400 tons of lead, 13,000 tons of tungsten, and 6,000,000 pounds [fol. 2443] of molybdenum have been added to the annual production of these metals.**

2. Release of Equipment and Materials by the Order.

a. One and a half million dollars in equipment has been transferred from the gold mines to essential non-ferrous mines and has accelerated strategic metal development.

b. Approximately $15,000,000 worth of strategic material has been released from gold mines that were closed.

B. *Criticism of the Reports Made by the Mining Equipment and Labor Production Divisions.*

Despite these clear gains, the report of the Mining Equipment Division argues that the Gold Order has accomplished little and that Preference Rating Order, P-56 would have been an adequate device to curtail operations in the gold mines. The report is to some extent vitiated by the following arguments which are not sustained by the facts:

1. On Page 4, it is stated that damages incurred by the operators in closing the mines may lead to post war claims for reimbursement. Aside from the irrelevance of this statement, such claims could, theoretically, have been put forth for losses sustained under the operation of P-56 or any other order.

---

* 1156 placed in other non-ferrous mines;
515 placed in other essential industries;
500 in other war industries and copper mines (of 650 registered, the transfer of 500 to war industries is assumed since registration is necessary to get unemployment benefits; the transfer to war industries is assumed due to high wage rates).

2171 Total

** From a sample study of 1000 gold miners displaced. Report of the Labor Production Division.

[fol. 2444] 2. On Page 6, it is argued that P-56 was an adequate instrument to curtail gold mining operations and the proof offered is that employment in gold mines declined from 38,771 in 1941 to 12,286 in September, 1942.* But this comparison is misleading since the first figure, compiled by the Bureau of Mines, uses a different definition of a gold mine than is used by the War Manpower Commission in arriving at the figure for 1942. In other words, the decline in gold mine employment is not measured by these figures.* The inescapable fact is that at the time the Gold Order was instituted, the labor shortage in copper mines made immediate action imperative. Nor could this have been accomplished by restricted priority assistance since most producers had large stocks of raw materials on hand and P-56 gave no authority to requisition these stocks.

3. On Page 3, it is implied that only 3217 laborers were displaced out of a total of 12,286.** But approximately half of the 12,286 includes employees working in gold mines which were not encompassed by the Order. Thus the displacement of 3217 out of about 6500 miners is therefore a more accurate ratio.***

[fol. 2445] Copies of the reports made by the Labor Production and Mining Equipment Divisions have been transmitted to you. The Planning Committee believes that to measure the full effectiveness of the Order, the following additional information is necessary and is requesting that it be prepared:

1. The total productivity of all labor displaced.

2. A breakdown of the $15,000,000 of strategic materials released, to determine specifically the kind and quantities of critical materials affected.

---

* The Bureau of Mine's figure includes both lode and placer operations; whereas, the War Manpower Commission's figure represents those employed only in lode mines in twelve Western States and South Dakota.

** Represents the period ending March 31, 1942, instead of September 1942 and covers a period just prior to the acute labor situation.

*** Derived by excluding those mines which were not affected by the Gold Order and are still in operation.

3. The quantities of idle equipment that are still available for transfer.

C. *Conclusions.*

There can be no doubt that the contributions made by the Gold Order are significant. It substantially accomplished the purposes for which it was passed. The amount of manpower released under the Order coincides with the estimates made prior to its issuance * and the miners transferred from gold to copper have been responsible for important increases in the production of critical non-ferrous metals. The data presented above indicates that to implement the administration of the Order and enhance its effectiveness, rigorous tightening of controls is necessary. This should result in the requisitioning of huge quantities [fol. 2446] of equipment still lying idle in the gold mines, badly needed in essential industries. A periodic review of serial numbers, issued under P-56, should also be made to ascertain whether or not mines holding these serial numbers are continuing to perform essential operations.
[fol. 2447] The figures in the table and chart which follow are an indication of the trend in copper employment and production. The increase for the last quarter of 1942 was caused by two factors: the furloughing of soldiers and the release of gold miners. Approximately 2900 soldiers (decreased to 1950 by February, 1943) and 525 gold miners.** were placed in copper mines.

From an examination of the figures on Page 1 of the report, it is obvious that the rise in copper employment for that period was not caused solely by the placement of gold

---

* WPB Press Release, Oct. 8, 1942 (WPB, 1989). It was estimated that between 3000 and 4000 gold miners would be made available for other work.

** Of 1000 referrals made by U.S.E.S., 454 were to copper mines. Assuming that 1000 is a representative sample; then, of the total referrals (1600) to non-ferrous mines, it is likely that 720 were made to copper mines. To determine actual placements in copper mines, the overall proportion of placement to referrals (72%) has been used.

miners, since the total number of gold miners that were transferred to all non-ferrous mines (1156) is less than the increase for copper employment (2171) alone.

[fol. 2448] PLAINTIFF'S EXHIBIT 126

October 10, 1942.

The President, The White House, Washington, D. C.

MY DEAR MR. PRESIDENT:

Some days ago the War Production Board announced a decision to close all gold mining operations in the United States. This order was made by the Board against the the emphatic protest of those representing the largest mining operations engaged in the mining of gold from lode and placer operations.

The largest mining operations affected by this order are in the states of South Dakota, California, and Colorado.

The Homestake Mine in South Dakota has been operating for some sixty years and has supported a community immediately surrounding the operation of some sixteen or eighteen thousand souls.

The Mother Lode Mines in California extend along the western base of the Sierra-Nevada range of mountains for a distance of 150 miles or more. These mines have been depended upon by communities the total of which would approximate one hundred thousand souls.

The population dependent on the Cripple Creek Mines of Colorado has varied from time to time and is not definite at this moment. Suffice it to say that it would be in the neighborhood of five or six thousand souls.

The economy of communities and states in which these mining operations are located has depended largely upon these operations, in that all of these mines have contributed materially by way of taxation to the states, counties, and municipalities in which they are located.

[fol. 2449] The labor employed by these mining operations in the respective states has been to a very large extent contributed by the communities that surround the respective

mine operations. Homes have grown up through the years in each of these communities, and sons followed their fathers into the mines.

The record made before the War Production Board discloses that in each of these mining communities the young men, that is, men under 50 or thereabouts, have already either gone into the military branches of the United States, or have gone into war activities where alluring wages attracted them. The record discloses that the men now engaged in mining operations in the mines affected by the order are by and large about 50 years of age or over. The record before the War Production Board discloses that the men now engaged in mining operations in these localities have, with but rare exception, been employed in the mines of the respective localities for many years.

It is stated that the object of the order made by the War Production Board closing down these gold mines is because of a shortage in supply of critical materials for defense, and the making of the order is supported by the theory that the labor employed in these gold mines will go into mines of copper or lead or zinc.

We respectfully draw your attention, Mr. President, to the record as made before the War Production Board that if all of the gold mines affected by the order of the Board are put on a stand-by basis, that is, if they are permitted to retain only enough labor to keep the mines from becoming flooded and caved, there will be in all about 2,020 of all types put out of employment.

The record before the Board shows that there may be another 500 men put out of employment from other mines of smaller capacity, making a total of 2,520 men put out of employment from lode mines.

It is estimated that the number of men put out of employment from dredger operations will be about 750 men. The men engaged in dredger operations are as a rule much older than those engaged in lode mining, at the present time. [fol. 2450] It is estimated that the total number of men put out of employment by the order of the War Production Board will be approximately 3,270. The record before the Board establishes that of this number about 900 are miners and muckers.

From this number, it is estimated that between 150 and 200 miners and muckers would be necessary to retain the

gold mines and dredges in a stand-by condition; hence, not to exceed 750 men, accustomed to actual mining and generally termed "miners" and "muckers" would be available for employment in mines of copper, lead or zinc.

The record made before the War Production Board discloses that miners, who have been for a long time engaged in gold mining, do not go into the mining of other minerals, such as copper, lead and zinc. There are many reasons stated for this custom.

It is emphatically stated before the War Production Board that if this mine labor population is released from employment in the gold mines in the respective states, only a negligible number, if any at all, will seek employment or remain employed in mining operations of other metals.

The impairment of the morale of communities in the states affected by the order of the War Production Board; the far-reaching effect upon the economic structure of the communities; the irreparable destruction of private property that will be accomplished by the flooding and caving of gold mines; the discouragement and heartache that will come into thousands of homes, many of them the homes of boys now in the military service of this country, but whose parents and relatives remain in the communities affected by this order,—all of these things will not be compensated by the negligible number, if any, of mine laborers who will go from the closed mines to communities far remote to engage in other mining activities.

We respectfully draw your attention to the fact that at this very time Great Britain is urging and aiding the production of more gold by the gold mining operators of South Africa.

We respectfully draw your attention to the fact that our neighbor ally in this war, the Dominion of Canada, is [fol. 2451] going forward and encouraging the production of gold in that country, and in a telephonic communication within the past few days with those in authority on the subject in Canada, the information was received that the Canadian government has no intention of closing down its gold mine operations.

We respectfully urge that no beneficial result inuring to the defense of the United States in its time of war will flow from the order made by the War Production Board

closing the gold mines of this country. The record needs no emphasis that great and irreparable injury will result.

We respectfully bring this matter to your attention with the request that you stay the order made by the War Production Board affecting the gold mine operations of the United States, at least until the whole subject of marshalling of manpower and the allocation of labor may be considered and the vital questions involved, concluded; thus that the gold mining industry of the United States may not be subjected to unwarranted and unusual hardship and injury which may not eventually be considered necessary, and which may not be equitably borne by other industries.

Respectfully, (Signed) Messrs. McCarran (Nevada); Johnson (Colorado); Millikin (Colorado); Johnson (California); Langer (North Dakota); Thomas (Idaho); Chavez (New Mexico); Hayden (Arizonia); Murray (Montana); Wallgren (Washington); Hatch (New Mexico); Bone (Washington); McNary (Oregon); Murdock (Utah); Nye (North Dakota); Holman (Oregon); Downey (California); McFarland (Arizona); Gurney (South Dakota); Bulow (South Dakota); Thomas (Utah).

[fol. 2452] PLAINTIFF'S EXHIBIT 127

Oct. 11, 1942.

Honorable Chan Gurney, United States Senate, Washington, D. C.

DEAR SENATOR GURNEY:

Reference is made to your letter of October 2, 1942, regarding the curtailment of gold mines. As you point out, no argument can be made for the need of gold in the war effort.

Nevertheless, as you probably know, the Army has been forced to take drastic and unprecedented action to meet the manpower crisis in the non-ferrous metal mining industry which has already seriously curtailed production of ammunition and other war materiel. The Secretary of

War has requested that 4,000 soldiers who have "hard rock" mining experience be furloughed from the armed forces to work in the copper mines.

Since such drastic measures have been taken by the Army to meet an urgent situation, similarly drastic measures must be taken to recruit all qualified civilian workers employed in non-essential activities such as gold mines. It will be impossible to secure from the Army a sufficient number of "hard rock" miners to meet the demands of the non-ferrous metal mines. Nearly all the workers now presently employed in the gold mines are urgently needed and can be used immediately in the copper mines.

In the light of the facts set forth above, I know that you will understand why the War Department feels that military necessity demands the immediate curtailment of the gold mines. The gold mining industry has been singled for curtailment only because it constitutes the most readily available pool of "hard rock" miners who are so urgently needed to further the war effort.

Sincerely yours, Brehon Somervell, Lieutenant General, Commanding.

[fol. 2453] PLAINTIFF'S EXHIBIT 128

War Department, The Chief of Staff, Washington

October 12, 1942.

Honorable Chan Gurney, United States Senate.

DEAR SENATOR GURNEY:

In your letter of October 2nd you pointed out the adverse effects of the closing of gold mines on the economic conditions in Lawrence County, South Dakota, and urged that such a decision be deferred until the entire manpower question has been considered.

It is my understanding that the War Production Board has ruled that the gold mining industry be closed down in the hopes that this action will release experienced mine labor for employment in the mining of the basic strategic

materials essential to our war production program. I am sure that this action was taken only after careful consideration of all the factors involved.

As you know, our war production effort is dependent to a large extent on the availablity of copper and molybdenum. The loss of mine labor to other industries has made it extremely difficult to maintain even present rates of production, which are insufficient to meet our war requirements. Drastic measures have been necessary to relieve the situation and the War Department has taken the extreme step of furloughing miners for this purpose. I trust sincerely that other war construction activities under way in South Dakota may to some extent relieve such distress as may be occasioned by the closing of the gold mine.

Faithfully yours, (Signed) G. C. Marshall, Chief of Staff.

Interdepartmental Committee on Non-Ferrous Metals

Meeting August 25, 1942

H. O. King, Chairman

The following were present:

Mr. H. O. King, Chairman, W. P. B.
Mr. Allen Buchanan, Industry Branch Consultant Service, W. P. B.
Mr. R. D. Parks, Miscellaneous Minerals Branch, W. P. B.
Mr. William Remington, Planning Committee, W. P. B.
Mr. Robert Abelow, War Labor Board.
Mr. R. J. McEwen, Miscellaneous Mining Branch, W. P. B.
Mr. M. K. Smith, Tungsten, Molybdenum and Vanadium Branch, W. P. B.
Mr. Louis Lister, Labor Production Division, W. P. B.
Mr. Samuel Lipkowitz, Labor Production Division, W. P. B.
Mr. Paul H. Norgren, Labor Production Division, W. P. B.
Dr. Wilbur A. Nelson, Industry Operations, W. P. B.

Mr. Stephen Raushenbush, Bureau of Mines, Department of Interior.

Major R. B. Coons, Selective Service.

Mr. Leo Werts, War Manpower Commission.

Capt. Sidney C. Sufrin, Civilian Personnel Division War Dept.

Capt. Russel W. Nauman, Service of Supply War Dept.

Mr. Robert R. R. Brooks, Labor Office, O. P. A.

Mr. King opened the meeting and explained that the agenda was primarily concerned with reports on the progress of particular measures already discussed or undertaken by the committee to alleviate the manpower shortage. [fol. 2455] The first report was devoted to the four letters that had been prepared for circulation among the mineworkers, emphasizing the importance of their work and informing them of the steps that are being taken on the Washington level to deal with the manpower wage problem. Copies of the letters prepared by Mr. McNutt, Mr. Davis and General Hershey were distributed to the committee. It was reported that the letter from Mr. Donald Nelson would be ready shortly.

The problem of a uniform salutation on each letter was discussed and the chairman was given authority to make revisions to achieve desired uniformity. It was agreed that a set of the four letters would be distributed to local unions through the medium of their International Unions, to the operators through the several Branch Chiefs, and to the mayors of mining towns and local draft boards in mining areas. It was decided that about 2,500 copies of each letter should be prepared.

Mr. King reported that another series of statements was being prepared for distribution among the mining operators. First, a letter from Mr. King urging employers to use the U. S. Employment Service, and second, a statement from General McSherry's office and another from General Hershey's office, each to accompany Mr. King's letter. The statement from General McSherry will inform operators of the clearance procedure under the U.S.E.S. for obtaining referrals; that from General Hershey will outline the procedure for obtaining occupational deferments for mine workers. It was agreed that copies of these statements would be ready before the next meeting and that this series

would be mimeographed and distributed to the operators by the Branch Chiefs.

[fol. 2456] Mr. King then asked for a report on labor shortages in mines other than copper, lead and zinc. Mr. McEwen of the Mercury Section of the Miscellaneous Metals Branch presented some data on the shortage of labor in mercury mines. He pointed out that 80 percent of the mercury production occurs within an area only about 200 miles from San Francisco and that the shipbuilding and aircraft industries on the Pacific Coast had drawn away a great many workers. He said there was a present shortage of 600 to 800 men and that this shortage represented 25 percent of the industry's present manpower. Development work in mercury mines has stopped completely as a result of the shortage. Mr. M. K. Smith of the Tungsten, Molybdenum and Vanadium Branch reported on labor shortages in those industries. He pointed out that although several new mill projects had been completed recently there was great difficulty at present in supplying these mills with sufficient ore as a result of the shortage of labor and that production therefore was far below capacity. At its next meeting, Mr. Smith agreed to furnish the committee with data on labor requirements in tungsten, molybdenum and vanadium operations.

The Gold Curtailment Order then came up for discussion. Dr. Wilbur Nelson read a copy of the tentative draft of the proposed order which had been written by the office of the chief of the mining branch. He explained that it would apply to all gold mines (except those which produced 1200 tons or less of commercial ore in the year 1941 or which are producing commercial ore at the rate of 100 tons [fol. 2457] or less per month). He pointed out that the proposed order did not apply to any operator who was the holder of a serial number issued under Preference Rating Order P-56, as amended.

Mr. King asked for a report at the next meeting on gold mine operators who come under the definitions of the P-56 order and its amendments and on the procedure in determining the serial number. The problem of the gradual versus the sudden curtailment of gold operations was brought up. It was the tentative decision of the group that it would be better to curtail them suddenly and to make

certain that the measures necessary to recruit the gold miners were prepared by U.S.E.S.

Mr. Raushenbush asked for some information of the probable number of gold mine workers who could be transferred. There was no definite agreement on just how many would be obtained. Data from the Bureau of Employment Security as of March 31, 1942 indicated that there were some 12,000 workers employed in lode gold mines and probably an additional 6,000 in placer operations but these totals have to be revised because there has been a heavy withdrawal of workers from the gold mine industry since then. Mr. Leo Werts from General McSherry's office reported that machinery to recruit gold miners was being set up and indicated that a report on the recruitment procedure to be followed would be presented at a subsequent meeting. Mr. King pointed out that the employment service would provide the gold miners with information on wages, rents and housing at the prospective place of employment when recruiting was started at the gold mines.

[fol. 2458] The committee then turned to consideration of the policy of having war contractors discontinue hiring miners. Mr. Werts reported that General McSherry was at the very moment discussing this problem with representatives of the Defense Plant Corporation, the Navy Department and the War Department and that General McSherry would have a report on the interview at the next meeting.

Mr. Buchanan pointed out that if a directive to war contractors ordering them not to hire miners was issued at this time it might embarrass the position of the union which is now arguing its case on wage disputes before the war Labor Board. He suggested that such a directive should be withheld at least until after the hearings on the cases were completed. Mr. Abelow of the War Labor Board also indicated that it would be desirable to postpone announcement of such a directive until after the panel had closed hearings.

The problem of allocating labor supply among the various metal mines was also brought up and in view of the labor shortage common to all of them it was agreed that closer cooperation between the mining branches affected by this problem would have to be secured.

The meeting was then adjourned and Mr. King announced that the next meeting would be held on the following Tuesday, September 1, at 2 o'clock.

Homestake Mining Company

Lead, South Dakota

October 15, 1942.

Notice to Employees

On October 8, 1942 the War Production Board issued an order for the closing of all of the larger gold mines of the United States. This order requires that the breaking of new ore must stop on October 15, 1942 and all operations must cease within sixty days from date of order. The expressed purpose of this order is to obtain miners for non-ferrous mines, particularly copper mines.

The company has made every reasonable effort to present its case and that of our communities to the officials of the War Production Board. In this it has been ably supported by officials of the State of South Dakota and by many Senators and Congressmen, including Senator Gurney and Congressman Case. These representations have been of no avail.

For our mine we are authorized to retain only such men as are necessary for maintenance. Our lumber and timber department will, however, continue to operate at capacity. Our coal mine will remain in operation. Our shops and foundry will work on war materials. It is probable that the work in this department will materially increase. Our power plants will continue at the rate of output needed by these operations. We shall need some men for an operation in Wyoming.

We call the attention of all employees that we must release to the opportunities for employment in the copper mines. Government representatives state that there is great need for men at the copper mines. We have also been asked to call to your attention Directive 13 of the War Manpower Commission dated October 7, 1942. This Directive states;

"On and after the date hereof no employer shall hire in, or hire for work in Alaska or any state west of the Mississippi, any person who on or after October 7, 1942 has ceased to be employed as a production or

maintenance worker in connection with gold mining except upon referral of such worker to such employer by the United States Employment Service."

We greatly appreciate the loyal and efficient service of our many employees. We regret that we are forced to release many of you. It is our suggestion that you remain at your work until you are released and further, that you leave your families in your homes in Lead at least until you have an opportunity to investigate the available housing in the community in which you will be employed. We hope that when it is again possible for us to resume operations you will wish to return and that we may then have place for all of you.

Homestake Mining Company, by Guy N. Range, General Manager.

Mr. H. O. King, Director, Copper Division, War Production Board, Washington, D. C.

Labor Shortage in Copper Mines

DEAR MR. KING:

I have your letter of June 10th, together with statements showing present shortage of labor in copper mines and estimated shortage for future months.

I am deeply concerned over the prospects of insufficient supply of copper. Our ability to produce the munitions necessary to win the war depends on getting enough copper. As you point out, the difficulty lies simply in shortage of manpower in the copper mines.

The War Department, however, must adhere to its decision not to furlough more soldiers to work in copper mines.

In the first place, the proposal would weaken our fighting forces at the time when every effort is being made to strengthen them. It should not be overlooked that the soldiers involved have been trained to fight, and the services of these trained men would be lost to the Army. If the Army is to release trained soldiers whenever there is a shortage of manpower in an essential industry, we might as well dissolve the Army. In the second place, the furloughing of more soldiers to work in the copper mines would do little toward production of more copper.

The causes of the shortage of miners are well known. For one thing, men have left to take employment in industries that offer better wages. Again, they have left to go to farms, having been assured that no farmers will be drafted into the Army. These factors have caused a drift away from the mines, and conditions cannot improve so long as the drift continues. The furloughing of soldiers to work in the mines will not stop the drift. The difficulties that are inherent in the present situation will not be remedied until effective measures are adopted to keep men at occupations as essential as that of copper mining and to recruit from less essential industries the additional men needed. The troubles in copper mining furnish a striking instance of the need of legislation along the lines of the Austin-Wadsworth bill.

[fol. 2463] Men with hard rock mining experience, I am told, are still engaged in mining gold, silver and other non-critical metals. I know of the arguments that are used in an effort to justify these operations, but the fact remains that their contribution toward prosecution of the war is very small. I submit that there is no warrant for asking that soldiers be turned over to work in copper mines as long as men with the very experience required for mining copper are permitted to work these non-essential mines.

Sincerely yours, (S.) Robert P. Patterson, Under Secretary of War.

Order Clearance Committee Meeting 902

May 4, 1945.

Orders

1. Orders Proposed for Revocation after V-E Day

Order L-208—Gold Mining

Lieutenant Tobias presented the objections of the Navy to revocation of Order L-208 on V-E Day. He declared that the Order, although framed ostensibly to conserve critical equipment and materials, was really issued to conserve manpower. He indicated that in the vicinity of the principal gold mines there are important Naval installations whose manpower needs might be jeopardized further if the gold mines are permitted to reopen in the near future. It is the view of the Navy Department that, although manpower needs of Naval installations might drop off immediately following V-E Day, nevertheless there remain more essential civilian needs which should be met from any manpower thus made available.

Mr. Lerner indicated that WMC endorses the views of the Navy on this point. There are many essential civilian items in short supply because of manpower limitations, which should be taken care of with manpower released on V-E Day before the question of opening the gold mines is considered. The WMC proposes to take the stand that if Order L-208 is revoked, WMC is absolved from any responsibility to keep base metal mines staffed. The crises is manpower in other mining areas continues, particularly in base metal mining areas. On the other hand, he wanted it clearly understood that WMC is agreeable to permitting the resumption of gold mining in due course, after more essential needs of the civilian economy have been met.

The Chairman observed that WPB, in the opinion of Mr. John Lord O'Brian, former WPB General Counsel, could not properly issue Orders on the basis of manpower con- [fol. 2465] siderations alone. Mr. Lerner contended that Mr. J. A. Krug has shown a willingness to base Orders on manpower considerations but that such policy has not in

fact been adopted because of European developments which give promise of early relief from manpower shortages. In response to a question as to the nature of the manpower ceilings imposed on the gold mines, he stated that these ceilings are imposed so that the mines may maintain a small force of employees for maintenance purposes only. They are not used for operating the mines.

Mr. Miller stated that if Order L-208 were revoked, gold mines, including those in Alaska, would operate under Order P-56 as non-serial number mines so that the Mining Division would still have effective control over their purchases of equipment. Only those mines which have serial numbers are able to buy equipment without special permission of the Division in each case. Mr. Miller pointed out that revocation of Order L-208 would not mean that the gold mines would immediately resume full operations—it would take several months of preparation before full employment would be possible. The need for additional workers would be progressive, with potential employment of about five thousand persons following revocation of the Order. He emphasized that many gold mines have lower wage rates than the base metal mines and, therefore, it is doubtful whether the gold mines could draw off workers from the base metal mines. So far, the gold mines have not been able to recruit up to the permitted manpower ceilings in order to get adequate maintenance crews.

In response to Captain Federa's inquiries, Mr. Lerner declared that WPB has asked deferment for all mine workers, especially requesting deferment for workers in lead mines. He pointed out that manpower ceilings, which would continue in effect after revocation of Order L-208, would be of some value in preventing newly opened gold mines from drawing off workers from essential industries. However, manpower ceilings are effective only on numbers, and not on types, of workers. Thus, ceilings would not control the return to the mines of skilled workers who might be needed in more essential industries. If Order L-208 is revoked, heavy pressure will be brought to bear on WMC to raise the present ceilings imposed upon gold mines. He doubted whether WMC would be able to resist this pressure. He stated that WMC requests retention of Order L-208 because of manpower considerations only.

Lieutenant Smith stated that Order L-208 was issued by WPB as the result of a commitment made to the Army in return for an undertaking on the part of the Army to furlough miners to go back to base metal mines. The Army and Navy had agreed to such furloughs if WPB would close the gold mines. It is clear, therefore, that Order L-208 was issued because of manpower considerations.

In response to Mr. Correll's question as to whether V-E Day cut-backs would relieve pressure on the mining employment situation in base metal mines, Lieutenant Beardman indicated that the Copper Division and the Tin, Lead and Zinc Division are assuming that, in order to meet [fol. 2466] essential civilian needs, the demand for base metals will continue unabated after V-E Day. Mr. Correll asked whether Order L-208 had diverted labor to copper, lead, and zinc mines. Mr. Miller reported that in general it had not been successful in accomplishing this objective. This was partly due to the fact that certain large gold producers, whose gold mining activities are incidental to their copper mining operations, continued in operation. He repeated that the low wage rates in the gold mines would prevent the drawing off of labor from war industries or other essential industries after V-E Day.

The various representatives invited for discussion of the proposed Order revocation left the meeting at this point.

The Chairman then reported that yesterday (May 3), Mr. J. A. Krug and Mr. William C. Keeley, Vice Chairman for Metals and Minerals, after extended conversations with WMC representatives, had agreed that the Order should be revoked when military cutbacks occur. He then referred to the conclusions reached with respect to the accomplishments of Order L-208, as contained in Report No. 9, "The Closing of the Gold Mines", prepared by the Policy Analysis and Records Branch, Office of the Executive Secretary.

However, Mr. Correll pointed out that these conclusions were merely judgments of the writer and that there was factual evidence to indicate that some manpower had been successfully transferred from gold mines to copper mines and other essential war industries. Further, Mr. Correll pointed out that this Order has been highly controversial; that it had not been circulated in the regular manner; and that the WPB Labor Offices had always felt that it was too

drastic and had proposed instead a progressive prohibition, but were overruled.

Mr. Randall stated that the Vice Chairman for Metals and Minerals was supporting the Mining Division's recommendation that Order L-208 be revoked subsequent to V-E Day. He was not modifying his position and would approve the revocation of Order L-208 "subject to Mr. Krug's review and decision".

Mr. Correll stated that the Offices of Labor Production and Manpower Requirements do not oppose revocation of the Order but he urged that the decision to revoke be made on the basis of the actual circumstances surrounding requirements for copper, lead, and zinc on V-E Day. At the present time there are no grounds for knowing what the specific conditions will be on V-E Day.

Mr. Calhoun felt that the basic question involved is whether WPB is willing to retain an Order because of manpower considerations only.

After further discussion, the Committee approved the V-E Day revocation of Order L-208; Major Booth, Commander Russ, and Mr. Calhoun dissented.

[fol. 2467] PLAINTIFF'S EXHIBIT 175

Calendar No. 65

Senate

81st Congress, 1st Session

Report No. 79

Relief of the Owners and Operators of Certain Gold Mines Which Were Closed or the Operations of Which Were Curtailed by War Production Board Limitation Order L-208

February 22 (legislative day, February 21), 1949.—Ordered to be printed

Mr. McCarran, from the Committee on the Judiciary, submitted the following

REPORT

[To accompany S. 45]

The Committee on the Judiciary, to whom was referred the bill (S. 45) for the relief of the owners and operators of certain gold mines which were closed or the operations of which were curtailed by War Production Board Limitation Order L-208, having considered the same, do now report the bill to the Senate favorably with amendments and recommend that the bill, as amended, do pass.

Amendments

On page 2, beginning with and including the word "property" on line 18 thereof, delete all through and including the comma following the word "period" on line 19.

On page 3, beginning with and including line 18, strike out all of section 2 down through and including line 8 on page 4, and insert in lieu thereof the following:

Sec. 2. The Secretary of the Treasury is authorized and directed to make use of the facilities of any Government agency to determine the validity and amount of claims. It

shall be the duty of the Secretary of the Treasury or the authority designated by the Secretary of the Treasury to render decisions on all claims filed within one year after date of filing thereof, except where prevented by unusual circumstances.

On page 4, line 16, delete "certified to him" and insert in lieu thereof the word "validated".

On page 4, line 20, delete the word "examiner" and insert in lieu thereof the following: "Secretary of the Treasury or the authority designated by him".

[fol. 2468] Purpose of Amendments

The purpose of the first amendment is self-evident. It corrects a typographical error in that the deleted phrase is repetitious of the identical phrase immediately preceding.

The purpose of the second amendment is to permit the Secretary of the Treasury, or an authority designated by him, to determine the validity and amount of claims. It is the concensus of the committee that the Secretary is properly equipped in his department to perform this function without additional legislation authorizing an examiner and staff specifically to undertake the work. In addition, the committee believes that the amendment permits the Secretary more discretion and flexibility in his endeavor to carry out the intent of the bill.

The third and fourth amendments are simple technicalities for the purpose of making sections 4 and 5 of the bill conform to section 2, as amended.

Statement

The reasons for enactment of this legislation are explained fully and completely in a unanimous subcommittee report of July 19, 1946, to the whole Committee on War Claims of the House of Representatives, following lengthy hearings on H. R. 4393 in the Seventy-ninth Congress, a bill similar in its purposes to the instant measure.

On October 8, 1942, the War Production Board issued order L-208, which summarily closed the gold mines in this country. The order was rescinded on July 1, 1945, having been in effect approximately 2½ years. The evidence in support of the bill shows that the gold-mining in-

dustry was selected as a guinea pig for the purpose of testing the feasibility of closing what was called nonessential industries. No similar order was issued against any other segment of American industry. The order completely failed to accomplish its purpose, or any purpose whatever, and inflicted irreparable and unjustified loss on the gold-mining industry. Your committee believes that this order inflicted a sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve.

Four main points were developed at the hearings through the testimony of industry witnesses, Government witnesses, and the introduction of a detailed report on the history and operation of War Production Board Order L-208, known as the gold-mine-closing order. In the opinion of your committee the evidence presented, both oral and documentary, overwhelmingly supports the following contentions.

1. WPB Order L-208 was unique in that it was the only Government order closing a productive industry.

2. Issuance of the order was an administrative error, based upon a statistical misconception, and may, furthermore, have been illegal.

3. The net results of the order in accomplishing its avowed primary purpose of channeling manpower to "essential" mines were negligible.

4. The economic loss to the gold-mining industry has been great and in some cases the damage may be irreparable.

All the above points are discussed at length in the aforementioned WPB historical report on L-208, entitled "The Closing of the Gold Mines (August 1941 to March 1944)," June 1, 1944—Report No. 9, Policy Analysis and Records Branch, Office of the Executive Secretary, War Production Board, printed in the appendix of the hearings on H. R. 4393, and were generally corroborated by Dr. Wilbur A. Nelson, who administered L-208 for the War Production Board.

This report was writtten for the private use of WPB Chairman Donald M. Nelson and, until recently, was classified as "confidential." It is interesting to note that the testimony of both industry and Government witnesses

merely tended to corroborate the statements and conclu- [fol. 2469] sions from this WPB report which are quoted below in support of your committee's recommendations. Further corroboration may be found in Senate Subcommittee Print No. 6 of the Senate Small Business Committee, entitled "Survey of the Nation's Critical and Strategic Minerals and Metals Program," issued in June of 1944, in which the effect of L-208 is discussed in some detail.

An elaboration upon the four points outlined above follows.

The Uniqueness of the Order

The star witness at the hearings Dr. Wilbur A. Nelson, who was intimately connected with all phases of the issuance and administration of L-208 during his term with the War Production Board, participated in the following exchange:

"Mr. Engle: The fact that this industry was the test case—the guinea pig—for such policy, and that similar nonessential industries were not shut down, throws emphasis on the controversy as to the method of closing the gold mines, a controversy that otherwise might be passed lightly over.

"Mr. Nelson: I think that is a very true and correct statement.

"Mr. Engle: And it is true that the gold-mining industry was a guinea-pig?

"Mr. Nelson: Definitely.

"Mr. Engle: And no other segment of American industry was treated in an identical manner?

"Mr. Nelson: I know of no one."

The above opinion was corroborated by other witnesses and also by the special WPB report, to Donald M. Nelson, previously referred to. This adverse selective treatment, in the opinion of your committee, places the closed or curtailed gold mines in a special category and subject in turn to special treatment by the Congress.

Order L-208 Was An Administrative Error

The testimony before your committee conclusively showed L-208 to have been issued as the result of an error in com-

piling labor statistics. The agencies generally classified as gold mines those mines which produced a material amount of gold as well as strategic and critical minerals. The Mining Branch of WPB, which constantly fought against issuing L-208, took a more realistic viewpoint. The War Manpower Commission and the Labor Divisions of WPB had a wholly exaggerated idea of the number of miners to be released by closing what they considered "gold" mines, many of which were known by the Mining Branch of WPB to be producing essential minerals and which could not be closed without damaging the war effort. The figures furnished the Army and Navy by the agencies laboring under this misconceived definition indicated that a large pool of miners would be made available by the issuance of L-208. The voice of the Mining Branch of WPB was not strong enough to reach the higher policy levels, nor were the figures submitted by the industry credited. The Secretaries of War and Navy therefore demanded action and got it.

Gold-mine operators had informed the Government that if all gold mines and dredges in the United States were closed approximately 3,270 men would be released, of which only 896 would be miners and muckers. Some 300 of these would be required to maintain the larger mines on a stand-by basis. Of the balance some were physically unfit for work in copper mines. It appears from the record that as far as transferrals could be checked through USES, the operators' estimates exceeded the eventual results in manpower captured for strategic metal mines. The War Production Board report on L-208 reaches this conclusion:

"* * * it may be concluded that since the number of gold miners actually reemployed was negligible, their contribution in increased production of copper, lead, zinc, etc., was likewise small, and probably was counterbalanced by the loss of such metals as are normally produced as byproducts of gold mining."

This conclusion is amply supported by the evidence placed before your committee.

It appears from the above that the American gold-mining industry was wrecked to no good purpose, while at the same time presumedly precious mining equipment was being

steadily exported to keep whole our allies' gold-mining industries. Writing in May, 1943, Gustav Peck, labor adviser to Donald M. Nelson, stated in a memorandum to William L. Batt:

"The mines are beginning to deteriorate; if they are once allowed to cave or flood to any appreciable extent, subsequent dewatering and reopening operations costing millions of dollars may prove prohibitive."
[fol. 2470] In the 3 years which have since passed, this deterioration has become a very serious factor, as many industry witnesses informed your committee.

Dr. Peck raised still another issue when he stated:

"The political and economic factors underlying the continuance of foreign gold mining are recognized, but a long-range view of the domestic situation raises the issue of whether the domestic gold-mining industry may be facing extinction while foreign gold mining anticipates an early return to prewar status."

It may be noted that a distinct thread of thought runs through the testimony to the effect that certain economic forces were delighted at the prospect of cutting off the production of domestic gold by any excuse. In support of this contention it may be noted that Milo Perkins stated:

"It is essential * * * that a reduction in gold mining should be envisaged for the postwar period."

It is well know that the War Production Board has no authority to issue orders concerning manpower. That was a function of the War Manpower Commission. Yet it is a well-understood fact that Order L-208 was issued primarily for the purpose of reghanneling manpower, and at the imperative instance of the Army, which threatened otherwise to curtail essential copper production by refusing to return drafted miners to the mines.

The testimony and exhibits before your committee show that the then general counsel of the War Production Board, Mr. John Lord O'Brien, had grave doubts as to the legality and force of an order from WPB, an agency supposedly authorized to be concerned only with materials, but actually

designed to have the effect of a manpower directive. Dr. Wilbur A. Nelson stated before your committee:

"I can say it was a grave question in the minds of certain members of the War Production Board. They definitely used their priority authority to handle the manpower problem."

To further show the confusion in thinking among the agencies, the War Production Board report states flatly:

"The truth of the matter was that those concerned with the order did not agree among themselves as to its real purpose."

As a matter of fact the Army and Navy had made up their minds and the civilian agencies had to act, willy-nilly, and then attempt to justify the action at a later date if possible to do so. The WPB report states the results succinctly:

"The anticipated protests against the order materialized immediately; the benefits did not."

The testimony before your committee certainly indicates the benefits never materialized but vast damage to an important industry did.

Actual Results Show Few Miners Channeled Into Strategic Mineral Mines

It has been pointed out that gold-mine operators furnished the War Production Board with estimates of the potential manpower pool of miners and muckers which would be made available by L-208. This estimate amounted to less than 600 as against agency estimates ranging from 5,000 to 10,000. The Secretaries of War and Navy stated more modestly on October 5, 1942:

"There are 2,000 to 3,000 hard-rock miners engaged in gold mining, now of no use in war production."

Dr. Wilbur A. Nelson testified before your committee that his figures, compiled in April of 1943, showed that 497 gold-mine workers "probably were actually placed in metal mines due to the gold-mine closing order * * * which would be about 300 miners and muckers." He also testified that most of these did not remain in their new jobs any length of time.

It must be noted that one of the primary reasons for the loss of labor at copper, lead, and zinc mines, aside from the draft, had been the high-wage inducements of the Army construction projects. The War Production Board states that "less than a week after the gold mines had been closed, largely because of the insistence of the Army, the Army ski-tow construction project at Pando, Colo., was completed. In the period October 15 to November 1, 1942, some 7,000 workers were released. This project was located only 20 miles from the Climax molybdenum mine, one of those particularly in need of employees. It has been alleged, and the records seem to substantiate the allegation, that a few of 7,000 workers released by the completion of the project returned to the mines from which they originally came. There was thus allowed to be dissipated a labor force of more than double that which conceivably could have been obtained by the closing of the gold mines." It is clear that these workmen, as well as those released from the gold [fol. 2471] mines, went into more lucrative jobs than mining offered, and that the primary objective—or at least the announced objective—that of getting labor for the production of strategic metals, was not gained.

The most liberal figures which may be inferred from testimony before your committee indicates that perhaps as many as 500 miners and muckers may have been channeled into strategic metal mines, most of which did not stay long.

There has been some argument to the effect that the release of equipment due to the closing of the gold mines may have warranted the issuance of L-208. According to figures in the hands of your committee, complied by Edward H. Rott of the WPB, who was in direct charge of the administration of the order, the estimated value of the used equipment released under L-208 was $2,147,480. Much of the equipment rendered idle by L-208 was specialized and could not be utilized elsewhere than at gold mines. The West, all through the war and today, is dotted with idle milling plants and equipment which could not be disposed of. At the same time we exported about $100,000,000 of mining, well, and pumping equipment in the year 1943 alone, of which a considerable amount was mining equipment.

The wrecking of the American gold-mining industry evidently was not warranted from the standpoint of freeing equipment for other uses, especially when it is evident from the testimony before your committee that great quantities of new machinery and tools were being exported for the maintenance of gold mining abroad.

Great, and in Some Cases Irreparable, Damage Has Been Done to the Gold-mining Industry

The report (No. 6) of the Senate Small Business Committee issued in June of 1944 states "the gold-mining industry has suffered heavy losses in physical assets, in market valuations and in income. Stockholders have been greatly distressed. The opportunity has been perfect for mines and mining securities to be picked up by large financial interests at low values. * * * Many mines cut off from current income and unable to sustain high maintenance costs have been abandoned with consequent heavy loss of investments. Some mines so abandoned may never be reopened because of the prohibitive cost of dewatering and restoring the caved and flooded workings. Some mining companies continue the losing battle to maintain their mines in working condition. * * * Most of the damage has been done and the principal victims were the smaller operators."

The testimony given at the hearings on H. R. 4393 before your committee bears out the above statements in detail. Witness after witness appeared and explained in detail the physical damage and financial loss resulting from L-208. This testimany not only was not controverted by any Government witness but was largely substantiated by the WPB report on L-208.

David Strickler, president of the Stratton Cripple Creek Mining & Development Co., stated:

"* * * it affected the little fellow worse than it did the big fellow. The big fellow * * * had some money in reserve, but the little fellow busted: that is what it did to him."

According to Julian D. Conover, secretary, American Mining Congress:

"The gold mines had already contributed a major part of their manpower to the armed services and to war industries. The order did not accomplish its purpose. It was

arbitrary and no provision was made for reimbursement."

Neil O'Donnell, of Idaho Maryland Mines, showed that the entire cash reserve of his company, amounting to $451,845, had been spent on maintenance by June of 1944, and the company had to resort to borrowing to preserve the mine. Up to January 1, 1946, $726,843 had been paid out for maintenance and repair of the mine. In spite of these expenditures, a further $694,045 is estimated to be necessary to rehabilitate the workings. This company is faced with a total loss of $1,419,000 and an empty treasury. It formerly gave employment to nearly 900 men.

The loss to small mines which were put out of business by foreclosure by creditors and forfeitures of leases and purchase contracts is impossible to estimate.

Philip R. Bradley, Jr. chairman of the mining board, State of California, while substantiating generally the situation outlined above, added, for an example, "the Central Eureka Mine in the Mother Lode District, which was one of the leading mines in the State, when L-208 shut them down; their expenditures for the maintenance of that mine averaged about $160,000 in each of the last 3 years. That company went broke.

[fol. 2472] Actual testimony by those who appeared before or filed statements with your committee showed losses of more than $2,816,000. Figures presented by the American Mining Congress gave an estimated total of $18,420,000 (including Alaska) as the probable aggregate of claims that might be payable under the proposed legislation. This does not, of course, include loss of production or profits. It represent out-of-pocket outlay to preserve mines in working order for stockholders, owners and operators.

Conclusion

In the opinion of your committee there is no better evidence substantiating the necessity for speedy passage of H.R. 4393 than the following statements from the War Production Board's report on L-208:

"With regard to the question as to whether or not the results achieved by L-208 compare favorably with the results anticipated at the time the order was issued, the answer would appear to be in the negative.

. . . . . .

"The effects of the closing of the gold mines on community and individual economy have been great. Gold mining was a major industry in many western States. State taxes on gross value of gold-mine output constituted a considerable proportion of State revenue. * * * It is impossible to estimate the loss to the individual miner and home owner in affected mining communities, but appeals and protests against the relinquishing of leases and the necessity for forfeiting equity in equipment are on file in the War Production Board."

* * * * * * * * *

It is clear, in the opinion of your committee, which opinion is supported by expert testimony and is uncontroverted by Government witnesses, that there was little or no basis for issuing Order L-208, and that it was not only an administrative error but that the War Production Board proceeded on dubious authority. The conclusion further has been reached that the order should have provided a mechanism for compensation and that, as such was not provided, the Congress should so provide, even while realizing that much of the loss and damage is irreparable. Your committee believes that the prompt repayment of such losses as are covered in the pending bill, H. R. 4393, will not only do substantial justice to an industry which was selected for a unique experiment, but will greatly aid in reestablishing an important industry, provide thousands of jobs to veterans and start a flow of taxes into county, State, and the Federal treasuries.

Senate

78th Congress, 2d Session

Report No. —

Survey of the Nation's Critical and Strategic Minerals and Metals Program

—— ——, 1944.—Ordered to be printed

Mr. Scrugham (for himself and Mr. Buck) submitted to the Special Committee to Study and Survey Problems of American Small Business the following

PRELIMINARY REPORT

Introduction

As the end of the year 1943 and the beginning of the year 1944 seemed to mark a distinct turn in the Nation's raw material program, especially as it concerned procurement of minerals and metals, a survey of the domestic mining situation at this time seems appropriate, not only to sum up what has been the experience of the domestic mining industry with the administration of the program, but also to indicate what changes may be advisable in order to keep a rational attitude throughout the approaching phase now that supply appears to be coming into a certain balance with requirements for war, and in some few instances exceeding such requirements.

I. DOMESTIC MINING AS A SMALL BUSINESS PROBLEM

As is the case with other American business, the majority of mining enterprises may be classified as small business. The many problems of small and marginal mine operators engaged in nonferrous and nonmetallic mineral production, exclusive of iron, coal, and petroleum, began to engage the attention of the Senate Small Business Committee soon after its establishment. The distress of this branch of small business enterprises became so apparent to Chairman James E. Murray and case referrals to the committee

were so numerous that early in 1943 a Subcommittee on Mining and Minerals Industry was appointed to give special attention to this important phase of domestic industry.

Senators James G. Scrugham, of Nevada, and C. Douglass Buck, of Delaware, were appointed to the subcommittee with Mr. Scrugham acting as chairman.

[fol. 2474] II. Manpower Problem in Small Mines

That there has been a serious over-all manpower shortage in the nonferrous mining industry is a well known and deplorable fact. It is also true that this shortage of labor has definitely limited the production of domestic ores and thereby would have limited the production of military matériel had imports been cut off.

Shortage of Manpower Limited Production

Early in 1943 the War Production Board stated that utilization of present manufacturing facilities was largely limited by the amounts of raw materials available and partly for this reason the Board ordered a cut-back in manufacturing facility expansion. At the same time the Facilities Bureau of the War Production Board gave labor shortages as the reason for the rejection of many worthy new projects placed before it during the past year which, if approved, could have produced and could now be producing large quantities of needed metals, if sufficient workers were available.

Reasons for Mining Manpower Shortages

The over-all manpower shortage is thought by your subcommittee to be due to two principal factors.

1. The early unrealistic attitude taken by Selective Service which resulted in the indiscriminate drafting of mine manpower, the bulk of which was taken before keyman deferment and other remedial measures were attempted. There is evidence to the effect that drafting of necessary mine, mill, and smelter employees has not yet entirely ceased.[19]

---

[19] This was written prior to the "draft all men under 26" order.

It was short-sighted policy to draft skilled mine labor, only to have it become necessary to release soldiers already partly trained for military service, but unskilled in mining in order to restaff our strategic and critical metal mines.

2. The attraction of high-wage construction and defense industries for the lower-paid mine workers. Steps taken "too little and too late" to rectify this situation slowed up the drain but not until great numbers of valuable key-men and semiskilled laborers were lost.

The Minerals Classification List (a sort of labor priority list), issued periodically by the War Production Board, is designed to funnel men already in the industry into the most important mines. As a guide for United States Employment Service it has been valuable but has not stopped labor turn-over. The War Manpower Commission has made a rather optimistic report on the operation of this plan.[20]

The War Manpower Commission spawned many plans, most of them futile, to keep workers in the mines and to attract workers to mining. Clearly only three steps were practical:

1. The return of sufficient miners from the Army, under strict control to prevent drifting from the jobs.
2. Payment of wages comparable with those in construction and defense industries.
3. Importation of mine workers.

These three points are discussed briefly in order.

[fol. 2475] Action by the Army Discussed

The Army was extremely reluctant to permit any man to return to the mining industry even though the armed forces are dependent upon metals for their very existence. Neither did the War Department insist on speedy and firm steps to stop drafting of mine, mill, and smelter workers. Action in this respect was tardy and partial. Only after the issuance of War Production Board Order L-208, which closed our gold mines, could the Army be persuaded to release or furlough miners and send them back to the

[20] See p. 23.

mines. Finally, in October 1942, 4,200 soldiers were furloughed to the nonferrous mines—about half the amount necessary to bring substantial relief. It has been stated by the Office of Manpower Requirements of the War Production Board that by March 1943 approximately 60 percent of the soldiers released to the mines still were so employed, while about 40 percent were separated from the mining industry for one reason or another. The separation figure to May 1944 is unknown. Some of the workers undoubtedly had a legitimate reason for changing jobs but there appears to have been no study made of the present disposition of these 4,200 men or any reason given why they should have been so loosely controlled.

Conditions after 1942 grew progressively worse in spite of various plans proposed by the War Manpower Commission, production was further threatened, development work fell off, and future production estimates looked very black. The Army was again persuaded to release more men after months of negotiation. Ten thousand workers would have fully staffed the nonferrous mining industry; 6,500 would have staffed the principal producers. But only 4,700 men were promised and this was finally cut to 4,500 men, the releases beginning in August 1943, and being made to selected groups of molybdenum,[21] copper, and zinc mines.

Wage Differentials a Considerable Factor

No appreciable progress has been made in paying wages in the mining industry comparable with those paid elsewhere. In fact, in order to do so, prices for minerals and metals would have to be substantially increased.

Witnesses testified before the subcommittee that in their opinion there was no reason why cost-plus contracts should not be given to mines as well as to manufacturers of Army and Navy matériel. Saddling the mining industry with the cost-plus evil might make payment of high wages possible, but the cure would be worse than the disease. Already a tremendous portion of our manpower is thought to be tied up wastefuly by industries with cost-plus-fixed-fee

---

[21] Molybdenum was shortly thereafter found to be "running out of our ears."

and similar types of contracts. Rewriting these contracts on a businesslike basis should release enormous amounts of labor.

The suggestion has been made that wages be raised to an attractive figure and paid by means of a special production premium earmarked for wages only, as mining companies obviously could not meet further wage demands, even should the War Labor Board be disposed to grant them.[22] Clearly, on any other basis, increases in wages [fol. 2476] should be accompanied by a simultaneous increase in prices or present premiums, as already has been pointed out by a member of the War Labor Board. It does not appear likely that any material relief can be expected from this quarter.

Mexican Labor Could Have Been Used

Importation of mine labor from Mexico for use in the southwestern areas long has been proposed. Agricultural and railroad labor has been imported, but not one miner, after 18 months of negotiation.

There is little reason to doubt that Mexican labor has been anxious to flow to mines in the United States. This labor would have had an important influence on production in the southwestern mines where climatic conditions are suitable; the furloughed soldiers could have been used in the North. It is also believed that this labor could have been selected so as not to interfere with Mexican mining enterprises. However, every possible objection has been interposed by the Mexican Government, and each time negotiations have reached a fruitful stage some new objection is raised to prevent closing a deal. As late as July 1943 it was expected by the War Manpower Commission that 2,000 Mexicans would be made available; but the Mexican Government, which consistently demanded equivalent standards of living for its nationals with those of United States workers, is said to have finally decided that the Mexicans might be spoiled by our standards of

---

[22] This method of meeting wage increases would be simple and would insure the whole amount earmarked being credited to wages.

living. It has been suggested that labor organizations may have played a silent part in preventing the importation of Mexican labor.[22a]

War Production Board Minerals Classification List

A priority listing of mines in order of importance of metals produced and productivity per man in specific operations is the final outcome of plans to cause a flow of workers to key mines and to guide the United States Employment Service in steering new workers toward jobs in mines considered most important to the war effort.

This plan, worked up by the War Production Board Minerals Co-ordinating Division and the War Production Board Office of Manpower Requirements, provides the War Manpower Commission with a mineral priority listing, revised at monthly intervals, wherein mines are placed in a mineral classification list, in four classes as follows:

Class I operations,[23] listed within metals or minerals, are those operations which are considered at the time of issuance of each classification list to be the most critical to the war economy and are the operations upon which first efforts in recruitment should be concentrated.

Class II operations, listed within metals or minerals, are essential operations to which referrals may be made of applicants for employment who do not accept employment in class I operations whether for reasons of working conditions, location of domicile, climatic conditions, or other reasons. Certificates of availability are to be denied to employees of these operations, except in unusual cases wherein the transfer desired is to a class I operation.

Class III operations, not listed, are all operations not classified as 1, 2, or 4. Although no direct recruitment of employees from these operations is to be allowed, certificates of availability are to be granted to all voluntary withdrawals, provided the applicant is willing to accept referral to class 1 or class 2 establishments.

[22a] Labor from Puerto Rico is now being considered.

[23] Operation, as used herein, includes mining, milling, smelting and refining, or other treatment, or ores, concentrates, minerals of metals.

[fol. 2477] Class IV operations, listed as to operations, are operations whose contribution to the war effort is minor in proportion to the manpower and material utilized. Recruitment campaigns among workers at operations in this class is encouraged, when such recruitment is for operations in class 1 and class 2.

In general, it is desired that no certificates of availability be granted to workers in any mines, mills, smelters, or refineries (class 1, 2, 3, or 4) except for work at other mines, mills, smelters, or refineries, and except for such transfers as are mandatory under the rulings of the stabilization order. It is urged that every measure be taken to tighten the issuance of certificates of availability to workers who plan to leave the mining industry.

The intent of the classification is to focus attention on operations of first importance, but there is no intention to deny recruitment of workers from without the industry who desire employment at class 3 mines and are unwilling to accept employment in class 1 or class 2 mines for reasons of location of home, special qualifications, or other reasons.

Production from mines in class 2 is important to the war effort; therefore, there should be no direct solicitation. Transfer from such mines should be solely on a voluntary basis.

Mines in class 1, 2, and 4 are mentioned by their names and are chosen in order of the critical necessity of each mineral group, and then in order of the productivity per man of each mine within the group. The criticism has been offered that the listing of mines by productivity tables tends to encourage high grading in an attempt to remain in or to get into the higher brackets, thus discouraging necessary development work. Productivity tables must be worked out with a high degree of knowledge of mining problems and hair splitting should be discouraged. United States Employment Service offices are supplied with these mineral classification lists to guide them in issuing certificates of separation and in placing new workers. The plan has obvious flaws but it appears to be the most sensible yet proposed if not carried to extremes.

However, the priority system tends to drain men steadily from mines in class 3, which includes practically all small mines. There is a report by the War Manpower Commis-

sion on the effectiveness of the plan, the text of which follows:

Evaluation of the Effectiveness of the War Production Board's Mineral Classification List

I. Purpose and Description

The adequate production of minerals and metals is basic to the war effort and it is of primary concern that manpower needs for these activities be satisfied. However, the requirements of war production, in terms of kinds and quantity of minerals and metals needed, vary with changes in the scheduled production of war materials, availability of substitutes, and sources of supply. Therefore, although the production of all metals and minerals is important, the continued and increased production of some is more critically needed at times than that of others.

To enable the War Manpower Commission to allocate the limited available supply of mine and smelter labor to the best over-all advantage, the War Production Board has issued monthly, since June 1943, a mineral classification list listing all producers of metals and minerals (except coal) in the order of their importance to the war effort. The primary purpose of the mineral classification list is to focus first attention on operations of first importance in order that manpower will be supplied where it is most needed and where it will be most productive. The War Manpower Commission has used the list as a guide in the placement of mine and smelter workers, giving referral and recruitment priority within the industry to those establishments deemed by the War Production Board to be most [fol. 2478] productive of the metals and minerals most critically needed from time to time.

The mineral classification list is divided into four classes as follows:

Class 1 establishments are those which are most critical to the war economy and on which the first efforts in recruitment are concentrated. Within this list, establishments are listed in order of their importance to the war effort.

Class 2 establishments are also essential but are of somewhat less importance than the class 1 firms. Within this

list, establishments are listed in order of their importance to the war effort.

Class 3 establishments consist of all establishments not listed in classes 1, 2 or 4. These firms are not as essential as those in class 1 or class 2, but since they are making a certain contribution to the war effort, workers are not actively recruited away from them. However, certificates of separation are granted to all voluntary withdrawals when transfers to mines in class 1 or 2 are requested.

Class 4 establishments are those whose contribution to the war effort is minor in proportion to the manpower and material utilized. Recruitment campaigns among workers at mines in this class are encouraged. Such recruitment, however, must be for firms in class 1 or class 2 and not for industries other than mineral activities.

Each month since the first issue of the list in June, the War Production Board has changed the relative positions of critical minerals on the list as the demands of war production dictated. As soon as an adequate supply of a mineral was assured, it was moved to a lower position on the list, and conversely, when the supply-demand situation for any mineral deteriorated, its position was raised so that the War Manpower Commission would give it a higher priority in the referral of workers. In addition, although the relative positions of some minerals remained unchanged, various individual establishments within each mineral group were shifted either upward or downward on the list. For example, 29 copper mines were in class 1 in June, 31 in July, and 25 in August. During these months, 2 copper mines were elevated to class 1 while 6 others were shifted to class 2. Similarly, shifts in the relative positions of individual establishments producing tungsten and aluminum were effected during the period while the bulk of such establishments remained in class 1. For example, 3 tungsten operations were shifted downward to class 2, while 8 aluminum plants were promoted from class 2 to class 1. All such changes were made on the basis of the relative productivity of individual establishments producing strategic metals.

While the original function of the mineral-classification list was simply to serve as a guide in the selective referral of available labor, it has, in addition, been used as an ad-

ministrative tool in connection with two other programs designed to alleviate the manpower problems of metal mines and smelters—(1) the development of a preferential Selective Service policy and (2) the selective placement of soldiers released from the Army for work in the mines. These programs are discussed below.

II. Effect of Employment, Labor Needs, and Turn-over

The consistent downward shifting in the relative position of certain metals on the list is in itself evidence of the effectiveness of the priority-referral program based on the list. For example, the War Production Board assigned the most productive molybdenum, copper, and zinc mines, the top positions in the June issue of the Mineral Classification List because, in May 1943, the shortage of manpower for these critical metals constituted the most serious threat to the war effort. By the end of September, War Manpower Commission efforts to fill the labor needs of establishments on the list from the top down proved so successful that it was possible for the War Production Board to place molybdenum mines in class 2 and copper and zinc mines at the bottom of class 1 in the October issue of the list. Similarly, other metals and minerals, such as aluminum and bauxite, placed in key top positions in early issues of the list because of falling production due to manpower shortages, are currently occupying lower positions because the system of priority referral of workers has helped to raise employment to a point where these metals are in a less critical production position. At the same time, it has been possible for the War Production Board to raise the positions of other minerals—such as mica, arsenic, and talc—which are emerging as critical war products so that mines producing them may receive first attention from the War Manpower Commission in the referral of workers. As the manpower needs of establishments producing these products are met, they will in turn be shifted to lower positions on future lists.

[fol. 2479] June 1, 1943, employment for establishments in classes 1 and 2 of the Mineral Classification List totaled 124,000 while employment early in the fall totaled nearly 126,350, a net increase of 2,350 workers. At the same time that employment in class 1 and class 2 establishments rose,

it remained unchanged in class 3 operations. A sample survey of nonferrous mines in classes 1, 2, and 3, all located in the same general locality in Colorado, California, Montana, Idaho, Missouri, Utah, and Arizona, indicates that while employment increased by nearly 3 per cent in class 1 and class 2 establishments, it remained relatively stable in class 3 operations.

Simultaneously with the increase in employment, labor needs declined. In July, all class 1 and class 2 establishments (including both mines and smelters) reported a current need for approximately 15,110 workers, while by fall only 13,660 were required, a net decline of 1,450. This figure should decline still further when the full effect of the placement of the 4,500 released soldiers in molybdenum, copper, and zinc mines has been felt.

Hires in class 1 and class 2 firms exceeded separations by nearly 840 workers in June and latest reports indicate that the excess has increased to 1,960. Although the underlying function of the Mineral Classification List is not to reduce turn-over but rather to act as a guide in the referral of available manpower, those metals occupying top positions on the list actually showed a drop both in total separations and in separation rates. For example, classes 1 and 2 copper, zinc, and molybdenum mines hired 3,340 workers in June and, at the same time, had 3,990 separations, a net loss of 650 workers. During August, hires exceeded separations for the first time since February 1943—4,520 workers were hired while 3,585 separated. The monthly separation rate declined from 9.1 to 8.1 percent.

United States Employment Service placements in class 1 and class 2 establishments rose from 4,430 in May to 5,530 during August, an increase of 1,100. A table indicating the trend of United States Employment Service placements from May to August follows:

Number of U. S. Employment Service placements—Change from previous period

May	4,432	
June	4,806	+374
July	4,547	—269
August	5,528	+981

At the same time that United States Employment Service placements in class 1 and class 2 firms rose, they declined in class 3 establishments. A sample survey of class 3 establishments located in the vicinity of class 1 and class 2 firms indicates that placements at such establishments dropped from nearly 280 in June to 95 in September, a decline of 35 percent.

III. Selective Service Program

Prior to the issuance of the first Mineral Classification List, selective service national headquarters had developed a policy whereby all production and maintenance operations in nonferrous metals activities located in the 12 Western States were designated as "critical occupations" and the workers given generous selective service consideration for occupational deferment. With the issuance of the first Mineral Classification List in June, selective service headquarters issued State Director Advice No. 217 which specifies the names and locations of all nonferrous metal operations in the 12 Western States listed in class 1 and class 2 and provides that the most serious considerations for occupational deferment be given workers employed at these establishments.

Since June, State Director Advice No. 217 has been issued on a monthly basis and, in addition to listing for special consideration class 1 and class 2 establishments in the 12 Western States, it has been expanded to include other class 1 and class 2 firms outside the 12 Western States whose labor needs indicate that preferential selective-service treatment should be accorded them.

The result of operations under this bulletin has been a reduction in separations due to military induction in class 1 and class 2 firms covered by the bulletin from about 490 in May to 185 in August. Inductions which are occurring currently arise primarily out of (1) the failure of management to request deferment; (2) the desire of the worker to join the armed services; or (3) the youthfulness or inexperience of the registrant.

[fol. 2480] IV. Program for Release of Soldiers

During the spring and summer of 1943 the manpower situation in the nonferrous metal mines became more critical than at any time in the past. Production of strategic non-

ferrous metals lagged seriously behind requirements, due solely to a shortage of manpower, at a time when it should have been rising rapidly. To stem the downward employment trend, the War Manpower Commission developed a comprehensive program in cooperation with other interested Government agencies. Part of the program was to effect the release to the Enlisted Reserve, and the placement by the United States Employment Service of soldiers with previous mining experience for work in nonferrous metal mines.

The mineral-classification list was used as a guide in determining which establishments were entitled to receive released soldiers. Thus, the 4,500 soldiers released from the Army between mid-August and September 9, were placed in the copper, zinc, and molybdenum mines which were in class 1 or class 2 of the August 1 mineral-classification list. In accordance with the basic purpose of the list, soldiers were referred only to the most productive operations producing the most critically needed metals.

War Manpower Commission, Reports and Analysis Service, Industry Analysis Division.

November 27, 1943.

[fol. 2481] Such improvements to the tax laws as the amendment by Senator Johnson of Colorado to H. R. 3687, Seventy-eighth Congress, first session, "Gross income from the property for purposes of percentage depletion," are very helpful.

Representatives of the War Production Board have appeared before congressional committees to insist that strategic and critical mineral production should not be hampered by improper taxation.*

A more sympathetic attitude by the Treasury toward small mining ventures obviously is necessary if such ventures are to be encouraged.

XIII. The Gold Mine Closing Order L-208

War Production Board Order L-208 is believed by the mining industry to have failed its main purpose. It has

---

* See appendix, exhibit 38, p. 134.

been subject to bitter criticism. Although this order was designed to force gold miners to seek employment in mines producing strategic and critical minerals, testimony indicates that a relatively small number of workers drifted in the desired direction. By the time the order was issued, most of the young, able-bodied employees of the gold mines had been recruited for war industries or the Army. Priority regulations already prevented the gold mines from consuming critical materials. Much of the equipment was not suitable for other purposes and a great deal of it lies idle today. Economic conditions would probably have forced the closing of most gold mines in the regular course of events without the tremendous dislocations which ensued after the promulgation of the closing order.

It is interesting to note that L-208 is the only order issued during this war which literally wiped out an industry by decree; an industry which by its very nature could not convert its facilities for war purposes. In the meantime foreign gold production has been fostered and equipment exported to aid in maintaining it.

The text of the order as amended will be found in the appendix as exhibit 31 on page 121.

The gold-mining industry has suffered heavy losses in physical assets, in market valuations, and in income. Stockholders have been greatly distressed. The opportunity has been perfect for mines and mining securities to be picked up by large financial interests at low values.

Only the larger, more productive mines with adequate financial reserves are expected to survive the emergency, although the postwar taxes, income, and jobs which would be created by all will be badly needed.

Many mines cut off from current income and unable to sustain high maintenance costs have been abandoned with consequent heavy loss of investments. Some mines so abandoned may never be reopened because of the prohibitive cost of dewatering and restoring the caved and flooded workings. Some mining companies continue the losing battle to maintain their mines in working condition. In certain cases the War Production Board has relaxed the order sufficiently to enable mines to be maintained in working condition.

A discussion of the War Production Board's attitude toward the gold mine closing order, L-208, is found in the published hearings of the Senate Small Business Committee, part 18, page 2446. Donald Nelson, Chairman of the War Production Board, remarked April 1, 1943, that [fol. 2482] he was making a full examination of the effect of the order to determine the advisability of relaxing it. On June 23, 1943, Mr. Nelson issued the following statement:

After a careful study of the effects of limitation order L-208 closing non-essential gold mines, the War Production Board today decided to continue the order in effect, and issued clarification of exemption appeals.

Evidence submitted to War Production Board revealed that the closing order has resulted in an increase in available labor supplies and stepped up production of other critical minerals such as copper, zinc, and lead.

Since the labor situation in the mining industry (especially copper) has been extremely critical for some time, it is imperative that every available relief be sought and every possible remedy be applied at this time in order to meet the essential needs of the armed forces, War Production Board has decided.

Investigation has revealed that, to date, at least 1,200 of the displaced gold miners have been moved into nonferrous metal mines, 500 have been placed in other essential industries and 800 referred to other jobs with placement not yet reported.

In addition to this valuable labor pool acquired by the closing order, much critical material has become available for essential uses. This material has been estimated as valued at some $75,000,000 and is moving into essential production at the rate of about $100,000 a week. Also, large quantities of critical materials heretofore consumed in gold-mine operations are now being saved. This saving has been estimated as high as $15,000,000 annually.

The War Production Board in its study of the gold-mine situation took cognizance of many proposals advanced toward a solution of the problems involved. A continuance

of the order was decided upon, with the right to appeal for exemption only if—

(a) The critical material output of the individual mine makes an equal or larger contribution to the war effort than the materials and labor absorbed in operations; and

(b) The necessary labor can be obtained without drawing upon any essential war activities, and certification to this effect can be obtained from the War Manpower Commission (WPB-3915).

And later, this correction:

The War Production Board today issued a correction to release War Production Board—3915, released Wednesday, June 23, 1943, concerning the basis for appeals from Limitation Order L-208, closing nonessential gold mines.

Appeals will be allowed only if—

(a) The critical material output of the individual mine makes an equal or larger contribution to the war effort than the materials, equipment, and labor used in operating the mine, considering the relative urgencies of the critical materials involved; or

(b) The necessary labor can be obtained without drawing upon any essential war activities, and certification to this effect can be obtained from the War Manpower Commission.

This was the final answer to the various attempts to have the War Production Board rectify what was, at least in part, a mistake.

Numerous witnesses at the field hearings expressed themselves as being in favor of Senator Murray's mine-relief bill, S. 344, and urged its speeding passage so as to avert further destruction of the industry. This bill is not designed to disturb in any way the limitation order L-208, but would authorize a moratorium on obligations and provide, through the Reconstruction Finance Corporation, funds for maintenance, payment of taxes, etc. Although the bill was introduced for the second time January 14, 1943 (it was first introduced late in 1942, but was lost when the first session of the Seventy-eighth Congress adjourned), and had the hearty support of the mining industry, it has not yet been reported upon by a special subcommittee of the

Senate Committee on Mines and Mining which has been considering it. In the meantime most of the damage has been done and the principal victims were the smaller operators.

[fol. 2483] California provides a good example of what has happened to gold producers. The United States Bureau of Mines reports "California gold production in 1943 fell below that for any year since 1848, the year James W. Marshall made his historic discovery in the gravels of the American River near Coloma. Preliminary figures show California gold production in 1943 as 148,000 fine ounces, valued at $5,180,000, compared with 847,997 ounces, valued at $29,679,895, produced in 1942. The decrease in value—$24,499,895—is greater than any ever experienced before in California."

The Bureau also states "California silver production in 1943 was 610,002 fine ounces, valued at $433,779, compared with 1,450,440 ounces, valued at $1,031,424, in 1942. The 1943 output marked the low point in quantity and value since 1933." A good deal of the California silver output was a byproduct of gold mining.

Similar drops in gold and silver production are found in other mining States except where these metals are produced principally as byproducts of base-metal mining.

Effect of L-208 on Silver Mining

As gold and silver so frequently are intimately mixed in the same ores, it is obvious that the gold closing order also affected silver production. It has been estimated that silver to the extent of more than 20,000,000 ounces has been lost as a result of general economic disturbances due to the war, including the restrictions placed by order L-208 on the mining industry. As silver is a metal of growing industrial importance, the drop in domestic production had to be balanced by increased importation and release of Treasury silver.

The importance of silver from an industrial standpoint aside from its fundamental value as a monetary metal is shown by the fact that around 25 percent of the current world production is consumed in the manufacture of engine bearings, which are of primary importance to the war effort. The industrial uses of silver are growing by leaps and

bounds and these uses will project into the post-war period in substantial competition with coinage uses.

The value of gold and silver mines to our national economy must not be overlooked and the necessary steps should be taken to preserve these mines in an operative condition.

Effect of L-208 on Fluxing Ores

A number of new operators caught by L-208 wished to mine gold or silver bearing siliceous fluxing ores badly needed by copper smelters and some were denied priorities and Government financing.

Clifford F. Smith, ore buyer for the Miami smelter, International Smelting & Refining Co., testified at Phoenix, Ariz.:[2]

Our problem is to purchase all of the copper ores of all these small mine operators, in order to continue this production without interruption or shut-down. The fluxing of these receipts becomes very important. These receipts vary in analysis from time to time so the required flux must vary also to keep the balance so no one ore can remain a flux. That causes us to mix our purchase of ores at various proportions, figuratively speaking, to a balanced diet.

We find that the copper ores purchased usually are low in silica content and high in alumina content, so we must find ore that is high in silica and low in alumina to mix with these copper ores to make the proper flux. Our experi- [fol. 2484] ence shows that these highly siliceous ores usually carry metal values in silver and gold and are very low in copper. Any curtailment of this ore with its silver and gold content would slow down our production at the smelter and increase our copper losses in our dross. Improper fluxing at this smelter would increase our copper loss to about 70,000 pounds of copper monthly.

Similar conditions were found at other smelters and certain fluxing problems were accentuated by increases in the amounts of concentrates to be smelted.

---

[2] Pt. 26, hearings, Senate Small Business Committee, p. 3372.

Mr. Smith considered the War Production Board's proposal to substitute copper-bearing siliceous ores for silver and gold siliceous ores as not the proper solution.

The phrasing of L-208, its definition of nonessential mines, and its exclusion from the order of mines with P-56 serial numbers left the way open for the War Production Board to permit the mining and shipping of precious-metal-bearing siliceous ore for flux. However, the Primary Production Branch, Copper Division, War Production Board, with the help of the Special Additional Premium for Copper, embarked upon a campaign to substitute siliceous ores with over 1½ percent of copper wherever possible, to prevent loss of smelter capacity. This plan has worked out with reasonable satisfaction, but probably at a financial loss to the smelters.

A somewhat unexpected result was to reduce critical arsenic production which is gained as a byproduct of arsenical pyritic gold ores.

Summing up the testimony, it is the opinion of the subcommittee that L-208 has been anything but an unqualified success and that the gold-mining industry should have been left to work out its own adjustments under priority restrictions, rather than summarily forced to close. However, the permission to continue shipping up to 100 tons of commercial ore per month benefited the very small operator.

XIV. Government Forms and Red Tape

Frequent complaints were heard by your subcommittee that the reports, forms, questionnaires, and inquiries received from Government departments are too voluminous and elaborate. The information requested is often impossible for the smaller operator to supply accurately, if at all, and much valuable time is consumed in compilation which could be better applied to producing ore.

A typical statement is that of Fred I. Elliot, of Phoenix, Ariz.,[3] referring to the difficulties of small operators:

They must get along with a makeshift arrangement, practically no office equipment or accommodations, since their time is of greater value applied elsewhere. Also the

[3] Pt. 26, hearings, Senate Small Business Committee, p. 3346.

data required of them has no permanent value in the compilation of records or in arriving at weighted averages.

The small operator might be defined as one who cannot afford to retain an attorney, employ a full-time bookkeeper, periodically hire an accountant, and who must unload all these duties on someone who has many other duties such as purchases of supplies, arranging for truck hauls, attention to priorities and quotas, and correspondence. Unless there is a substantial profit involved, and that is too rare to be considered here, the small operator can seldom afford the above services until he has around 25 on the pay roll.

The statement on this same subject by S. H. Williston, president of the Oregon Mining Association,[4] also is worthy of notice, as it expresses a general feeling. The hearings of the subcommittee abound with comments indicating the [fol. 2485] discomforts suffered by the small mine operator because of the multiplicity of Government regulations which he must satisfy.

Small mines are numbered by thousands. At the same time, while these mines are of great importance to the war effort, they do not employ individually great numbers of men nor produce the bulk of our mineral requirements. Forms sent to their operators should be of the simplest possible nature. Much of the data collected from these small operators is actually worthless. Procuring it is generally a waste of their time and that of the government officials and clerks who have to handle the forms. The establishment of cut-off points, chosen according to the subject involved, would be of great help. For instance, reporting forms seldom need to be sent to mines employing 25 men or less. In some cases the dollar value or volume of production could be used as a cut-off indicator. Where certain classes of information are desired a system of sampling can be used wherein questionnaires are sent only to a predetermined percentage of small operators and the results calculated for the group.

There has been some improvement recently in handling questionnaires along this line but much remains to be accomplished.

---

[4] Part 28, hearings, Senate Small Business Committee, p. 3651.

The industry committees set up by the Bureau of the Budget to advise it in carrying out the purposes of the Murray Federal Reports Act have been very helpful.

XV. Résumé of Conclusions

There follows a synopsis of your subcommittee's more pertinent conclusions, most of which already have been more fully stated in the various chapters of this report.

Manpower Problems in Small Mines

It must be recognized that manpower problems relating to small and large mine operations are not identical; that there are sources of labor available to small mines which are not available to large mining operations. Every effort should be made to procure the full benefit of maximum marginal small-mine production by utilization of the small-mine labor pools, arbitrary mine-to-mine shifts seldom are feasible.

Premium Price Plan for Copper, Lead, and Zinc

1. The administration of the premium price plan long ago should have been streamlined, policies clarified, and the case-handling time appreciably shortened. Constant attention to this problem still is imperative.

2. (*a*) The life of B, C, and special additional copper premiums should be announced as coextensive with A premiums, subject to necessary individual adjustments, or

(*b*) It should be announced that no cancelations of any premiums will be made prior to July 31, 1945, where such cancelations will close a mine in which there is an unrecovered wartime investment.

3. If it should be found necessary to extend the life of the entire plan to July 31, 1946, even though applications covering new operations are no longer authorized. This should be done without hesitation.

[fol. 2486] Metals Reserve Company Purchasing and Stock-piling

1. Intent to cancel Metals Reserve contracts should be announced at least 90 days in advance of the issuance of

the formal cancelation notice and every possible latitude should be allowed the producer by arranging liberal settlements where wartime investments still are unrecovered.

2. Necessary cancelations should be made as gradually as possible so as not to demoralize the industry. Jesse Jones concurred in this principle when he said:

> We have had requests from the War Production Board to stop some few contracts, stop production of this, that, and the other material, but we have done very little at it, and we do not intend summarily to shut a man off and let him go hungry.

3. The small-lot-purchase stock-pile program should be continued intact for the duration of the war.

4. Purchase contracts should not be terminated by taking advantage of technical flaws or breaches beyond the control of the contractor simply because the need for the particular mineral or metal no longer is as crucial as was the case at the time the contracts were entered into. Said Mr. Jones before the Senate Military Affairs Committee, "A little extra stock piling is not awfully serious."

Government Financing of Mining Projects

The Reconstruction Finance Corporation should continue independently the long-range program authorized by the Congress and should not be unduly influenced by the uncertainty and fluctuations of the War Production Board program.

Mine Access Roads Program

1. This program should be continued in force for the balance of the war.

2. Additional funds should be provided to the Public Roads Administration and earmarked for raw material access roads.

3. Immediate attention should be given to accomplishing further simplification of procedure and to planning the routing of applications so as to cut down processing time.

4. Roads should be constructed promptly and as cheaply as may be feasible for the service for which they are required.

Bureau of Mines Exploration and Development Programs

1. There should be less delay in approving programs and starting the work.

2. Information revealed by exploration and testing programs should be made available to authorized persons as quickly as possible.

Office of Price Administration Rationing and Mine Operation

1. So as to avoid interfering with production, rationing programs should entail as little delay and distress as possible.

2. The food-rationing program, especially meat rationing, should be realistic and should be tailored to suit workers in heavy industry and to the peculiarities of the mining business.

[fol. 2487]

Effect of Securities and Exchange Commission Laws and Regulations

1. Forms and procedures should be simplified to the greatest possible degree.

2. The rules of registration should not penalize the applicant by making him use a style of prospectus which may make the security issue appear to be unattractive.

3. Venture capital should be encouraged to invest when the enterprise frankly admits its promotional nature and states the facts accurately in its prospectus.

Transportation of Ores and Freight Rates

A study should be made of our system of freight rates for transportation of ores and concentrates with particular emphasis on the possible adverse effect upon the mining industry of freight rates as now graduated according to value of the product.

Mine Taxation

1. Taxation should be planned so that the operator can receive an adequate return on his investment commensurate with risk, depreciation, and depletion. Full consideration should be given to the short life of most small mines.

2. Venture capital should be encouraged.

3. Venture capital losses should be deductible to a greater degree than is now possible.

The Gold Mine Closing Order, L-208

The order should be continually under review with view to rescinding it the moment the labor and material situation so permit.

Government Forms and Red Tape

Every effort should be made to keep forms and questionnaires at a minimum, both in quantity and complexity. This is particularly true in the case of questionnaires to be sent to small mines. Spot sampling and arbitrary cut-off points should be resorted to at every opportunity.

General Conclusions

It is recommended that domestic mineral and metal production be given preferential treatment by the Government over imports. As far as is possible and compatible with the best conduct of the war, domestic metals and minerals should be utilized first. When the rate of consumption plus necessary additions to stock piles falls below the rate of imports plus domestic production; cut-backs should first be made in imports and cut-backs in domestic production should be ordered only when the rate of consumption falls below the rate of domestic production. Full consideration should be given to the advisability of maintaining domestic industry even when the cost of the domestic raw material appears to be somewhat higher than imported raw material. Taxes, consumption of materials, and jobs are the [fol. 2488] outcome of expenditures within the United States. Raw materials should be imported by the Government only when there is a real shortage of domestic products and when such importation is necessary for the conduct of the war.

It is imperative that the Congress as soon as is possible pass an adequate strategic and critical minerals and metals stock-piling act which will assume future national security and protect industry against the dumping of surpluses. It is recommended that S. 1582 which is designed to accomplish these ends, be passed immediately.

[fol. 2489] PLAINTIFF'S EXHIBIT 178

Calendar No. 1536

82d Congress, 2d Session

Report No. 1605

Gold Miners

May 28, 1952.—Order to be printed

Mr. McCarran, from the Committee on the Judiciary, submitted the following

REPORT

[To accompany S. 3195]

The Committee on the Judiciary, to which was referred the bill (S. 3195) granting jurisdiction to the Court of Claims to hear, determine, and render judgment upon certain claims, having considered the same, reports favorably thereon, without amendment, and recommends that the bill do pass.

Purpose

The purpose of the proposed legislation is to authorize the United States Court of Claims to have jurisdiction to hear, determine, and render judgment, notwithstanding any statute of limitations, laches, or lapse of time on the claim of any owner or operator of a gold mine or gold placer operation for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof.

Statement

On October 8, 1942, the War Production Board issued order L-208 which summarily closed the gold mines in this country. The order was rescinded on July 1, 1945, having been in effect approximately 2½ years.

The records of the War Production Board show that the gold mining industry was selected as a guinea pig to test

the policy of shutting down so-called nonessential industries during the war. The issuance of the order was based upon dubious if not nonexistent authority. The order failed [fol. 2490] completely to make any substantial contribution to the war effort and inflicted ruinous costs on the gold mining industry. No similar order was issued against any other industry in the Nation during the war years.

In the United States Court of Claims, War Production Board Limitation Order L-208 was the subject of the case of *Idaho Maryland Mines Corporation* v. *The United States*, and the court issued a decision on May 6, 1952, denying the defendant's motion to dismiss the amended petition of the plaintiff. The defendant's position was based upon a previous decision rendered in *Oro Fina Consolidated Mines, Inc.* v. *United States* (118 C. Cls. 18), but the United States Court of Claims in the instant case held in part as follows:

As stated above, on a motion to dismiss for failure to state a cause of action, all facts well pleaded must be deemed to be admitted for the purpose of such motion, although this does not constitute an admission of such facts upon which judgment can be rendered without adequate proof. A careful consideration of the facts alleged, and a comparison of those facts with the facts considered by the courts in analogous cases, persuades us that if plaintiff is able, by competent proof, to establish the existence of such facts, the result may follow that despite its ostensible purpose of protecting the public in time of war, the action of the War Production Board in issuing Limitation Order L-208 was not in fact reasonably calculated to accomplish such purpose and that no state of facts existed sufficient to justify the Board's order as an exercise of its war power, and that the action was in fact arbitrary. Under such circumstances as outlined in the petition, we believe the plaintiff is entitled to a trial on the merits to prove its claim that the action of the War Production Board was far more than a regulation and amounted to a taking of plaintiff's right to mine and sell gold. This is a valuable property right for which plaintiff would be entitled to just compensation under the Fifth Amendment to the Constitution, if there was a taking. *United States* v. *Dickinson*, (331 U.S. 745). The establishment at a trial on the merits of proof of facts by plaintiff to rebut the presumption that the particular exertion of the Government's war powers represented by L-208 was jus-

tified, is a most difficult burden, and it may well be that even then, as in such cases as *Hamilton* v. *Kentucky Distilleries Co.* (251 U. S. 146), *Perrin* v. *United States* (232 U. S. 478), and *United States* v. *Doremus* (249 U. S. 86), defendant will come forward with sufficient facts to justify Order L-208 as a proper regulation. At this stage of the proceeding, however, plaintiff has alleged facts sufficient to constitute a cause of action within the jurisdiction of this court and defendant's motion to dismiss the amended petition must be overruled.

A reading of the above clearly indicates that the court is of the opinion that sufficient facts have been alleged to justify a trial on the merits in the claim of the Idaho Maryland Mines Corp., which insofar as this legislation is concerned is one of the type of instances which require adjudication by the court.

At the present time many other claimants who may have as good a right for an adjudication of their claims as does the Idaho Maryland Mines Corp. may not prosecute such claims due to the running of the statute of limitations. Many of the claimants after the ruling in the Oro Fina case undoubtedly felt that to file in the Court of Claims would be useless and, therefore, allowed the statute to run against them. It must be noted that the great majority of the mine operators affected by the order were the small operators who were mining in many out-of-way places and did not have the facilities to employ legal staffs to keep them informed of their possible rights. They accepted the order under duress and then had no facilities with which to overcome the great prestige of Government.

In order that the background of this situation can be fully understood and appreciated, it is deemed proper to [fol. 2491] set forth in part the report on H. R. 4393 of the Seventy-ninth Congress, which deals with the promulgation and effects of Order L-208.

On October 8, 1942, the War Production Board issued Order L-208, which summarily closed the gold mines in this country. The order was rescinded on July 1, 1945, having been in effect approximately 2½ years. The evidence in support of the bill shows that the gold-mining industry was selected as a guinea pig for the purpose of testing the feasibility of closing what was called nonessential indus-

tries. No similar order was issued against any other segment of American industry. The order completely failed to accomplish its purpose, or any purpose whatever, and inflicted irreparable and unjustified loss on the gold-mining industry. Your committee believes that this order inflicted a sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve.

Four main points were developed at the hearings through the testimony of industry witnesses, Government witnesses, and the introduction of a detailed report on the history and operation of War Production Board Order L-208, known as the gold-mine-closing order. In the opinion of your committee the evidence presented, both oral and documentary, overwhelmingly supports the following contentions:

1. WPB Order L-208 was unique in that it was the only Government order closing a productive industry.
2. Issuance of the order was an administrative error, based upon a statistical misconception, and may, furthermore, have been illegal.
3. The net results of the order in accomplishing its avowed primary purpose of channeling manpower to "essential" mines were negligible.
4. The economic loss to the gold-mining industry has been great and in some cases the damage may be irreparable.

All the above points are discussed at length in the aforementioned WPB historical report on L-208, entitled "The Closing of the Gold Mines (August 1941 to March 1944)," June 1, 1944—Report No. 9, Policy Analysis and Records Branch, Office of the Executtive Secretary, War Production Board, printed in the appendix of the hearings on H. R. 4393, and were generally corroborated by Dr. Wilbur A. Nelson, who administered L-208 for the War Production Board.

This report was written for the private use of WPB Chairman Donald M. Nelson and, until recently, was classified as "confidential." It is interesting to note that the testimony of both industry and Government witnesses merely tended to corroborate the statements and conclusions from this WPB report which are quoted below in support of your committee's recommendations. Further corroboration may be found in Senate Subcommittee Print No. 6

of the Senate Small Business Committee, entitled "Survey of the Nation's Critical and Strategic Minerals and Metals Program," issued in June of 1944, in which the effect of L-208 is discussed in some detail.

An elaboration upon the four points outlined above follows.

The Uniqueness of the Order

The star witness at the hearings, Dr. Wilbur A. Nelson, who was intimately connected with all phases of the issuance and administration of L-208 during his term with the War Production Board, participated in the following exchange:

"Mr. Engle. The fact that this industry was the test case—the guinea pig—for such policy, and that similar non-essential industries were not shut down, throws emphasis on the controversy as to the method of closing the gold mines, a controversy that otherwise might be passed lightly over.

"Mr. Nelson. I think that is a very true and correct statement.

"Mr. Engle. And it is true that the gold-mining industry was a guinea pig?

"Mr. Nelson. Definitely.

"Mr. Engle. And no other segment of American industry was treated in an identical manner?

"Mr. Nelson: I know of no one."

The above opinion was corroborated by other witnesses and also by the special WPB report, to Donald M. Nelson, previously referred to. This adverse selective treatment, in the opinion of your committee, places the closed or curtailed gold mines in a special category and subject in turn to special treatment by the Congress.

[fol. 2492] Order L-208 was an Administrative Error

The testimony before your committee conclusively showed L-208 to have been issued as the result of an error in compiling labor statistics. The agencies generally classified as gold mines those mines which produced a material amount of gold as well as strategic and critical minerals. The Mining Branch of WPB, which constantly fought against issuing L-208, took a more realistic viewpoint. The War Manpower Commission and the Labor Divisions of WPB had a wholly exaggerated idea of the number of

miners to be released by closing what they considered "gold" mines, many of which were known by the Mining Branch of WPB to be producing essential minerals and which could not be closed without damaging the war effort. The figures furnished the Army and Navy by the agencies laboring under this misconceived definition indicated that a large pool of miners would be made available by the issuance of L-208. The voice of the Mining Branch of WPB was not strong enough to reach the higher policy levels, nor were the figures submitted by the industry credited. The Secretaries of War and Navy therefore demanded action and got it.

Gold-mine operators had informed the Government that if all gold mines and dredges in the United States were closed approximately 3,270 men would be released, of which only 896 would be miners and muckers. Some 300 of these would be required to maintain the larger mines on a stand-by basis. Of the balance some were physically unfit for work in copper mines. It appears from the record that as far as transferrals could be checked through USES, the operators' estimates exceeded the eventual results in manpower captured for strategic metal mines. The War Production Board report on L-208 reaches this conclusion:

"* * * it may be concluded that since the number of gold miners actually reemployed was negligible, their contribution in increased production of copper, lead, zinc, etc., was likewise small, and probably was counterbalanced by the loss of such metals as are normally produced as byproducts of gold mining."

This conclusion is amply supported by the evidence placed before your committee.

It appears from the above that the American gold-mining industry was wrecked to no good purpose, while at the same time presumedly precious mining equipment was being steadily exported to keep whole our allies' gold mining industries. Writing in May 1943, Gustav Peck, labor adviser to Donald M. Nelson, stated in a memorandum to William L. Batt:

"The mines are beginning to deteriorate; if they are once allowed to cave or flood to any appreciable extent, sub-

sequent dewatering and reopening operations costing millions of dollars may prove prohibitive."

In the 3 years which have since passed, this deterioration has become a very serious factor, as many industry witnesses informed your committee.

Dr. Peck raised still another issue when he stated:

"The political and economic factors underlying the continuance of foreign gold mining are recognized, but a long-range view of the domestic situation raises the issue of whether the domestic gold-mining industry may be facing extinction while foreign gold mining anticipates an early return to prewar status.'

It may be noted that a distinct thread of thought runs through the testimony to the effect that certain economic forces were delighted at the prospect of cutting off the production of domestic gold by any excuse. In support of this contention it may be noted that Milo Perkins stated:

"It is essential * * * that a reduction in gold mining should be envisaged for the postwar period."

It is well known that the War Production Board had no authority to issue orders concerning manpower. That was a function of the War Manpower Commission. Yet it is a well-understood fact that Order L-208 was issued primarily for the purpose of rechanneling manpower, and at the imperative instance of the Army, which threatened otherwise to curtail essential copper production by refusing to return drafted miners to the mines.

The testimony and exhibits before your committee show that the then general counsel of the War Production Board, Mr. John Lord O'Brien, had grave doubts as to the legality and force of an order from WPB, an agency supposedly authorized to be concerned only with materials, but actually designed to have the effect of a manpower directive. Dr. Wilbur A. Nelson stated before your committee:

"I can say it was a grave question in the minds of certain members of the War Production Board. They definitely used their priority authority to handle the manpower problem."

[fol. 2493] To further show the confusion in thinking among the agencies, the War Production Board report states flatly:

"The truth of the matter was that those concerned with the order did not agree among themselves as to its real purpose."

As a matter of fact the Army and Navy had made up their minds and the civilian agencies had to act, willy-nilly, and then attempt to justify the action at a later date if possible to do so. The WPB report states the results succinctly:

"The anticipated protests against the order materialized immediately; the benefits did not."

The testimony before your committee certainly indicates the benefits never materialized but vast damage to an important industry did.

Actual Results Show Few Miners Channeled Into Strategic Mineral Mines

It has been pointed out that gold-mine operators furnished the War Production Board with estimates of the potential manpower pool of miners and muckers which would be made available by L-208. This estimate amounted to less than 600 as against agency estimates ranging from 5,000 to 10,000. The Secretaries of War and Navy stated more modestly on October 5, 1942:

"There are 2,000 to 3,000 hard-rock miners engaged in gold mining, now of no use in war production."

Dr. Wilbur A. Nelson testified before your committee that his figures, compiled in April of 1943, showed that 497 gold-mine workers "probably were actually placed in metal mines due to the gold-mine closing order * * * which would be about 300 miners and muckers." He also testified that most of these did not remain in their new jobs any length of time.

It must be noted that one of the primary reasons for the loss of labor at copper, lead, and zinc mines, aside from the draft, had been the high-wage inducements of the

Army construction projects. The War Production Board states that "less than a week after the gold mines had been closed, largely because of the insistence of the Army, the Army ski-tow construction project at Pando, Colo., was completed. In the period October 15 to November 1, 1942, some 7,000 workers were released. This project was located only 20 miles from the Climax molybdenum mine, one of those particularly in need of employees. It has been alleged, and the records seem to substantiate the allegation, that a few of the 7,000 workers released by the completion of the project returned to the mines from which they originally came. There was thus allowed to be dissipated a labor force of more than double that which conceivably could have been obtained by the closing of the gold mines." It is clear that these workers, as well as those released from the gold mines, went into more lucrative jobs than mining offered, and that the primary objective—or at least the announced objective—that of getting labor for the production of strategic metals, was not gained.

The most liberal figures which may be inferred from testimony before your committee indicates that perhaps as ma-y as 500 miners and muckers may have been channeled into strategic metal mines, most of which did not stay long.

There has been some argument to the effect that the release of equipment due to the closing of the gold mines may have warranted the issuance of L-208. According to figures in the hands of your committee, compiled by Edward H. Rott of the WPB, who was in direct charge of the administration of the order, the estimated value of the used equipment released under L-208 was $2,147,480. Much of the equipment rendered idle by L-208 was specialized and could not be utilized elsewhere than at gold mines. The West, all through the war and today, is dotted with idle milling plants and equipment which could not be disposed of. At the same time we exported about $100,000,000 of mining, well, and pumping equipment in the year 1943 alone, of which a considerable amount was mining equipment.

The wrecking of the American gold-mining industry evidently was not warranted from the standpoint of freeing equipment for other uses, especially when it is evident from the testimony before your committee that great quantities

of new machinery and tools were being exported for the maintenance of gold mining abroad.

Great, and in Some Cases Irreparable, Damage Has Been Done to the Gold-Mining Industry

The report (No. 6) of the Senate Small Business Committee issued in June of 1944 states "the gold-mining industry has suffered heavy losses in physical assets, in market valuations and in income. Stockholders have been greatly distressed. The opportunity has been perfect for [fol. 2494] mines and mining securities to be picked up by large financial interests at low values. * * * Many mines cut off from current income and unable to sustain high maintenance costs have been abandoned with consequent heavy loss of investments. Some mines so abandoned may never be reopened because of the prohibitive cost of dewatering and restoring the caved and flooded workings. Some mining companies continue the losing battle to maintain their mines in working condition. * * * Most of the damage has been done and the principal victims were the smaller operators."

The testimony given at the hearings on H. R. 4393 before your committee bears out the above statements in detail. Witness after witness appeared and explained in detail the physical damage and financial loss resulting from L-208. This testimony not only was not controverted by any Government witness but was largely substantiated by the WPB report on L-208.

David Strickler, president of the Stratton Cripple Creek Mining & Development Co., stated:

"* * * it affected the little fellow worse than it did the big fellow. The big fellow * * * had some money in reserve, but the little fellow busted: that is what it did to him."

According to Julian D. Conover, secretary, American Mining Congress:

"The gold mines had already contributed a major part of their manpower to the armed services and to war industries. The order did not accomplish its purpose. It was arbitrary and no provision was made for reimbursement."

Neil O'Donnell, of the Idaho Maryland Mines, showed that the entire cash reserve of his company, amounting to $451,845, had been spent on maintenance by June 1944, and the company had to resort to borrowing to preserve the mine. Up to January 1, 1946, $726,843 had been paid out for maintenance and repair of the mine. In spite of these expenditures, a further $694,045 is estimated to be necessary to rehabilitate the workings. This company is faced with a total loss of $1,419,000 and an empty treasury. It formerly gave emplpoyment to nearly 900 men.

The loss to small mines which were put out of business by foreclosure by creditors and forfeitures of leases and purchase contracts is impossible to estimate.

Philip R. Bradley, Jr., chairman of the mining board, State of California, while substantiating generally the situation outlined above, added, for an example, "the Central Eureka Mine in the Mother Lode District, which was one of the leading mines in the State, when L-208 shut them down; their expenditures for the maintenance of that mine averaged about $160,000 in each of the last 3 years. That company went broke."

Actual testimony by those who appeared before or filed statements with your committee showed losses of more than $2,816,000. Figures presented by the American Mining Congress gave an estimated total of $18,420,000 (including Alaska) as the probable aggregate of claims that might be payable under the proposed legislation. This does not, of course, include loss of production or profits. It represents out-of-pocket outlay to preserve mines in working order for stockholders, owners and operators.

Conclusion

In the opinion of your committee there is no better evidence substantiating the necessity for speedy passage of H. R. 4393 than the following statements from the War Production Board's report on L-208:

"With regard to the question as to whether or not the results achieved by L-208 compare favorably with the results anticipated at the time the order was issued, the answer would appear to be in the negative.

* * * * * * *

"The effects of the closing of the gold mines on community and individual economy have been great. Gold mining was a major industry in many western States. State taxes on gross value of gold-mine output constituted a considerable proportion of State revenue. * * * It is impossible to estimate the loss to the individual miner and home owner in affected mining communities, but appeals and protests against the relinquishing of leases and the necessity for forfeiting equity in equipment are on file in the War Production Board."

* * * * * * *

It is clear, in the opinion of your committee, which opinion is supported by expert testimony and is uncontroverted by Government witnesses, that there was little or no basis for issuing Order L-208, and that it was not only an administrative error but that the War Production Board [fol. 2495] proceeded on dubious authority. The conclusion further has been reached that the order should have provided a mechanism for compensation and that, as such was not provided, the Congress should so provide, even while realizing that much of the loss and damage is irreparable. Your committee believes that the prompt repayment of such losses as are covered in the pending bill, H. R. 4393, will not only do substantial justice to an industry which was selected for a unique experiment, but will greatly aid in reestablishing an important industry, provide thousands of jobs to veterans and start a flow of taxes into county, State, and the Federal treasuries.

The committee has carefully studied the facts relating to the situation that arose as a result of the proclamation of the War Production Board Limitation Order L-208 and is convinced that the gold mining industry was dealt with in a fashion which merits the consideration of the court in the adjudication of the losses which may have been occasioned by this order. The Idaho Maryland Mines Corp. decision is ample evidence of the fact that the least that can be done is to allow those persons affected by Order L-208 their day in court for such recompense as may seem justified. The committee further feels that in order to afford a more thorough understanding of the entire prob-

lem, the decision of the United States Court of Claims decided May 6, 1952, should be included as an appendix to this report.

The committee is of the opinion that the bill (S. 3195) is extremely meritorious, and urges favorable consideration of the measure by the Senate at an early date.

Appendix

In the United States Court of Claims

No. 50182

(Decided May 6, 1952)

Idaho Maryland Mines Corporation v. the United States

Mr. George Herrington for the plaintiff. Mr. Herbert H. Salinger; Bacigalupi, Elkus & Salinger; and Orrick, Dahlquist, Neff & Herrington, were on the briefs.

Mr. Thomas L. McKevitt, with whom were Mr. Assistant Attorney General Wm. Amory Underhill, and Mr. Assistant Attorney General Holmes Baldridge, for the defendant. Mr. R. W. Koskinen was on the brief.

On Defendant's Motion to Dismiss the Amended Petition

Littleton, *Judge*, delivered the opinion of the court:

This case arises out of an alleged taking, under and within the meaning of the Fifth Amendment to the Constitution, of plaintiff's gold mining properties in the County of Nevada, California, by virtue of the complete closing of plaintiff's mine by the War Production Board pursuant to Limitation Order L-208, issued by that Board, which order, plaintiff insists, upon the fact alleged, was arbitrary and violative of plaintiff's property rights with respect to the operation of its gold mining properties.

The original petition in this case was filed on June 4, 1951. Defendant's answer, filed August 3, 1951, contained special defenses challenging the sufficiency of the complaint and, upon defendant's motion, an order was entered

directing that the case be calendared for hearing by the court on the special defenses. Arguments in this case and in two other cases [1] involving similar issues were heard on November 5, 1951. At the oral argument, counsel for this petitioner and counsel for Central Eureka Mining Company (case No. 49468) were granted permission to file amended petitions. Plaintiff herein filed its amended petition on November 19, 1951.

Defendant has moved to dismiss the amended petition on the grounds that it fails to state a claim upon which relief can be granted and also fails to state a claim within the jurisdiction of this court.

[fol. 2496] PLAINTIFF'S EXHIBIT 336

Office for Emergency Management
War Manpower Commission
Washington, D. C.

July 9, 1942.

Chairman: Paul V. McNutt, Federal Security Administrator

To: Mr. Reginald G. Conley.
From: Bernard C. Gavit, General Counsel.
Subject: Release of Employees from Gold Mining Industry.

At a meeting of the War Manpower Commission, yesterday, the following problem was referred to this office.

General McSherry wishes to secure the release of men employed in the gold mining industry for transfer to the copper mining industry. Concededly the War Manpower Commission cannot accomplish this result directly. May the result be accomplished (1) by the War Production Board refusing to the gold mine operators critical materials used in their operations thus compelling the closing

---

[1] *Central Eureka Mining Company* v. *United States*, case No. 49468, and *Homestake Mining Company* v. *United States*, case No. 50195.

of the mines; (2) may the Chairman of the War Manpower Commission direct the War Production Board to take that action?

The specific situation suggested is simply illustrative of the general problem in this field.

B. C. G.

Plaintiffs' Exhibit No. 336 rec. 4-7-53. J. B. P.

(Here follow 4 photolithographs, side folios, 2497, 2498, 2499, 2500)

Note:

Pages 1574A - 1574D are
exhibits at start of card 23.

[fol. 2501] C. Brief summary of action recommended:

Order L-208 should be amended in the following respects:

1. A formal change to take care of the situation where a gold mine, which is still operating under a serial number on the issuance date of the order, thereafter has that serial number cancelled. In such case, the period of permitted operation should begin to run from the date of cancellation rather than from the date of the original issuance of the order.

2. A provision freezing the machinery in nonessential mines. Operators of closed gold mines may wish to sell critical mining machinery or equipment. This should be controlled so that it will go to more essential rather than less essential mines. The proposed new paragraph freezes such machinery and equipment, but does not tie up small and standard operating supply items. Provision is made to have operators report promptly to the Mining Branch a description of all frozen machinery and equipment. The Mining Branch is setting up a unit to help in the speedy disposal of such machinery and equipment as the operator may wish to sell. The complete list will be available in case it becomes essential at a later date to requisition the other machinery and equipment.

3. An additional exception to permit the minimum assessment work required by Federal statute.

[fol. 2502] DEFENDANT'S EXHIBIT 33

July 7, 1942.

Memorandum

To: General Frank J. McSherry.
From: Richard A. Lester.

At Mr. Haber's suggestion, I drafted the attached general statement regarding curtailment of non-essential production and employment, and the attached statement illustrating the application of this general policy to gold mining and milling. These were handed to Mr. Haber this morning for consideration with a possibility for submitting them to the War Manpower Commission meeting tomorrow.

Attachments—2
Lester:mmm

[fol. 2503] Statement Regarding Curtailment of Non-Essential Production and Employment to Fill Critical Needs for War Production

It shall be the policy of the War Production Board and the War Manpower Commission to curtail non-essential production and employment in those industries and areas where labor shortages restrict or impede the production of war items or of critical materials for such items and where other methods of obtaining an adequate labor supply for the impeded war or critical-materials production are not feasible because they would involve an adverse effect upon war or essential activities, a long delay that would be detrimental to the war program, the use of a considerable amount of critical materials and labor for such items as housing and additional community services for in-migrants, or similar disadvantages to the war program.

In the selection of non-essential activities for curtailment in order to fill critical needs for war production and in determining the extent and methods of such curtailment, account shall be taken of the following factors:

1. The location of the labor that would be released.
2. The broad occupational pattern of the workers that would be released and their suitability for work in war and essential industries in the area.
3. The character and extent of the demand for labor in war and essential production in the area.
4. The extent to which such curtailment will save critical materials, power, and transportation.
5. The suitability of the equipment of the curtailed industry for war production.
6. The inventories of processed or semi-processed material and parts in the possession of firms in the non-essential industries.

[fol. 2504] Statement Regarding Curtailment of Non-Essential Production and Employment to Fill Critical Needs for War Production

It shall be the policy of the War Production Board and the War Manpower Commission to curtail non-essential production and employment where such non-essential activi-

ties involve the consumption of critical material or materials, providing all of the following conditions also prevail:

(1) The production of war items or critical materials for such items is being impeded for lack of an adequate labor supply.

(2) The labor supply in such non-essential activities is well adapted for use in the war or critical-materials industry which is being impeded by a critical labor shortage so that there is every likelihood, considering location and labor market conditions, that most of the employees laid off by curtailment of the non-essential activities can at once have jobs in the production of war items or of critical materials at comparable rates of pay.

(3) There is no alternative method of obtaining an adequate labor supply for the impeded war or critical-materials industry that does not involve (a) adversely affecting other essential activities, or (b) the use of a considerable amount of critical material, or (c) a long delay that would be detrimental to the war program.

In the selection of non-essential activities for curtailment in order to fill critical needs for war production and in determining the extent and methods of such curtailment, account shall be taken of the following factors:

(1) The extent to which such curtailment will save critical materials.

(2) The suitability of labor that would be released for the needs of the war or critical-materials industry suffering from a shortage of labor.

(3) The location of the labor that would be released.

(4) The feasibility of using the equipment of a curtailed industry in the war program, especially in the industry or industries suffering from a critical labor shortage.

(5) The inventories of processed or semi-processed material and parts in the possession of firms in the non-essential industries.

[fol. 2505] Gold Mining and Milling as an Illustration of the Policy of Curtailing Non-Essential Production and Employment to Fill Critical Needs for War Production

Further gold production within the continental United States is absolutely non-essential.

1. Copper and other base-metal production is being curtailed for lack of an adequate labor supply. A USES report on non-ferrous metal mining and milling for May 15 shows that of 30 operations with some 26,000 employees in Idaho, Montana, Utah, Nevada, Arizona, and New Mexico for which data were available, 15 reported a critical shortage of labor impeding production and 14 had standing orders for workers with the USES. A total of about 1,000 workers would have been required merely to relieve the critical shortages in these 15 operations. At least one mine and one smelter are reported to have been closed as a result of labor shortage.

2. It is estimated that there will be need for a net increase of over 7,000 in employment in non-ferrous mining and milling (copper, lead, zinc, tungsten, manganese, chrome, etc.) in the West during the next 10 or 12 months. In addition there is the need for replacement of withdrawals, which have been running as high as 15 and 25 per cent. Although some 50-odd establishments in copper, lead, and zinc hired over 4,000 workers in the 60-day period ending May 15, their total employment actually decreased about 340 because withdrawals averaged 13 per cent of total employment.

3. Workers in both open-cut and vein gold mining and in gold milling have, in general, the necessary training and qualifications for base-metal operations. Indeed, one company controlling both gold operations and base-metal operations is already arranging for the closing of its gold mine in one state and the transfer of its gold workers to its new base-metal operations in another state. Another company, however, closed its zinc operations and kept a nearby gold and silver mine open.

4. Most of the gold mining in the West occurs in the same states or in the same areas as do copper, lead, zinc, and other base-metal operations. Last year 15 large operators engaged over 90 per cent in gold mining and milling employed around 6,800 workers.

Women cannot be used extensively in base-metal mining or milling, and there is no other activity in the important copper-mining states that could be classified as non-essential as gold production and would release as many workers qualified for base-metal operations.

Alternative suggestions for supplying labor to base-metal operations, such as the use of Japanese, Mexicans, coal miners, and iron ore miners, prove upon investigation to involve many difficulties, perhaps considerable delays, transportation problems, and questions regarding the adequacy of the labor that might be so supplied both in terms of numbers and qualifications.

[fol. 2506] 5. The savings of critical materials with the curtailment of gold operations would be considerable, for such materials are still being obtained through priorities for maintenance, repair, and operating supplies in connection with gold production. This has involved the granting of priorities for such materials as tool steel, zinc dust, etc.

6. Part of the equipment, such as drills, mechanical loaders, etc., used in gold mining could be used in base-metal mining, thus saving metal and releasing for war work some important facilities now used for producing metal mining equipment. Gold milling facilities are also adaptable for the base metals.

7. The gold mining and milling industry would not present a problem of inventories of processed or semi-processed material and parts left in the manufacturers' hands as a result of curtailment. It would be necessary to make arrangements for a skeleton crew to pump out underground mines that were closed.

[fol. 2507] DEFENDANT'S EXHIBIT 34

July 4, 1942.

Memorandum

To: General Frank J. McSherry.
From: Richard A. Lester.
Subject: Critical Shortage of Labor in Non-ferrous Metal Mining and Employment in Nearby Gold and Silver Mines.

The May reports to the U. S. Employment Service indicate that copper and zinc production has already been retarded as a result of labor shortage in Idaho and Utah. For example, a very serious labor shortage, which is impeding production, is being experienced at the Morenci, Arizona

operations of Phelps-Dodge. Although an average of 30 workers a day were being hired there, employment dropped during the month prior to May 15 with a result that a shortage of 165 workers was causing a corresponding curtailment of production.

Reports from 50 odd establishments in copper, lead and zinc mining and refining show that total employment actually decreased by about 340 workers, although these establishments hired more than 4,000 workers in the 60-day period preceding the date of their report. In this 60-day period withdrawals amounted to 13 percent of total employment. Studies of the movement of workers out of the copper mines indicate that most of them are going into war plants and Selective Service with comparatively few of them going into other copper mines. A number of copper companies have placed standing orders with the Employment Service, and the local offices in Idaho and Arizona resorted to interstate clearance in May. A USES order for 100 miners and 100 muckers in Idaho was cleared through all western states but had brought no referrals by May 15. Companies were requesting the use of Japanese and Mexicans for their operations.

The 15 largest producers of gold in 7 western states employed in 1941 a total of approximately 6,700 workers in operations connected with gold mining. Fourteen large silver operations that produce mostly silver and comparatively little zinc, lead or copper employed in 1941 somewhat over 2,000 workers in 7 western states. In many cases the gold and silver mines are located near copper mines which are experiencing labor shortages or near lead, zinc, tungsten, chrome, or molybdenum mining operations which could absorb many additional miners and increase their output thereby.

[fol. 2508] Some companies operating gold or silver mines are owned or controlled by companies that are operating nearby copper and zinc mines. For example, the Anaconda Copper Mining Company is operating a gold mine and a silver mine in Montana, employing about 120 workers, in the vicinity of its copper operations where it reports a shortage of 400 employees and in the vicinity of a zinc mine which it recently closed because of insufficient labor. Also the company is starting two new chromite developments in Montana which will employ 400 miners. The Newmont

Mining Company, which owns a controlling interest in gold mines in California employing about 1000 men, owns an important copper project in California that will come into full operation by the end of this year, and also owns the Magma Copper Company in Arizona, which has placed a standing order with the Employment Service. The U. S. Smelting, Refining and Mining Company is closing down its gold mine employing some 200 workers in Arizona and arranging to transfer them to its new lead-zinc mine at Vanadium, New Mexico.

The biggest problem in connection with non-ferrous metal mining is the very high turnover rates ranging from 10 to 25 percent during a two-month period. In addition, there is the actual movement of experienced miners away from the mines. On the basis of existing labor needs and the new expansions, we estimate that there will be a need for a minimum net increase of 4,000 workers in copper mines and mills, and a minimum net increase of 2,000 in lead and zinc mines and mills during the next six months. With the additional needs in tungsten, chrome, manganese, and molybdenum, the net additional number of workers will probably range between 7,000 and 10,000 with no allowance for replacements with the high turnover rates. As already indicated, the total employment in the 15 largest gold and 14 largest silver operations in the region approximated 9,000 last year. At the present time there are about 30,000 employees in the copper mining and milling and about the same number in the lead and zinc operations.

Steps should be taken to remedy the critical labor situation in non-ferrous metal mining, including arrangements for the transfer of miners from gold and silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers released went into non-ferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover.

Attached is the USES report on non-ferrous metals for May.

Attachment.
Lester:mmm

[fol. 2509] DEFENDANT'S EXHIBIT 35

August 25, 1942.

Memorandum

To: Brigadier General Frank J. McSherry.
From: Richard A. Lester.
Subject: Workers in the Homestake Mining Company.

Yesterday Mr. Guy Bjorge, manager of the Homestake Mining Company, visited me to explain the situation in his company and community with regard to labor supply. The company now has a little over 2,000 workers, having taken on 491 and having lost 631 workers in the last two years. There are 1150 workers in the Mining Department; and Mr. Bjorge says that they still have many employees who are under 35 years of age, although 50 per cent of their employees are over 40 years of age. Of those who left, for which records are available, 158 went into the Armed Forces, 163 went into war production jobs, and 46 left for farming or to return to school. The company also has 160 men in the Timber Department, logging its own lumber.

Mr. Bjorge indicated the importance of his company's payroll to the community, which consists of about 15,000 persons in and around Lead and Deadwood, South Dakota. He explained how much his company contributes in taxes; but readily recognizes that since the government buys all his products, the government is paying out much more than it takes in.

Mr. Bjorge said that there are three or four other gold mines in the district around Lead and Deadwood, which mines have a total of about 500 employees. There is one cooper property and one tungsten property in the area which his company was willing to buy and operate, but the owners were holding out such properties for a price which his company considered to be too high.

Lester/hn.

[fol. 2510] Data on Curtailment Program for Gold Mining

General McSherry discussed the question of curtailing gold mining at the War Manpower Commission meeting of July 8th. On the same date, the War Department, through an interdepartmental committee, presented a program for

increasing copper production which included under a recommendation to the War Production Board the request of "production of gold, with the exception of required amounts of essential silicious gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the non-ferrous mines which are essential to the war effort."

On July 31st, Richard A. Lester sent to the Chief of the Mining Branch and to the Deputy Director for Operations in the War Production Board, tne outline of a proposed Limitation Order on Gold Mining.

On August 19th, the Chief of the Mining Branch of the War Production Board first submitted copies of a draft order for comment. Recently, those in charge of drafting the order have decided to base it as suggested in Mr. Lester's proposal on gold production rather than on the use of metal.

Most recent information is that a draft of an order to curtail gold mining is to be submitted to Donald Nelson along with a memorandum that will point out the adverse effects of curtailing gold mining in such States as South Dakota and Colorado, since a large portion of State and Local taxes are raised from gold mining, although all the income from gold mining is paid by the Federal Government. There is still considerable opposition in the War Production Board to issuing an order closing down gold mines.

It is estimated that there are between eight and ten thousand persons working in gold mining and milling operations in the United States at the present time. The attached memorandum on the Homestake Mining Company indicates that this company in August had over 2000 workers of whom 1150 were in the mining department. In gold mining and milling operations alone, it had a total of about 1700 workers. Other gold mines in that district had about 500 employees.

The following table indicates the number of mines and the output in the year 1940:

Mines in Continental United States	Number	Ore Production	Ounces of Gold
Mines producing less than 5,000 tons gold ore	3,437	1,661,370 tons	304,866
Mines producing more than 5,000 tons gold ore	221	10,715,224 "	2,017,648
Mines in Alaska	74	4,985,298 "	214,097

The transferring of workers from gold mining to nonferrous metal mining should be consummated before cold weather sets in.

Enclosure.
RLester/pkf.

[fol. 2511] DEFENDANT'S EXHIBIT 36

War Manpower Commission

Directive XIII

Employment of Workers Previously Employed as Production or Maintenance Workers in Gold Mines

By virtue of the authority vested in me as Chairman of the War Manpower Commission, and having found after consultation with the members of the War Manpower Commission that substantial numbers of persons, heretofore employed as production or maintenance workers in gold mines, are or will be unemployed, that such persons possess skills needed in and readily adaptable for use in essential non-ferrous metal industries, that critical labor shortages in essential nonferrous metal industries can be greatly alleviated by the employment in such industries of such persons, and that the measures hereinafter set forth are necessary to promote the effective mobilization and maximum utilization of the Nation's manpower in the prosecution of the war, it is hereby declared to be the policy of the War Manpower Commission that:

I. On and after the date hereof no employer shall hire in, or hire for work in, Alaska or any State west of the Mississippi River, any person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining except upon referral of such worker to such employer by the United States Employment Service.

[fol. 2512] II. No person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining shall be referred by the United States Employment Service to any work in Alaska or a State west of the Mississippi River other than

work in essential non-ferrous metal mining, milling, smelting, and refining activities unless such referral would be in the best interests of the war effort or unless the denial of such referral would entail an undue hardship upon the individual concerned, as determined in accordance with regulations and standards prescribed by the Chairman of the War Manpower Commission.

III. Any worker or employer, or group of workers or employers, dissatisfied with any act or failure to act pursuant to this directive shall be given a fair opportunity to present his or their case to the local area War Manpower Committee. Such Committee shall make recommendations concerning such cases as well as other matters pertaining to the carrying out of this directive in its area to the manager of the appropriate local employment office of the United States Employment Service. The Chairman of the War Manpower Commission shall prescribe regulations and procedures for the carrying out of the responsibilities of local area committees under this directive, including procedures for the review of the recommendations of such committees by Regional War Manpower Committees and by the National Management-Labor Policy Committee.

IV. All persons are hereby enjoined to observe strictly all provisions of this directive and all provisions of regulations and interpretations issued by the Chairman of the [fol. 2513] War Manpower Commission in implementation of this directive.

V. Each department and agency of the Federal Government is hereby directed to take all lawful and appropriate steps under authority vested in it by law to achieve and promote compliance with the provisions of this directive.

VI. This directive may be cited as the "Employment of Gold Mine Production and Maintenance Workers Directive."

Paul V. McNutt, Chairman.

October 7, 1942.

1. The Branch Chief or Administrator of the Order shall have prepared the Form SEC–4 (Rev. 4/15/42) in quadruplicate, the summary statement and supporting data (item 2 below) in triplicate, and the Order in sextuplicate. All dissenting memoranda (if any) shall be prepared in duplicate by the persons submitting such dissents. The Branch Chief or Administrator of the Order shall retain one carbon copy of all of the above material and transmit the remaining papers through the Priority Specialist to the Review and Approval Branch. On approval, one carbon copy each of the Form SEC–4, the Order, the summary statement, and supporting data shall be transmitted by the Office of the Deputy Chief, Bureau of Priorities, to the Division of Information.

2. Furnish a brief but specific summary covering the following information for the use of the Clearance Committee, attaching supporting data where necessary.

a. Purpose of Order in terms of one or more of the following:
(1) To facilitate essential production (such as P Orders).
(2) To limit nonessential production (such as L Orders).
(3) To conserve the supply and/or direct the distribution of critical materials or equipment (such as M or E Orders).
(4) For other reasons.

b. Scope of Order with respect to the following (describe briefly):
(1) Industry(s) or company(s) affected.
(2) Materials, products, or equipment covered.

c. Present and prospective supply and demand positions of items covered. (Give latest available data on stocks, production, requirements, etc.)

d. Effect of Order, if any, with respect to the following:
(1) Amounts of critical materials that will be saved.
(2) Amounts of critical materials that will be consumed under the Order.
(3) Existing inventories
(4) Extent and expected period of labor displacement.
(5) Industry conversion to war production.
Present spread of war orders in the industry.
Possible percentage of conversion to war production.
(6) Foreign requirements.

e. Describe the specific provisions of the Order with respect to the following:

b. Scope of Order with respect to the following (describe briefly):
(1) Industry(s) or company(s) affected.
(2) Materials, products, or equipment covered.

c. Present and prospective supply and demand positions of items covered. (Give latest available data on stocks, production, requirements, etc.)

d. Effect of Order, if any, with respect to the following:
(1) Amounts of critical materials that will be saved.
(2) Amounts of critical materials that will be consumed under the Order.
(3) Existing inventories
(4) Extent and expected period of labor displacement.
(5) Industry conversion to war production.
Present spread of war orders in the industry.
Possible percentage of conversion to war production.
(6) Foreign requirements.

e. Describe the specific provisions of the Order with respect to the following:
(1) Nature of the restrictions, prohibitions, or assistance provided.
(2) Inventory restrictions (if any).
(3) Reasons for selection of the particular base period (if any).
(4) Any unusual provisions.

f. Is this Order necessary, i. e., could the same results be accomplished by amendment or addition to existing Order(s)? If P Order, state reason for not using Production Requirements Plan.

g. Extent to which industry has been consulted.

h. Additional personnel required to administer the Order.

i. What forms and procedures are required and when will they be available for distribution?

3. Indicate in section D those persons consulted in the drafting of the Order and forms, attaching their memoranda if any.

4. The Branch Chief shall sign section E and transmit the papers to the Priority Specialist for signature and action.

5. Indicate in section F the information required by the Clearance Committee.

6. Submit the Order to the Review and Approval Branch, Office of the Deputy Chief, Bureau of Priorities.

7. Those persons required to clear the Order shall indicate such clearance by signature in section G.

[fol. 2514] DEFENDANT'S EXHIBIT 42

Homestake Mining Company

Lead, South Dakota

Jan. 13, 1942.

Mr. Merle H. Guise, Technical Advisor, Mining Priorities Section, First Floor, Wing 1 Temporary Building E, 6th St. & Adams Drive, S. W., Washington, D. C.

DEAR MR. GUISE:

Your air mail inquiry of the 8th, addressed to Mr. Bjorge, was received the 10th. Mr. Bjorge is away from his office at present.

We have endeavored to "boil down" the figures you wish to the best of our ability in the short time allowed. In making such a study the mine operator is immediately confronted with the fact that the myriad of parts and types of materials may contain small percentages of alloys, which actual constituents are known only to the manufacturers. However, we feel safe in assuming that most of our repair parts are carbon steel (if not from castings). The actual alloy steels employed are negligible. In totalling iron and steel—straight, fabricated or machined, we have added the different types of steel and iron together and have noted the few exceptions where alloys are involved.

No attempt has been made to show "minimum tons required" from which "scrap return" would be subtracted to get "net requirements" inasmuch as our previous report (of Dec. 24, 1941) was predicated on a "net requirements" basis, taking into account the careful utilization of all scrap in our own foundry. We only realize about half the scrap needed and must make up the difference by purchase. Our realized scrap totals approximately 1,200 short tons per annum from iron and steel materials and supplies plus 12 tons of manganese scrap (from mill liners, etc.) and about a ton of copper scrap is obtained from divers parts of the operation.

Herewith please find rough tabulation of our "net requirements" for 1942.

[fol. 2515] Our 1942 ore tonnage production should be about the same as in 1941; namely, 1,500,000 tons.

In our Dec. 24th, 1941 report one chemical item of consumption for 1942 was overlooked and you may wish to add this to that report. This was sodium aluminate amounting to 3 tons and employed in boiler plant water treatment.

I trust the above will cover your requirements.

Yours very truly, H. A. Walker, Assistant General Manager.

[fol. 2517] DEFENDANT'S EXHIBIT 43

War Production Board

Memorandum

September 9, 1942.

To: Mr. A. I. Henderson
From: R. J. Lund
Subject: Gold Mining Order

At a meeting held in your office on September 4, attended by Messrs. Dodge and Scribner of your staff, Mr. Parks of the Miscellaneous Minerals Branch, and Mr. Stow of the Mining Branch, you issued instructions that an order be drawn up either by the Miscellaneous Minerals Branch or the Mining Branch which would curtail the output of gold and which would not be connected with Order P-56. You indicated that this Branch should prepare the order but that the order could be administered by this Branch or the Mining Branch as later determined.

It was understood that the purpose of the order was to make mining labor now producing gold available to copper and other strategic non-ferrous metal mines. This end can be attained by WPB only through its authority to control materials.

Attached is copy of the order for your consideration. This order has not been circulated, except in discussions with the Mining Branch.

The order is designed to close all mines producing gold to the extent of 50 percent or more of the value of the total output. In considering the order the following matters are pertinent:

(1) Number of mines affected

Based on 1940 production figures obtained from the Bureau of Mines, the latest they were able to supply, about 220 lode mines will be affected by the order. This figure is not exact, because production in the 1941 or 1942 base period specified in the order is not strictly comparable with the 1940 picture. Geographic distribution of these lode gold mines is as follows: California, 58; Colorado, 32; Montana, 30; Nevada, 27; Arizona, 18; Alaska, 12; Idaho, 12; Utah, 8; South Dakota, 6; with the remainder distributed among five other states.

Detailed data on placer operations affected by the order are not presently available, but the Bureau of Mines reported that in 1940 a total of 3,107 placer mines produced gold and silver in the United States, and 1,069 in Alaska. Undoubtedly, sizable numbers of these produced such small quantities that they would be exempted by the order.

[fol. 2518] The Bureau of Mines reported that in 1940 there were 49 connected-bucket floating gold dredges operating in Alaska, 46 in California, 12 in Idaho, 7 in Montana, 6 in Oregon, 1 in Colorado, and 1 in Nevada. In addition there were large numbers of mechanized placer operations using drag line and power-shovel excavators, but no separate figures on these operations are available.

(2) Labor involved

Based on 1941 data, latest available from the Bureau of Mines, approximately 12,400 employees in lode gold mines will be thrown out of work by the order. Incomplete data indicate that about 70 percent of this labor is employed underground. Geographic distribution of this total labor was as follows: California, 3394; South Dakota, 2123; Colorado, 1689; Alaska, 1251; Arizona, 911; Montana, 602; Nevada, 601; Idaho, 590; Utah, 484; with the remainder distributed in a number of Western and Eastern states.

No detailed data are available showing number of employees in placer operations, except that the number would probably amount to at least several thousand in the United States and perhaps two thousand in Alaska.

(3) Estimated recapture of employees affected

Assurances were given by General McSherry at a meeting of the Interdepartmental Committee on Non-Ferrous Metals, September 8, that the U.S. Employment Service had adequate staff available to go immediately into the several hundred mining camps which might be affected by the gold curtailment order and to recruit labor for transfer to copper mines and other non-ferrous metal mines in dire need of such labor. At a previous meeting of this Committee, an estimate was made that about 25 percent of the mine labor might be recaptured for work in other mines.

(4) Other metals lost

Production of other metals in 1940 by mines affected is as follows: copper, 2,751,000 pounds; zinc, 92,000 pounds; lead, 12,047,000 pounds; silver, 4,947,000 ounces. Other metals such as antimony, arsenic, tungsten, molybdenum, and manganese are also produced in minor amounts by some of these mines.

(5) Fluxing ore problem

Some gold mines affected by the order produce large tonnages of siliceous ore required by smelters working primarily on other non-ferrous metals, such as copper, lead and zinc. This flux is necessary to their operation, and [fol. 2519] gold values in the flux naturally make operations more economical than by adding barren siliceous material which may, or may not, be available at the smelter.

(6) Critical materials saved

Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available but the general order of magnitude of such consumption is indicated by the fact that in 1939 gold mines in the United States (excluding Alaska) spent about $17,000,000 on supplies and materials, $2,000,000 for fuel and about $5,000,000 for purchased electric energy.

(7) Effect on economy of states and communities

Shutting down the operations at mines affected by the order will result in loss of sizable tax revenues, in respect to state tax revenues alone, in some of the states involved. There has been insufficient time to obtain complete data on this point, but two examples are cited as follows: (a) In South Dakota, total state taxes collected in fiscal year 1941, exclusive of motor fuel taxes, amounted to $11,700,000; taxes paid to the state by mines in South Dakota affected by this order amounted to $1,000,000, or about 9 percent of the total; (b) in Nevada total taxes collected in fiscal year 1941, excluding motor fuel taxes, amounted to $3,300,000, of which about $65,000, or 2 percent, was collected from mines affected by this order.

Losses in county and municipal taxes will be felt much more severely by the communities in the vicinity of the mines. In this respect, shutting down mining operations is not comparable with shutting down other industrial operations in communities where enterprise is diversified; in the West it is generally true that the mine is the sole major source of income for local communities. For example, it has been reported that the Homestake Mining Company pays 65 percent of the local community taxes and 50 percent of the county taxes; that the wage earners and those servicing them pay the balance largely from the $4,500,000 in annual wages paid by the company. At least 19,000 people, the population of the county, are directly or indirectly dependent upon its operation.

For reasons stated in the last paragraph, hardships faced by old established mine employees will be severe. There is virtually no possibility of converting the facilities at the mines to war work.

[fol. 2520] (8) Probable loss of deep mining operations and dredging equipment

Although the order permits gold mining companies to maintain buildings, machinery and equipment in repair, and to keep access and development workings in a safe and accessable condition, it is probable that most of the deep mines situated in heavy, caving ground will be unable to take full advantage of these provisions in the order. As a result it is probable that many of these old, deep mines may never be reopened.

Costly dredging equipment forced to lie idle will be subject to more rapid depreciation than if it were maintained in operation.

The suggestion was made at a meeting this morning that the order should be tightened further by lowering the exemption from the 4,000 ton figure to 1,500 tons annually, or a monthly rate of 100 tons. Such a change would result in a large increase in the number of mines affected by the order, in the total labor involved, and in items 3 to 6, inclusive, discussed above. Tabulations covering these smaller operations are just now being made, so details in respect to these items cannot be presented herewith. The order will be modified to the lower exemption figure before

clearance, if these studies indicate a considerable amount of labor involved.

A factor which would tend to lower the number of mines affected, labor involved and other items discussed above, is the fact that many of the gold mines affected by the order have already been forced to curtail or close operations through difficulties encountered in obtaining material and equipment, or through loss of labor to other industries. In one known instance, a recent fire destroyed the mill of a sizable mine so this operation is completely shut down and no labor available for recruitment.

There is, of course, an appeal provision in the order, through which, again, the number of mines, number of employees, other critical materials and fluxing ores affected will be lowered from the estimates cited in items 1 to 5 above.

Concluding Statement

Administration of an order such as the above, entirely divorced from provisions of Order P-56, necessarily involves duplication of work, both here in Washington and in the companies affected by the order. Those gold mines producing needed metals and fluxing ores will have to submit an appeal under the provisions of the order before they can be exempt. There is no practicable way of defining, in an order, such mines that should be exempted. This appeal procedure duplicates, in large measure, the appeals that were already made under the administration of P-56, and it is likely that the repercussions throughout the mining industry of such duplication of effort will be unwholesome. [fol. 2521] Without using the mine serial numbers already established as a means for determining essential mining operations, there appears to be no alternative other than to use a percentage value basis in defining gold mines, and to provide for continued operation of essential ones through an appeal procedure.

Other pertinent considerations are presented in the attached memorandum to you from Dr. Wilbur Nelson, and I suggest that they be given careful attention.

The adverse repercussions mentioned above might be overcome in some measure by including an additional provision in the accompanying order which would automatically

exempt those gold mines now having serial numbers until they are notified by the Director General for Operations that they are to cease operation. Each of these cases, in the meantime, should be carefully reviewed and judged in the light of the more acute situation now prevailing.

I shall await your written instructions before proceeding further.

R. J. Lund, Chief Miscellaneous Minerals Branch.

RJLund/ljp
Enclosures

[fol. 2522] DEFENDANT'S EXHIBIT 46

War Production Board

Washington, D. C.

September 11, 1942

Attention: Miss Thornton

Memorandum

To: Mr. Donald M. Nelson.
From: J. M. Scribner, Operating Assistant to Mr. A. I. Henderson.
Subject: Gold Order.

In accordance with instructions issued by Mr. A. I. Henderson, you will find attached a copy of the proposed curtailment order on gold. This order is in process of circulation in accordance with the procedure for order clearance and should be presented to the Clearance Committee for action about September 21.

Mr. Henderson requested that the order be prepared in a manner completely divorced from Order P-56. However, in his absence, after a consultation with Mr. H. W. Dodge and Dr. Wilbur A. Nelson, and a meeting with Messrs. Fred M. Eaton, Richard Lester, and myself, it was determined to be most practical that the order not be divorced from P-56.

The effect of this order will be to close down all gold mines not having a mine serial number, within 30 days from issuance. It is the intention of the Mining Branch to

review all mine serial numbers assigned to mines producing 50% or more gold in dollar value and to withdraw such serial numbers unless the balance of the production represents critical materials urgently needed for the war effort in amounts sufficient to justify continuance of the operation.

J. M. Scribner

Attachment

[fol. 2523] Draft of SEC-4

The Order requires that all mines producing gold, except those having a serial number under P-56, cease operation and development within 30 days after the date of issuance of the Order. The Order makes provision for the minimum maintenance and repair necessary to maintain the mines plant in condition and for the granting of preference ratings to accomplish this after application made to the Director General for Operations.

All gold mines which produce needed quantities of copper, lead, zinc, and other minerals, or of silicious fluxes, already hold serial numbers under Order P-56. Therefore, the mines closed down by this proposed order would be only those which have, after examination by the Mining Branch, already been determined to be nonessential to the war effort.

The result of closing these nonessential mines will be to conserve all the material which they have been using for operational and development purposes. Heretofore they have merely been denied the right to use the high preference ratings granted by Order P-56, but have been able not only to obtain certain material under P-100, but also to use their own inventories.

[fol. 2524] Title 32—National Defense

Chapter IX—War Production Board

Subchapter B—Director General for Operations

Part —Gold Mining

Limitation Order L—

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of criti-

cal materials for defense, for private account, and for export which are used in the maintenance and operation of gold mines, and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

Section —, Limitation Order L—

(a) *Definitions.* For the purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, unless the operator of such mining enterprise is the holder of a serial number for such enterprise issued under Preference Rating Order P-56, as amended.

(b) *Restrictions Upon Acquisition, Consumption, and Use of Material by Nonessential Mines.*

(1) *Operation and Development.* On and after 30 days after the issuance date of this order, no person, except as permitted under the provisions of subparagraph (b)(2), shall acquire, consume, or use any material for the operation or development of a nonessential mine.

(2) *Maintenance and Repair.* On and after 30 days after the issuance date of this order, no person shall acquire, consume, or use any material for the maintenance or repair of a nonessential mine except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(c) *Restrictions on Application of Preference Ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material for consumption or use in the maintenance or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

[fol. 2525] (d) *Assignment of Preference Ratings.* The Director General for Operations will, upon receiving an application in accordance with paragraph (c) above, assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in subparagraph (b)(2) above.

(e) *Exception.* The provisions of this order shall not apply to any mine which produced 1200 tons or less of com-

mercial ore in the year 1941, and which is producing commercial ore at the rate of 100 tons or less per month from and after the issuance date of this order.

(f) *Records.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(g) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(h) *Audit and Inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(i) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to the War Production Board, Mining Branch, Washington, D. C., Ref.: L—.

(j) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of or from processing or using material under priority control and may be deprived of priorities assistance.

(k) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(l) *Applicability of Priorities Regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

Issued this — day of —, 1942.

——— ———, Director General for Operations.

[fol. 2526] DEFENDANT'S EXHIBIT 48

September 1942.

Summary of Proposed Gold Curtailment Order

A draft of a limitation order on materials and supplies for gold mining is being circulated within the War Production Board. The order provides for complete shutdown of non-essential mines in the United States with the following exceptions:

1) Mines producing less than 1,200 tons of ore per year will be permitted to continue operations at their rate of operation in 1941 or early 1942. Such mines are usually individual or partnership enterprises worked by men who are not likely to be employed by others.

2) A limited amount of supplies and equipment will be made available for the purpose of keeping the mines accessible and safe. This is intended to avoid flooding or otherwise damaging mines which would be in a position to produce after the emergency has passed.

A non-essential mine is defined as a mining enterprise in which gold is produced, unless the operator holds a serial number for such enterprise issued under Preference Rating Order P-56, as Amended. Since producers of siliceous fluxing ores and of complex ores containing substantial amounts of critical metals as well as gold have already been granted serial numbers, the order will not affect the production of essential metals.

The basic purpose of this curtailment of gold mining is, of course, to free manpower for the mining of essential minerals, particularly non-ferrous metals such as copper, zinc and lead. Because many of the gold mines are located much close to other mines producing such strategic metals as mercury, molybdenum, tungsten, vanadium, chromium, manganese, etc., it is expected that workers will also be made available to these industries.

The War Manpower Commission through the Employment Service is now taking steps to insure orderly recruiting of these gold miners and to provide for a minimum of delay in reemployment as well as to provide transportation expenses. It is expected that this procedure will make possible the maximum diversion of labor to essential mining industries where their skills can be used to best advantage.

Beside diverting manpower to essential industries, this order, when in effect, will also conserve some materials and supplies used in gold mining, such as mercury, drill steel, etc.

[fol. 2527] DEFENDANT'S EXHIBIT 49

April 24, 1943

Memorandum

To: Mr. Edward T. Dickinson, Jr., Executive Director, Planning Committtee, War Production Board, 2744 Social Security Building.

From: Mr. Edward H. Rott, Deputy Administrator, Order L-208, Mining Equipment Division, War Production Board, 1025 Temporary Building R.

Subject: Supplement to Report of April 8 on the Effect and Accomplishments of Limitation Order L-208.

In accordance with your request for additional information relative to:

1. Breakdown to show amount of critical and non-critical materials involved in the $15,131,977 reported as estimated potential consumption of the two hundred seventy lode gold mining operations included in the analysis, and,

2. Total investment in mining equipment and milling facilities made idle through the issuance of Order L-208, this supplement has been prepared.

Ninety-four mines employing twenty five men or more and producing approximately 90% of the total production of the two hundred seventy operations covered by the above analysis were considered. This group was selected since their equipment would be more or less standardized and the investment would cover about 95% of the total investment. The smaller operations are generally less costly and frequently do not include milling facilities.

It must be understood that any figures given in connection with the above items must be a very rough estimate. However, we believe that the figures are sufficiently close to give a fair idea of what may be expected in the way of saving critical materials and gain through the transfer of idle equipment.

1. Breakdown to Critical and Non-Critical Materials

Critical Materials—Critical materials have been classed as such because of a shortage of the raw materials going into them or inadequacy of production facilities.

[fol. 2528]

Repair parts, drill steel, new equipment for replacement, grinding balls, ball mill and crusher liners, steel plates for shop work, etc., cable, zinc dust, etc.

	50% of Total	$ 7,500,000.00
Lumber	10% of Total	1,500,000.00
Powder, caps and fuse	20% of Total	3,000,000.00
Sub Total		$12,000,000.00

Non-Critical Materials—Classed as such because supply raw material is adequate for their production and there are sufficient production facilities. Lime, cyanide, other chemicals and misc.

	20% of Total	3,000,000.00
Total		$15,000,000.00

2. Estimated investment in mining equipment and mill facilities by ninety-four mines employing twenty-five men or more

The total output of niney-four operations considered was approximately 38,000 tons of ore daily. To mine and treat that tonnage, conservatively speaking, required in normal times, the following investment:

For Mining Equipment	$19,000,000
For Milling Facilities	$38,000,000

It is estimated that 75% of the mining equipment and not more than 30 to 35% of the milling facilities are transferable for use in strategic metal mining or other industries. However, it is our opinion that not more than 10% of this will be moved. Reasons for this are that much of the equipment is too old or worn to be desired for use by other operators and in a large number of cases, the available equipment will not meet the specifications necessary for the job for which it is required. In some cases, equipment will not be reported and in others, owners may strongly oppose releasing their property.

[fol. 2529] The above estimate does not include gold dredges or equipment used in other types of placer mining for which we have no satisfactory information as to investment. In gold dredging, the investment in dredges, draglines, washing plants, tractors, bulldozers, etc., is very large. Some of our largest individual transfers of used equipment are from such operations, namely: draglines for coal mining, construction or use about ship yards, and

tractors with bulldozers for construction and other mining operations.

Edward H. Rott.

Gold Mining Order L-208

Executive Secretary's Note

June 15, 1943.

I. The Present Issue

The question has been raised whether the present closing order on nonessential gold mines, Limitation Order L-208, shall be amended. Thirty United States Senators have requested in writing the recision of the Order but have indicated that a substantial relaxation of the terms of the Order would meet with their approval. Moreover, a number of grants of appeal for relief from the Order expire this month and a policy must be established with regard to continuing the grants or allowing them to expire with an effective tightening of the restrictions on nonessential gold mining.

The order closing nonessential gold mines was directed primarily toward releasing miners to essential activities, particularly non-ferrous mining. The efforts made to transfer the released gold miners to copper mines was partially successful. Not all the gold miners released are able to mine copper, many of them refused to travel away from their home surroundings, and others preferred to work in other activities such as farming and stock raising. While the degree of relief afforded to the copper mines by the closing of the nonessential gold mines is debated, there is no doubt that the copper situation was relieved to some extent.

The copper situation is critical. Requirements for the third quarter were 40,000 tons in excess of indicated supply and our stockpile has been seriously depleted. Production declined from an average of 94,700 tons in the last

quarter of 1942 to an average of 91,200 tons in the first quarter of this year. The United States Copper Association estimates a total labor shortage at copper mines, mills, smelters and refineries of about 4,700 workers. This shortage must be corrected and an additional 3-4,000 workers supplied to the copper mining industry if the present capacity and projected increased facilities are to be fully utilized during the balance of this year and in 1944. Other nonferrous mining industries are facing similar shortages.

Recognizing the critical situation, the War Production Board has discussed with Army officials the furloughing of 7,000 additional soldiers for work in the copper mining industry. The War Department is reluctant to do this until assured that all other practical solutions have been exhausted, such as diverting all possible miners from gold mines. A decision must be reached now as to whether limitation Order L-208 should be continued, relaxed, or tightened.

[fol. 2531] II. History of Limitation Order L-208

A. In August 1942 the labor situation in the copper mines had become critical. This situation was discussed at the War Production Board on September 1 and the Board agreed that every effort should be made to improve the situation in non-ferrous metal industries. Accordingly the Army furloughed, for work in copper mines, 4,000 soldiers who were formerly hard-rock miners.

B. On October 6, 1942 the War Production Board decided that an order stopping all ~~non~~essential domestic gold mining should be issued at once.

On October 8, 1942 Limitation Order L-208 was issued, ordering the closing down of nonessential gold mines except very small producers, but allowing for appeals.

III. Results of L-208

A. Manpower Saved:

Total employed in gold mining prior to L-208	12,300	
In essential gold mines or in small operations exempted from the Order	5,800	
Affected by the Order	6,500	
Reported by operators as displaced by the Order		3,200

Note:—The difference of 3,300 includes maintenance employees in closed mines and 1,700 in mines continuing production through grants of relief under appeals from the Order.

Placed in non-ferrous mines	1,200
Placed in other industries	500
Referred to other jobs—not placed	800
Refused reference to other jobs	300
Not accounted for	400

B. Equipment Saved: The amount of used equipment which became available for other essential activities is esti- [fol. 2532] mated at $75,000,000. Equipment has been moving into transfer channels leading to essential work at the rate of about $100,000 per week. By the middle of May 1943, $2,200,000 used gold mining equipment had been transferred to essential activities.

C. Materials Saved: The normal amount of critical materials consumed by affected gold mines is not available, but overall industry data for 1942 shows consumption of $26,000,000 of materials for maintenance and operation and $9,000,000 for capital investment. Since the Order affected about one-half of the total number of gold miners employed, the materials saved may run to $10-$20,000,000 annually, part of which is offset by the consumption of critical materials in permitted maintenance and stand-by operations.

D. Critical Materials Added to Available Supply: The Labor Production Division estimates that the gold miners who were transferred to nonferrous metal production have added to the annual production of critical materials in the following amounts:

Copper	11,000 tons
Zinc	4,000 tons
Molybdenum	3,000 tons
Lead	2,400 tons
Tungsten	130 tons

The Minerals Resources Coordinating Division estimates that by the closing of the gold mines annual production of about 6,370 tons of non-ferrous metals was lost, most of it in lead which is the least critical of the group. Assuming that only 500 of the transferred gold miners have continued at their new jobs in non-ferrous mines, they will contribute this year an additional 12,000 tons of copper, lead and zinc. The net gain is roughly 6,000 tons.

IV. Appeals from L-208

Since issuance of Order L-208 many mines have appealed for permission to continue operations. In some cases a few aged employees were involved who could not find employment in war industries. In others, permission was granted to process stockpiles and tailings above ground. In still others, collateral extraction or development of non-ferrous metals was involved.

[fol. 2533]

Number of appeals processed		187
Appeals granted and in effect		137
Involving 1 to 5 employees	84	
Involving 6 to 24 employees	46	
Involving 25 or more employees	7	
Total employees involved in grants		1,487
U. S.	1,019	
Alaska	468	

The appeals were granted for a limited term. As many expire this month, the question arises whether relief should be extended or the mines closed down.

V. Alternative Proposals

A. Rescind Limitation Order L-208 as requested by thirty United States Senators.

B. Continue Order L-208 with no change of policy on appeals.

C. Amend Order L-208 to provide that nonessential gold mines can be operated at a rate which will permit break-even operations, to pay for maintenance. Proponents of this policy contend that mines cannot be maintained without income from mining operations. If not maintained, mines flood and deteriorate rapidly. Contra-arguments point out that a resumption of mining will consume critical materials, halt the flow of machinery and equipment from mines to essential war activities, and draw labor back to

the mines from more essential operations to which they have transferred, in spite of the proposed restriction that only miners more than 46 years old can be employed, and if not available in the locality must be certified for such work by the War Manpower Commission. Additionally, the War Production Board's policies have been built on furtherance of the war effort and not commercial or competitive considerations.

D. The closing of at least all the nonessential gold mines regardless of any consideration.

E. Continue Order L-208 with exemptions allowed on appeal only if:

(a) the critical material output of the individual mine makes an equal or larger contribution to the war effort than the materials and labor absorbed in operations, and,

(b) the necessary labor can be obtained without drawing upon any essential war activities, and certification to this effect can be obtained from the War Manpower Commission.

[fol. 2533a] DEFENDANT'S EXHIBIT 51

Minutes of War Production Board

June 15, 1943

[fol. 2534] 3. Gold Mining

The Chairman referred to the Executive Secretary's Note on the question whether the present closing order on nonessential gold mines, Limitation Order L-208, shall be amended (Doc. 228). He reported that he had been requested in a letter signed by thirty United States Senators to rescind the Order, although they indicated that a substantial relaxation of the terms of the Order would meet with their approval. Moreover, a number of limited exemptions to the Orders granted by the Appeals Board expire this month and a decision must be reached regarding the continuing policy on appeals.

The Chairman recalled that the primary purpose in closing nonessential gold mines was to divert men and materials into essential non-ferrous mines, particularly copper mines, to relieve a situation which became particularly

acute in the last half of 1942. Manpower shortages and a consequent decline in copper output were called to the attention of the War Production Board (See WPB Minutes, September 1, 1942, Item 1), and the Board agreed that every effort should be made to improve the situation in the non-ferrous metal industries. The Army later furloughed for work in copper mines 4,000 soldiers who were formerly hardrock miners. Shortly thereafter the War Production Board agreed that an order stopping all nonessential gold mining should be issued at once (See WPB Minutes, October 6, 1942, Item 1). Limitation Order L-208 was then issued ordering the closing of nonessential gold mines except very small producers, but allowing for appeals.

These actions did relieve the situation to some extent. Although not all the gold miners displaced were transferred to other mining operations, the net gain in 1943 output of copper, lead, and zinc is estimated at about 6,000 tons. Additionally, many of the miners were placed in other war industries. By closing the nonessential gold mines a great deal of equipment was made idle and became available for essential activities. It is estimated that by the middle of May 1943, 2,200,000 dollars of used gold mining equipment had been transferred to essential activities and transfers are continuing at the rate of about 100,000 dollars per week. It is also pointed out that nonessential gold mines normally consume a large quantity of critical materials and their closing may have made as much as 10-20,000,000 dollars of materials available for essential consumption, less a small amount which they continue to absorb for maintenance and standby operations. Rescission would undo these benefits. The Chairman stated that he is unwilling to approve the production of gold at the expense of copper, a most critical material. Mr. Ickes concurred.

The Chairman emphasized that the copper situation is still critical. Requirements for the third quarter of this year were 40,000 tons in excess of indicated supply and our stockpile has been seriously depleted. (See WPB Minutes, April 27, 1943, Item 2). Production has again turned downward. The present labor shortage in the copper mines, mills, smelters, and refineries is estimated at 4,7000 workers. This shortage must be corrected and additional 3-4,000 workers supplied to the copper mining industry if the present capacity and projected increased facilities are to

be fully utilized during the balance of this year and in 1944. Other non-ferrous mining industries are facing similar shortages. The War Production Board has discussed with Army officials the furloughing of 7,000 additional soldiers for work in the copper mining industry. The War Department is reluctant to do this until assured that all other practical solutions have been exhausted, such as diverting all possible miners from gold mines.

The Chairman stated that the principal argument made by the proponents of gold mining is the economic dependence of the various mining communities on continued operation of gold mines. Another argument is that gold mining machinery is being exported to Latin American and South Africa. The Vice President stated that South African economy is vitally dependent on gold mining and its cessation there would have vastly more serious results than in the United States. It may well be true that in order to preserve the economic and political stability of other countries, a smaller quantity of critical materials would have to be exported in the form of gold mining machinery than in other forms if gold mining were discontinued there. Our exports of gold mining machinery have been far less than requested. The Chairman observed that even if materials were saved by prohibiting the export of gold mining machinery, our domestic economy would not benefit from the labor released by closing foreign gold mines. He stated that he would have a study made of the volume of gold mining machinery exported.

Upon motion by Mr. Lubin and seconded by Mr. Ickes, it was unanimously agreed that:

Limitation Order L-208 shall be continued with exceptions allowed on appeal only if

(a) The critical material output of the individual mine [fol. 2534a] makes an equal or larger contribution to the war effort than the materials, equipment, and labor used in operating the mine, considering the relative urgencies of the critical materials involved, or

(b) the necessary labor can be obtained without drawing upon any essential war activities, and certification to this effect can be obtained from the War Manpower Commission.

G. Lyle Belsley, Executive Secretary.

Approved: D. M. Nelson, Chairman.

[fol. 2535] DEFENDANT'S EXHIBIT 52

Washington Gas Light Company Building

War Production Board

Memorandum

September 15, 1942.

To: Dr. Marcellus H. Stow, Chief, Mining Branch, Room 1035, Temporary "R" Bldg.

From: Harvey A. Anderson, Chief, Conservation and Substitution Branch.

Subject: Preliminary draft of proposed Limitation Order L-208 covering Gold Mining.

The Conservation Division believes that in (a) the definition of a "nonessential mine" should be more specific as regards the metals associated with the gold production. The interpretation of this definition seems to rest on Preference Rating Order P-56 as administered by the Mining Branch. In such interpretation we should like to have adequate consideration given to the following points:

(1) The most critical metals are now represented by copper, zinc, vanadium, tungsten, molybdenum, iridium and rhodium, some or all of which might conceivably be associated with gold.

(2) The metals to be specifically excluded are silver, lead, antimony and mercury.

Our recommendation is based upon the latest estimates of supply and demand made by the Statistical Branch.

(Signed) Harvey A. Anderson.

In the Supreme Court of the United States

OCTOBER TERM, 1956

No. —

THE UNITED STATES, PETITIONER

v.

CENTRAL EUREKA MINING COMPANY (a Corporation), ALASKA-PACIFIC CONSOLIDATED MINING COMPANY, IDAHO MARYLAND MINES CORPORATION, HOMESTAKE MINING COMPANY, BALD MOUNTAIN MINING COMPANY, ERMONT MINES, INC.

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

The Solicitor General, on behalf of the United States, prays that a writ of certiorari issue to review the judgment of the Court of Claims, entered in the above cases on February 20, 1956.

OPINIONS BELOW

The original opinion of the Court of Claims and its opinion on rehearing are set out in the Appendix, *infra*, pp. 1-130.[1]

---

[1] The Court of Claims' earlier opinions overruling the Government's demurrer are reported as *Idaho Maryland Mines Corp.* v. *United States*, 122 C. Cls. 670; *Homestake Mining Co.* v. *United States*, 122 C. Cls. 690 and *Central Eureka Mining Co.* v. *United States*, 122 C. Cls. 691.

JURISDICTION

The judgment of the Court of Claims was entered on February 20, 1956 (App., *infra*, p. 122). A motion by the United States for a new trial, seasonably filed, was denied July 12, 1956 (App., *infra*, pp. 123-130). By order of the Chief Justice signed on October 9, 1956, the time for filing a petition for a writ of certiorari was extended to and including October 24, 1956 (App., *infra*, p. 131). The jurisdiction of this Court is invoked under 28 U.S.C. 1255.

QUESTIONS PRESENTED

In order to conserve scarce war materials and to bring about the voluntary relocation of skilled manpower to more vital mining activities, the War Production Board, on October 8, 1942, issued Limitation Order L-208, requiring those gold mines deemed nonessential to this country's war effort to be closed in the shortest possible time and prohibiting their acquisition or use of any material, facility, or equipment for mining except the minimum necessary for adequate maintenance. The Order contained no provision for routing the scarce war materials held by the mine owners to the more urgent users of such materials. During the period that the order was in effect, the Government did not otherwise interfere with the owners' exclusive possession and control of the mines. The questions presented are:

1. Whether Limitation Order L-208 resulted, under the Fifth Amendment, in a temporary taking of the owners' right to mine gold.

2. Whether, if there were a temporary taking, such action by the War Production Board was authorized, so as to impose liability therefor upon the United States.

STATEMENT

This is an action for just compensation under the Fifth Amendment for the alleged temporary taking of some nine gold mines pursuant to War Production Board Limitation Order L-208 during World War II. The Court of Claims, two judges dissenting, concluded that the Government had taken the owners' right to mine gold for which they were entitled to compensation under the Fifth Amendment, and reserved determination of the exact amounts of recovery for further proceedings.[2] The pertinent facts as found by the Court of Claims may be summarized as follows:

1. *Period prior to issuance of Limitation Order L-208.* By October 8, 1942, when Order L-208 was issued, the War Production Board had been delegated broad powers to regulate the production and supply of materials essential to the prosecution of the war effort (App., *infra*, p. 51).[3] By a system of priorities, man-

[2] Under Rule 38(c) of the Rules of the United States Court of Claims, trials in the first instance may be limited to the issues of law and fact relating to the right of recovery, with the amount of recovery reserved for further proceedings. In *United States* v. *Caltex (Philippines) Inc.*, 344 U.S. 149, also coming to this Court from the Court of Claims, the issue of liability was reviewed on certiorari before the amount of recovery was determined. See Petition in No. 16, Oct. T., 1952, p. 2, fn. 2; 343 U.S. 955. In the analogous situation in patent cases where the issues of infringement and damages are separately tried, the judgment on infringement has also been reviewed on certiorari before trial of the issue of damages. *United States* v. *Esnault-Pelterie*, 299 U.S. 201; *Marconi Wireless Co.* v. *United States*, 320 U.S. 1, 47. See also *United States* v. *Alcea Band of Tillamooks*, 329 U.S. 40, 341 U.S. 48.

[3] The power to allocate materials and facilities, wherever deemed necessary and appropriate in the public interest and to promote the national defense, was granted by Congress to the President in the Second War Powers Act. See 2(a)(2) of 54 Stat. 676, as amended by 55 Stat. 236 and 56 Stat. 177. This power was delegated to the War Production Board by a series of Executive Orders:

datory orders, and orders which prohibited or curtailed the manufacture of end products,[4] the War Production Board attempted to increase production and conserve essential materials, supplies, and equipment (App., *infra*, pp. 51-52). To serve these ends, the Board often had to consider means of attaining the maximum utilization of manpower—a problem inherent in any attempt to increase production (App., *infra*, p. 53).

As the shortage of critical war materials became increasingly acute during 1941 and the early months of 1942, the mining industry generally was subjected to progressively more stringent limitations (App., *infra*, pp. 53-62). Finally, on March 2, 1942, Preference Rating Order P-56 was amended so as deprive gold and silver mines of all priority ratings formerly available. This was accomplished by revoking the "serial numbers" of all mines (including those of respondents here) where the production of gold or silver, or both, relative to other minerals, constituted thirty percent or more of the total value of the extracted ore (App., *infra*, p. 61). Although an earlier unrevoked priority order permitted the gold mine operators to obtain maintenance, repair, and operating supplies with a priority position equal to that of the least essential industries in the United States, the demand for the equipment was so far above available supply that the possibility that the gold mines would obtain any was remote (App., *infra*, p. 62). Thus, by granting the lowest possible priority rating in a market where supplies

---

see Executive Order 9024 (7 Fed. Reg. 329); Executive Order 9040 (7 Fed. Reg. 527); Executive Order 9125 (7 Fed. Reg. 2719).

[4] For instance, during the war, production of office machinery, furniture, bicycles, stoves, refrigerators, and laundry equipment was suspended or limited (App., *infra*, p. 52).

were exceedingly scarce, the War Production Board had effectively eliminated the possibility of acquisition by the gold mines of critical materials or supplies (App., *infra*, p. 62).

2. *Issuance of Limitation Order L-208.* In the summer of 1942, the Labor Division of the War Production Board became concerned with the problem of an acute shortage of hardrock or underground miners in the vital non-ferrous copper mines (App., *infra*, p. 62). The primary reasons for this shortage were the draft, and the migration of workers out of the mine fields because of higher wages and better working conditions in other war industries (App., *infra*, p. 63). Accordingly, it was suggested to the War Production Board that, if the gold mines were closed, the unemployed miners would probably be diverted to copper mining, thereby alleviating a shortage which severely threatened the national war effort (App., *infra*, p. 65). In this connection, it was recognized that there was no authority to require the miners to transfer to industries in which their services were more urgently required (App., *infra*, p. 66); and further that the workers thus made available by the closing of the gold mines might very well go to work in the West Coast war plants instead of in the non-ferrous copper mines (App., *infra*, p. 66).

Despite these doubts as to the outcome of the proposed order, the War Production Board, on October 8, 1942, issued Limitation Order L-208 (App., *infra*, p. 85). Specifically, the Order directed that each gold mine without a priority "serial number" (1) should close down in the shortest possible time; (2) that, after seven days, no material or equipment should be ac-

quired, consumed, or used to break new ore or proceed with any new operations; and (3) that, after sixty days, no material or equipment should be acquired, consumed, or used to remove any ore or conduct any operation except to the minimal amount necessary to maintain the properties safe, accessible, and in good repair (App., *infra*, p. 86). In the Order closing the gold mines, no attempt was made by the Board to impose mandatory orders for delivery of the materials and facilities then possessed by the various mine operators to critical industries (App., *infra*, p. 90).

Notwithstanding the Order, only an insignificant number of hardrock miners actually transferred to the copper mines (App., *infra*, p. 89). Eventually, the acute labor shortage in the copper mines was alleviated by the Army's granting of furloughs to four thousand men for work in the copper mines—an action the Army had not been willing to institute so long as the gold mines continued in operation (App., *infra*, p. 84).

Finding that (1) Order L-208 explicitly ordered respondent gold mines to suspend operations, (2) the Order did not allocate the supplies and equipment remaining in the mines at the time of the shutdown to specific users in more essential industries, and (3) a major consideration in the decision to close the mines was consequential relocation of manpower in mines which extracted minerals more essential to the war effort than gold ore, the Court of Claims held that, while the War Production Board was authorized to impose such regulatory controls, Order L-208 nevertheless exceeded the permissible bounds of regulation

and, consequently, that the action of the Board constituted a "taking" entitling the gold mine operators to just compensation under the Fifth Amendment (App., *infra*, pp. 1-33).[5] Chief Judge Jones and Judge Laramore dissented (App., *infra*, pp. 47-50).

REASONS FOR GRANTING THE WRIT

The Court of Claims, in holding that Limitation Order L-208 went beyond the bounds of permissible regulation and resulted in a Fifth Amendment taking, although the Government at no time interfered with the owners' exclusive possession of the mines, has erroneously decided an issue of unusual constitutional importance in the twilight zone between non-compensable regulation and compensable takings. Not only is the decision directly contrary to the Court of Claims' prior rulings in *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, certiorari denied, 341 U.S. 948, and *St. Regis Paper Co.* v. *United States*, 110 C. Cls. 271, certiorari denied, 335 U.S. 815 (see also *Alaska-Pacific Consolidated Mining Company* v. *United States*, 120 C. Cls. 307), but it is at odds with the prior decisions of this Court. And in addition to the fact that a large number of cases arising under the same Limitation Order are now pending in the Court of Claims—as to which the Government's liability under the decision below may well aggregate

---

[5] While holding that in general there had been a compensable taking, the court dismissed three of the nine complaints. Oro Fino's claim was dismissed because plaintiff was either not the real party in interest or it claimed under an invalid assignment (App., *infra*, p. 39); Alabama-California Gold Mine Co. ceased operations two months prior to the issuance of Order L-208 (App., *infra*, p. 43); and Consolidated Chollar Gould & Savage Mining Co. was granted permission to continue mining operations after Order L-208 was issued and its eventual suspension of mining operations was pursuant to a voluntary decision (App., *infra*, p. 43).

tens of millions of dollars—a more definitive delineation between "regulation" and "taking" is needed as a guide for use in the current and continuing preparation for possible future national or war emergencies.

1. *(a)*. In the *Oro Fino* case, *supra,* the plaintiff, as do respondents here, sought just compensation for the alleged taking of a gold mine under Order L-208.[6] Stating that "[t]he issue is whether L-208 was a regulation or a requisition" (118 C. Cls. at 24), the Court of Claims—after extensively reviewing this Court's numerous decisions affirming that under the war power the Government may properly impose value-impairing restrictions on the use and disposition of property without becoming liable for just compensation under the Fifth Amendment (see *infra,* pp. 12-15) —concluded (we believe properly) (118 C. Cls. at 28, 29-30):

> We think that the principle that the use and enjoyment of property may under proper circumstances be regulated or restricted or even temporarily suspended in order to protect the whole public, is applicable to the case at bar. The war provided the proper circumstances. The United States did not take plaintiff's property or impose a servitude on it, as Pennsylvania was held to have done in the *Pennsylvania Coal* case [*Pennsylvania Coal Co.* v. *Mahon,* 260 U.S. 393]. What the Government did here was to impose a permissible restriction upon the use by plaintiff of

---

[6] In that *Oro Fino* case, the Court of Claims dismissed the complaint on the Government's demurrer. While the decision here was made after trial, the evidence merely elaborated upon the conclusory allegations of the first *Oro Fino* complaint.

its property in the interests of the general safety. * * *

* * * * *

* * * It is clear that a taking was not intended. The defendant did not deprive plaintiff of property by bestowing a right on another, as the statute in the *Pennsylvania Coal* case in effect did. The Government did not take over or use plaintiff's land; it did not take any gold; there was as much gold in the Oro Fino mine on June 30, 1945, when Order L-208 was revoked, as there was on January 18, 1943, when the mine was closed. Title and possession remained in plaintiff. The Government merely forbade, for the time being, the mining of gold on this land. If this had the effect of depriving plaintiff temporarily of the only interest it had in the land, and if, because plaintiff's interest was not in fee but was for a definite duration, it made that interest less valuable, these adverse effects were incidents, not so much of Order L-208, as of the kind of ownership that plaintiff had. The Government is not liable for such effects.

In so holding, the court expressly adhered to principles it had followed in the *St. Regis* case, *supra* (see 118 C. Cls. at 20). In *St. Regis,* the War Production Board, in order to alleviate a serious pulpwood shortage, prohibited all plants in a defined area of the United States from consuming, processing, or delivering any pulpwood without specific authority, and ordered the company to sell its entire supply of pulpwood to specified critical users at OPA ceiling prices. Although the company was thereby forced to suspend

operations for the period of the limitation order, the Court of Claims ruled (110 C. Cls. at 278, 279):

> It amply appears from the petition that defendant did not actually "acquire by condemnation * * * any real property, temporary use thereof, or other interest therein, together with any personal property located thereon or used therewith, that shall be deemed necessary, for * * * war purposes" as it might have done under authority of the Second War Powers Act (56 Stat. 176, 177; 50 U.S.C.A. App. sec. 632). It did not, as plaintiff argues, take over the complete dominion and control of plaintiff's property, nor appropriate to itself any right to the use and enjoyment of plaintiff's plant or any part thereof. On the other hand it is equally apparent from the allegations of the petition that the determinations and directions of the War Production Board respecting plaintiff's Tacoma plant did have the effect of depriving plaintiff of the use of said plant in the consumption and processing of pulpwood, in order that manufacturers in more strategic areas might employ, in the manufacture of war materials, the pulpwood which plaintiff would otherwise have consumed, and that it was intended to accomplish this end notwithstanding it should mean the forced closing down of plaintiff's mill. * * *

(b). In its lengthy opinion in this case the Court of Claims does not discuss its prior *Oro Fino* decision[7]

---

[7] In overruling the Government's demurrers in these cases (see *supra*, p. 1, fn. 1), the Court of Claims distinguished *Oro Fino* on the basis of the more extensive and detailed allegations, contained in the amended petitions, of arbitrary action by the War Production Board in issuing Order L-208. See *infra*, p. 14, fn. 11.

and attempts to distinguish *St. Regis* on two grounds: (1) that Order L-208 expressly required that the gold mines be closed in the shortest possible time, and (2) that Order L-208 did not undertake to allocate the critical supplies and equipment of the gold mines to war plants (App., *infra*, pp. 21-23, 32). These factual differences do not justify a difference in legal result. In *St. Regis*, the court expressly recognized that the restriction placed upon the company by the Government left the company no choice but to shut down. 110 C. Cls. at 279, *supra*, p. 10. On the other hand, even if the shutdown requirement had been omitted from Order L-208, the same cessation of operations would have been effected by the Order's other provisions forbidding the operator of a non-essential mine from acquiring, consuming, or using any material, facility or equipment. Indeed, in *Oro Fino* the court rejected this very distinction (118 C. Cls. at 29):

> * * * We see no relevance in the distinction between the cases, urged by plaintiff, that Order L-208 was a direct order to plaintiff to close down while the order in the *St. Regis* case merely forbade the paper company to use the materials it needed to continue to operate. We decline to hold that the Government may not do directly what we have already held it may do indirectly.

Similarly without substance is the court's further distinction *i.e.*, that in Order L-208 the War Production Board did not allocate to more essential users the critical supplies and equipment on hand in the gold mines when the Order was issued. The disposition of these supplies was admittedly not the prime purpose of the allocation order (*supra*, p. 5), nor did the

Board undertake completely to distribute every item of supply or equipment that might be of service to the war effort. As Chief Judge Jones, dissenting here, points out (App., *infra*, p. 48),

> * * * even those who were engaged in essential wartime industry were often merely given priority orders which were little more than hunting licenses and these industries had the task of locating and securing the critical materials.

The fact that the Board did not undertake to control the disposition of the supplies and equipment held by the mine owners indicates, not an excessive use of the allocation power as the Court of Claims held, but a use of that power which was far more limited than that in *St. Regis*.

2. (*a*). Even apart from the Court of Claims' prior decisions, established principles suggest that Order L-208 did not result in a "taking" of the gold mines. It is clear that there was no affirmative use or invasion of the mines by the Government, nor was ownership or possession transferred to the Government; instead, the owners retained complete title to, and possession of, their mines. The sole impact of Order L-208 was negative, *i.e.*, to forbid the owners from using their mines to extract gold during the war period, and since there was as much gold in the mine when Order L-208 was revoked as when it was issued, the effect of the Order was simply to suspend until after the war the extraction of the gold.

Such an imposition by the Government falls short of a taking for public use, which almost always requires that there be some positive invasion of the property, some use *by* the United States. See, *e.g.*, *United*

States v. *Pewee Coal Co., Inc.*, 341 U.S. 114; *United States* v. *Causby*, 328 U.S. 256; *United States* v. *General Motors*, 323 U.S. 373; *Portsmouth Co.* v. *United States*, 260 U.S. 327; *Richards* v. *Washington Terminal Co.*, 233 U.S. 546; *United States* v. *Welch*, 217 U.S. 333; *Pumpelly* v. *Green Bay Co.*, 13 Wall. 166.[8] The requirement of public *use* consequent upon a taking is set out in the Fifth Amendment itself and has recently been emphasized by this Court in *United States* v. *Caltex (Philippines), Inc.*, 344 U.S. 149, 155. Significantly, in the instant case, it was the lack of any usefulness of the gold mines for the war effort which led to the issuance of Order L-208.

(b). Nor, in our view, does this case fall within the very limited category of takings resulting when a regulatory order interferes too severely or extensively with the use or control of property. See, *e.g.*, *Pennsylvania Coal Co.* v. *Mahon*, 260 U.S. 393. Until now, this narrow exception has been restricted to peacetime situations,[9] and while war does not suspend the Fifth

---

[8] The so-called destruction cases (of which the flooding decisions are representative) clearly involve an affirmative invasion of property. See, *United States* v. *Welch*, 217 U.S. 333 (cited by the court below at App., *infra*, p. 19). This is also true in regard to other cases cited below. See *United States* v. *General Motors*, 323 U.S. 373; *Richards* v. *Washington Terminal Co.*, 233 U.S. 546; *Kimball Laundry Co.* v. *United States*, 338 U.S. 1. See App. *infra*, pp. 19, 32.

In *United States* v. *Pewee Coal Co., Inc.*, 341 U.S. 114, the Court found that the Government had taken *actual* possession of the coal mine, and that that possession and control amounted to a taking. See 341 U.S. at 114-117; cf. *United States* v. *Wheelock Bros., Inc.*, 341 U.S. 319.

[9] The *Pennsylvania Coal* case is distinguishable on at least two additional grounds: first, the restriction in that case was for the particular benefit of a single private house, while here the restriction was clearly for the nation as a whole; and second, the restriction in *Pennsylvania Coal* was permanent while here it was only for the temporary period of actual hostilities. See also *supra*, pp. 8-9.

Amendment it is clear that war or emergency are circumstances justifying governmental action without compensation which might be questionable in periods of less stress. Thus, in time of war or emergency, rent control can be imposed. *Woods* v. *Miller*, 333 U.S. 338; *Bowles* v. *Willingham*, 321 U.S. 503; *Block* v. *Hirsh*, 256 U.S. 135.[10] Commodity prices can be limited (*Yakus* v. *United States*, 321 U.S. 414; *Morrisdale Coal Co.* v. *United States*, 259 U.S. 188) and profits can be renegotiated. *Lichter* v. *United States*, 334 U.S. 742. Materials may be allocated among producers and distributors (*L. P. Steuart & Bros., Inc.* v. *Bowles*, 322 U.S. 398); prohibition of liquor may be ordered (*Ruppert* v. *Caffey*, 251 U.S. 264; *Hamilton* v. *Kentucky Distilleries & Warehouse Co.*, 251 U.S. 146); and rights under a contract may be frustrated. *Omnia Commerical Co.* v. *United States*, 261 U.S. 502. Here, the Court of Claims agreed that the restriction on acquisition, use, and consumption by the mines of materials and supplies was a reasonable exercise of the wartime allocation power (App., *infra*, p. 32), and also that the War Production Board's objective of better manpower utilization was unobjectionable (App., *infra*, p. 30).[11]

---

[10] Justice Holmes' statement in *Block* v. *Hirsh*, *supra*, that "[a] limit in time, to tide over a passing trouble, well may justify a law that could not be upheld as a permanent change" (256 U.S. at 157) indicates that emergency restrictions are least likely to result in a taking where they are imposed for a temporary period.

[11] Despite its holding that the War Production Board was authorized to issue an order to achieve these objectives (App., *infra*, p. 30), the Court of Claims also stated that the issuance of Order L-208 was arbitrary. This appears to be based on the premise that it was unreasonable to believe that gold miners would voluntarily transfer to the copper mines where workers were vitally needed. But the facts were that, when Order L-208 was issued, manpower was emphatically needed and, while there was a difference of opinion

The fact that the owners of the gold mines suffered some damage and incurred expense—though retaining the gold and the mines intact—does not, of course, serve in itself to convert Order L-208 from valid regulation to a Fifth Amendment taking. It is settled that even substantial damages or injury flowing from a valid exercise of the war powers need not be compensated. *Morrisdale Coal Co.* v. *United States*, 55 C. Cls. 310, 316, affirmed, 259 U.S. 188; *Royal Holland Lloyd* v. *United States*, 73 C. Cls. 722; see *Block* v. *Hirsh*, 256 U.S. 135; *Bowles* v. *Willingham*, 321 U.S. 503; *Woods* v. *Miller Co.*, 333 U.S. 138; *Hamilton* v. *Kentucky Distilleries Co.*, 251 U.S. 146, 155-158; *Omnia Commercial Co.* v. *United States*, 261 U.S. 502; *United States* v. *Carver*, 278 U.S. 294; *Transportation Co.* v. *Chicago*, 99 U.S. 635; *United States* v. *Caltex (Philippines), Inc.*, 344 U.S. 149; cf. *Miller* v. *Schoene*, 276 U.S. 272, 279-280. As stated by the Court in *Lichter* v. *United States*, 334 U.S. 742, 754:

> In total war it is necessary that a civilian make sacrifices of his property and profits with at least the same fortitude as that with which a drafted soldier makes his traditional sacrifices of comfort, security and life itself.

3. In addition, the Court of Claims has ignored the significant factors that (1) the War Production Board did not have the authority to requisition property in

---

as to whether the Order would be effective, the prospects of success as they appeared at that time, rather than by hindsight, justified the War Production Board's action. In any case, if the Order were arbitrary and so invalid, the judicial relief available was a suit to enjoin enforcement, not for compensation for damages. See *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579, *infra*, p. 16.

circumstances such as are here involved [12] and (2) the Board did not intend, nor did it purport, to exercise any requisitioning authority that it had.

While its original opinion in these cases appears to take a contrary view (App., *infra*, pp. 23-31), the Court of Claims recognized these factors in its opinion on rehearing (App. *infra*, p. 125); and it also acknowledged the rule that the Government may not be held liable for an unauthorized taking (see, *e.g.*, *United States* v. *Goltra*, 312 U.S. 203; *United States* v. *North American Co.*, 253 U.S. 330; *Hooe* v. *United States*, 218 U.S. 332 [13] (App., *infra*, p. 126)). Nevertheless, the court reaffirmed its earlier conclusion that the taking was authorized, reasoning that the Government in

---

[12] None of the statutes referred to by the court in its original opinion (App. *infra*, p. 3, fn. 1) authorized the taking which the court held occurred here. The Selective Service and Training Act of September 16, 1940, 54 Stat. 885, authorized, in Section 9, only the placing of "mandatory orders" with firms "for such product or material as may be required and which is of the nature and kind usually produced or capable of being produced by such" firm. The Act of October 10, 1940 (54 Stat. 1090) authorized the requisition of "military or naval equipment or munitions, or component parts thereof, or machinery, tools, or materials, or supplies necessary for the manufacture, servicing or operation thereof" * * * held for export. And the Act of October 16, 1941 (55 Stat. 742) provided:

> * * * whenever the President, during the national emergency declared by the President on May 27, 1941, but not later than June 30, 1943, determines that (1) the use of any military or naval equipment, supplies, or munitions, or component parts thereof, or machinery, tools, or materials necessary for the manufacture, servicing, or operation of such equipment, supplies, or munitions, is needed for the defense of the United States; (2) such need is immediate and impending and such as will not admit of delay or resort to any other source of supply; and (3) all other means of obtaining the use of such property for the defense of the United States upon fair and reasonable terms have been exhausted, he is authorized to requisition such property * * *.

[13] This principle seems to have been confirmed and applied in *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U.S. 579, 585.

issuing Order L-208 merely used "an *unauthorized* means of accomplishing an *authorized* taking" (emphasis in original) (App., *infra*, p. 129); to buttress this result, the court quoted from this Court's recent opinion in *Hatahley* v. *United States*, 351 U.S. 173 (App., *infra*, pp. 128-129).

But the Court of Claims' rationale is erroneous, even if it be assumed that that court has jurisdiction wherever a taking by the particular agency is authorized and that the agency's failure to follow the prescribed statutory procedure does not oust the court of authority. As we have already indicated, *supra*, pp. 15-16, the War Production Board—the agency which issued Order L-208—had not been given any power to take this kind of property. Unless the principle that the Government may not be held responsible in damages for an unauthorized taking is to be jettisoned (and the Court of Claims did not purport to abandon it), there must be, at the least, some authority in the agency to seize or requisition the particular property.

Hatahley has no bearing on this problem. That case arose under the Federal Tort Claims Act, which imposes liability upon the Government for the torts of its employees "while acting within the scope of his office or employment, under circumstances where the United States, if a private person, would be liable to the claimant in accordance with the law of the place where the act * * * occurred." 28 U.S.C. 1346(b). The Court held the Government liable since "[u]nder the law of Utah, an employer is liable to third persons for the willful torts of his employees if the acts are committed in furtherance of the employer's interests or if the use of force could have been contemplated in the employment." 351 U.S. at 180. In contrast to this principle, which is generally applied in tort law and is

necessary if the doctrine of *respondeat superior* is to be effective, no such rule has been followed in the field of eminent domain. On the contrary, because the authority to requisition property has been granted only with great care and its use has been carefully controlled to prevent abuse, the Government has been held liable only for those takings for which the requisite general authority has been granted. See the cases cited, *supra*, pp. 12-13, 16.

4. Some 160 cases under the same Limitation Order (L-208) are now pending in the Court of Claims.[14] If the rulings in the instant cases are left standing, the Government's total liability will probably be measured in terms of thirty to sixty million dollars. Moreover, the general constitutional problem of when "regulation" turns into "taking" is of ever-present concern during a span of war or emergency,[15] and, in view of the prevailing opinions below, it would be well to have, at this time, more authoritative guidance which will be useful in current planning for future periods of stress, as well as in the actual operation of controls in times of emergency. It will also be most helpful to have a definitive ruling on the extent of the jurisdiction of the Court of Claims where an administrative seizure is unauthorized.

---

[14] Subsequent to the denial of certiorari in *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C.Cls. 18, certiorari denied, 341 U.S. 948, *supra*, Congress, by the Act of July 14, 1952, 66 Stat. 605, authorized the Court of Claims to hear and render judgment on the claims of the gold mine operators, without regard to the statute of limitations.

[15] See, *e.g.*, *Block* v. *Hirsh*, 256 U.S. 135; *Marion & Rye Valley Railway* v. *United States*, 60 C. Cls. 230, affirmed, 270 U.S. 280; *Dayton-Goose Creek R. Co.* v. *United States*, 263 U.S. 456; *Hamilton* v. *Kentucky Distilleries and Wine Co.*, 251 U.S. 146; *Yakus* v.

CONCLUSION

For the foregoing reasons, it is respectfully submitted that this petition for a writ of certiorari should be granted.

J. LEE RANKIN,
Solicitor General.

(1) BALD MOUNTAIN MINING COMPANY, (3) ALABAMA-CALIFORNIA GOLD MINES COMPANY, (5) CONSOLIDATED CHOLLAR GOULD & SAVAGE MINING COMPANY, (7) ERMONT MINES, INC. v. THE UNITED STATES

Mr. Phillip Barnett for Plaintiff Central Eureka Mining Company. *Messrs. Ralph D. Pittman* and *Rodney H. Robertson* were on the brief.

Mr. John Ward Cutler for Plaintiffs Oro Fino Consolidated Mines, Inc., Bald Mountain Mining Company, Consolidated Chollar Gould & Savage Mining Company and Ermont Mines, Inc.

Mr. O. R. McGuire, Jr., for Plaintiff Alaska-Pacific Consolidated Mining Company. *Messrs. Hogan & Hartson* and *V. A. Montgomery* were on the brief.

Mr. George Herrington for Plaintiff Idaho Maryland Mines Corporation. *Messrs. Orrick, Dahlquist, Herrington & Sutcliffe* were on the briefs.

Mr. Edward W. Bourne for Plaintiff Homestake Mining Company. *Messrs. James D. Ewing, Eugene Z. Du Bose, Edward E. Rigney, J. Kenneth Campbell* and *James W. Misslbeck* were on the briefs.

Mr. Kendall M. Barnes, with whom was *Mr. Assistant Attorney General Warren E. Burger*, for the defendant. *Mr. Thomas H. McGrail* was on the brief.

LITTLETON, *Judge*, delivered the opinion of the court:

The plaintiffs were, at the times herein mentioned, the owners and operators of gold mines. On October 8, 1942, the War Production Board issued Limitation Order L–208 requiring certain so-called non-essential mines to close down and cease all mining operations, or any other operations in and about the mines, except to the minimum amount necessary to maintain the mines safe and accessible. Violations of the order were punishable by fine and imprisonment. By its terms, the order suspended for the life of the order the right of plaintiffs to mine and sell gold.

It is plaintiffs' contention that this action by the Government amounted in law to a taking, for a public purpose, of their right to make profitable use of their mining properties for which just compensation is due them under the Fifth Amendment to the Constitution. In the alternative, the plaintiffs contend that by virtue of the jurisdiction conferred on this court by the special jurisdictional act of July 14, 1952, 66 Stat. 605, they are entitled to recover for the closing of their mines the amount of losses incurred as a

result of Order L–208. It is plaintiffs' position that in the absence of the special jurisdictional act, this court would not have jurisdiction to render a judgment in favor of a gold mine owner for losses incurred unless they could establish a compensable taking, but that the act conferred on this court jurisdiction to render judgment for such losses where they resulted from the issuance of L–208.

Following denial by this court of the Government's motion to dismiss the petition in the case of the *Idaho Maryland Mines Corp.* v. *United States* [1952], 122 C. Cls. 670, the instant cases were consolidated for trial before a commissioner of the court on the question of the Government's liability, the question of just compensation or the amount of damages being reserved for further proceedings.

By the time L–208 was issued by the War Production Board, on October 8, 1942, the President had delegated to that Board all allocation, priorities and requisitioning powers granted to him by Congress,[1] except the power to requisition real property. In general, the purposes to be

[1] The Act of June 28, 1940, 54 Stat. 676, as amended by the Act of May 31, 1941, 55 Stat. 236, as further amended by Title III of the Second War Powers Act of March 27, 1942, 56 Stat. 177, gave to the President priorities and allocation powers and the authority to delegate such powers. Section 9 of the Selective Training and Service Act of September 16, 1940, 54 Stat. 885, 892, gave the President the power to place mandatory orders for products or materials required for the national defense, and provided for the payment of just compensation for such products, or as rental for any facilities or plants used by the United States. The Act of October 10, 1940, 54 Stat. 1090 authorized the President to take over for use or operation any military or naval equipment, etc., held for export purposes but whose exportation had been denied by law, and provided for payment of just compensation. The Act of October 16, 1941, 55 Stat. 742, authorized the President to requisition all other military or naval equipment not held for export. This act was amended in Title VI of the Act of March 27, 1942, *supra*, to eliminate the requirement that only equipment and machinery not in actual use by the owner could be requisitioned. Section 120 of the National Defense Act of 1916, 39 Stat. 213, authorized the President to place mandatory orders for the production of materials required for defense and for the seizure of plants refusing to cooperate. All of these acts provided for the payment of just compensation for any interest taken. The President delegated all the above authorities to the War Production Board or its predecessors in a series of Executive Orders as follows: Executive Order 8572, October 21, 1940, as amended by Executive Order 8612, December 15, 1940 (the Priorities Board); Executive Order 8629, January 7, 1941 (Office of Production Management); Executive Order 8875, August 28, 1941 (OPM and SPAB); Executive Order 8891, September 4, 1941; Executive Order 8942, November 19, 1941; Executive Order 9024, January 16, 1942 (WPB); Executive Order 9040, January 24, 1942; Executive Order 9125, April 7, 1942; Executive Order 9138, April 17, 1942; by Executive Order 9139, April 18, 1942, the President established the War Manpower Commission and transferred to it the labor supply functions of WPB's Labor Division.

accomplished through the exercise of those powers were to increase production of raw materials and finished products needed for the national defense through the mobilization of the material resources and the industrial facilities of the nation. The Board's power to regulate the production and supply of materials, equipment and facilities necessary for the national defense was broad and was, in general, accomplished by the use of various orders, the most common of which were the "P" or priorities orders, the "M" or materials orders, and the "L" or limitation orders. "P" orders were usually addressed to buyers of materials, etc., and authorized them to attach to their purchase orders a symbol entitling them over other users to a certain preference in delivery. "M" or materials orders were allocation orders addressed to the manufacturers or distributors of materials. These orders were used to limit and define the use or the distribution of the particular material which was the subject of the order. "M" orders might also prohibit producers or distributors of certain materials or products from selling them to any buyer unless that buyer had a certain preference rating. "L" or limitation orders, were also related to the Board's allocation functions and were issued to curtail or prohibit the manufacture of end products which required the use of specified critical materials.

The mining industry, along with other industries, was subject to regulation of its acquisition and use of materials, supplies and equipment needed in the defense effort. A general repair order known as P–22 was issued on September 9, 1941, which authorized a variety of industries, including the mining industry, to use only the lowest preference rating, i. e., A–10, to acquire the materials needed for the repair of their mining property and equipment. On September 17, 1941, Preference Rating Order P–56 granted an A–8 preference rating to so-called recognized mining enterprises to acquire materials needed by them for operating supplies and for the maintenance of the mines' property and equipment. This order represented the first special treatment accorded to gold mines as distinguished from other types of mines, in that placer gold mines were expressly excluded from any benefits under the order. Lode gold mines were permitted the use of the A–8 rating because it was recognized

that denying to them repair and maintenance supplies would cause depreciation of their installed equipment and structures, and because many lode mines produced metals other than gold which were useful to the defense effort.

As the critical materials supply situation became more acute, the Office of Production Management [2] found it necessary to take action that would insure a sufficient amount of new and repair parts for the mines producing critical raw materials, and in order to do this it eventually became necessary to deny to mines whose production was predominantly gold the right to purchase any new machinery for use in that production, and to limit such gold mines to the lowest preference rating for the acquisition of maintenance, repair and operating supplies. Accordingly, on December 18, 1941, Preference Rating Order P–100 was issued granting the mines an A–10 or the lowest possible preference rating. On March 2, 1942, Preference Rating Order P–56 was amended to revoke the serial numbers of all gold mines whose total dollar production was more than 30 percent gold. Without a serial number, a gold mine could not acquire any materials needed for operating supplies, or supplies for the maintenance of their property and equipment. Over two hundred gold mines, including those of most of the plaintiffs herein, never again received serial numbers under Order P–56 and thus, by March 1942, a series of progressively more stringent regulations had virtually eliminated any opportunity for the gold mines to acquire critical materials and supplies needed for the national defense.

No agency of the Government was ever granted any real power to control civilian manpower during the war. However, the War Production Board found it necessary to take into consideration manpower problems obviously inherent in the overall problem of increasing the production of vital raw materials and finished products necessary for defense. Shortly after the establishment of WPB's predecessor agency, the Office of Production Management, an operating division known as the Labor Division was established in OPM to study and keep abreast of the labor requirements for national defense and to advise and collaborate with the

[2] At this time the Office of Production Management was still in existence. It was not succeeded by WPB until January 1942.

other divisions of OPM on all matters affecting labor.[3] In the summer of 1942, the Labor Division of what was now WPB, became concerned with the seriously increasing shortage of hardrock or underground miners in the vital nonferrous metal mines, particularly in the copper mines. This concern was shared by the recently established War Manpower Commission and by the War Department which had become alarmed by the growing shortage in the output of copper. Upon investigation, these groups found that the exodus from the strategic metal mines was the result of the higher wages and better working conditions available to the miners in the aircraft and shipbuilding industries and on the armed services building construction projects frequently being carried on in the vicinity of the copper mines. It was also determined that a large number of experienced miners were being drafted into the armed services and Selective Service was adverse to granting deferments to such workers. Despite the urgings of mine employers and the government agencies involved to miners to stay on the job, the strategic metal miners continued to leave the mines for the more attractive job opportunities offered by other defense industries. Production was also hampered by the generally low morale of the miners, the short workweek in the mines, and the lack of any effective means of recruiting workers for work in the strategic metal mines.

During this same period the gold mines were losing experienced miners by virtue of the same circumstances, except that working conditions in many of the gold mines were good, many of the miners owned their own homes, and gold mining was often a family tradition from which they would not readily depart.

Based on 1940 and 1941 statistics furnished by the Bureau of Mines, the War Department, the War Manpower Commission and the War Production Board's Labor Division determined that if the gold mines could in some way be closed down, several thousand hardrock miners would immediately become available for work in the nonferrous metal mines, although no one was quite sure how they could be induced to go to work in such mines since no one had author-

[3] OPM Regulation 5, March 18, 1941, 6 F. R. 1598, 32 CFR 2875—1941 Supp.

ity to require them to do so. A survey by WPB's Mining Division revealed that the labor figures arrived at by the Labor Division were unduly optimistic and that the probable number of hardrock miners employed in gold mines was much smaller than the estimate based on the 1940 and 1941 figures; that, after taking into consideration the number of hardrock miners who would be necessary to maintain the closed mines in safe condition, and the number who were elderly men and home owners and thus unlikely to leave their homes unless forced to do so, a relatively small number of experienced miners would be thrown on the labor market for any purpose. The conclusions of the Mining Division were reinforced by data supplied by representatives of the larger gold mines who came to Washington to confer with officials of WPB and the Army, and also by Congressional Representatives of the mining States. Everyone involved in the ensuing controversy was aware that there was no power in any arm of the Government to force gold miners to work in the nonferrous metal mines, and no way to deny to gold miners opportunities to work in the same war industries or on the same armed services' construction projects that had been luring the nonferrous metal miners away from their jobs in the mines. Selective Service could not bring itself to grant deferments to miners. The Army indicated that it might furlough some four thousand soldiers who had mining experience, and condition their furloughs on their staying on the jobs in the nonferrous metal mines. But the Army was reluctant to grant those furloughs while the gold mines were still operating. Army officials were furnished with facts and figures showing that few hardrock miners would be released by the closing of the gold mines and that there was no way of compelling those miners to work in the copper mines and little likelihood that they would do so. Despite this, officials of the Army continued to bring great pressure to bear on the War Production Board to close down the gold mines, indicating that otherwise WPB would not be doing its part to increase production in the nonferrous metal mines. The Army's objection to the continued operation of gold mines appears to have been largely political rather than practical. Its reluctance to furlough trained soldiers was understandable, but the fact remains that it

was the only governmental agency which had sufficient control over manpower to compel persons under its jurisdiction to work in the nonferrous metal mines and continue to do so.

Over the vigorous objection of informed persons in and out of the War Production Board, the Board on October 8, 1942, issued L–208 which ordered the complete shutdown within 60 days of all the country's gold mines which did not produce sufficient strategic metals to warrant their holding serial numbers.

Within a relatively short time it became apparent that the closing of the gold mines was doing little to relieve the shortage of hardrock miners in the strategic metal mines. In fact, the record indicates that no more than 100 gold miners went into other mines and remained there for a year or more. Despite numerous appeals and a desire on the part of WPB officials to modify the order to permit the gold mines to operate at least on a break-even basis, the order was continued in effect and unchanged until the summer of 1945.

The record establishes that no one having anything to do with the issuance of L–208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines. Although WPB had full power to requisition any large inventories of supplies, materials, and equipment owned by the gold mines, or to authorize more essential users of such materials to place mandatory orders with the gold mines, no such power was ever exercised. In L–208 WPB did not even attempt to assure that those critical materials, equipment and facilities would be held for possible future requisition or order, but left the owners free to sell them to anyone they pleased, whether the prospective purchaser was engaged in essential defense work or not.

The record establishes that the purpose and intent of WPB in issuing L–208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i. e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines. The record fails to establish that

the prohibition of gold mining was reasonably calculated to or in fact did increase the country's war efficiency.

The following contentions were made in the Homestake brief and were adopted in general by all the other plaintiffs. After discussing those contentions and disposing of them, we shall take up separately the applicability of the conclusions reached to each of the plaintiffs.

Plaintiffs contend that L–208, while in form a regulation restricting their acquisition and use of critical materials needed for defense, was in substance a requisition or taking, for the life of the order, of plaintiffs' right to make profitable use of their gold mining properties for which taking the Government is liable to pay just compensation under the Fifth Amendment to the Constitution. Plaintiffs also contend that if the court should decide that L–208 was actually a regulation in substance as well as in form, it was arbitrary in that it went far beyond what was required by the exigencies of the war situation existing at the time of its issuance, bore no reasonable relation to its ostensible purpose of conserving critical materials needed in the defense effort, and in fact and law amounted to a taking of valuable property rights of plaintiffs for which just compensation should be paid.

The Government contends that regardless of how much damage plaintiffs may have suffered by virtue of their compliance with the provisions of L–208, the order was a proper exercise of the statutory regulatory powers over critical materials by the War Production Board; that it was issued to prohibit plaintiffs' use of those materials in a manner detrimental to the public safety in wartime; that the Government made no use of plaintiffs' property nor did the order represent any positive invasion of any of plaintiffs' property rights, and that no direct benefits accrued to the Government from the imposition of the order except the negative benefit arising from the prohibitions placed on plaintiffs' use of their property. Defendant urges that under these circumstances, plaintiffs' losses are no more compensable than were the losses suffered by the St. Regis Paper Company from the imposition on it of War Production Board General Preference Order M–251 (*St. Regis Paper Co.* v. *United States*, 110 C. Cls. 271; cert. den. 335 U. S. 815), or the losses

suffered by landlords who complied with wartime rent control regulations (*Bowles* v. *Willingham*, 321 U. S. 503, *Block* v. *Hirsh*, 256 U. S. 135, *Marcus Brown Holding Co.* v. *Feldman*, 256 U. S. 170). Defendant also contends that if WPB acted arbitrarily and without good cause in issuing L–208, then the order was unauthorized and illegal and the Government is not liable to pay just compensation for losses occasioned by the unauthorized act of its agents, citing *Hooe* v. *United States*, 218 U. S. 322 and *United States* v. *North American Transportation & Trading Co.*, 253 U. S. 330. Defendant suggests that in this latter circumstance, plaintiffs should have refused to obey the order (*Morrisdale Coal Co.* v. *United States*, 259 U. S. 188); or they should have brought injunction proceedings against the officials of WPB to prevent enforcement of the order.

Our first problem is to determine the precise nature of the action taken by the War Production Board in its issuance of L–208, i. e., whether that action amounted to a regulation or a taking of plaintiffs' property rights. Next it must be determined whether WPB had the power to do what it in fact did, and finally whether the Government is liable for the injuries caused plaintiffs by the exercise of that power, even though the power was exercised arbitrarily.

The property which plaintiffs contend has been taken from them, and which defendant urges was merely limited in its usefulness to plaintiffs as a consequence of a valid regulation of scarce materials, was plaintiffs' right to make profitable use of their gold mining properties. As pointed out by Mr. Justice Roberts in *United States* v. *General Motors Corporation*, 323 U. S. 373, while "property" as that term is used in the Fifth Amendment certainly means the physical thing with respect to which the citizen exercises rights recognized by law, it also means the group of rights inhering in the citizen's relation to the physical thing, as the rights to exclusively possess, use and dispose of the physical thing. In this sense, the right of a gold mine owner to extract gold from his mine and to sell it for a profit, is a property right protected by the Constitution. *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393.

In order to determine whether that property right was "regulated" or "taken," or was merely injured as a conse-

quence of a regulation or of a taking of some other property or property right of plaintiffs, we turn to the limitation order itself and to the facts and circumstances of record surrounding its issuance.

The order was issued on October 8, 1942, by the War Production Board which had succeeded to all the powers and functions of the old Office of Production Management and the Supply Priorities and Allocations Board. The preamble to L–208 reads as follows:

> The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

The statutory authority cited at the conclusion of the order was section 2 (a) of the Act of June 28, 1940 (54 Stat. 676), as amended,[4] which granted to the President the power to establish priorities and to allocate materials. The President's allocation powers were expressed in the following language (56 Stat. 178), which it will be noted, closely resembles the above quoted language in the preamble of L–208:

> * * * Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense.

As further authority for its issuance, the order cited Executive Order 9024 (January 16, 1942) abolishing SPAB and establishing the War Production Board, Executive Order 9040 (January 24, 1942), abolishing the Office of Production Management and transferring to WPB all of its duties and powers along with those of the old SPAB, and providing that WPB should perform the functions and exercise the authority vested in the President by section 120 of the

[4] Act of May 31, 1941 (Pub. Law 89), 55 Stat. 236; Act of March 27, 1942 (Pub. Law 507), 56 Stat. 177.

National Defense Act of 1916 (39 Stat. 312). Section 120 of the last mentioned act provided that the President in time of war might, through the head of any Government department or agency, place mandatory orders with individuals, firms, associations, etc., for products produced by them; that if there was a refusal to make or sell at a reasonable cost any product required in response to such mandatory orders, the President, through the head of any department, might take immediate possession of the plant. The section provided for the payment of compensation for any product or material acquired by mandatory orders, or as rental for the use of the manufacturing plant. Executive Order 9125, April 7, 1942, also cited in L–208, contained the President's delegation of his allocation and priority authority to WPB pursuant to Title III of the Second War Powers Act of 1942, 56 Stat. 176.

Order L–208 provided that for the purposes of the order all gold placer or lode mines located in the United States or its territories or possessions which did not hold serial numbers under Preference Rating Order P–56 were deemed "nonessential mines".[5] The order then required such nonessential gold mines to do the following: (1) to close down as soon as possible after the issuance of the order; (2) to cease acquiring, consuming or using any material, facility or equipment for the purpose of breaking any *new* ore or for the purpose of carrying on any development work; (3) on or after 60 days from the issuance of the order, to cease acquiring, consuming or using any material, facility or equipment to remove *any* ore or waste from the mine, above or below ground, or to conduct any other operation in or about the mine except to the minimum amount necessary to maintain the buildings, machinery and equipment in repair, and the mine's access and development workings safe and accessible; (4) to refrain from using any preference rating to acquire any material or equipment for consumption or use in the operation, maintenance or repair of the mines covered by the order, except with the permission of the Director General for Operations. The order provided that the Direc-

[5] This provision had the effect of including in the operation of the order all mines whose gold production in dollar value exceeded 30 percent of its total production.

tor General for Operations, WPB, might assign preference ratings only for obtaining the minimum amount of material needed to maintain the nonessential gold mines in safe condition during the closedown. Violations of the provisions of the order were made a crime punishable by fine or imprisonment. The order provided that persons affected by the order might appeal to the Board by letter and that the Director General for Operations might thereupon take such action as he might deem appropriate.

The preamble to the order, the authority cited at the end thereof, and the prohibition placed upon the acquisition of critical materials, indicate that the order was merely intended to allocate *away from* the so-called nonessential gold mines materials, equipment and facilities which were in short supply and needed for defense. A study of the balance of the order, particularly in the light of certain facts of record, persuades us that the order was not intended to be an allocation order. Insofar as the order prohibited the acquisition of materials, equipment and facilities, certain existing orders, P–56 and P–100, already prevented the acquisition by the gold mines of any such materials except, in the case of P-100, where gold mines did have the lowest priority rating in existence for repair parts, and that could have been revoked. The record establishes that the gold mines, particularly the Homestake mine, had on hand in October 1942 large amounts of materials, equipment and facilities needed in the mining of gold and that Homestake, and some of the others whose circumstances we shall discuss separately, could have continued operations with such inventories for a considerable period after October 8, 1942. L–208 did not in fact "allocate" any of such materials, equipment or facilities away from the mines but, on the contrary, left the mine owners and operators free to dispose of them in any manner they saw fit, by delivering or selling them to nonessential users or by keeping them in the mines. What the order did do, and do directly, was to prohibit the continued operation of the gold mines.

A comparison of L-208 with General Preference Order M–251 which was involved in the *St. Regis* case, *supra*, may aid in evaluating the Government's contention that the two orders were alike in their purpose, operation and effect, and

that the loss of the gold mine owners' right to make profitable use of their mining properties was merely a consequential injury resulting from a valid allocation of critical materials away from the mines in the same way that the injury to the paper company's right to do business was the consequence of a valid allocation of pulpwood away from the company.

The preamble to the St. Regis Order, M–251, was in all material respects identical with the preamble of the gold order, L–208.[6] The order was issued on October 19, 1942, ten days after the issuance of the gold order, and the authority cited for its issuance was identical with that cited in the gold order.

Order M–251 provided that in areas declared by WPB's Director General for Operations to be shortage areas, the Director General could allocate the available supply of pulpwood held or accumulated in that area away from and to specific persons; that he could direct the holders of pulpwood in the area to maintain their accumulations of pulpwood *available for disposition* by the Director General who might direct the delivery of specific quanties of such accumulated pulpwood to specific persons. The Director General was authorized to direct that no one in the area might acquire, consume, process or deliver any pulpwood of the types defined, and which were held or accumulated in the area, *except as the Director General might order.* The Director General was also authorized to require the manufacture of particular types of woodpulp or other wood products by manufacturers. On October 23, 1942, this order was applied specifically to the St. Regis Paper Company and that company was forbidden to acquire, consume, process or deliver any pulpwood, except on authorization or by direction of the Director General for Operations of WPB. Immediately upon issuance of the order to St. Regis, that company was directed by the Director General to deliver during the month of November its entire inventory and supply of pulpwood to

[6] General Preference Order M–251 contained the following preamble:

"The fulfillment of requirements for the defense of the United States has created in certain areas and is expected to create in other areas a shortage in the supply for defense, for export and for private account, of wood for pulp and lumber, and has created a shortage in the supply for defense, for export and for private account of various materials and facilities required for the production of pulpwood; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

specified persons "at regularly established prices and terms", subject to OPA regulations. St. Regis was permitted to continue processing and manufacturing its customary products from pulpwood during the balance of October. Although the order did not direct plaintiff to close its factory and plaintiff was left free to make any use of its factory it could, its inability to secure pulpwood resulted in the closing of the mill, plaintiff having decided that it was not feasible to convert its facilities to some other type of manufacturing that would not require the use of pulpwood.

In its suit in this court, the St. Regis Paper Company contended that M–251 amounted to a temporary taking of its paper factory and of its right to do business. Although it was not made an issue in the case, M–251 probably did amount to a taking of plaintiff's inventory of pulpwood (cf. *Edward P. Stahel & Co., Inc., et al.* v. *United States*, 111 C. Cls. 682, cert. den. 336 U. S. 951), but plaintiff did not sue for the taking of its pulpwood, probably because shortly after the order was issued plaintiff received what it considered to be just compensation on the mandatory sales to the Government's designees pursuant to M–251. The court held that M–251 did not require the closing of plaintiff's plant nor did it interfere with plaintiff's use of the plant; that, on the contrary, the order represented a valid exercise of WPB's admitted power to allocate a scarce material such as pulpwood, and that any injury to plaintiff's profitable use of its plant, or any loss in value of its plant, were merely consequential and therefore did not amount to a taking and were not compensable. The terms of the order itself certainly bore out the court's conclusion since the order merely represented an attempt by the Government to secure all the available supply of pulpwood in the area by freezing the supplies on hand with the owners in the area and immediately placing mandatory orders directing delivery to specified users elsewhere, and by prohibiting the users in the area in question from acquiring any more pulpwood.

Like M–251, the gold order prohibited the acquisition, consumption or use of certain personal property used in the mining of gold. L–208 did not, however, require the gold mine owners to hold for the use or disposition of the Government their inventories and supplies of the personal prop-

erty covered by the order but left the owners free to use that personal property in any way they wished except in the mining of gold. The plaintiffs might have sold their inventories of machinery, supplies and equipment to any user whether or not that user was conducting a business which was essential to the defense effort. The record establishes that the Government did not intend to, nor did it ever, requisition any of this personal property or direct the mine owners to sell it to anyone else. From the language of the order itself and from the circumstances surrounding its promulgation, it is apparent that its only purpose was to deprive the gold mine owners and operators of their right to make use of their mining properties.

Since the subject matter of L–208 was the gold mine owners' right to make use of their gold mines and was not the materials equipment and facilities they had on hand and in which the Government apparently had little interest, the next question is whether L–208 amounted to a "regulation" of that property right or to a "taking."

"Regulation" implies a degree of control according to certain prescribed rules, usually in the form of restrictions imposed on a person's otherwise free use of the subject matter of the regulation. Where the restrictions imposed are temporary and narrow, and where the persons on whose property the restrictions are imposed are assured an opportunity to receive "reasonable" compensation as determined by an impartial arbiter, the courts have held that enforcement of such regulations has not deprived the owner of the regulated property of due process, nor has it resulted in the "taking" of a property right in the constitutional sense. Typical of this type of regulation are the rent control regulations referred to above, regulations issued under the renegotiation statute (*Lichter* v. *United States*, 334 U. S. 742) limiting the right to make excessive profits on war contracts, and restrictions imposed in mortgage moratorium legislation (*Home Building & Loan Association* v. *Blaisdell*, 290 U. S. 398). On the other hand, where the restrictions imposed by the so-called regulations are so broad that the owner of the property regulated is deprived of most or all of his interest in the property, for all practical purposes there has been a

taking of that property. *Louisville Bank* v. *Radford*, 295 U. S. 555.[7]

The case of *Edward P. Stahel & Co., et al.* v. *United States*, referred to earlier herein, has much in common with the issues raised in the instant controversy as well as with those involved in the earlier case of *St. Regis Paper Co.* v. *United States*, *supra*. In the *Stahel* case, as in the others, plaintiffs alleged that an order of the Office of Production Management (predecessor agency to the War Production Board) though in form a regulation, operated in such a manner as to take valuable property rights of plaintiffs without payment of just compensation. The order in question was General Preference Order M–22 issued on October 16, 1941. M–22 prohibited the owners of raw silk, including the plaintiffs, from selling or delivering their silk to any user but the Government or persons designated by the Government, and further provided that any orders placed with such owners by the Government or its designees had to be accepted and filled. The order did not prohibit the acquisition of raw silk by plaintiffs. Some two months after the issuance of M–22, the Government and its designees began placing mandatory orders with plaintiffs for the silk which was paid for, upon delivery, at the OPA price. Plaintiffs sued for additional compensation for the silk, alleging that the "taking" had occurred on the issuance of General Preference Order M–22 on October 16, 1941, and that, accordingly, they were entitled to recover an additional amount to compensate them for delay in payment, plus amounts expended for storage and handling of the silk after October 16, 1941, until

[7] *The Home Building & Loan Association* case, *supra*, involved the constitutionality of a Minnesota statute which, in time of economic depression sought to relieve the plight of needy mortgagors by providing for a possible extension of the redemption period of their mortgaged property. Citing the many safeguards contained in the statute to protect the rights of the mortgagee and the fact that the mortgagee would ultimately receive all that he was entitled to under the mortgage, the Court upheld the statute as a *limited* and *temporary* restriction on the mortgagee's right to enforce his contract, such restriction being justified by the great public calamity, i. e., the depression. This case was relied on by the mortgagor, Radford, in *Louisville Bank* v. *Radford*, *supra*, to uphold the constitutionality of the Frazier-Lemke Act of 1934, which also sought to relieve the plight of needy mortgagors during the depression. The Supreme Court held that the restrictions imposed by the federal act were neither limited nor temporary and that they amounted to a taking of valuable property rights of the m rtgagees without any compensation whatsoever.

the silk was finally delivered to and paid for by the Government or its designees. The Government contended that M–22 was merely a regulation which placed certain limitations or restrictions upon plaintiffs' right to sell their silk and that these limitations were imposed in the proper exercise of the sovereign's lawful power to allocate scarce materials in wartime *away from* nonessential to essential users, and that while the restrictions imposed in the interest of the defense effort may have decreased the value of the silk to the plaintiffs, the silk was not taken on October 16, 1941, citing *Omnia Commercial Company, Inc.* v. *United States*, 261 U. S. 502, *Bowles* v. *Willingham*, 321, U. S. 503.[8] The Government pointed out that on October 16, 1941, when the order was issued, the Government did not take any positive action regarding plaintiffs' property which, on the contrary, was left in the possession and control of the plaintiffs subject only to the negative power of the Government evidenced by the restriction that it might not be sold or delivered to anyone but the Government or its designees. The court held that the restrictions imposed by M–22 on plaintiffs' use of its silk were so broad that, for all practical purposes, plaintiffs were deprived of their silk; that although the silk did remain in the actual possession of the plaintiffs after October 16, 1941, it was held not for their own use but for the use of the Government whether the Government ever exercised its right under the order to demand delivery of the silk or not.[9] The court noted that the Government had the statutory power to requisition plaintiffs' silk and pay just compensation therefor on October 16, 1941, and held that the

[8] In the *Omnia* case the Government had requisitioned the entire output of steel by the Allegheny Steel Company and had directed the company not to comply in that year with any contract calling for steel. The Omnia Commercial Company had a contract with the Allegheny company entitling Omnia to Allegheny's steel at a price well under the market. Omnia sued the United States alleging that the Government had "taken" its right to have its contract with Allegheny performed. The court held that the contract had not been taken but only its performance frustrated and that Omnia's loss of the expected profit was a consequential loss resulting from lawful governmental action of requisitioning Allegheny's steel. In the *Bowles* v. *Willingham* case the Supreme Court held that rent control imposed only temporary and narrow restrictions on an owner's use of his property.

[9] In its motion for a new trial which was denied, the Government pointed out that under the court's decision a holder of silk on October 16, 1941, who had never received a mandatory order for any of its silk, would still be entitled to the same compensation as the holder who sold all of his silk on mandatory orders.

Government's choice of a general preference regulation as a means of acquiring the use of plaintiffs' property in preference to a formal requisition did not deprive the operation of M–22 of its character of a taking, or lessen plaintiffs' constitutional right to just compensation. Plaintiffs' recovery included an additional amount to compensate them for delay in payment, plus amounts expended by them in handling and storing the silk after October 17, 1941.

It seems to us that the restrictions placed by L–208 on the right of gold mine owners to mine and sell gold were neither conditional nor limited and were as complete as were the restrictions placed on plaintiffs' silk in the *Stahel* case. In neither the *Stahel* case nor the instant case did the Government, through the orders issued, attempt to vest in itself title to the subject matter of the orders, or to assert any proprietary rights in the subject matter. In both cases the orders merely sought to impose certain negative restrictions on the otherwise free use of their property by the owners. If plaintiffs' silk was taken by M–22 because that order served to deprive plaintiffs of all beneficial use of their silk, regardless of the fact that physical invasion of the property right was merely threatened in the order and might never have taken place, it would seem to follow that L–208 was equally a taking of the right of the gold miners to make profitable use of their mining properties by mining and selling gold.[10] It also appears that the loss of the gold mine owners of their right to mine gold was the direct result of L–208 and was not a consequential loss in the sense that it was the result of the exercise of defendant's power to allocate scarce materials, or to take such materials, as was

[10] It is not contended that their right to mine and sell gold was acquired by defendant in the sense that the Government actually took possession of the mines and carried on the business for its own benefit. It is contended, however, that the Government deprived plaintiffs of their right to make profitable use of their mining properties for the period during which the order was in effect and that this deprivation amounted to a taking. That Government action short of acquisition of title or short of physical occupancy may constitute a "taking" in the constitutional sense has been upheld by the Supreme Court. *United States* v. *General Motors, supra; United States* v. *Welch*, 217 U. S. 333; *Richards* v. *Washington Terminal Co.*, 233 U. S. 546. As Justice Roberts pointed out in the *General Motors* decision, it is the "deprivation of the former owner rather than the accretion of a right or interest to the sovereign" which constitutes the taking, and if the effects of the Government's actions are so complete as to deprive the owner of all or most of his interest in his property, that property has been "taken."

plaintiffs' loss in the *St. Regis* case, *supra*, because, as we have seen, L–208 neither allocated nor took plaintiffs' inventory and supply of critical materials, equipment and facilities.

To allocate means to distribute or to assign. Allocation is the act of distributing or of putting one thing to another. Insofar as L–208 prohibited the *acquisition* by gold mine owners of materials, equipment and machinery, the order was allocating the available supply of those items *away from* the gold mines so that there might be more to distribute or allocate to mining enterprises considered to be more essential to the war effort. Insofar as L–208 prohibited the mine owners from using any of the materials, supplies, equipment, machinery and facilities owned by them and on hand, that prohibition allocated nothing, i. e., it distributed nothing because the order contained nothing which required the gold mine owners to sell those items to the more essential users. Furthermore, because the order merely deprived the owners of the machinery, materials, supplies, etc., on hand, of the use thereof for one single purpose, i. e., for the continued mining of gold and left the owners free to otherwise dispose of those items as they pleased, that prohibition did not amount to a "taking" of the materials, equipment, machinery, etc., owned by the gold mine owners and operators. The fact that occasional voluntary sales of idle gold mining machinery were made to some more essential mines does not give to that part of L–208 prohibiting the owners from using those items to mine gold the character of an allocation order; it merely emphasizes the fact that those items were not "taken." But the petitioners herein are not suing for the taking of their machinery, facilities and supplies on hand.

We turn next to a consideration of whether L–208 was in fact a limitation order. Limitation orders were used to supplement priority orders which were not always effective to keep nonessential manufacturers of nonessential products from acquiring critical materials. Such nonessential manufacturers, even with the lowest priority rating, might be able to pick up from time to time a significant amount of critical materials which at a later time might be needed by essential manufacturers. To remedy this situation, limitation orders were directed to the manufacturers of *specified end prod-*

ucts which were considered nonessential in war time, such as office machinery, furniture, bicycles, stoves and passenger automobiles, and they prohibited the manufacture of such end products into the manufacture of which went critical materials.

No critical materials went into the end product of a gold mine, i. e., refined gold. The gold mining industry used critical materials only for the maintenance, repair and operation of the mines. If it had been the sole purpose of WPB to prevent gold mines from *acquiring* critical materials to a greater extent than they were already prevented by P–56, under which they could acquire nothing because their serial numbers had been revoked, and under P–100 under which they could acquire only limited amounts with their lowest (A–10) priority rating, that part of L–208 which absolutely prevented the acquisition of those materials to operate the mines, effectively did that.

It has been suggested by defendant that a further purpose of a limitation order was to prevent the consumption of critical materials already on hand and owned by a nonessential industry in order to "conserve" such critical materials. The question immediately arises in connection with L–208: In what significant way did L–208 *conserve* such critical materials, i. e., the equipment and machinery and supplies of the gold mines? Presumably something is "conserved" for the purpose of putting it to some more important use, otherwise what is the object of "conservation"? A material may be in short supply but if it is not needed by anyone, it seems hardly a proper object of conservation, and if it is kept idle or saved up, it would appear to be merely hoarded rather than conserved. Also, if something is scarce and is urgently needed by others, it cannot be said to be conserved unless the so-called conservation measure makes some effective provision for getting that scarce and needed material into the hands of essential users. The provision may appear in the same measure or in a supplemental measure. This was not done in L–208 and it was this omission which robs the order of the character of a *bona fide* limitation order.

L–208 was labeled a "Limitation Order", and up to a point it followed the pattern of true limitation orders. But a limitation order has a specific purpose: it is issued to conserve critical materials so that those materials may be used by essential war industries. It is not issued to insure that those critical materials will deteriorate through disuse or be preserved for future use by the nonessential owners thereof. L–208 made specific provision for the gold mine operators to preserve their own critical machinery and equipment so that they, i. e., the nonessential owners, would have that equipment and machinery in good condition for use in gold mining when the limitation order was finally lifted.

Paragraph (b) (3) of L–208 provided that no gold mine operator might acquire, consume or use any critical material, facility or equipment *except to the minimum amount necessary to maintain the gold mine's buildings, machinery and equipment in repair and its access and development workings safe and accessible.* Paragraph (c) of the order authorized the Director General for Operations of WPB to assign such preference ratings as might be required to gold mine operators to enable them to obtain the minimum amount of critical materials necessary to maintain their nonessential mines on the basis set forth in subparagraph (b) (3), i. e., to keep their machinery and equipment in repair, *inter alia.*

The above makes it quite clear that the "conservation" brought about by L–208 with respect to the mining machinery and equipment owned by the mine operators was not the usual conservation purpose of a limitation order of WPB, i. e., conservation so that the equipment, machinery and materials owned by a manufacturer of nonessential products might be converted to the manufacture of essential end products either by the owner or by some manufacturer of an essential end product. Any actual conservation intended and brought about by that part of L–208 which prohibited the use of the gold mine owners' equipment and machinery for the mining of gold was for the purpose of conserving that equipment and machinery for future use by the nonessential gold mines in the production of nonessential gold.

In summary, it appears to us that only to the extent that L–208 prohibited the *acquisition of new materials and equip-*

ment was that order either a limitation or an allocation order. The balance of the order, having to do with the prohibition of the consumption and use of materials, equipment and machinery owned by the mines and on hand, in the operation of the gold mines, was not intended to and could not, under the very terms of the order itself, accomplish any of the purposes of allocation or limitation orders. Since that prohibition on use of materials and equipment on hand was neither a limitation nor an allocation order, the destruction of the right to mine and sell gold was not consequential to a limitation or allocation order.

L–208 was aimed, in all its provisions, directly at the beneficial use of the mining properties of the gold mine owners, and the only intention reasonably inferrible from the language of the order itself and the circumstances surrounding its issuance was an intent to temporarily deprive them of that property right. By the issuance of Order L–208 the defendant prohibited the carrying on of otherwise lawful mining operations and thereby placed a definite servitude on plaintiffs' profitable use of their mines which resulted in a temporary taking of that property right. See *Peabody* v. *United States*, 231 U. S. 530; *Matthews* v. *United States*, 87 C. Cls. 662, 720.

We come next to the question whether the War Production Board had the necessary authority to issue an order which would have the effect of depriving plaintiffs of their right to make profitable use of their mining properties. The Government contends that if, as argued by plaintiffs, WPB acted "arbitrarily" in issuing L–208, it acted without authority and the Government is not liable to pay just compensation for property destroyed by the unauthorized act of its agents.

While it is true, in general, as urged by defendant, that the Government is not liable for damages occasioned by the unauthorized acts of its agents, the problem of determining whether or not a particular act was "authorized" is not always a simple one.

If the statute under which the Government agent is acting specifically forbids the particular act complained of, that action is clearly unauthorized and the Government will not

be liable for damages resulting from that action. *Hooe* v. *United States*,[11] *supra*.

If an agent of the Government acts without any statutory authority, that action is unauthorized and the Government will not be liable for damages resulting from that action. In such a case the injured person's remedy would be by injunction against the individual government official acting without authority. *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U. S. 579. In that case the President issued an order directing the Secretary of Commerce to take and operate most of the Nation's steel mills. Although there were in existence at that time two statutes authorizing the President to take both personal and real property under certain conditions, the Supreme Court held, and the Government admitted, that those conditions were not met. Furthermore the Court noted that the seizure technique to solve labor disputes in order to prevent work stoppages was not only unauthorized by any congressional enactment but that Congress had refused to adopt that method of settling labor disputes when it was considering amendments to the Taft-Hartley Act in 1947. The Court further held that not only was there no statutory authority for the seizure or taking of the steel mills, but also there was no constitutional authority for such a taking in that the President had no such inherent power. In the instant case Congress had by legislative enactment given the President authority to take for title or for use both real or personal property or interests therein, and those statutes did not impose "cumbersome, involved, and time-consuming" conditions referred to by the Supreme Court in connection with the statutes referred to in the *Youngstown* case. On the contrary, the conditions imposed by the wartime statutes were simple, and involved (1) that

[11] In the *Hooe* case a federal statute provided that in renting space for Government use, Government officials might not obligate the Government for the future payment of money in an amount in excess of the appropriation. A Government official rented from plaintiff a part of his building at a rental in the full statutory amount, but occupied additional space in the building for which plaintiff was not paid. Plaintiff sued for the additional rent either on the ground of an implied contract or as just compensation for private property taken for public use. It was held that the Government was not liable on either theory since the officer acted without lawful authority when he did anything which tended to commit the Government to pay more rent than the statutory maximum and that in so doing he was not representing the United States.

the taking be *deemed* by the President or his designee to be necessary for the prosecution of the war and (2) that just compensation be paid the owner of the property interest taken. It is true that the wartime statutes under which the President and WPB operated did not specifically authorize the closing of any business as a means of taking over that business. But the closing amounted to a taking and the President and WPB were authorized to take private property when, *in their opinion*, such taking would be in the interests of national defense. We have here then, merely the use by WPB of an unorthodox and perhaps *unauthorized means* of accomplishing an *authorized end* or result, i. e., a taking. And if a taking is authorized by Congress, it is compensable under the Constitution despite the means used to accomplish it, as we shall discuss more fully hereinafter.

Where the agent's actions are not prohibited by statute and where they are within the general scope of his authority, although under general law they may be tortious, the modern trend is to hold such actions to be the acts of the sovereign. This subject was discussed at some length in *Larson* v. *Domestic & Foreign Corp.*, 337 U. S. 682, in which the Court held that the District Court did not have jurisdiction to grant an injunction preventing officials of the War Assets Administration from selling coal to anyone other than the petitioner on the ground that the suit was actually one for specific relief against the Government which had not consented to be so sued. The petition in that case alleged that the War Assets Administration had sold certain surplus coal to the petitioner; that the Administrator for that agency had then refused to deliver the coal to petitioner and had entered into a new contract to sell the coal to others; that the petitioner's contract with the Government was an immediate contract of sale under which title to the coal had passed to the petitioner; that, accordingly, retention of the coal by the Administrator, after demand was a conversion of petitioner's property and the Administrator's actions illegal so that the relief prayed for was not against the Government but against the Administrator individually to enjoin his threatened tortious action. The Supreme Court held that the Administrator had statutory authority to make

decisions concerning the meaning and effect of the contracts he entered into on behalf of the Government, and that such authority included the authority to make incorrect as well as correct decisions, whether of law or of fact; that any action taken pursuant to an incorrect decision was not, *ipso facto*, an unauthorized or illegal act, but might well be the act of the sovereign even where the act involved the wrongful withholding of property belonging to the petitioner, i. e., a conversion. The Supreme Court then held that the action of an officer of the sovereign, "be it holding, taking or otherwise legally affecting the plaintiff's property," could only be regarded so illegal as to permit suit for specific relief against the officer as an individual where that action was clearly outside the officer's statutory powers or where, though within those powers, the powers themselves were constitutionally void. The Supreme Court stated at page 695:

> There is, therefore, nothing in the law of agency which lends support to the contention that an officer's tortious action is *ipso facto* beyond his delegated powers. Nor, we think, is there anything in the doctrine of sovereign immunity which requires us to adopt such a view as regards Government agencies.

The Supreme Court concluded that since the Administrator's tortious actions were taken pursuant to erroneous decisions (of law) which he was authorized to make, he was acting for and as the representative of the Government and not in his individual capacity. The injunction was denied because it would have required specific relief against the Government itself. The Supreme Court suggested that the petitioner's remedy was in the Court of Claims for damages for breach of contract or for just compensation for the taking of the petitioner's coal.

Where a Government agent exercises a statutory power in a manner not provided for in the statute, the courts have held that his action was not "unauthorized" if the result of the action was one contemplated by the statute. In *Hurley* v. *Kincaid*, 285 U. S. 95, petitioner had obtained an injunction in the District Court restraining certain Government officials from proceeding further with the construction of a flood control project then being carried out under the Federal Flood Control Act. It was clear that the continued construc-

tion would necessarily destroy portions of plaintiff's property. The lower court granted the injunction on the ground that the Government officials were acting "illegally" and therefore in their individual capacity in threatening to proceed with the project without first acquiring by formal eminent domain proceedings, as they were specifically required to do by the Flood Control Act, the necessary flowage rights over petitioner's land. The Supreme Court reversed the action of the lower court granting the injunction, on the ground that the acts complained of were the acts of the sovereign and not the individual acts of the officials; that the Flood Control Act authorized the taking of petitioner's land or of an easement therein; that the only "illegality" involved was the failure of the Government officials to compensate petitioner for the land taken and that such a circumstance afforded no basis for an injunction where, as in that case, compensation might be procured by the petitioner in an action at law in the Court of Claims. The Supreme Court held that the Fifth Amendment assured plaintiff of just compensation but that (p. 104, footnote 3) it did not entitle him to be paid the compensation in advance of the taking:

> Even where the remedy at law is less clear and adequate, where large public interests are concerned and the issuance of an injunction may seriously embarrass the accomplishment of important governmental ends, a court of equity acts with caution and only upon clear showing that its intervention is necessary in order to prevent an irreparable injury.

Although the Supreme Court did not characterize as "arbitrary" the action of the Government officials in refusing to institute condemnation proceedings as provided for in the Flood Control Act, it would seem that such action was arbitrary in the same manner that a willful breach of a Government contract by a contracting officer is arbitrary. In neither case, however, are such arbitrary actions "unauthorized" in that they were forbidden by statute or were clearly outside the scope of the powers delegated by statute.

A regulation may be so arbitrary in its application to the particular subject matter and under the circumstances that it actually results in the regulatory body exercising powers not conferred on it by statute. This was the case in *Berwind-*

White Coal-Mining Co. v. *United States*, 9 F. 2d 429. Plaintiffs therein were owners of coal mines and private coal cars. They sought to enjoin the enforcement of an order of the Interstate Commerce Commission relating to the distribution among bituminous coal mines of coal cars during times of car shortages. Enforcement of the order would have prevented the plaintiffs from using their private coal cars. The court observed that the rights of private car use and ownership are recognized by Congress, and that Congress had not delegated to the Commission any power over private car owners or over the soft coal industry. The court held that in issuing the order in question the Commission, through what purported to be an exercise of its regulatory power over carriers, actually abolished the use of private coal cars to a substantial extent and thus deprived the private car owners of the full enjoyment of their rights to operate their mines and supply themselves with coal from other mines. The order of the Commission was held to be unjust and unreasonable and to amount to an unlawfully arbitrary exercise of power which had the effect of regulating that which the Commission had no power to regulate.

It would seem to follow from the above, that the "arbitrary" action of a Government official is not necessarily "unauthorized" and "illegal" if the action represents an exercise of powers delegated to the official by the sovereign.

In the instant case the record establishes that as an order allocating critical materials away from a nonessential user, L–208 was arbitrary and unreasonable. The amount of such materials which were thereby prevented from being delivered to the gold mines was not significantly greater than was already prohibited by existing priority orders, and a simple revocation of those orders insofar as they applied to the gold mines, would have cut off all such deliveries. L–208 did not require the owners of the critical materials to hold the materials they had on hand for the use of the Government or some essential user to be designated by the Government, nor did it require that the owners deliver the materials to such essential users, but rather left them free to dispose of the critical materials in any way or to anyone they pleased. The only use which the gold mine owners were forbidden to make of the critical materials, equipment and supplies which they

owned and had on hand, was in the operation of their gold mining properties. Despite its preamble and the authority cited for its issuance, the language of the order itself and the circumstances surrounding its issuance indicate that neither its purpose nor its effect was to conserve or allocate critical materials, equipment and facilities needed for defense, but was rather to deprive the gold mine owners of their right to make profitable use of their gold mines. Viewed as a taking of that property right, the order was equally arbitrary since the record discloses that those officials responsible for its promulgation either knew or should have known that the only reason for the order, i. e., relieving the manpower shortage in the nonferrous metal mines, would not be accomplished thereby. However, we think that the only "illegality" involved in WPB's arbitrary action was its failure to pay just compensation for the property right of which plaintiffs were deprived, because we believe that WPB had the necessary statutory authority to take this property. By October 1942, Congress had conferred upon the President authority to requisition, place mandatory orders for, or take for title or for use, any real or personal property or interests therein which he deemed necessary to successfully prosecute the war. These statutes left the determination of war necessity to the absolute discretion of the President, but they required the payment of just compensation for any property taken or used. Congress also authorized the President to take possession of factories or other business establishments and to operate them if it was deemed by him to be in the interests of the national defense to do so. All these powers were delegated to the War Production Board except the President's power to condemn real property. Although none of the statutes contained specific language authorizing the requisition of a business in order to keep that business from operating at all, if the Government felt that the idleness of a business would be of benefit to the defense effort but did not believe the business sufficiently evil or dangerous in wartime to justify its closing,[12] we suppose its powers of requisitioning were broad enough to permit such action, subject, however, to the obligation to pay just compensation

[12] *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146.

to the owner. Neither party has suggested that the Government lacked such power.

Defendant also urges that if, as plaintiffs contend, the only purpose of the order was to divert manpower from the gold mines to the nonferrous metal mines, then the action taken by WPB in issuing the order was unauthorized because the War Production Board had no authority to issue orders affecting manpower.

From our study of the statutes, executive orders and regulations relating to WPB, we think that WPB was authorized to take into consideration the manpower implications of any order it might issue. The relationships between manpower and the consumption of scarce materials, and between manpower and increased production of vital end products, are of too obvious significance in the whole war production situation to suppose that they were not the legitimate concern of the War Production Board. The establishment of the Labor Division early in the life of the Office of Production Management and the presence on the War Production Board itself and on the War Manpower Commission of the Director of the Labor Division, are ample evidence of this concern. While Congress never enacted legislation which gave the Government the power to order a civilian worker to leave one job and go to another, or to order an employer to discharge an emplovee in order that the employee might be hired by someone else, it was no objection to an order of the Government, otherwise valid, that one of the results of its enforcement would be a better utilization of available manpower in the interests of the national defense. That the main objective of the gold limitation order may have been to bring about a shift in the employment of underground gold miners from the gold mines to the nonferrous metal mines is, we think, immaterial on the issue of the order's validity, since the order did not in any of its provisions attempt to exercise authority with respect to manpower and provided no possible basis for any attempted enforcement of the latent manpower purpose.

The only circumstance under which the Government may escape the obligation to pay for property which is destroyed or taken by the authorized action of its agents, is where, in time of war, that property is inherently dangerous, or is be-

ing used in such a manner as to clearly endanger the public safety. *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146; *United States* v. *Caltex*, 344 U. S. 149. Gold mines which did not possess a serial number under WPB Order P–56 because they did not produce significant amounts of critical metals in addition to gold, were determined by WPB to be "nonessential," but we know of no precedent which would justify our holding that a nonessential industry or business was, *ipso facto*, one endangering the public safety in time of war. That such an industry could be regulated, and strictly regulated in wartime, is unquestioned, and resulting losses are not compensable if the action taken is truly regulatory in nature. But the power to regulate a nonessential but nondangerous industry in wartime is not the power to destroy, and limitation is not the equivalent of confiscation. *Stone* v. *Farmers' Loan and Trust Co.*, 116 U. S. 307, 331. As the Supreme Court said in *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393, 415, "The general rule at least is that while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking."

That the taking of the gold mine owners' right to make use of their mining properties was not in fact necessary to the successful prosecution of the war, and that the officials responsible for the issuance of L–208 either knew or should have known this fact, does not, we think, relieve the Government of its obligation to pay just compensation for the destruction of this right. The statutes and executive orders granting to the Government authority to take property which would aid in the prosecution of the war left to the discretion of those officials to whom the authority was delegated the determination of "war necessity." No tests or procedures were prescribed in connection with the making of that determination and no criteria furnished. That the determination was without foundation would be no defense in a prosecution by the Government of the owner for refusal to give up his property on the Government's demand for it accompanied by a tender of just compensation. Similarly, we think the same lack of wisdom in determining that the Government actually needed certain property which it took

or destroyed would be no defense to the Government in a suit by the owner for just compensation.

That the Government did not make any physical use of the gold mines does not deprive its action of its character of a taking. The Supreme Court has held that *destruction* of private property for a *public purpose* is the equivalent of a *taking* of private property for a *public use*. *United States* v. *Welch*, 217 U. S. 333; *Kimball Laundry Co.* v. *United States*, 338 U. S. 1.

In concluding that L–208 amounted to a temporary taking of plaintiffs' profitable use of their mining properties for which just compensation should be paid, we have had the following considerations in mind. If L–208 had merely denied plaintiffs the right to acquire any materials, facilities or equipment needed to operate a gold mine and, as a result thereof, plaintiffs had ultimately found it necessary to cease operations because of lack of needed materials, new or repair parts, their losses would have been consequential to the exercise by WPB of its lawful regulatory power of allocation in connection with scarce materials and therefore would not have amounted to a taking. If WPB had had the power to allocate civilian manpower from and to industries, and, as a result of its allocation, plaintiffs' mines had been forced to close down, there would similarly have been no taking. If L–208 had not only denied the gold mines the right to acquire materials, equipment and facilities but had ordered the mine owners to cease using what they had on hand, to hold them for the possible use of the Government, and not to dispose of them to anyone but the Government or its designees, such an order would have amounted to a taking by the Government of those materials, facilities and equipment, whether the Government or its designees ever actually took physical possession of them or not, and the loss of the gold mine owners' ability to carry on their business would have been consequential to the taking of the materials, equipment and facilities and would not have been compensable under the Fifth Amendment.

L–208 did not do any of the above things except to deny the gold mine owners and operators the right to acquire additional materials, facilities and equipment. However, the

loss of plaintiffs' right to make profitable use of their mining properties was not, in many cases, the result of that denial. The record establishes that a number of the plaintiffs herein could have operated for a time at least with what they had on hand and without acquiring any additional materials, facilities and equipment which were under Government restriction. How long they could have operated is of importance on the question of damages rather than of liability. But L–208 did not stop with a mere denial of the right to acquire materials, equipment and facilities. The real substance and intent of the order was embodied in the prohibition directed at the continued operation of the gold mines. The so-called limitation on the gold mine owners' use of the equipment and supplies and facilities which they owned was not intended to make those items available to the Government or to the war effort but was expressly included in the order to insure that they would not be used in the mining of gold, and was part and parcel of the express order to cease doing business.

We conclude that L–208 by prohibiting the carrying on of otherwise lawful mining operations placed a servitude on plaintiffs' profitable or beneficial use of their mines and thus amounted to a temporary taking of that property right in the case of those mine owners and operators who were forced to close their mines by virtue of their compliance with those provisions of L–208 which prohibited them from using their materials, facilities and equipment to mine gold and which ordered them to close down their mines. Such mine owners and operators are entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution.

Homestake Mining Company

The Homestake Mining Company is a California corporation. Homestake is and was in 1942 the owner of patented mining claims covering more than 5,000 acres of mining properties containing gold-bearing ores of great value located in the Black Hills area of South Dakota near the city of Lead. For some 65 years prior to October 8, 1942, Homestake had been engaged in the business of mining, proc-

essing and selling gold, and in 1942 it was the largest gold producer in the United States.

The mine was located in an isolated area and was therefore required to observe a policy of self sufficiency. From its early days it maintained larger inventories of supplies and equipment than was customary in most mining enterprises. It owned extensive timberlands which provided lumber needed for the mine. It had developed a coal mine, and it produced all of its own electric power. Prior to the issuance of L–208, Homestake had completed two deep mine shafts and had equipped them with modern hoists. It had also erected a new lumber mill. Its steam power plant was relatively new and its ore processing mills were in excellent operating condition.

The mine maintained its own foundry and machine shops to fabricate and repair a variety of mining and processing equipment. Homestake's inventory of supplies and materials, which it could not make for itself, was sufficient in October 1942, to permit the company to operate its mine during the entire period of the closure. Dynamite, which the company would have had to obtain within a few months, was readily available without restriction.

The working and living conditions at Homestake in 1942 were superior to those of any of the nonferrous metal mines to which the Government hoped to transfer the Homestake miners. Homestake had lost some of its manpower in October 1942, but had it been permitted to continue operations it could have maintained normal production levels by using mining techniques requiring less labor and by increasing its workday from seven to eight hours.

In October 1942, the Homestake mine constituted the largest single source of potential nonferrous metal mining labor, with a total payroll of approximately 1,800 workers of all kinds. Following the closing order, Homestake released 473 men of whom 183 were classified as miners, 39 of whom had had less than six months' experience. The nearest nonferrous metal mines were about 500 miles from the Homestake mine—Anaconda copper mine at Butte, Montana, and the Climax molybdenum mine at Climax, Colorado. Representatives of the United States Employment Service attempted to induce released Homestake workers to accept

employment at those nonferrous metal mines. Fifty-one Homestake employees accepted employment at Climax, 41 staying less than 6 months and only 6 remaining as long as a year. One hundred seventy-eight Homestake employees went to Anaconda and more than 100 left before the end of a year. Between October 8, 1942 and November 12, 1942, the United States Employment Service placed 207 Homestake employees of all kinds in other mining districts. A number of these employees, however, returned to Lead shortly after November 12, 1942.

Prior to October 8, 1942, employment at Homestake had not suffered as had employment in the nonferrous mines and, although some employees had left the mines, most of the old employees stayed on. The reasons for the greater stability of employment in this mine, which constituted the largest single source of experienced miners, were probably the good living conditions, the free medical and hospital service, group insurance, pensions, recreational and other facilities provided for Homestake employees by the company. These conditions were unusual in the mining industry and had no counterpart in the nonferrous metal mines.

After the issuance of L–208, Homestake was permitted to hoist and process ore already broken until the latter part of May 1943. After June 1, 1943, the mine was closed for all except maintenance purposes until July 1, 1945, when the mine was reopened.

Without acquiring new machinery, parts, supplies or other materials, and with a greatly reduced labor force, Homestake could have operated profitably during the entire period of closure.

Although Homestake had a large inventory of supplies and materials, and large amounts of machinery and equipment in good condition, neither WPB nor any other Government agency sought to requisition, purchase or compel the transfer thereof to the Government or to a war industry.

The properties of Homestake were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business. The closing of the mine had far-reaching and drastic repercussions in the city of Lead and in the surrounding communities. The population of Lead declined sharply. More than 750

homes and apartments were left vacant and 36 business establishments which had served the communities were closed. About ten percent of the State's annual revenue derived from Homestake was lost to the State.

We conclude that L–208 amounted to a temporary taking of the profitable use of the Homestake mining properties for which Homestake is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Idaho Maryland Mines Corporation

Idaho Maryland Mines Corporation, a Nevada Corporation, owned in fee certain gold mining properties known as the Idaho Maryland Mines, consisting of approximately 8,000 acres of gold-bearing lands situated in the Grass Valley Mining District in the County of Nevada, State of California, together with all the necessary mining plant and equipment located on those lands.

On October 8, 1942, Idaho Maryland had extensive equipment and facilities for the operation of its mining enterprise, including machine shops, electric shops, welding shops, blacksmith shop, carpenter shop, cyanidation plant and smelting plant, a sawmill and other mills, all the usual automotive and other equipment. It also had on hand a large inventory of supplies and materials necessary for operating the mine, including pipe and rail, steel, drill steel, tires, tubes, repair parts for milling machinery, valves, pipe fittings, mercury, etc. The mine was a fully developed one comprising extended drifts, cross-cuts raises and winzes, fully equipped with modern mechanical equipment. The mine had its own timber supply and its own sawmill. Its electric power was furnished by the Pacific Gas and Electric Company and there was no shortage of electric power at the mine nor was it curtailed during the shutdown period.

Prior to the issuance of L–208, the mine had lost considerable manpower. Its payroll was reduced from 800 employees to 212 employees[13] between December 1941 and

[13] The average age of the 212 employees was 47.7 years. Forty-three of the underground workers were 50 years of age or over.

October 8, 1942. Alterations in mining methods enabled the mine to continue a profitable operation with the smaller force of workers.

With a greatly reduced labor force and without acquiring any critical material, supplies, equipment or facilities subject to Government control, Idaho Maryland could have operated its mining properties on a profitable basis during the entire period of L–208.

The properties of Idaho Maryland were useful for no other purpose than the production of gold. Its various machine shops were not capable of being utilized in the mass production of any item.

The closing of the mine caused considerable community dislocation and individual hardship in Grass Valley, California, which was wholly dependent upon the operation of the gold mine for its continued prosperity. Since 1848, the principal occupation of the inhabitants of the communities of Grass Valley and Nevada City had been gold mining.

On May 3, 1944, Idaho Maryland was permitted by WPB to resume operations on a limited basis to be carried out with a force not to exceed 200 men who were required to be over 40 years of age and not employed by other industries. Production was limited to 7,800 tons of ore per month, but because of the length of time it took to prepare for production and to open up the necessary ground workings after extensive damage caused by the shutdown, Idaho Maryland was not able to produce 7,800 tons a month in 1944. Permission to hire additional labor was denied by WPB on November 24, 1944.

The closing of Idaho Maryland was brought about by reason of compliance with the provisions of L–208 which ordered that the mine be closed and that the owners not use materials, supplies, machinery and facilities on hand to operate the mine. We conclude that L–208 amounted to a temporary taking of the profitable use of the Idaho Maryland mining properties for which Idaho Maryland is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Central Eureka Mining Company

Central Eureka Mining Company, a California corporation, owned approximately 641 acres of gold-bearing land located at Sutter Creek, Amador County, California. On October 8, 1942, the mine had been producing gold for about 80 years. It then employed 117 men of whom 73 were classified as underground workers. The average age of these employees was 41.74 years. Most of them were married and had children and a number owned their own homes in the vicinity of the mine. Following the closing of the mine, the company was permitted to retain 42 men for maintenance purposes.

Central Eureka's equipment included machine shops, electrical shops, blacksmith shop, carpenter shop, an assay office, a complete mill from primary crush to cyanidation, and its own source of timber. It had all the automotive and other necessary equipment required to carry on its mining operations and the servicing of the underground workings. On October 8, 1942, the company was operating profitably and could have continued to so operate throughout the entire period of the L–208 closure without acquiring any critical materials, machinery or equipment and with a reduced force of labor. The properties of the company were useful for no other purpose than the production of gold, and were adaptable to no other use than the conduct of a gold mining business.

Following the issuance of L–208, Central Eureka attempted to operate a copper mining project at Battle Mountain, Nevada, but abandoned the work in the summer of 1943. Central Eureka leased some mining equipment to individuals engaged in tungsten mining. It does not appear that any of the company's equipment or materials were ever requisitioned by the Government or acquired on mandatory orders by the Government's designees.

The closing of Central Eureka mine was brought about by compliance with the provisions of L–208 which ordered the mine to close and to cease using its materials, supplies, machinery and equipment to operate the mine. We conclude that L–208 amounted to a temporary taking of the profitable use of the mining properties of Central Eureka for which Central Eureka is entitled to be paid just compensation with-

in the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Oro Fino Consolidated Mines, Inc.

On October 8, 1942, certain gold mining properties located in Ophir Mining District, Placer County, California, were operated by J. C. KempvanEe under lease, dated September 5, 1935, from Hazel P. Gridley. Subsequent to receipt of L–208 from WPB, the lessee was permitted by WPB to continue the removal and milling of broken ore until January 15, 1943. Thereafter, operations at the mine were discontinued and the mine closed down.

As of October 8, 1942, there were approximately 11 employees in the mine as contrasted with about 40 in normal times. The mine was equipped with the necessary machinery and equipment on October 8, 1942, but how long the mine could have continued in operation without acquiring additional materials, supplies or equipment, is not established by the record. The mine could be used for no other purpose than the production of gold, and its closing in early 1943 was due to compliance with those provisions in L–208 which ordered the mine to be closed and prohibited the operator from using materials, equipment and facilities on hand to operate the mine.

Defendant raises a special defense in this case. Defendant urges that plaintiff, Oro Fino Consolidated Mines, Inc., is not the real party in interest and that the claim, if any, with respect to the closing of the mine, resides in J. C. KempvanEe because the assignment of the lease by KempvanEe to the corporation did not include this claim. Plaintiff argues that the language of the assignment is sufficiently broad to cover the claim of KempvanEe against the United States.

The assignment, dated February 2, 1950, states that the lessee, KempvanEe

> "does hereby sell, assign, transfer and grant unto ORO FINO CONSOLIDATED MINES, INC., a corporation, all right, title and interest in and to that certain mining agreement and the real property therein described and all rights arising by virtue of said agreement, dated

> September 5, 1935, by and between HAZEL P. GRIDLEY, a widow, designated as lessor and J. C. KEMPVANEE, designated as lessee, * * *."

At the time of the alleged taking, KempvanEe was the owner of the lease covering the mining properties and the damage, if any, was to KempvanEe. It appears that in 1948 the financial backer of KempvanEe died and he turned for financial assistance to another individual who suggested that the mining operation be incorporated. As a result, the plaintiff corporation was organized on January 4, 1950, and on February 2, 1950, KempvanEe assigned his rights in the lease to the corporation.

We think it immaterial whether or not the somewhat ambiguous assignment conveyed to plaintiff the original lessee's right to receive just compensation or not since, if it did, the anti-assignment statute, 31 U. S. C. 203, bars plaintiff's recovery. *United States* v. *Shannon*, 342 U. S. 288; *Potts* v. *United States*, 130 C. Cls. 88. In the *Shannon* case, the Shannons had purchased from the Boshamers a tract of land part of which had previously been leased by the Boshamers to the United States. Buildings on the land had been damaged by soldiers of the United States, and the contract of sale to the Shannons provided that the sellers, the Boshamers, released to the purchasers any claim, reparation, or other cause of action against the United States Government for any damage caused the property. The Boshamers were themselves unwilling to institute a claim against the United States. The Supreme Court held that the assignment of the claim fell clearly within the ban of the Anti-Assignment Act as a voluntary assignment, as distinguished from an assignment by operation of law. In the *Potts* case, *supra*, Potts held an oil and gas lease on land inundated by Lake Texoma with the building of Denison Dam. Drilling operations by Potts were damaged by the rising water in 1945. In 1950 Potts assigned the lease to Godfrey and O'Hearn. All three persons sued the United States for a taking. The Court of Claims denied the claims of Godfrey and O'Hearn, holding that whatever claim Potts may have had against the Government, he could not validly assign it to anyone.

If the assignment in evidence in this case did not convey to this plaintiff the claim of KempvanEe against the United

States, plaintiff is obviously not the real party in interest. If the assignment did convey the claim, recovery is barred by the anti-assignment statute. Accordingly, the petition of Oro Fino Consolidated Mines, Inc., is dismissed.

Alaska-Pacific Consolidated Mining Company

Alaska-Pacific Consolidated Mining Company is a State of Washington corporation owning and operating mining properties located in the Willow Creek (Wasilla) Mining District in the Territory of Alaska. The properties consisted of an underground or lode mine with about 5 miles of underground workings and with two entries. The mine is in an isolated area and except for timber, all supplies, including foodstuffs, were imported from the States by ship, rail and truck. Because of its isolation, the mine customarily carried a substantial inventory of parts, equipment and supplies and at the time the mine was closed by virtue of L–208, Alaska-Pacific had an inventory of parts, equipment and supplies sufficient to permit continued operations for at least one and one-half years. A company village was maintained at the mine, consisting of the mine and mill buildings, various warehouses, shops, dormitories, a school and an office building, a store, messhall and various recreational facilities.

The normal crew at the mine was about 125 men. On October 8, 1942, the mine had a crew of 101 men. The only other mines in Alaska at that time, aside from gold mines, were two coal mines. Only three of Alaska-Pacific's employees had any coal mining experience. There appears to have been an aversion, at least on the part of Alaskan gold miners, to working in coal mines, partly because of the hazards involved and partly because the equipment and machinery were different. Although the record does not establish the exact number of gold miners who transferred to the two coal mines, there were at least four and possibly a few more.

Alaska-Pacific was able to produce a small amount of concentrate essential to the smelting of copper and a certain amount of tungsten. WPB was inclined to permit the mine to continue operating for the production of tungsten and, in response to a series of appeals, the mine was permitted to continue operations until August 8, 1943, on which date WPB

required the mine to close down. Subsequent to the closure of the mine, Alaska-Pacific sold most of the perishable items in its inventory to such agencies as the Alaska Road Commission and the Alaska Railroad, and stored at the mine the other items.

The closing of the Alaska-Pacific mine was brought about by reason of compliance with the provisions of L–208 which ordered that the mine be closed and that the owners not use the materials, supplies, equipment and facilities on hand to operate the mine. We conclude that L–208 amounted to a temporary taking of the right of Alaska-Pacific to make profitable use of its mining properties, for which it is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

Bald Mountain Mining Company

Bald Mountain Mining Company is a South Dakota corporation owning certain gold-bearing lands in Lawrence County, South Dakota. On October 8, 1942, Bald Mountain was engaged in mining gold on those properties. Pursuant to appeals to WPB, Bald Mountain was permitted to continue gold mining operations until August 8, 1943.

On October 8, 1942, Bald Mountain employed approximately 150 men. How many of these men were hardrock miners or where they went after the mine closed in August 1943, the record does not disclose.

It appears that the mine closed in August 1943, because of L–208. The mine was reopened shortly after revocation of L–208 in the summer of 1945. The record does not disclose the nature or size of the mine's inventory of mining equipment, materials and supplies on hand when the mine finally closed, or how long the mine could have continued to operate without acquiring new materials, etc.

We conclude that L–208 amounted to a temporary taking of the right of Bald Mountain to make profitable use of its mining properties for which it is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

In that connection, however, consideration should be given to the probable length of time Bald Mountain could have operated its mine without acquiring additional materials, facilities or equipment for which priorities were required during the period L–208 was in effect and while the mine was closed.

Alabama-California Gold Mines Company

Alabama-California Gold Mines Company, a State of Washington corporation, owned certain gold-bearing lands located in the State of California. On August 8, 1942, Alabama-California closed its gold mine and ceased all operations because of its inability to secure sufficient manpower or materials. Inasmuch as the mine of Alabama-California was not closed by virtue of compliance with the provisions of L–208, there has been no taking of its right to make profitable use of its mining properties and the petition will therefore be dismissed.

Consolidated Chollar Gould & Savage Mining Company

Consolidated Chollar Gould & Savage Mining Company, a California corporation, owned certain gold-bearing lands in Story County, Nevada. Its method of operation on October 8, 1942, was an open-pit one. It had explored the location and size of the veins of gold and silver through an underground shaft, but finding the cost of mining through that shaft to be excessive, it had stripped off the rock above the veins containing precious metal, and was recovering ore by use of power shovels. Some time prior to the issuance of L–208 officials of the mine had determined that because of the shortage of rubber essential to the trucking of waste from the stripping operations, the development of new ore would no longer be practicable. The mine's management had also been making preparations to conduct operations which would consist of rehandling previously mined and processed ore, and machinery was installed for this purpose. On October 30, 1942, the company requested of WPB permission to conduct operations which would consist of the rehandling of previously mined and processed ore (tailings). It represented that such operations would require a crew

of only six men who would be available from the local community and were of such an advanced age that they were precluded from employment in copper mines or defense plants. It also stated that the planned operations would require no steel consumption and that the supplies on hand and available from mines already closed down would enable the operations to be carried to completion. WPB permitted such operations to be carried on first to February 26, 1943, and then to June 30, 1943.

The above-described rehandling operations proved to be financially impractical and on April 28, 1943, Consolidated Chollar requested permission of WPB to resume its normal open-pit operations. It stated that it expected equipment to be available as a result of the completion of defense projects in the area, and that it would require no more than 20 men from the locality whose average age was over 50 years. Consolidated stated that steel consumption would be low and that it had the necessary steel on hand to operate for at least six months. Consolidated had been granted a serial number for use in its permitted rehandling operations, but on June 19, 1943, WPB refused to transfer the application of that number to the resumption of open-pit operations. Consolidated then advised WPB that there were 15 men not suitable for work in war industries available in the locality and that there were sufficient operating supplies and fabricated repair parts on hand, with the exception of sodium cyanide, for the conduct of open-pit operations for six months. It stated that if such operations were authorized, priority assistance for supplies and equipment would not be required for six months except in the event of unexpected equipment breakdown.

On August 28, 1943, WPB issued Serial No. 36–26–T under Preference Rating Order P–56 which had the result of removing this plaintiff from the restrictions of L–208, and permitted the mine to conduct open-pit operations. It was also authorized by the serial number to the use of a priority rating for obtaining maintenance, repair and operating supplies. The rating was extended through the first and second quarters of 1944.

In December 1943, Consolidated Chollar advised WPB that during the previous ninety days' operations under its

serial number it had been unable to bring its operations up to capacity because of the inefficiency of available labor and the lack of adequate equipment in the form of power shovels and trucks but that it hoped this condition would improve in time. It stated that with 23 men it had been producing an average of 320 tons per day, compared with 400 tons per day in 1942, with approximately the same number of men.

The record does not disclose how long Consolidated Chollar continued open-pit operations under its serial number or its reasons for discontinuing its operations if, in fact, it did discontinue them.

The record discloses that after the war Consolidated found it necessary to first remove overburden from above the ore vein because no ore was clear for breaking. The reason for this was that during the effective period of L–208, Consolidated Chollar had been able to process all the ore which it had stripped of overburden prior to the close of 1942.

From the above, it appears that open-pit mining operations of Consolidated, in which it was engaged in October 1942, were not discontinued as a result of the issuance of L–208 except for the period from sometime in November 1942 to August 28, 1943, and during that period Consolidated was permitted to carry on the rehandling of previously mined and processed ore in accordance with plans it had made early in 1942. We conclude that while Consolidated's operations were curtailed by WPB, they were never required to close down as provided in L–208, nor were they ever made to comply with that part of the order which prohibited the use of materials, equipment and facilities owned by them for any purpose having to do with the operation of the mine. The right of Consolidated Chollar to make profitable use of its mining properties was regulated but it was not taken or destroyed for any period and this plaintiff is accordingly not entitled to recover. The petition of Consolidated Chollar Gould & Savage Mining Company will therefore be dismissed.

Ermont Mines, Inc.

Ermont Mines, Inc., an Oregon corporation, owned a compact block and contiguous quartz lode mining claim, desig-

nated by numbers 1 through 34 inclusive, and located in the County of Beaverhead, State of Montana.

At the time of the issuance of L–208 in October 1942, Ermont was working claims numbered 1 (with drifts on claims numbered 2, 3 and 4), 2 (working over into claim number 6), 7, 9, 19, 20, 23, 24, 28 and 32. After receiving the WPB order to close down pursuant to L–208, Ermont continued taking out ore already mined, ran it through the mill and refinery, and shipped it to the mint. Sometime in November, the mine and buildings were closed and a watchman was employed to look after the property.

An October 8, 1942, Ermont employed a crew of men adequate to work the above claims. The men had homes in the vicinity of the mine. The mine had sufficient supplies, machinery and equipment in good working order which would have enabled the mine to continue operations for at least a year from October 8, 1942, if the mine had not been closed down pursuant to L–208. Mining operations were resumed at Ermont at sometime subsequent to the revocation of L–208.

We conclude that L–208 amounted to a temporary taking (for at least one year) of the right of Ermont to make profitable use of its mining properties for which Ermont Mines, Inc., is entitled to be paid just compensation within the meaning of the Fifth Amendment to the Constitution. The case will be remanded to a commissioner of the court for trial on the question of damages.

In summary, the following plaintiffs have established their right to recover just compensation for a temporary taking of their right to make profitable use of their gold mining properties and their cases will be remanded to a commissioner of the court for trial on the question of damages: Homestake Mining Company; Idaho Maryland Mines Corporation; Central Eureka Mining Company; Alaska-Pacific Consolidated Mining Company; Bald Mountain Mining Company, and Ermont Mines, Inc. In view of our decision in these cases it is unnecessary to discuss the various contentions relative to the special jurisdictional act of July 14, 1952, 66 Stat. 605.

The petitions of Alabama-California Gold Mines Co., and Consolidated Chollar Gould & Savage Mining Company will

be dismissed, inasmuch as it does not appear that they were closed down as a result of compliance with the provisions of L–208, which circumstance also removes them from any possible coverage by the special jurisdictional act.

The petition of Oro Fino Consolidated Mines, Inc., will be dismissed for the reasons set forth hereinbefore. It is so ordered.

MADDEN, *Judge*, and WHITAKER, *Judge*, concur.

JONES, *Chief Judge*, dissenting:

I concede that that part of order L–208 which directed certain mines to be closed down was invalid. The statute did not authorize such action. Paragraph (b) (1) of that order undertook to do that and was therefore issued without authority. However, paragraphs (b) (2) and (3) of the same order, which forbade the use of critical materials in nonessential industry, were valid exercises of the President's power under the allocation statute and they would have produced the closing down of the mines whether or not paragraph (b) (1) had been included.[1] I would hold that paragraph (b) (1) of order L–208 should therefore be construed as mere surplusage and not an exercise of the President's powers of eminent domain. Since the valid portions of the order would have produced the closing of the mines, the added part of the order becomes immaterial.

During the war limitation orders were issued to curtail or prohibit the use of critical materials in the manufacture of nonessential products. L–208 (b) in its second and third paragraphs did just that. The majority concedes that such mines as did not have critical materials on hand are not entitled to recover for the reason that the gold mining process did consume critical materials and that regulations (other than L–208) depriving the operators of the effective right to acquire such materials were valid under the statute.

It follows that L–208, in so far as it prohibited the acquisition of critical materials, was valid. In so far as this order or other priority or allocation orders, either working together or separately, forbade the use of critical materials on hand for nonessential purposes, they were also valid wartime regulations. *St. Regis Paper Co.* v. *United States*, 110

[1] The full text of L–208 is set out in finding 43.

C. Cls. 271; cert. den., 335 U. S. 815. I do not think it matters whether the acquisition or use of critical materials was prohibited by L–208 or by it in conjunction with other priority or allocation orders.

The majority concludes that those operators who had critical materials on hand are entitled to recover for the time that these materials would have allowed them to continue operation. In this respect the court seems to rely mostly on its conclusion that in so far as L–208 prohibited the use of critical materials on hand, it was arbitrary. The court bases this conclusion in turn primarily on the fact that the Government took no affirmative steps to allocate the materials "away from" the gold mine operators into more essential uses.

We do not think this was necessary under the circumstances. If indeed these materials were critical, then it is natural to expect that, under the operation of supply and demand, such materials would find their way into essential uses. In fact it would have been wholly impracticable in a great national emergency for any agency of government to allocate and assign every bolt, nut, and piece of critical materials. Thus, for example, even those who were engaged in essential wartime industry were often merely given priority orders which were little more than hunting licenses and these industries had the task of locating and securing the critical materials. The fact that our nation, unprepared though it was, was able to produce wartime materials on a vast scale is a magnificent tribute to our free economy.

It was reasonable to suppose that the gold mine operators would attempt to reduce their capital investment in materials which they had no authority to use. This did in fact happen in the case of the Central Eureka Mining Company which leased some of its equipment to persons engaged in tungsten mining. Thus, while it may be true that there were other motives and purposes in issuing L–208 than the allocation of critical materials, I do not think that in so far as L–208 was intended to allocate critical materials it was arbitrary. There can be no question that some strategic materials could be expected to be saved by the dual prohibition of forbidding the gold mines to acquire new strategic

materials and preventing the use of the materials and equipment they had on hand.

It cannot be said that L–208 and concurrent orders in their prohibition of the use of strategic materials on hand had no reasonable relation to the execution of the lawful purpose of allocating strategic materials. *Jones* v. *City of Portland*, 245 U. S. 217, 224. That this may have been done more effectively by other means does not matter.

The President had neither the constitutional power nor the statutory authority to close the mines directly. It is probable that as a legal matter the enforcement of that part of the order which directed the closing of the mines could have been enjoined. However, in wartime that is not a very practical remedy because it puts any individual or company in the position of hindering the war effort. In any event the Supreme Court has ruled that the defendant cannot be held for damages flowing from an unauthorized act of its officials. *Federal Crop Insurance Corp.* v. *Merrill*, 332 U. S. 380, 384. Besides, if that portion had been enjoined, the valid portions of the order, as well as concurrent orders freezing the uses of critical materials, would have remained in effect. These would have compelled the closing of the mines, and the injunction would have been useless.

There is no doubt that plaintiffs were damaged by the necessity of closing the mines. War produces many hardships. It entails many sacrifices. When ceilings are placed on the prices of the products of farm and factory, when wages are frozen and when young men are taken and sent to face hardships and even death on distant battlefields at a small rate of pay in the fixing of which they have had no part, when prices generally are fixed, when all the interests of the nation are fused in the common purpose—losses are inevitable. No nation could justify such action in normal times. It would be next to impossible to measure and pay all the losses involved in an all-out war.

If the Congress should see fit to acknowledge liability to these owners on the ground that their losses were unusual, the court should willingly undertake to determine the amount, but unless this is done I do not think the court should select these losses to be compensated.

369822—56——4

LARAMORE, *Judge*, dissenting:

The majority opinion points out that L–208 was not an allocation order, as it purported to be, but rather was clearly an order closing gold mines deemed nonessential to the war effort; *i. e.*, those mines whose gold production in dollar value exceeded 30 percent of their total production.

There was no authority vested in the President to directly close a business. The President could regulate the gold mines, allocate materials away from them, or requisition their materials, or even the business itself, if he determined their need essential for defense, and that such need was immediate and would not admit delay or resort to any other source of supply, and all other means of obtaining the use of such property for defense had been exhausted. See Act of October 16, 1941, 55 Stat. 742. Instead of determining that these gold mines were needed for defense, the President determined that they were nonessential and that the national defense would be better served by their closing.

The majority considers the closing under such circumstances to be a taking of plaintiffs' right to do business and compensable under the Fifth Amendment. I believe that the President lacked the constitutional power and statutory authority to close these mines and, therefore, the unauthorized closing could and should have been enjoined. *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U. S. 579.

Inasmuch as the President lacked authority to close these mines, and such closing has not been ratified by Congress, the unauthorized closing is not compensable under the Fifth Amendment. *Hooe* v. *United States*, 218 U. S. 322; *United States* v. *North American Transportation & Trading Company*, 253 U. S. 330; *United States* v. *Goltra*, 312 U. S. 203.

FINDINGS OF FACT

The court, having considered the evidence, the briefs and argument of counsel, and the report of Commissioner William E. Day, makes the following findings of fact:

1. On January 7, 1941, the President of the United States established the Office of Production Management, hereinafter referred to as OPM, and delegated to it the powers and duties described in Executive Order 8629 (6 Fed. Reg. 191) and Executive Order 8942.[1] On August 28, 1941, the President by Executive Order 8875 established the Supply Priorities and Allocations Board, hereinafter referred to as SPAB, and directed it to determine general policies for OPM.

2. By Executive Orders issued January 16 and January 24, 1942,[2] the President established the War Production Board, hereinafter referred to as WPB, and vested in the Chairman of that Board, acting with the advice and assistance of the members of the Board, the functions and powers formerly vested in OPM and SPAB. The Chairman of WPB was authorized by the Executive Order of January 16, 1942, to exercise the powers, authority and discretion conferred upon him through such officials or agencies as he might determine.

3. The function of WPB and its predecessor agencies was to exercise general direction over the war procurement and production program, to regulate the production and supply of materials and equipment necessary for the national defense, and after the declaration of war for the prosecution thereof, and to determine when and in what manner priorities should be accorded to deliveries of such material and equipment. These agencies fulfilled this function by the issuance of various orders, the most common of which were designated as "P" orders (priorities), "M" orders (materials), and "L" orders (limitation).

The "P" orders were generally addressed to buyers of materials and authorized them to attach to their purchase orders a letter or symbol entitling them to preference in

[1] In Executive Order 8629, the President delegated his priorities power under section 2 (a) of the Act of June 28, 1940, 54 Stat. 676, and his power of requisitioning under section 9 of the Act of September 16, 1940, 54 Stat. 885, 892, including the power to take possession of plants. Further requisitioning power conferred on the President by the Act of October 10, 1940, 54 Stat. 1090, and the Act of October 16, 1941, 55 Stat. 742, were delegated to OPM by Executive Order 8942, Nov. 19, 1941.

[2] Executive Order 9024, January 16, 1942; Executive Order 9040, January 24, 1942. The latter order delegated to WPB the President's power under section 120 of the National Defense Act of 1916, 39 Stat. 213, to place mandatory orders and to take possession of plants.

delivery. Once having been granted, this preference could usually be applied on a repetitive basis.

The "M" orders were usually directed to the manufacturers or distributors of materials and were aimed at controlling either the use or the distribution of particular materials. These orders frequently prohibited producers from selling to any buyer unless the buyer had some preference rating.

The "L" orders were usually issued to prohibit or curtail the manufacture of end products containing critical materials, continued production of which would have necessarily consumed such critical materials. Sometimes an additional purpose of such "L" orders was to accomplish the conversion of scarce manufacturing facilities to war production.

"L" orders were issued prohibiting or limiting the production of end products such as office machinery, furniture, bicycles, stoves, refrigerators, laundry equipment, automobiles, and other products. In most instances a prohibition against the production of a product resulted in the facilities being transferred to war production. Thus, the automobile industry's facilities were largely converted to war purposes although some of the facilities may have become inoperative because of a lack of adaptability to other purposes or to war production.

Issuances of "L" orders sometimes released manpower employed in the production of the prohibited end products. Working with the particular industry branch involved in the "L" order, the Labor Production Branch [3] of WPB, assisted in making arrangements whereby the application of the "L" order to the industry would be most effective in terms of the utilization of the services of the manpower so released.

Where an area was threatened with serious economic dislocation by reason of the threatened closing down of a primary industry resulting from an "L" order because substitute

[3] On March 18, 1941, OPM issued Regulation 5 (6 F. R. 1598, 32 CFR 2875—1941 Supp.), establishing a new operating division known as the "Labor Division". The functions and duties of this division were (1) to ascertain labor requirements for national defense; (2) to develop programs and coordinate efforts for assuring an adequate and trained labor supply for defense purposes; (3) to advise regarding problems and standards of work and employment in defense industries; (4) to assist in the prevention and adjustment of labor controversies which might retard the defense program; (5) to advise and collaborate with other divisions of OPM on all matters affecting labor.

materials were not available to produce that industry's product, either the area or the industry could be certified as "distressed" by WPB. Such a certification entitled the firms in the area to special treatment in the awarding of war orders, i. e., the orders did not have to go to the lowest bidders, and financial assistance could be given to enable the plants to convert. The entire washing machine industry was so certified.

The preference ratings assigned under the "P" orders originally ranged from A–1 to A–10, with the highest rating, A–1, being further subdivided. There was no control over the number of buyers who might be given a particular rating, and a buyer having one of the lower preference ratings might and often did find it impossible to purchase any material because the holders of the higher ratings had exhausted the available supply.

4. In the decisions by OPM and WPB to issue a "P", "M", or "L" order, a number of considerations might be involved such as the conserving of essential materials, supplies and equipment for use in essential war industries, the increasing of production of strategic raw materials or essential end products, and the maximum utilization of available manpower. In the earlier months of the war some areas of the country were still suffering from large scale unemployment.

5. On July 29, 1941, OPM issued Preference Rating Order P–23 in order to facilitate the acquisition of materials by producers of machinery and equipment used in the mining, beneficiation and preparation of coal and metallic ores. Said order authorized such producers to use a preference rating of A–3 for the acquisition of such materials.

6. On September 9, 1941, OPM issued Preference Rating Order P–22, known as the General Repair Order. It authorized a broad variety of industries, including mines and quarries generally, to use an A–10 rating for the acquisition of material needed for the repair of their property or equipment.

7. On September 17, 1941, OPM issued Preference Rating Order P–56 and amended it on September 22, 1941. Said order, as amended, authorized recognized mining enterprises to use a preference rating of A–8 for the acquisition of materials needed for operating supplies and for the main-

tenance of the property and equipment of such mines. Under the terms of said order OPM was to issue so-called mine serial numbers to all mines certified by an appropriate agency of a State, Territory or possession as constituting a recognized mining enterprise.

Placer gold mines but not lode gold mines were expressly excluded from the benefits of Order P–56. Placer mining is the derivation of gold from streamborne materials in contrast with lode mining which is the underground working of auriferous quartz veins in hard rock.

The reason for the distinction between lode and placer mines in the assignment of preference ratings under Order P–56 was set forth in a report entitled "Status of Gold Mining" submitted to SPAB on November 18, 1941, by its Executive Director, Donald Nelson. The report read in part as follows:

> * * * Most lode mines are underground, and consequently subject to the hazards of rapid depreciation if they are shut down. Flooding by water is the chief hazard. Though not all lode-mining is deep enough to suffer seriously if a shutdown occurs, continuity of operation is clearly desirable to prevent depreciation of installed equipment and structures. On the other hand, placer operations can be discontinued (and often are, seasonally) without injury to equipment. * * *

Another reason for this distinction was stated in November 1941 by Dr. Wilbur Nelson, who was then Priorities Specialist and Administrator of Order P–56 and who later became the Chief of the Mining Branch of WPB, to be "that we felt that we must start restricting mining activities where they were not essential to the production of materials needed in a defense effort." This referred to the fact that placer mines produced only gold, while many lode mines produced other metals.

8. In the memorandum submitted to SPAB on November 18, 1941, Mr. Donald Nelson had reviewed the problems relating to furnishing materials both to gold mines in the United States and to gold mines in foreign countries, and had said, in part:

> 1. A general announcement of policy toward gold-mining is needed. Otherwise, specific *administrative* actions will be questioned by the mines as unfairly dis-

criminatory. This is particularly necessary if the purchase of new machinery for gold production is to be virtually prohibited after November 30. A necessary preliminary to such a declaration would be a request to the Treasury for an immediate formal opinion on the significance of new gold production to monetary policy. It is to be emphasized that from a consumption of scarce materials standpoint, this whole issue is a minor one. Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political. It is political from two opposing standpoints—that of popular reaction to the continuation of an industry widely regarded as unnecessary (to the point of jocularity), and contrariwise, that of the regional interests delineated in the report.

2. The continuation of the right of lode gold mines to use the A–8 rating under Order P–56 could be made entirely discretionary with the Director of Priorities. The guiding principle might be established by SPAB of requiring their purchases to be held to the bare minimum necessary to prevent disastrous shut-downs. SPAB might also wish to establish a separate test of eligibility in terms of the amount of other more useful metals that are produced jointly with gold. For example, if the selling value of the essential metals is 25 percent and that of gold produced 75 percent, the mine might be permitted to buy machinery and supplies on the same basis as other essential metal producers. Or the minimum ratio might be set at 40 percent in the value of other metals, and 60 percent gold. The intent would be to avoid any discouragement to production of the essential metals.

3. An alternative, and more drastic, policy would be to eliminate all domestic gold mines, whether lode or placer, from Order P–56 and also from the general repair Order, P–22. Gold mine operators would thus be forced to buy repairs and supplies without A-ratings, but could apply for special help on Form PD–1. It is quite possible that only very gradual declines in output and employment would result, because of managerial ingenuity. Here again, exceptions could be made for mines producing other metals.

4. In lieu of any blanket privileges to foreign mine operators, all foreign mine needs could be reviewed continuously with the Economic Defense Board, so that considerations of inter-American and British American policy could be consistently applied to decisions authorizing or forbidding shipments of gold-mining machinery

and repair parts. No serial numbers authorizing several purchases would be issued, but applications for individual shipments would be entertained. Here again, the specific quantities of burdened material (which are not large) are not the issue, but the political considerations involved and the question of treating nonessential industries consistently are paramount. In the special case of Canada, the Joint Economic Committees could secure all relevant statistical data.

5. Some special basis of treatment might be worked out for Alaska, where gold mining assumes the proportions of a majority industry. To cut off suddenly all shipments of new equipment needed for replacement, and to make it unduly difficult to secure supplies, might have several effects upon employment in Alaska, and upon the revenues of the Territory. The Labor Division might be asked for a formal opinion on the probable impact upon employment in the Territory of the restrictions suggested in this report. The Territorial Government could also be asked for a formal report on the importance of gold mining, with all relevant statistical data.

On November 24, 1941, a meeting concerned with priorities and export licenses for gold-mining machinery was called by A. A. Berle, Jr., Assistant Secretary of State. It was attended by representatives of the Treasury Department, the Federal Reserve Boa d and OPM, as well as the State Department. The consensus of opinion at such meeting was reported that:

> * * * preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output and to refusing equipment for any expansion of output; subject to exceptions in cases where extraordinary hardship might result—as in the case of isolated communities having no alternative forms of employment—preference ratings for exports of gold mining equipment should be made to depend on a showing that the maintenance of the present level of gold production is necessary (a) to supply dollars for an otherwise deficit dollar position in the balance of payments of the country (or in the case of South Africa, for the dollar position of the sterling area), or (b) for special political reasons; whenever the current gold mining is maintained mainly to prevent a dollar deficit and especially where the labor could be used for more direct contribution to defense production, this Government

should endeavor to find other means of meeting this deficit such as lend-lease activities, purchase of gold "in the ground" for postwar delivery, and the like. To give effect to the foregoing conclusions, no general priority ratings for gold mining equipment, including repair and replacement parts, should be granted but individual consideration should be given to each application on its merits unless adequate periodic compliance investigations can be made (particularly in Canada) as is done in the United States.

On December 2, 1941, SPAB, having before it the report of the November 24 meeting quoted above, directed Donald Nelson to obtain the official opinions of the State Department, Treasury Department, Federal Reserve Board and the Board of Economic Warfare on "supplying gold mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit positions."

9. Donald Nelson complied with the directions of SPAB, and secured the official comments of these departments and agencies. The Secretary of the Treasury stated in part as follows:

> * * * Domestic gold production in wartime serves no military purpose, but does consume labor and materials that have usefulness in military production, particularly in the mining of scarce metals. We do not believe, therefore, that domestic gold mines should receive any preference rating for machinery unless the gold is produced with a substantial amount of much needed by-product metals or ores, or unless it is produced in a mine so peculiarly situated that serious and sustained unemployment of men not eligible for defense jobs would result from its shutdown.

The Secretary of State confined his reply to the subject of supplying gold-mining equipment abroad, and said in part:

> It is the Department's opinion that preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output, and to refusing equipment for any expansion of output. * * *

The Chairman of the Board of Governors of the Federal Reserve System stated in part that:

> Priority measures tending to reduce new gold production under present circumstances are, in my judgment,

highly desirable. The United States stock of gold is already redundant. Its dollar value is more than five times as great as in the 1920's. From the standpoint of credit control in this country further additions to gold stock are not only unnecessary; they are harmful. By swelling excess bank reserves, they add to inflationary dangers and make the maintenance of a stable and productive economy more difficult. From the standpoint of war output of the allied countries, the materials, machinery, and labor devoted to gold production are largely wasted.

* * * * *

Since new gold output is largely unnecessary and diverts materials, machinery, and labor from production of war supplies, I strongly favor curtailing it so far as is practicable through the priorities system. I would suggest that no machinery be allowed to foreign mines for the expansion of gold output; and that machinery and supplies for the maintenance and repair of gold mines should be restricted to the minimum consonant with the principles adopted by the Supply Priorities and Allocation Board for other nondefense industries.

Milo Perkins, Executive Director of the Board of Economic Warfare, after discussing the question of supplying mining equipment to foreign gold mines, proceeded to outline a policy with an ultimate objective of eliminating the domestic gold-mining industry in the postwar era. In this connection he stated:

The system of priorities on gold mining equipment was devised as part of the general effort to economize on scarce facilities and thereby to maximize the joint war effort of the nations fighting for the democratic cause. But in dealing solely with the question of gold mining equipment there is a danger of losing an opportunity both to solve the longer-term aspects of the gold problem and to maximize the joint war effort. Such an opportunity exists now. The United States can and should use the power that it derives from being practically the sole buyer of the yellow metal in order to initiate a program of a gradual reduction in gold production. Such a program would contribute to a maximization of the joint war effort and, at the same time, would facilitate a solution of the postwar gold problem.

* * * * *

It is essential therefore, that a reduction in gold mining should be envisaged for the postwar period. It is, however, obviously impossible to effect a cessation of

gold production overnight because of the enormous dislocation it would involve in the national economies of the more important gold producing countries. The purchase of gold in the ground leaves the problem unsolved, and merely adds to the difficulties of the immediate postwar period. A program of gradual reduction and final cessation of all new gold production spread over a period of fifteen to twenty years is the only satisfactory solution to the general gold problem. This is the moment to institute such a program. Further, the United States possesses the necessary powers to initiate such a program. Being practically the only buyer of the yellow metal, the United States is in a position to demand that its future purchases will be on an increasingly restricted scale. * * *

On December 23, 1941, Donald Nelson sent his summary of the foregoing letters to SPAB in the following terms:

As directed by the Board at its December 2d meeting I have obtained the official opinions of the State Department, Treasury Department, Federal Reserve Board and Board of Economic Warfare on supplying gold-mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit positions.

The following is a summary of these opinions:

1. In a war economy labor, materials, and machinery applied to gold production are largely wasted. Moreover, dollars made available through Lend-Lease, R. F. C. and stabilization loans, etc., have made new gold unnecessary as a provider of dollar exchange. Therefore:

(a) Nothing should be allowed for expansion, although minimum amounts for maintenance and repair should to some extent be provided.

(b) Only high-grade ores or those yielding high percentages of other minerals useful in the war effort should be mined.

(c) Labor, materials and machinery should be converted to more vital production except where extreme political or economic hardship would result.

2. In-the-ground purchase of gold is neither necessary nor desirable. It is an experiment which raises serious complications and not only fails to solve the present problem but also presents a new one for the postwar period.

3. Agreements should be entered into with gold producing countries, to the end that they do not divert labor, materials and machinery from more essential uses to gold production.

On the same day SPAB adopted the spirit of these recommendations. It stated:

> It was the judgment of the Board that in view of the military program only limited priorities and export licenses should be granted to the gold mining industry,

and it was agreed

> that in granting priorities and export licenses for gold mining machinery, materials should not be allowed for expansion of production although minimum amounts for maintenance and repair may be provided,

10. On December 18, 1941, OPM issued a new General Repair Order, Preference Rating Order P–100, to replace Order P–22, which was revoked on the same day. The stated purpose of Order P–100 was to effectuate the policy of SPAB in maintaining governmental, charitable and industrial property located in the United States, its territories and possessions, upon an adequate operating basis, without expansion or improvement of facilities except where duly authorized or approved. Industries coming within the terms of Order P–100 were entitled to an A–10 Preference Rating (the lowest rating used) for their maintenance, repair and operating supplies.

P–100 represented a continuation of SPAB's policy of granting some preference rating for maintenance, repair and operating supplies to industries in general without regard to essentiality in the war program, and this policy prevailed throughout the war. This policy was designed to avoid unnecessary dislocations in the civilian economy. The percentages of critical materials such as steel, aluminum and copper used in all industries for maintenance, repair and operating supplies ranged from one-half of one percent to three percent of the total amounts available for the entire economy.

11. On December 31, 1941, OPM issued Preference Rating Order P–56–a to supersede P–23, which had expired on that date. Order P–56–a continued to authorize the manufacturers of mining machinery to use a preference rating of A–3 to acquire material entering into the production of machinery and equipment ordinarily used in the mining industry, including the gold-mining industry.

12. By a letter dated February 18, 1942, John P. Gregg, Assistant Chief of the Bureau of Priorities, WPB, proposed to C. H. Matthiessen, Jr., Chief of that Bureau, that gold and silver mines be closed forthwith in order to conserve materials. The letter stated in pertinent part:

> 4. The Committee is of the view that the restrictions with respect to materials to be used in the mining of gold and silver are not sufficiently restrictive and that a limitation order should be drafted forthwith to stop production of gold and silver in the United States, appropriate consideration being given to the continuance of such production in Canada, Mexico, South Africa, and other areas now permitted to obtain materials and equipment from this country under Lend-Lease or direct purchase.

13. Said proposal of February 18, 1942, to close the gold and silver mines as a means of conserving materials was rejected. Instead, on March 2, 1942, WPB amended Preference Rating Order P–56 so as to deprive gold and silver mines of all priority ratings formerly available to them under that order. This was accomplished by revoking the so-called mine serial numbers of all mines the production of which in dollar value consisted of more than 30 percent of gold and/or silver.

14. Although the amended Order P–56 required the revocation of the mine serial numbers held by gold mines coming within the foregoing 30 percent exclusion clause, in actual practice WPB restored such numbers to mines whose production included significant quantities of materials important to national defense. However, over 200 gold mines, including those of the plaintiffs herein, never again received serial numbers under Order P–56.

15. The amended Order P–56 was the subject of vigorous objections in the mining districts, and public meetings were held in Reno, Nevada, and Denver, Colorado, to protest the amendment. These meetings were attended by the Governors of five states, several United States Senators and Representatives, mine operators, Wilbur Nelson as Chief of the Mining Branch of WPB, and other interested parties.

16. In addition to the aforementioned meetings the 30 percent exclusion clause was the subject of extensive hearings before a special Senate Committee (U. S. Senate, 74 Cong.,

2d Sess., Subcommittee of the Special Committee on the Investigation of Silver, *Hearings*, May 5, 6, 8, and 28, 1942).

17. WPB on May 15, 1942, amended Order P–56 so as to eliminate the 30 percent exclusion clause. However, the amendment effected no practical change, since no person could use the ratings assigned by Order P–56 unless a serial number was granted by WPB. After March 2, 1942, serial numbers were never restored to gold and silver mines producing no substantial quantities of critical materials.

The gold mines excluded by the above amendments to Order P–56 were reduced to the same priority position as that of the least essential industries in the United States, i. e., they were entitled only to an A–10 preference rating for the acquisition of maintenance, repair and operating supplies under Order P–100. They were excluded from obtaining any critical materials which might have been needed by any of the nonferrous metal mines or by any other industry deemed by WPB to be more essential. While it was possible for gold mines excluded from any benefits under P–56 to apply for equipment under the general repair order P–100, the demand for desired equipment was so far above available supply that the possibility of the gold mines obtaining any was remote. Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment.

18. By July of 1942, the Labor Division of the War Production Board, and officials of the War Department and the War Manpower Commission, were all becoming concerned with the fact that the production of nonferrous metals in the United States, particularly copper, would not be adequate to meet current and anticipated demands. Investigation revealed that this condition was due not only to the increased wartime demands, but to an alarming shortage of miners in the nonferrous metal mines. The agencies concerned were agreed that the success of the country's armament program was basically dependent on increased production of basic raw materials such as copper and other nonferrous metals.

The reasons for the poor production of nonferrous metals were found to be (1) the out-migration of workers in the nonferrous mines to other war industries offering higher

wages and better working conditions, (2) drafting of the workers for the armed services by Selective Service, (3) excessive labor turnover within the industry, (4) low morale of the workers, (5) the short workweek in the mines, and (6) the lack of an organized and effective program of recruitment of workers for this industry.

Labor scouts employed by the aircraft and shipbuilding plants were working through the mountain states offering high wages and were inducing men to leave the mines. Armed services construction projects in the vicinity of the mines offered higher wages and were recruiting miners for work on such projects.

19. An informal committee organized by officials of the War Department to study the copper shortage situation submitted a report on July 8, 1942, recommending a program for dealing with the problem. For the War Manpower Commission it recommended a program for the recruitment of mine labor, involving among other things the expansion of the offices and personnel of the United States Employment Service in the mining areas, and including "a program for the orderly transfer of workers in gold mines and other nonessential industries to the nonferrous mines," as well as assistance in securing Selective Service deferments for mining occupations. For the WPB, the report recommended a Labor-Management Production Drive Committee to secure increased production through improved morale and greater efficiency; the report then recommended that:

> 2. Production of gold, with the exception of required amounts of essential silicious gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines which are essential to the war effort. * * *

For the War Labor Board the recommendation was that in the cases then pending before it, involving about half of the copper-mining industry, it give careful consideration to the wage differential problem. The recommendations for the Army and Navy were the establishment of morale building programs for the miners and the exertion of influence on their contractors to prevent further recruitment from the nonferrous mines.

20. The Labor Production Division[4] of WPB was also studying ways to relieve the shortage of underground workers in the nonferrous metal mining industry. On July 4, 1942, the Acting Chief of the Priorities Branch of the Labor Production Division sent a memorandum to the Director of Operations of the War Manpower Commission who was also in charge of the Labor Supply[5] functions of WMC at that time. The memorandum pointed out the acute labor shortage in the nonferrous metal mining industry and observed that the 15 largest producers of gold in seven Western States had some 6,700 employees; that the gold mines of these producers were sometimes located in the vicinity of nonferrous metal mines and that in some cases one company would own both a gold mine and a nonferrous metal mine in an area. The statistics upon which the above figures were based were as of 1941, and were later found not to represent the situation in the summer of 1942, because the gold mines, as well as the nonferrous metal mines, had been losing workers to the war industries and the draft. The 6,700 figure employed in the memorandum represented employees of all kinds, including clerical employees, and no figure was given of the number of hardrock miners which were the type of employee needed in the nonferrous metal mines. In speaking of the "15 largest producers of gold in seven Western States", the memorandum did not point out that several of such gold producers also produced nonferrous metals in substantial quantities and therefore would not be classified as gold mines for the purpose of any anticipated action.

The above memorandum described the large turnover in employment in the copper mines and the steady decline in over-all employment; it noted that most of the men leaving the copper mines were going into war plants or were being drafted into the armed services, and that the companies were requesting permission to hire Japanese and Mexican labor in their operations. The memorandum concluded as follows:

> Steps should be taken to remedy the critical labor situation in nonferrous metal mining, including arrangements for the transfer of miners from gold and

[4] See footnote 3, supra, for the functions and duties of this division.

[5] When the War Manpower Commission was organized under Executive Order 9139, April 18, 1942, WPB's labor supply functions were transferred to WMC.

silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover.

21. On July 9, 1942, the General Counsel of the War Manpower Commission sent to a member of his staff a memorandum concerning the possibility of transferring gold miners to work in the nonferrous metal mines. The memorandum stated:

> At a meeting of the War Manpower Commission yesterday, the following problem was referred to this office.
>
> General McSherry [Director of Operations of WMC] wishes to secure the release of men employed in the gold mining industry for transfer to the copper mining industry. Concededly the War Manpower Commission cannot accomplish this result directly. May the result be accomplished (1) by the War Production Board refusing to the gold mine operators critical materials used in their operations thus compelling the closing of the mines; (2) may the Chairman of the War Manpower Commission direct the War Production Board to take that action?
>
> The specific situation suggested is simply illustrative of the general problem in this field.

22. The proposal for closing the gold mines in order to divert their miners to nonferrous metal mines was gaining momentum in August 1942, and accordingly, Wilbur Nelson, Chief of the Mining Branch, WPB, who was not in sympathy with the method of the proposed plan, expressed opposition to it on August 14, 1942, in a memorandum to H. O. King, Chief of the Copper Branch, WPB, reading in pertinent part as follows:

> The Mining Branch views with serious alarm the dissipating of the only appreciable reserve of highly competent mining labor through the hasty closing of the gold mines in the United States.
>
> The gold and silver miners constitute the last reservoir of the skilled mining labor. We must, therefore, be

certain that that labor is directed toward the most critical points before permitting it to be disbursed. [Sic.]

The present critical situation developed when copper, lead, zinc, mercury and other miners left their jobs and went to the West Coast on shipbuilding and on aircraft jobs, and into the mountain areas in new war industries work.

If we close down the gold mines while these same opportunities are available for work at substantially high rates of pay in other war industries, the miners will not move to a copper, lead, or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast.

Logic dictates this, for when a copper miner at Butte is willing to leave his home and go to the coast, I am sure that a gold miner, living in the excellent living conditions at Lead, is not going to leave his family and stop at Butte if he could go to the west coast.

* * * * *

23. Late in August 1942, Guy N. Bjorge, General Manager of plaintiff Homestake Mining Company, the largest gold-mining company in the United States, learned that consideration was being given by the Government to a proposal to close domestic gold mines in order to divert their miners to the nonferrous metal mines. He therefore went to Washington and conferred with several officials of WPB, including Donald Nelson, Chairman, and Wilbur Nelson, Chief of the Mining Branch, as well as Brigadier General McSherry, Director of Operations of the War Manpower Commission, and Lieutenant General Somervell, commanding the Services of Supply, War Department. In the course of these conferences Mr. Bjorge furnished figures as to the small number of men who might be obtained for work in the copper mines by such order. He pointed out that many men had already left the Homestake Mine in 1942 for the same reasons that men had left the copper mines, mainly to accept employment at West Coast aircraft factories and shipyards. Mr. Bjorge also pointed out that the miners remaining at Homestake were an older, more stable class of men, a large percentage of whom were home owners, and asserted his belief that it was improbable that they would leave their homes for the poor housing facilities and undesirable working conditions at the nonferrous metal mines.

24. On August 26, 1942, United States Senator Pat McCarran of Nevada wrote a letter to Donald Nelson, Chairman of WPB, setting forth various reasons why he believed the proposed closing of the gold mines would not accomplish its purpose of obtaining any considerable number of miners for the nonferrous metal mines. Senator McCarran wrote, *inter alia:*

* * * * *

> In the first place, the transfer of necessary labor from closed gold and silver mines to mines producing copper, lead, zinc, etc., would be negligible, due to the fact that very few operations exist today where only gold and silver are mined, and in these districts (mainly, the Homestake Mining activity in South Dakota and the Mother Lode Mining district in California), the number of men who could be so transferred is small. Many of the usual workers have joined the armed forces; many are familiar only with the routines of this type of mining and cannot be successfully transplanted. Thus little good would result and great hardships would be inflicted upon affected families and communities.
>
> Secondly, there is no rule or procedure by which such workers could be legally forced to transfer to other mines. The labor that would be denied employment by reason of the shutting down of the mines producing gold and silver would most likely go to the places where they would receive higher wages than are paid in mines.

* * * * *

On September 1, 1942, Donald Nelson replied to Senator McCarran in pertinent part as follows:

* * * * *

> A serious study has been and is being made of sources from which mine labor could be made available to the nonferrous metal mines. Naturally, our thoughts have included gold mines, but we have not at this time reached any conclusion thereon.
>
> We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today.
>
> Because of your experience in mining matters, and the factual evidence you secured in your recent hearings in the West, I am asking our people responsible for mine production to carefully consider your suggestions.

* * * * *

25. The minutes of the War Production Board for the meeting held September 1, 1942, provide in part as follows:

1. Labor Supply for Copper, Lead, and Zinc Industries

The Chairman stated that since the labor supply in the copper industry had reached a critical stage and already had resulted in a decline in the production of copper, he had asked the Labor Production Division and the Copper Branch to report to the Board on the manpower problem in the nonferrous metals industries (Doc. 135).

Mr. King reported that 6,000 miners have been lost by the copper, lead, and zinc mines to other industries during the past several months and that the shortage of labor will become increasingly acute next year when new facilities will require 2,000 additional miners. Preliminary reports indicate a shortage of 2,100 workers in smelters and refineries. Mr. King pointed out that the loss of 5 or 6 thousand workers at the copper mines might so influence the subsequent fabricating processes that 100 thousand workers in war plants at the end product state would be affected. Although monthly production of copper increased steadily from early 1941 to a peak of 95,000 tons in May and June 1942, output in July dropped 5,000 tons to 90,000. The copper outlook is even more critical than shown by the drop in production, since at many mines labor is being transferred from developmental and stripping operations, necessary to provide for future production, to current ore extraction. The position of the smelters and refineries is exemplified by a smelter at Tacoma where output of 2,000 tons of copper per month is being lost for lack of only 300 unskilled common laborers. Mr. King emphasized that production at the mines, smelters and refineries will continue to fall unless the exodus of labor is checked and the supply of workers augmented. Output of lead and zinc likewise declined in July, and the labor-production situation in these metals is similar to that in the copper industry.

Mr. Lund pointed out that there is general agreement that the higher wages paid to workers in competing occupations in other industries are the prime factor causing the out-migration of labor from the mines and mills. Average weekly earnings in April of 37.28 dollars for mine workers and 35.18 dollars for smelting and refining workers compared with an average of 53.30 dollars in shipbuilding and 45.94 dollars in aircraft, the principal competing industries. Corollary factors in the out-migration of workers have been rumors of ceil-

ings on wages and proposals to confine workers to their present jobs, the hazards of mining, and inadequate housing and transportation facilities.

Mr. Lund pointed out that the decision of the War Labor Board, expected within a month on 30 or 40 cases involving higher wages for copper miners, will have an extremely important bearing on the out-migration problem.

Mr. King reported that following a resolution of the War Production Board (See WPB Minutes, March 3, 1942, Item 7), labor-management committees were established in the metal mining areas and the importance of having mine workers stay at their jobs was publicized. On June 13, 1942 the Chairman of the War Production Board formally launched the War Production Drive in the nonferrous metals industries by a radio address to the miners at Butte, Montana.

As further steps in halting out-migration, the Inter-Departmental Committee on Nonferrous Metals was established on August 11 and various letters and literature have been prepared for distribution to mine operators and labor unions; an order has been prepared to prohibit the use of materials in nonessential gold mines, which may free about 8,000 workers; plans to prevent employment of miners on Army and Navy construction projects are being considered; and training programs are being introduced into mining properties. To increase the efficiency of present working forces, mine equipment is being accorded high priority ratings, and labor is being trained and upgraded by improving working and living conditions, and by lowering age and other restrictions on hiring. Mr. Lund observed that in many cases labor standards have shown no change from those existing in normal times when a surplus of labor is available. He suggested that the pooled employment interviews which the War Manpower Commission is now conducting in some parts of the country should be pursued with increasing vigor.

Mr. Lubin inquired if the order to prohibit the use of materials in nonessential gold mines had actually been issued and, if not, what steps are being taken toward its issuance. Mr. King, replied that a first problem is to define a nonessential gold mine since gold is frequently found in association with other metals and it is necessary to avoid denying materials to mines that produce important quantities of critical metals jointly with gold. It is hoped that an appropriate definition can be developed very shortly and an order issued promptly thereafter.

* * * * *

The Chairman remarked that since other uses have been cut to a minimum, the major use of copper is in munitions, especially small arms ammunition, and any reduction in the copper supply will be reflected in a reduced output of ammunition. He expressed the belief that the War Production Board must take an active and leading role in assuring an adequate supply of copper and Mr. Lubin added the suggestion that the concern of the War Production Board in this problem is sufficiently great to establish its own employment offices, if this is necessary to obtain additional copper miners.

After further discussion it was agreed that:

> Inadequate production of copper, lead, and zinc will result inevitably in reduced output of munitions, including small arms ammunition needed by the fighting forces. The output of these metals is now being reduced by a shortage of manpower in mines, smelters and refineries.
>
> The War Production Board is charged with the primary responsibility for providing the maximum possible production of critical metals, but the solution of the problem of assuring a sufficient supply of labor involves the responsibilities of other agencies of the Government as well. The coordination of the efforts and activities of other agencies of the Government with those of the War Production Board is needed, therefore, to ensure an adequate supply of critical metals.
>
> The War Production Board urges all agencies involved to promote and support such actions as may be necessary to provide to nonferrous mines, smelters, and refineries a supply of labor adequate for the maximum possible output of such metals. It is especially important that the facilities of the United States Employment Service be expanded and strengthened to meet this particular need.

* * * * * *

The Chairman referred to above was Mr. Donald Nelson, Chairman of the War Production Board. The Mr. King referred to was Mr. H. O. King, Chief of the Copper Branch, Industry Operations, WPB. The Mr. Lund referred to was Mr. Wendell Lund, Director of the Labor Production Division, WPB. The Mr. Lubin referred to was Mr. Isadore Lubin, acting for Mr. Harry L. Hopkins, Special Assistant to the President.

26. On September 4, 1942, Mr. A. I. Henderson, Deputy Director General for Industry Operations, WPB, directed that an order be drafted by the Miscellaneous Minerals Branch which would curtail the output of gold and which would not be related to Preference Rating Order P–56.

27. On September 9, 1942, Mr. R. J. Lund, Chief of the Miscellaneous Minerals Branch, sent the following memorandum to Mr. A. I. Henderson:

> At a meeting held in your office on September 4, attended by Messrs. Dodge and Scribner of your staff, Mr. Parks of the Miscellaneous Minerals Branch, and Mr. Stow of the Mining Branch, you issued instructions that an order be drawn up either by the Miscellaneous Minerals Branch or the Mining Branch which would curtail the output of gold and which would not be connected with Order P–56. You indicated that this Branch should prepare the order but that the order could be administered by this Branch or the Mining Branch as later determined.
>
> It was understood that the purpose of the order was to make mining labor now producing gold available to copper and other strategic nonferrous metal mines. This end can be attained by WPB only through its authority to control materials.
>
> Attached is copy of the order [6] for your consideration. This order has not been circulated, except in discussions with the Mining Branch.
>
> The order is designed to close all mines producing gold to the extent of 50 percent or more of the value of the total output. In considering the order the following matters are pertinent:
>
> (1) *Number of mines affected*
>
> Based on 1940 production figures obtained from the Bureau of Mines, the latest they were able to supply, about 220 lode mines will be affected by the order. This figure is not exact, because production in the 1941 or 1942 base period specified in the order is not strictly comparable with the 1940 picture. Geographic distribution of these lode gold mines is as follows: California, 58; Colorado, 32; Montana, 30; Nevada, 27; Arizona, 18; Alaska, 12; Idaho, 12; Utah, 8; South Dakota, 6; with the remainder distributed among five other states.
>
> Detailed data on placer operations affected by the order are not presently available, but the Bureau

[6] The copy of the order is not in evidence.

of Mines reported that in 1940 a total of 3,107 placer mines produced gold and silver in the United States, and 1,069 in Alaska. Undoubtedly, sizable numbers of these produced such small quantities that they would be exempted by the order.

The Bureau of Mines reported that in 1940 there were 49 connected-bucket floating gold dredges operating in Alaska, 46 in California, 12 in Idaho, 7 in Montana, 6 in Oregon, 1 in Colorado, and 1 in Nevada. In addition there were large numbers of mechanized placer operations using drag line and power-shovel excavators, but no separate figures on these operations are available.

(2) *Labor involved*

Based on 1941 data, latest available from the Bureau of Mines, approximately 12,400 employees in lode gold mines will be thrown out of work by the order. Incomplete data indicate that about 70 percent of this labor is employed underground. Geographic distribution of this total labor was as follows: California, 3,394; South Dakota, 2,123; Colorado, 1,689; Alaska, 1,251; Arizona, 911; Montana, 602; Nevada, 601; Idaho, 590; Utah, 484; with the remainder distributed in a number of Western and Eastern states.

No detailed data are available showing number of employees in placer operations, except that the number would probably amount to at least several thousand in the United States and perhaps two thousand in Alaska.

(3) *Estimated recapture of employees affected*

Assurances were given by General McSherry at a meeting of the Interdepartmental Committee on Non-Ferrous Metals, September 8, that the U. S. Employment Service had adequate staff available to go immediately into the several hundred mining camps which might be affected by the gold curtailment order and to recruit labor for transfer to copper mines and other nonferrous metal mines in dire need of such labor. At a previous meeting of this Committee, an estimate was made that about 25 percent of the mine labor might be recaptured for work in other mines.

(4) *Other metals lost*

Production of other metals in 1940 by mines affected is as follows: copper, 2,751,000 pounds; zinc, 92,000 pounds; lead, 12,047,000 pounds; silver, 4,947,000 ounces. Other metals such as antimony,

arsenic, tungsten, molybdenum and manganese are also produced in minor amounts by some of these mines.

(5) *Fluxing ore problem*

Some gold mines affected by the order produce large tonnages of siliceous ore required by smelters working primarily on other nonferrous metals, such as copper, lead and zinc. This flux is necessary to their operation, and gold values in the flux naturally make operations more economical than by adding barren siliceous material which may, or may not, be available at the smelter.

(6) *Critical materials saved*

Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available but the general order of magnitude of such consumption is indicated by the fact that in 1939 gold mines in the United States (excluding Alaska) spent about $17,000,000 on supplies and materials, $2,000,000 for fuel and about $5,000,000 for purchased electric energy.

(7) *Effect on economy of states and communities*

Shutting down the operations at mines affected by the order will result in loss of sizable tax revenues, in respect to state tax revenues alone, in some of the states involved. There has been insufficient time to obtain complete data on this point, but two examples are cited as follows: (a) In South Dakota, total state taxes collected in fiscal year 1941, exclusive of motor fuel taxes, amounted to $11,700,000; taxes paid to the state by mines in South Dakota affected by this order amounted to $1,000,000, or about 9 percent of the total; (b) in Nevada total taxes collected in fiscal year 1941, excluding motor fuel taxes, amounted to $3,300,000, of which about $65,000, or 2 percent, was collected from mines affected by this order.

Losses in county and municipal taxes will be felt much more severely by the communities in the vicinity of the mines. In this respect, shutting down mining operations is not comparable with shutting down other industrial operations in communities where enterprise is diversified; in the West it is generally true that the mine is the sole major source of income for local communities. For example, it has been reported that the Homestake Mining Company pays 65 percent of the local community taxes

and 50 percent of the county taxes; that the wage earners and those servicing them pay the balance largely from the $4,500,000 in annual wages paid by the company. At least 19,000 people, the population of the county, are directly or indirectly dependent upon its operation.

For reasons stated in the last paragraph, hardships faced by old established mine employees will be severe. . There is virtually no possibility of converting the facilities at the mines to war work.

(8) *Probable loss of deep mining operations and dredging equipment.*

Although the order permits gold mining companies to maintain buildings, machinery and equipment in repair, and to keep access and development workings in a safe and accessible condition, it is probable that most of the deep mines situated in heavy, caving ground will be unable to take full advantage of these provisions in the order. As a result it is probable that many of these old, deep mines may never be reopened.

Costly dredging equipment forced to lie idle will be subject to more rapid depreciation than if it were maintained in operation.

The suggestion was made at a meeting this morning that the order should be tightened further by lowering the exemption from the 4,000-ton figure to 1,500 tons annually, or a monthly rate of 100 tons. Such a change would result in a large increase in the number of mines affected by the order, in the total labor involved, and in items 3 to 6, inclusive, discussed above. Tabulations covering these smaller operations are just now being made, so details in respect to these items cannot be presented herewith. The order will be modified to the lower exemption figure before clearance, if these studies indicate a considerable amount of labor involved.

A factor which would tend to lower the number of mines affected, labor involved and other items discussed above, is the fact that many of the gold mines affected by the order have already been forced to curtail or close operations through difficulties encountered in obtaining material and equipment, or through loss of labor to other industries. In one known instance, a recent fire destroyed the mill of a sizable mine so this operation is completely shut down and no labor available for recruitment.

There is, of course, an appeal provision in the order, through which, again, the number of mines, number of employees, other critical materials and fluxing ores af-

fected will be lowered from the estimates cited in items 1 to 5 above.

Concluding Statement

Administration of an order such as the above, entirely divorced from provisions of Order P–56, necessarily involves duplication of work, both here in Washington and in the companies affected by the order. Those gold mines producing needed metals and fluxing ores will have to submit an appeal under the provisions of the order before they can be exempt. There is no practicable way of defining, in an order, such mines that should be exempted. This appeal procedure duplicates, in large measure, the appeals that were already made under the administration of P–56, and it is likely that the repercussions throughout the mining industry of such duplication of effort will be unwholesome.

Without using the mine serial numbers already established as a means for determining essential mining operations, there appears to be no alternative other than to use a percentage value basis in defining gold mines, and to provide for continued operation of essential ones through an appeal procedure.

Other pertinent considerations are presented in the attached memorandum to you from Dr. Wilbur Nelson, and I suggest that they be given careful attention.

The adverse repercussions mentioned above might be overcome in some measure by including an additional provision in the accompanying order which would automatically exempt those gold mines now having serial numbers until they are notified by the Director General for Operations that they are to cease operation. Each of these cases, in the meantime, should be carefully reviewed and judged in the light of the more acute situation now prevailing.

I shall await your written instructions before proceeding further.

28. On September 11, 1942, Mr. J. M. Scribner, an assistant to Mr. A. I. Henderson, sent the following memorandum to Donald Nelson:

In accordance with instructions issued by Mr. A. I. Henderson, you will find attached a copy of the proposed curtailment order on gold. This order is in process of circulation in accordance with the procedure for order clearance and should be presented to the Clearance Committee for action about September 21.

Mr. Henderson requested that the order be prepared in a manner completely divorced from Order P–56.

However, in his absence, after a consultation with Mr. H. W. Dodge and Dr. Wilbur A. Nelson, and a meeting with Messrs. Fred M. Eaton, Richard Lester, and myself, it was determined to be most practical that the order not be divorced from P–56.

The effect of this order will be to close down all gold mines not having a mine serial number, within 30 days from issuance. It is the intention of the Mining Branch to review all mine serial numbers assigned to mines producing 50% or more gold in dollar value and to withdraw such serial numbers unless the balance of the production represents critical materials urgently needed for the war effort in amounts sufficient to justify continuance of the operation.

In addition to the draft of the proposed order, there was also included an explanation of its effect in the following terms:

The Order requires that all mines producing gold, except those having a serial number under P–56, cease operation and development within 30 days after the date of issuance of the Order. The Order makes provision for the minimum maintenance and repair necessary to maintain the mines plant in condition and for the granting of preference ratings to accomplish this after application made to the Director General for Operations.

All gold mines which produce needed quantities of copper, lead, zinc, and other minerals, or of silicious fluxes, already hold serial numbers under Order P–56. Therefore, the mines closed down by this proposed order would be only those which have, after examination by the Mining Branch, already been determined to be nonessential to the war effort.

The result of closing these nonessential mines will be to conserve all the material which they have been using for operational and development purposes. Heretofore they have merely been denied the right to use the high preference ratings granted by Order P–56, but have been able not only to obtain certain material under P–100, but also to use their own inventories.

29. The effect of the proposed limitation order was further summarized in the following terms at about the same time:

A draft of a limitation order on materials and supplies for gold mining is being circulated within the War Production Board. The order provides for complete shutdown of nonessential mines in the United States with the following exceptions:

(1) Mines producing less than 1,200 tons of ore per year will be permitted to continue operations at

their rate of operation in 1941 or early 1942. Such mines are usually individual or partnership enterprises worked by men who are not likely to be employed by others.

(2) A limited amount of supplies and equipment will be made available for the purpose of keeping the mines accessible and safe. This is intended to avoid flooding or otherwise damaging mines which would be in a position to produce after the emergency has passed.

A nonessential mine is defined as a mining enterprise in which gold is produced, unless the operator holds a serial number for such enterprise issued under Preference Rating Order P–56, as Amended. Since producers of siliceous fluxing ores and of complex ores containing substantial amounts of critical metals as well as gold have already been granted serial numbers, the order will not affect the production of essential metals.

The basic purpose of this curtailment of gold mining is, of course, to free manpower for the mining of essential minerals, particularly nonferrous metals such as copper, zinc and lead. Because many of the gold mines are located much closer to other mines producing such strategic metals as mercury, molybdenum, tungsten, vanadium, chromium, manganese, etc., it is expected that workers will also be made available to these industries.

The War Manpower Commission through the Employment Service is now taking steps to insure orderly recruiting of these gold miners and to provide for a minimum of delay in reemployment as well as to provide transportation expenses. It is expected that this procedure will make possible the maximum diversion of labor to essential mining industries where their skills can be used to best advantage.

Beside diverting manpower to essential industries, this order, when in effect, will also conserve some materials and supplies used in gold mining, such as mercury, drill steel, etc.

30. The minutes of the Interdepartmental Committee on Non-Ferrous Metals for September 15, 1942, provide in part as follows:

* * * * *

Dr. M. Stow presented a report on the proposed order to curtail gold mining operations. He distributed a copy of the proposed order which, he said, had been brought up for consideration before the Clearance Committee.

Dr. Stow explained that the persons responsible for drafting the order favored the method of curtailing gold mines by denying them serial numbers under P–56, rather than the type of blanket order which would shut down any gold mine whose gold ore production was above a stipulated proportion of its total production by dollar value. Under the former type of order the gold mines would be closed by being denied serial numbers under P–56, as a result of which they would be unable to obtain either supplies or equipment and would be prohibited from using their present supplies and equipment.

Mr. Harbison [Army representative] expressed some concern over the delay in issuing the gold order. He outlined the steps that various agencies had taken to meet the manpower shortage in nonferrous metal mines, and pointed out that the transfer of gold miners to essential mining was being held up by the lack of a gold curtailment order. He pointed out that the U. S. Employment Service had been unable to obtained any recruits at Rapid City, South Dakota, because the gold mines had not been closed down, although Anaconda Copper Mining Company had agreed to pay transportation costs. He made it clear that the War Department was impatient at the delay.

Mr. Lester of the War Manpower Commission asked that his organization be kept informed of what mines would be affected by the directive, in order that representatives of the Employment Service might be on the spot beforehand.

In this connection, since the primary purpose of the order was to free manpower rather than to curtail materials, Mr. Lipkowitz suggested that an advisory committee be established with representatives from Labor Production Division and War Manpower Commission.

The meeting was attended by representatives of the various minerals branches, the Mining Branch, the Labor Production Division, and the Legal Division of the War Production Board, as well as representatives of the War Manpower Commission, the Office of Price Administration, and the War Department. Dr. Wilbur Nelson presided at the meeting. Dr. Stow was immediately subordinate to Dr. Wilbur Nelson in the Mining Branch.

31. The draft of the proposed limitation order for the goldmining industry was submitted to Morris Creditor, Special Assistant to Donald Nelson. On September 15, 1942, he sent the following comments upon it to Donald Nelson:

I have reviewed the proposed limitation order for the gold mining industry and I wish to raise certain points as to the soundness of such an order.

You will recall that we received a letter from Senator Gurney on August 31 in which he set forth the harmful effects that such an order would have on the economy of the State of South Dakota. In your reply you stated in effect that we were confronted with the manpower problem and something had to be done to overcome the losses of production which are being experienced in the mining of copper and other strategic materials through the shortage of experienced miners.

In the preamble of the limitation order no mention is made of manpower requirements. It simply states that the order is made necessary because of the shortage in the supply of critical materials which are used in the maintenance and operations of gold mines.

It would seem to me that if the order is based on the premise of critical materials alone, the question might be raised as to why such an order would not apply to materials being sent by this country to other gold mines in Canada, South America, and South Africa.

If the main purpose of this order is to divert miners from the gold mining industry to copper and other mining industries, it seems to me that there is no assurance that this order would accomplish the desired results. As Gustav Peck pointed out to you in his memorandum of September 9, it would be too bad to close the Homestake Mine, for instance, without the assurance that most of the miners will continue to practice their trades in the copper mines.

Would it not be more practical to accomplish the purposes by a freeze order similar to that which is now in effect for workers in the copper mines and the lumber industry. This may be more drastic but, on the other hand, may give better assurance that the miners in the gold mines would eventually find their way into the copper mines. Consideration might also be given to the idea of having the Army give indefinite furloughs to Service men who in the past were engaged in the mining of nonferrous materials.

Even aside from the possible dissipation of these skilled miners into other occupations, there is a question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally,

will be stuck in Alaska. Where are they expected to go?

I am sure that a great deal of thought has been given to the proposed limitation order on gold mining, but unless there is a high degree of assurance that the main purpose will be accomplished; namely, the diversion of these miners to the nonferrous mines, I feel it is important to weigh the adverse effects it might have in other directions.

Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries.

32. On September 17, 1942, Mr. J. M. Scribner, assistant to Mr. A. I. Henderson, sent the following memorandum to Dr. Stow of the Mining Branch:

Acting in accordance with instructions received from Mr. Donald Nelson's office this morning, please be advised that the gold order is to be cleared with all of the branches involved as promptly as possible, but it is not to be presented to the Clearance Committee for clearance until further word is received from Mr. Nelson's office.

The order is to be held in the branch in such shape that it may be presented to the Clearance Committee for action immediately upon advice from Mr. Nelson's office that it is to go through.

33. On September 25, 1942, representatives of the branches of WPB concerned with mineral production met and discussed the proposed gold limitation order which, by that time, had been designated L–208. A resolution was passed urging that representatives of the gold-mining companies be called to Washington to discuss the proposed gold order so that:

A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort.

B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production.

34. On September 25, 1942, William L. Batt, Vice Chairman of WPB, sent a memorandum to A. I. Henderson, Deputy Director General for Industry Operations, WPB, which stated, *inter alia:*

I have told the Chairman that my judgment is that the limitation order on gold mining should be released at the appropriate time, and he has agreed. It was the consensus of opinion that we should wait until the War Labor Board had acted on certain wage matters, and I shall expect to be advised when the situation is clear on this point.

It seems to me imperative that we very carefully word our press release so that the predominant objective, namely of releasing less essential labor for more essential requirements, shall be clearly evident. And I particularly direct the attention of those who have to do with this matter at this point.

* * * * *

35. On September 30, 1942, a conference was held in Mr. Batt's office. Senator McCarran of Nevada and Senator Gurney of South Dakota, as well as Congressman Englebright of California, and Congressman Case of South Dakota, attended. Samuel Hill of the War Manpower Commission and members of the WPB staff, including Wilbur Nelson and Samuel Lipkowitz, also attended. The Members of Congress spoke of the hardships that would be imposed on the inhabitants of the gold-mining communities and of the detrimental effects on the morale of such people if the mines should be closed down by the issuance of a WPB order. The WPB representatives, except Wilbur Nelson, countered with statements emphasizing the need for labor in copper mines. Some discussion arose as to the number of gold mine employees who would be released by such a closing order.

36. On September 29, 1942, at the direction of W. L. Batt, Wilbur A. Nelson telephoned the following representatives of the gold mining industry and requested them to attend a meeting in Washington: Guy N. Bjorge, General Manager of Homestake Mining Company, Errol MacBoyle of Idaho Maryland Mines Corporation, Merrill Shoup of Golden Cycle Corporation, Carroll Searles of Newmont Mining Corporation, and Thomas McCormack of the Natomas Company. The meeting took place on October 1st and lasted for approximately five hours.

Those in attendance at the meeting included W. L. Batt, Wilbur A. Nelson, Allen Buchanan and Samuel Lipkowitz of WPB's Labor Division, Messrs. Hill, Harbison, Ayer, Hayes,

Heikes and Hatch, General Lucius Clay representing the War Department Services of Supply, General Frank J. McSherry of the War Manpower Commission, Senator Chan Gurney and Representative Francis Case of South Dakota, Representative Harry Englebright of California, and the five aforementioned representatives of the gold mining industry.

At the opening of the meeting Mr. Batt stated that he had brought the gold mine operators to Washington to tell them that a decision had been made to close the gold mines in order to transfer the released labor to the copper mines. In justification of such an order, Mr. Lipkowitz of WPB's Labor Division stated that there were between 10,000 and 12,000 men who were then employed in the gold mines. The gold mine owners immediately protested that the figures stated were completely inaccurate; that the gold mines had already lost their most active men who had either gone to the shipyards and aircraft plants on the West Coast or had been drafted into the Armed forces; that the miners remaining in the gold mines were settled residents of their communities and that it was doubtful that they would move away to work in the copper mines if the gold mines were closed.

In response to General McSherry's statement that the need for underground workers in the copper mines was urgent, Mr. Bjorge of Homestake pointed out that it was unreasonable to hope that gold miners would accept the jobs which the nonferrous metal miners were already leaving for more desirable employment, and that it was more likely to expect that miners forced to leave Homestake would go to the same type of more desirable jobs to which the copper miners were going. He also pointed out the great hardships which the closing of the Homestake mine would inflict upon the local communities and upon the State of South Dakota. Similar arguments against a closing order were advanced by the other gold mine operators and by the Senators and Representatives in attendance. Messrs. Hatch, Heikes and Ayer, all of WPB, questioned the possible effectiveness of the proposed order. General Clay, representing the Army, spoke strongly in support of a closing order. Late in the meeting, Wilbur A. Nelson undertook to determine how

many miners and muckers would actually be released by a closing order.

37. On October 3, 1942, Wilbur Nelson furnished Mr. Batt with figures which he had obtained directly from the gold mine operators. He reported that while there were 3,270 workers employed by gold mining companies at that time, only 896 of them were hardrock miners and muckers. He further reported that approximately 300 of these men would be needed to maintain the buildings, machinery and equipment in repair, and the access and development workings safe and accessible as provided for under the proposed order. His report concluded that if all the gold mines and dredges in the United States were put on a stand-by basis, it would make available only about 600 miners and muckers for other mining enterprises "provided they [could] all be induced to go into other mines."

38. On October 1, 1942, Mr. Batt sent the following memorandum to Donald Nelson, Chairman of the WPB:

> The more I study the gold mining situation, the more uncertain I am as to the form which a restriction of operations should take. Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure. If the question comes up in your press conference, I would suggest that you refer to the need for miners and the lack of need for gold, and say that the matter is being studied from all angles.

39. On October 2, 1942, Under Secretary of War Robert P. Patterson sent Mr. Batt the following letter:

> I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other nonferrous metals as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.
>
> If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's approval, and I believe that Mr. Forrestal will do the same for the Navy.

40. On October 5, 1942, Under Secretary of War Patterson and Under Secretary of the Navy Forrestal sent the following memorandum to Donald Nelson:

> The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.
>
> The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided.

41. The matter was presented to the War Production Board at its meeting on October 6, 1942. The minutes of that meeting, insofar as here material, and which accurately reflect what transpired, read as follows:

> Mr. Batt reported that the matter of shutting down United States gold mines had been receiving detailed attention. On conferring with Brigadier General McSherry of the War Manpower Commission and representatives of the gold mining companies, it had been found that at present the gold mining industry employs 3,270 workers; 750 are engaged in dredging and only 896 are hard-rock miners. Loss of labor to the Services and to war industries, and higher costs have already sharply curtailed operations of all domestic mines except Homestake. Homestake's labor force has dropped from a peak of slightly over 2,000 workers to 1,876, including lumbermen and machine shop workers. If Homestake were shut down except for standby operations, all but 500 of these workers could be released for work elsewhere. Lead and Deadwood, South Dakota, with aggregate populations of 16,000 are totally dependent on the mine's operation.
>
> Although it has recently emphasized other forms of production, the State Department, because of broad in-

ternational considerations, heretofore has urged that gold mining in South Africa and Honduras be maintained. The South African economy and the stability of the present government are largely dependent on gold mining. The basic industries of Honduras are the cultivation of bananas, of which exportation to the United States has been reduced to 20 percent of normal, and gold mining. Mr. Leon Henderson reported that Canadian gold mining is being curtailed very sharply. The Vice President pointed out that questions pertaining to production of gold abroad should appropriately be discussed with the Board of Economic Warfare.

Mr. Batt stated that after investigation he recommends that: (1) All nonessential domestic mining of gold other than that incident to the mining of critical metals be stopped as soon as possible and not later than within 60 days; and (2) gold mines not producing critical metals be allowed to continue standby maintenance operations lest it be impossible to reopen them at the close of the war.

General Somervell stated that because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, failure to stop gold production immediately would be inexcusable.

After further discussion it was agreed that:

> An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition.

42. Those in attendance at the October 6, 1942, meeting of WPB to consider the gold closing order included Donald M. Nelson, W. L. Batt, A. I. Henderson, Wilbur A. Nelson, Under-Secretary of War Robert P. Patterson, Lieutenant General Brehon B. Somervell, and Paul V. McNutt, Chairman of the War Manpower Commission. The meeting was also attended by numerous other persons who were there for the purpose of considering the so-called feasibility program. The gold curtailment order was discusssed for some fifteen to thirty minutes and it was decided to issue the gold closing order immediately.

43. On October 8, 1942, the WPB issued Limitation Order L–208 directing that operations at gold mines not holding

serial numbers under Order P–56 be discontinued. Order L–208 read as follows:

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

Section 3093.1—LIMITATION ORDER L–208

(a) *Definitions.* For the purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P–56.

(b) *Restrictions upon production.*

(1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.

(2) In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.

(3) In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the issuance date of this order, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment

of such placer mine, after the issuance date of this order, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A–1–k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P–56.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in subparagraph (b) (3) above.

(e) *Records.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(f) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to:

War Production Board
Mining Branch
Washington, D. C. Ref: L–208

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or fur-

nishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(k) *Applicability of Priorities Regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7 F. R. 561; E. O. 9024, 7 F R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R 2719; sec 2 (a), Pub. Law 671, 76th Cong., as amended by Pub Laws 89 and 507, 77th Cong.)

Issued this 8th day of October, 1942.

Ernest Kanzler
Director General for Operations

44. Coincident with the issuance of L–208, the War Manpower Commission issued a directive relating to the employment of workers previously employed as production or maintenance workers in gold mines. This directive was issued on October 7, 1942, by Paul V. McNutt, Chairman, and stated in material part as follows:

I. On and after the date hereof no employer shall hire in, or hire for work in, Alaska or any State west of the Mississippi River, any person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining except upon referral of such worker to such employer by the United States Employment Service.

II. No person who on or after October 7, 1942, has ceased to be employed as a production or maintenance worker in connection with gold mining shall be referred by the United States Employment Service to any work in Alaska or a State west of the Mississippi River other

than work in essential nonferrous metal mining, milling, smelting, and refining activities unless such referral would be in the best interests of the war effort or unless the denial of such referral would entail an undue hardship upon the individual concerned, as determined in accordance with regulations and standards prescribed by the Chairman of the War Manpower Commission.

45. Immediately following the issuance of Order L–208 on October 8, 1942, a statement was issued by Paul V. McNutt, Chairman, War Manpower Commission, and Donald Nelson, Chairman, WPB, appealing to all workers in gold mines to transfer to nonferrous metal mines and not to other war industries.

46. The dominant consideration by Chairman Donald Nelson of WPB in the issuance of Limitation Order L–208 was the releasing of mine labor from the gold mines for employment in mines that were producing other metals, such as copper, which were in short supply and urgently needed in the war program.

47. The closing of the gold mines did very little to relieve the manpower shortage in the nonferrous metal mines because (1) a relatively small number of the type of workers needed in those mines, i. e., hardrock miners, were released (finding 37); (2) a number of these men were required to remain in the gold mines to keep them in safe condition; (3) the older and more settled experienced miners remained in their home communities doing what they could to make a living or remaining idle; (4) most of the younger hardrock miners released sought employment in the better paying war industries, construction projects, or were drafted in the armed services. Approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year.

48. Although the preamble to the order stated that it was issued to conserve critical materials, supplies and equipment needed for defense and in short supply, the only part of the order itself which attempted to effect such a conservation was that part which prohibited the gold mines from acquiring such materials, and that acquisition had already been effectively curtailed and in large part cut off by existing priority orders (finding 17). That part of the order which

prohibited the use by the gold mines of the supplies, materials and equipment and facilities they owned and had on hand did nothing to assure that those materials, etc., would be available for use by more essential industries of by the Government. The order left the owners free to dispose of them as they pleased.

49. Prior to the issuance of L–208, and afterwards until the end of the war, critical materials, machinery and equipment subject to allocation and control by WPB were shipped in substantial quantities to foreign countries for use in their gold mining industry. These countries included South Africa, Canada, Honduras, Nicaragua and Columbia, in all of which gold mines continued to operate throughout the war.

50. On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L–208 knew (1) that existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users; (2) that the closing of the gold mines would release only a small number of hardrock miners and helpers; (3) that no agency of the Government had the power to compel these men to accept employment in the nonferrous metal mines; (4) that in all likelihood unemployed gold miners would accept employment in shipbuilding, aircraft and construction industries rather than go to work in the nonferrous metal mines where wages were low and working and living conditions poor; (5) that L–208 was not in fact directed at the known reasons for the shortage of underground workers in the nonferrous metal mines, i. e., low wages, bad working and living conditions, and the refusal of Selective Service to defer miners; (6) that a substantial number of the employees of the gold mines were middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible; (7) that in many instances the communities in the vicinity of gold mines were entirely dependent upon the operation of the mines for their continued prosperity; (8) that the deeper mines were likely to deteriorate and become flooded if closed down, and that many operators would not be able to afford the cost of keeping their mines safe and accessible or their machinery, equipment and buildings in repair during a long period of unproductivity.

51. It is reasonable to conclude that in issuing L–208 WPB acted without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines.

52. On October 10, 1942, 21 United States Senators from 12 gold-producing Western States sent the following letter to the President of the United States:

> Some days ago the War Production Board announced a decision to close all gold mining operations in the United States. This order was made by the Board against the emphatic protest of those representing the largest mining operations engaged in the mining of gold from lode and placer operations.
>
> The largest mining operations affected by this order are in the states of South Dakota, California, and Colorado.
>
> The Homestake Mine in South Dakota has been operating for some sixty years and has supported a community immediately surrounding the operation of some sixteen or eighteen thousand souls.
>
> The Mother Lode Mines in California extend along the western base of the Sierra-Nevada range of mountains for a distance of 150 miles or more. These mines have been depended upon by communities the total of which would approximate one hundred thousand souls.
>
> The population dependent on the Cripple Creek Mines of Colorado has varied from time to time and is not definite at this moment. Suffice it to say that it would be in the neighborhood of five or six thousand souls.
>
> The economy of communities and states in which these mining operations are located has depended largely upon these operations, in that all of these mines have contributed materially by way of taxation to the states, counties, and municipalities in which they are located.
>
> The labor employed by these mining operations in the respective states has been to a very large extent contributed by the communities that surround the respective mine operations. Homes have grown up through the years in each of these communities, and sons followed their fathers into the mines.
>
> The record made before the War Production Board discloses that in each of these mining communities the young men, that is, men under 50 or thereabouts, have already either gone into the military branches of the United States, or have gone into war activities where alluring wages attracted them. The record discloses that the men now engaged in mining operations in the

mines affected by the order are by and large about 50 years of age or over. The record before the War Production Board discloses that the men now engaged in mining operations in these localities have, with but rare exception, been employed in the mines of the respective localities for many years.

It is stated that the object of the order made by the War Production Board closing down these gold mines is because of a shortage in the supply of critical materials for defense, and the making of the order is supported by the theory that the labor employed in these gold mines will go into mines of copper or lead or zinc.

We respectfully draw your attention, Mr. President, to the record as made before the War Production Board that if all of the gold mines affected by the order of the Board are put on a standby basis, that is, if they are permitted to retain only enough labor to keep the mines from becoming flooded and caved, there will be in all about 2,020 of all types put out of employment.

The record before the Board shows that there may be another 500 men put out of employment from other mines of smaller capacity, making a total of 2,520 men put out of employment from lode mines.

It is estimated that the number of men put out of employment from dredger operations will be about 750 men. The men engaged in dredger operations are as a rule much older than those engaged in lode mining, at the present time.

It is estimated that the total number of men put out of employment by the order of the War Production Board will be approximately 3,270. The record before the Board establishes that of this number about 900 are miners and muckers.

From this number, it is estimated that between 150 and 200 miners and muckers would be necessary to retain the gold mines and dredges in a stand-by condition; hence, not to exceed 750 men, accustomed to actual mining and generally termed "miners" and "muckers" would be available for employment in mines of copper, lead or zinc.

The record made before the War Production Board discloses that miners, who have been for a long time engaged in gold mining, do not go into the mining of other minerals, such as copper, lead and zinc. There are many reasons stated for this custom.

It is emphatically stated before the War Production Board that if this mine labor population is released from

employment in the gold mines in the respective states, only a negligible number, if any at all, will seek employment or remain employed in mining operations of other metals.

The impairment of the morale of communities in the states affected by the order of the War Production Board; the far-reaching effect upon the economic structure of the communities; the irreparable destruction of private property that will be accomplished by the flooding and caving of gold mines; the discouragement and heartache that will come into thousands of homes, many of them the homes of boys now in the military service of this country, but whose parents and relatives remain in the communities affected by this order—all of these things will not be compensated by the negligible number, if any, of mine laborers who will go from the closed mines to communities far remote to engage in other mining activities.

We respectfully draw your attention to the fact that at this very time Great Britain is urging and aiding the production of more gold by the gold mining operators of South Africa.

We respectfully draw your attention to the fact that our neighbor ally in this war, the Dominion of Canada, is going forward and encouraging the production of gold in that country, and in a telephonic communication within the past few days with those in authority on the subject in Canada, the information was received that the Canadian government has no intention of closing down its gold mine operations.

We respectfully urge that no beneficial result inuring to the defense of the United States in its time of war will flow from the order made by the War Production Board closing the gold mines of this country. The record needs no emphasis that great and irreparable injury will result.

We respectfully bring this matter to your attention with the request that you stay the order made by the War Production Board affecting the gold mine operations of the United States, at least until the whole subject of marshalling of manpower and the allocation of labor may be considered, and the vital questions involved, concluded; thus that the gold mining industry of the United States may not be subjected to unwarranted and unusual hardship and injury which may not eventually be considered necessary, and which may not be equitably borne by other industries.

In May 1944, the Policy Analysis and Records Branch of the WPB submitted a report concerning Limitation Order L–208 providing in part as follows:

> It is generally agreed by the WPB divisions concerned with mining activities that a very small percentage of the released gold mine workers actually were employed by other mines. A majority of them probably went into work of greater value to the war effort than gold mining, such as lumbering, agriculture, construction, shipbuilding, aircraft manufacture;[96] but the fact remains that the primary justification for closing the gold mines was to get labor for the production of the strategic metals. Wilbur Nelson, Arthur S. Knoizen, present Director of the Mining Division, and F. H. Hayes, Chief of the Primary Production Branch of the Copper Division, concur in the statement that the number of gold mine workers who went into other mines and remained there for a year or more was not over 100.[97]

[96] A partial analysis based on the records of the Social Security Board, indicates that the released gold mine workers went into a wide variety of occupations, including in addition to those mentioned in the text, coal mining, steel working, communications, transportation, and many others; they scattered, in short, through a fair cross-section of American industry. Letter, John J. Corson, Director, Bureau of Old Age and Survivors Insurance, Social Security Board, to Stacy May, October 22, 1943.

[97] Wilbur Nelson and Arthur S. Knoizen, in interviews with the writer, March 7, 1944; F. H. Hayes, in an interview with writer, March 4, 1944.

FINDINGS RELATING TO PLAINTIFF HOMESTAKE MINING COMPANY

53. Homestake Mining Company (hereinafter referred to as Homestake) is and was at all times herein mentioned a corporation organized and existing under the laws of the State of California.

54. Homestake is and was at all times herein mentioned the owner of patented mining claims covering more than 5,000 acres of mining properties containing gold-bearing ores of great value located in the Black Hills area of South Dakota, near the city of Lead, South Dakota.

55. On October 8, 1942, and for 65 years prior thereto, Homestake was and had been engaged in the business of mining, processing and selling gold, and in 1942 was the largest gold producer in the United States.

56. On October 15, 1942, Homestake notified its employees of the issuance of Order L–208 and informed them of the necessity of concluding its gold-mining operations pursuant

to the order. Homestake urged such employees as would be released to consider the opportunities for employment in the copper mines.

57. Pursuant to the terms of Order L–208 Homestake discontinued breaking new ore on October 15, 1942, and began to lay off miners on that date.

58. On or about October 17, 1942, Homestake appealed to WPB, requesting permission to continue mining operations on the ground that Order L–208 would work an exceptional and unreasonable hardship upon it. On November 25, 1942, WPB decided the appeal, granting Homestake only limited relief. The WPB advised Homestake of this decision in a letter dated November 25, 1942, which stated in part as follows:

> Permission granted to remove and mill broken ore from underground and refill the stopes with suitable material during a period of six months beginning December 8, 1942, provided that no more than 60 employees are at any time assigned to or used in such operations and provided further that workers shall not be assigned to such operations when the War Manpower Commission finds that they are needed in mining operations elsewhere. Permission is denied to break any new ore or to proceed with any development work or any new operations in or about the Homestake mines.

59. Homestake, with the aid of the limited additional personnel authorized by WPB, continued the hoisting and processing of ore already broken from on or about October 15, 1942, until the latter part of May 1943. After June 1, 1943, the Homestake gold mine was closed down for all purposes, except necessary maintenance, until on or about July 1, 1945. It reopened on that date and has operated continuously since then.

60. On October 8, 1942, the life of operations of Homestake's gold mine based on ore bodies, indicated by reserves of ore in sight and ore that could be expected from development, was at least 20 years at the then current rate of mining.

61. Homestake, at the time of its founding in 1877, was located in an isolated part of the United States and as a result was required to maintain a policy of self-sufficiency. From its early days it established a program of maintaining larger inventories than customary in most mining en-

terprises. Prior to October 8, 1942, Homestake had acquired extensive timberlands which provided lumber for the mine, and continued this program up to the time of the issuance of Order L–208. Prior to October 8, 1942, Homestake also had developed a coal mine, and was producing its own electric power.

62. In October of 1942, Homestake had recently completed two deep mine shafts equipped with large modern hoists, and had erected a new lumber mill. Its steam power plant was relatively new and its ore processing mills were in excellent operating condition.

63. On October 8, 1942, Homestake maintained its own foundry and machine shops used in the fabrication and repair of a variety of mining and processing equipment. In addition, Homestake was capable of supplying all of its own needs with respect to mine timber, coal, and electric power.

64. The chief items of materials and supplies used by Homestake in its mining and milling operations consisted of pipe, rail, rock drills, parts for rock drills, drill steel hoisting ropes (wire), electrical wire, cyanide, lime, shoes and dies for stamp mills, balls and rods for grinding mills, liners for grinding mills, and cones and mantles for crushers. Items of necessary equipment included locomotives, mine cars and mechanical shovels.

Homestake's inventory of these and other necessary materials and supplies was sufficient to operate its mine during the entire period of the closure. This did not include items such as dynamite and explosives. Only a three months' supply of dynamite was on hand on October 8, 1942, but it was readily available without restriction.

65. At no time did WPB requisition or order Homestake to surrender or transfer any of its supplies, equipment or machinery, nor did it make any inquiries regarding the amount, nature or availability of Homestake's supplies, equipment and machinery, although the Board was furnished with an inventory of supplies on hand and other information relating to equipment and machinery.

66. The working conditions at Homestake and the living conditions in the communities surrounding Homestake in 1942 were superior to those at the nonferrous metal mines to which the Government sought to transfer the Homestake

miners. Homestake employees enjoyed free medical and hospital services, group insurance, pensions, recreational facilities, and many of the older miners owned their own homes. In 1942, approximately 440 of Homestake's employees had seen more than 21 years of service with the mine, and some had been employed there for more than 40 years. For these reasons, Homestake had enjoyed greater employment stability than the nonferrous metal mines despite the lure of higher pay in the war industries.

67. In October 1942, Homestake had sufficient labor available to operate at full capacity. Even in the event of reduction of available manpower Homestake could have maintained normal production levels by using mining techniques requiring less labor and by increasing its workday from seven to eight hours.

68. The Homestake Mining Company released 437 men from its employment during the period from the issuance of L–208 on October 8, 1942, to a date shortly prior to November 12, 1942. Of these 437 employees, 391 came from the mine department, 21 from the metallurgical department, 21 from the mechanical department, and 4 from the carpenter department. Of the 391 employees from the mine department, 183 were classified as miners on Homestake's payroll. And of these 183 miners, 39 had less than six months' experience. Of the 437 released, 110 men did not register with the United States Employment Service. Of the remainder, 207 of them were placed by the United States Employment Service in other mining work as of a date shortly prior to November 12, 1942.

Homestake reported to the U. S. Social Security Agency that it had in its employ during the third quarter of 1942 a total of 2,129 employees. In its report for the fourth quarter of 1942, the company reported that 921 of these employees received less wages than they had received in the preceding quarter, which indicates that these employees were separated from the company's employ before December 31, 1942. Of these 921, there were 401 also reported by another employer, although not previously so reported, which indicates that these employees transferred to such other employers after leaving the Homestake Mining Company. These figures did not include transfers after Decem-

ber 31, 1942, although Homestake continued limited operations through that date.

69. In October 1942, Homestake was the largest single source of potential nonferrous metal mining labor. Representatives of the United States Employment Service, immediately following the issuance of L–208, attempted to induce released workers to accept employment at the Anaconda copper mine at Butte, Montana, and the Climax Molybdenum mine at Climax, Colorado, both about 500 miles from the Homestake mine.

Fifty-one Homestake employees accepted employment at Climax. Forty-one stayed less than six months and only six employees remained as long as one year.

One hundred and seventy-eight Homestake employees accepted employment at Anaconda, and of these more than 100 left before the end of a year. A great many Homestake employees never transferred to nonferrous metal mines but remained at the mine doing maintenance work, remained idle at home, or went into other pursuits. As early as November 1942, some of the miners who had been assigned to jobs in other mining districts began returning to Lead.

70. The properties of Homestake were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business.

71. The closing of the Homestake mine pursuant to Order L–208 had far-reaching and drastic repercussions in the city of Lead and the surrounding communities. The population declined sharply, more than 750 homes and apartments were left vacant and boarded up, and 36 business establishments which had served the communities were left vacant.

72. In the years immediately prior to the issuance of Order L–208, the State of South Dakota received about $1,000,000 per year, or approximately ten per cent of its annual revenues, from Homestake. The State was deprived of this source of revenue by the order closing the gold mines.

73. Without acquiring new machinery or repair parts, or supplies on which there were restrictions concerning acquisition, and with a reduced labor force, Homestake could have operated profitably during the period of closure.

74. By reason of the issuance of Order L–208 Homestake was deprived of the use and benefit of ownership of its gold-

mining properties, to wit, the right to obtain gold from the ore bodies on its properties and to sell such gold.

75. No compensation has been paid to plaintiff Homestake by defendant for the closing of its mine as hereinbefore described.

FINDINGS RELATING TO PLAINTIFF CENTRAL EUREKA MINING COMPANY (A CORPORATION)

76. Central Eureka Mining Company (hereinafter referred to as Central Eureka) is a corporation organized and existing under the laws of the State of California, with its principal places of business located in Sutter Creek, Amador County, California, and in San Francisco, California.

77. On October 8, 1942, Central Eureka owned approximately 641 acres of gold-bearing land located at Sutter Creek, Amador County, California. On that date the mine employed a total of 117 men, of whom 73 were classified as underground workers.

The average age of the total number of employees was 41.74 years; 74.36% of the employees were married and had an average of 2.64 dependents. These employees had resided in the community wherein the mine was located for an average of 4.26 years, and 31 of these employees owned their own homes in that community.

78. Immediately following the issuance of L–208 on October 8, 1942, all but 64 men left the mine, that group having been retained by the company to maintain the mine until January 1943, when the National War Labor Board ordered that thereafter the company would not be authorized to employ more than 42 men in the maintenance of the mine. The record does not disclose how many of either the 64 or the 42 men were underground workers.

79. Prior to October 8, 1942, Central Eureka Mining Company was engaged in the successful operation and development of its gold mining property at a profit. In the five-year period immediately preceding the issuance of L–208, the company paid $355,414.04 in Federal and State taxes. During that same period of time the company paid to its shareholders dividends in the amount of $1,182,000.

80. On October 8, 1942, Central Eureka had an inventory of supplies on hand which would have enabled the mine to operate for a period of two or three years without replenishment.

81. Central Eureka's mining equipment included on October 8, 1942, machine shops, electrical shops, blacksmith shop, carpenter shop, an assay office, a complete mill from primary crush to cyanidation, its own source of timber, automotive and all other necessary equipment required to carry out mining and servicing of the underground workings and the extraction of gold from ore bodies.

82. During the period October 8, 1942 to June 30, 1945, while L–208 was in effect, Central Eureka, which had been producing gold for about 80 years, could have continued to operate its mine on a satisfactory basis with a reduced force of men. It had on hand sufficient inventory for that purpose and had approximately 100,000 tons of blocked out ore (exposed on four sides) in reserve and had additionally inferred ore and probable ore in reserve which would substantially increase the 100,000 ton figure.

83. The properties of Central Eureka Mining Company were useful for no other purpose except the production of gold, and were adaptable to no use other than the conduct of a gold mining business. The mine was closed by reason of compliance with L–208.

84. Within six weeks after the issuance of Order L–208, Central Eureka applied for a serial number under P–56 for the operation of a copper-mining project at Battle Mountain, Nevada. Some mining equipment was transferred from its gold mine to this copper project. It was closed down by Central Eureka about the middle of 1943.

85. In addition, Central Eureka leased some mining equipment, including flotation machines and feeders, agitators, classifiers, sand pumps, filters and compressors, to individuals who were engaged in tungsten mining. This material would not have been so leased had it not been for the issuance of Order L–208.

86. On December 9, 1943, Central Eureka, by its general superintendent, wrote the following letter to the Mining Division of WPB:

As General Superintendent of the Central Eureka Mining Company, an Amador County, California gold producer closed under War Production Board Order L–208 and placed on a maintenance basis, I wish to call your attention to our position as well as similar gold operations.

The cost of keeping our mine unwatered and of doing absolutely essential retimbering and repair work is becoming a great burden on this Company's treasury. If it became necessary to abandon the mine entirely and allow it to fill with water, I question seriously whether we or anyone else would be able to undertake a rehabilitation project at the present price of gold.

It appears to me that the situation could be helped very much if we could have the sympathetic consideration of the people charged with the administration of Order L–208 in a relatively small departure from the provisions of the Order. Such departures might include (1) the hiring temporarily or permanently of a few additional men, either as replacements or to meet emergencies, (2) the permission to extract a small amount of ore to help out the heavy deficit of the maintenance operation and to allow variations from time to time in the tonnage extracted, and (3) the consideration of use or exchange of a small amount of strategic materials as required. So far, we have been unable to make Washington officials understand these operating problems. I do not believe that such misunderstanding is the result of being arbitrary but is probably due to the fact that they are too far away from our operations to see the true picture. My thought is that if the administration of Order L–208 could be decentralized and placed in the hands of some Western representative—either Mr. Lane in Denver or Mr. Keating in San Francisco—our operations would receive a more sympathetic consideration based upon a personal understanding by the Administrator. I feel personally that this could be done without interfering in any material way with the purposes of Order L–208, understanding of course that the purpose of Order L–208 is the conservation of manpower and strategic materials for the war effort.

It is of vital concern to this Company and to this community to keep our operation alive if at all possible. The lack of authority given local administrators with respect to Order L–208 seems to unfairly discriminate against the gold mining industry as compared to other forms of business which have been forced to indirectly reduce operations. A local administrator with adequate authority could help materially to clear up this feeling

on the part of the gold operators and of the citizens of the gold mining communities.

Your early consideration of this request would be greatly appreciated.

87. On December 17, the WPB acknowledged and on December 22, 1943, replied to the above letter in part as follows:

> Supplementing our letter of December 17, your problem has been discussed very thoroughly in conference, and we fully understand your problems on maintenance in keeping your mine open and ready for operation.
>
> We suggest that you file an appeal from this order, stating your problems in detail, advising what is involved in getting your mine in operation and maintaining it on a minimum basis. In your appeal, also state whether manpower is available, and if so, can you get certification from the War Manpower Commission to use these men if they are not needed in other essential war industries.
>
> We assure you that as soon as this appeal is filed, we will give it immediate consideration to see what can be done to give you some relief under the order.
>
> We also suggest that you file with your appeal, the possible requirements of material of all types that you will need for approximately a year. If this is not possible, six months will suffice.
>
> * * * * *

There is no evidence of an appeal under L–208 other than the letter quoted in finding 86.

88. By reason of the issuance of Order L–208, Central Eureka was deprived of the use and benefit of ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

89. No compensation has been paid to Central Eureka by defendant for the closing of its mine as hereinbefore described.

90. On June 30, 1945, the WPB revoked Order L–208. Thereafter in 1947 or 1948 Central Eureka reopened its mine and has operated it continuously since.

FINDINGS RELATING TO PLAINTIFF IDAHO MARYLAND MINES CORPORATION

91. Idaho Maryland is now and was on October 8, 1942, and at all times hereinafter mentioned has been, a corpora-

tion duly organized and existing under the laws of the State of Nevada.

92. Idaho Maryland is now and at all times herein mentioned has been the owner in fee of certain gold-mining properties known as the Idaho Maryland Mines, consisting of approximately 8,000 acres of gold-bearing lands situated in the Grass Valley Mining District in the County of Nevada, State of California, together with all necessary mining plant and equipment located on said lands.

93. Idaho Maryland operated the above-described mining properties for many years prior to October 8, 1942, and continuously since July 1, 1945. It was recognized on October 8, 1942, as the second largest gold mine in the United States in terms of ore removed and treated.

94. Idaho Maryland's mining equipment located on said lands included on October 8, 1942, machine shops, electric shops, welding shops, blacksmith shop, carpenter shop, cyanidation plant and smelting plant, a sawmill and other mills, shops, automotive and all other necessary equipment required to carry out mining and servicing of the underground workings and the extraction of gold from the ore bodies.

95. It would not have been necessary for Idaho Maryland to acquire, during the life of L–208, any critical materials, supplies, equipment or facilities to enable it to continue operation on a profitable basis, because, (1) the mine was a fully developed mine comprising extended drifts, cross-cuts, raises and winzes, fully equipped with a large amount of modern mechanical equipment, including an efficient hoisting layout; (2) the company owned sufficient equipment in good condition, a large inventory of supplies and materials necessary for operating the mine, including large quantities of pipe and rail, steel, drill steel, building machine repair parts, tires, tubes, repair parts for milling machinery, valves, pipe fittings and miscellaneous supplies, a large supply of mercury and all other materials required to operate the mine. At no time during the war were industrial or commercial explosives, including dynamite, fuses and caps, subject to priority restrictions, and were available in large supply in the open market.

96. During the period of close down, Idaho Maryland was not wholly dependent upon the use of the mining machinery and equipment actually owned by it on October 8, 1942. There was a considerable quantity of secondhand mining machinery available at all times in California which could have been purchased by Idaho Maryland had the necessity arisen. Secondhand mining machinery was not rationed and was freely obtainable in the open market.

97. Idaho Maryland owned and operated its own cyanidation plant, but such operation was not essential to the continued operation of the mine as a gold mine. Two-thirds of the gold content of the ore is and was on October 8, 1942, recovered at the Idaho Maryland Mine in the amalgamation process, and prior to subjecting ore concentrates to the cyanidation process. Some of the free gold was recovered on the jig table prior to the amalgamation process. The Idaho Maryland mining properties are peculiar in that the ore contains considerable free gold. The cyanidation process is a further treatment of the residue of the concentrates to recover the remaining gold. The concentrates could have been sent to the American Smelting and Refining Company Smelter at Selby, California, for smelting and the final recovery of the remaining gold therefrom. The Selby smelter operated during the entire period of the war.

98. Idaho Maryland operated its own saw mill and had its own supply of timber. The mine obtained its power in 1942 from the Pacific Gas and Electric Company and continued to use such power throughout the period of shutdown. There was no shortage of electric power at the mine nor was it curtailed or restricted during the shut down but was available at all times.

99. The operations at Idaho Maryland were curtailed due to the loss of manpower between December 1941 and October 8, 1942. The payroll was reduced from over 800 employees to 212 employees between those dates. As the separations of employees reduced the number of employees, it became necessary before the closedown ordered by L–208 to alter their mining methods so as to more effectively utilize the employees who had stayed.

100. On October 8, 1942, 116 of Idaho Maryland's remaining employees were underground workers. The average age

of all employees as of October 8, 1942, was 47.7 years and 43 of the underground men were over the age of 50. If *all* of Idaho Maryland's underground workings had been kept safe and accessible as permitted by L–208, none of the 116 underground workers would have been released.

101. During the period of October 8, 1942, to June 30, 1945, while Order L–208 was in effect, Idaho Maryland could have continued to operate its mine, except for the prohibition contained in Order L–208, on a satisfactory basis with a reduced force of men by resorting to shrinkage stoping, which is a method of operation requiring fewer underground men. This method of operation has been customarily followed in the Idaho Maryland Mine. It is a method customarily used in other gold mines, such as Homestake. It would also have been possible to operate with a reduced crew by eliminating extensive development work. Extensive development work is not necessary in a mine such as Idaho Maryland, located in a well-known mineralized area such as Grass Valley Mining District. In fact, Idaho Maryland has operated continuously without the necessity of having blocked out proven ore bodies.

102. Upon the issuance of Limitation Order L–208 on October 8, 1942, Idaho Maryland, under threat of criminal prosecution for failure to comply therewith, immediately notified its employees that the mine was being closed down and discontinuing work. In compliance with said order Idaho Maryland completely closed down the operation of its gold-mining properties and suspended all mining production from and after the period prescribed in said Order L–208, to wit, on October 15, 1942.

103. The properties of Idaho Maryland are, and were, useful for no other purpose except the production of gold, and said mining properties were adaptable to no profitable use other than the conduct of a gold-mining business and were not capable of being used for any purpose other than the production of gold.

The blacksmith shop, machine shops and other shops and equipment of Idaho Maryland, which were used for the repair and maintenance of mining machinery, were not capable of being utilized in the mass production of any item and were

not devoted to any other use during the period of shutdown following the issuance of L–208.

104. With a greatly reduced labor force and without acquiring any critical material, supplies, equipment or facilities subject to government control, Idaho Maryland could have operated its mining properties on a profitable basis during the period L–208 was in effect.

105. On October 8, 1942, there were 81 employees who had terminated their employment with Idaho Maryland after October 8, 1942, who were thereafter reemployed by that firm, which obtained a record of the employees' intervening employment in most but not all instances. Of the 69 as to which the firm had a record of intervening employment, 6 were employed in other mining activities during some or all of the time they were out of the company's employ, 8 were in military service, 4 were employed in the Miners' Foundry, Nevada City, California, 6 worked with the railroads, 4 were employed in shipyards, and the remainder as to which there was information were engaged in other types of employment.

106. Grass Valley, Nevada County, California, located near Idaho Maryland's gold mining properties, was wholly dependent upon the operation of the gold mine for its continued prosperity. The closing of the mine caused considerable community dislocation and individual hardship. Since 1848, the principal occupation of the inhabitants of the communities of Grass Valley and Nevada City had been gold mining.

107. Pursuant to an appeal taken by Idaho Maryland Mine to the War Production Board, the mine was permitted to complete a second exit between the mine and the Brunswick Mine which was required by California State Law. On December 13, 1943, Idaho Maryland filed a second appeal calling to the attention of the Board specific conditions which existed underground in the mining properties by reason of the shutdown. The underground workings were caving and collapsing and the mine contended that it was essential for the protection of the underground workings that mining operations be resumed forthwith. On May 3, 1944, Idaho Maryland was permitted by WPB to resume operations on a limited basis with not over 200 men who must be over 40 years of age and not working for other industries. Produc-

tion permitted was limited to 7,800 tons of ore per month but Idaho Maryland was not able in 1944 to reach that production because of the time it took to prepare for production and to open up the necessary ground workings due to the destruction which had already occurred to the mine. A third appeal on November 24, 1944, asking permission to hire additional men was denied.

108. By reason of the issuance of Order L-208, Idaho Maryland Mine was deprived of the use and benefit of ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

No compensation has been paid to Idaho Maryland by defendant for the closing of its mine as hereinabove described.

FINDINGS RELATING TO PLAINTIFF ORO FINO CONSOLIDATED MINES, INC.

109. The petition as to this plaintiff was originally filed on February 8, 1950, in the name of Oro Fin*a* Consolidated Mines, Inc. Thereafter on September 9, 1952, an amended petition in this case was filed in the name of Oro Fino Consolidated Mines, Inc.

110. Oro Fino Consolidated Mines, Inc., was incorporated under the laws of the State of Nevada on January 4, 1950.

111. Under date of September 5, 1935, Hazel P. Gridley leased to one J. C. KempvanEe certain gold mining property in Ophir Mining District, Placer County, California, known and described in the lease as the Or*a* Fin*a* Mine. J. C. KempvanEe thereafter operated this property as Oro Fino Consolidated Mines, but this was simply a trade name, and the lessee continued to be the said KempvanEe.

112. Mr. KempvanEe was operating said gold-mining properties on October 8, 1942. On November 16, 1942, he requested permission of the War Production Board to continue the removal and milling of broken ore until January 15, 1943, representing that there were then 1,912 tons of broken ore in the mine. Such permission was granted by the War Production Board under date of December 2, 1942. The record does not disclose when operations at the mine

actually ceased, but it was apparently prior to March 27, 1943. The mine has never operated since that date.

113. As of October 8, 1942, there were approximately 11 employees in the mine as contrasted with about 40 in "normal" times. The record does not disclose the employments into which these men went following the closing of the mine, although it does show that as of November 8, 1942, one of these employees was awaiting a call to duty in the armed forces.

114. There is no evidence in the record as to the amount of machinery or equipment in the mine as of October 8, 1942, or as to the availability of materials for the maintenance of such machinery or equipment. The mill had been newly erected in 1938, and there were certain parts available for its maintenance, although it does not appear how long the mill could have continued operating without replenishment of this inventory of parts. The record does not indicate the disposition, if any, which was made of these parts and equipment following the closing of the mine.

115. The properties of Oro Fino were useful for no other purpose than the production of gold and were adaptable to no other use than the conduct of a gold mining business.

116. By reason of the issuance of L–208, Mr. KempvanEe was deprived of the use and benefit of the gold mining properties leased by him, i. e., the right to mine and sell gold.

117. In 1948 a Mr. MacBoyle, Mr. KempvanEe's financial backer, died. Mr. KempvanEe then turned to Mr. Nugent for financial assistance as there were certain royalty payments under a lease and certain other expenses recurring. Mr. Nugent agreed to furnish such assistance and did so. He suggested that the operation be incorporated. On January 4, 1950, Oro Fino Consolidated Mines, Inc., was organized. On February 2, 1950, Mr. KempvanEe assigned all his right, title and interest in the lease of the mining property from Mrs. Gridley to Oro Fino Consolidated Mines, Inc. The assignment provides in part as follows:

> The undersigned J. C. KEMPVANEE does hereby sell, assign, transfer and grant unto ORO FINO CONSOLIDATED MINES, INC., a corporation, all right, title and interest in and to that certain mining agreement and the real property therein described and all rights arising by virtue of said agreement, dated September 5, 1935, by and between

HAZEL P. GRIDLEY, a widow, designated at lessor and J. C. KEMPVANEE, designated as lessee, * * *

Said agreement is hereby incorporated herein and made part hereof for all purposes as though fully set forth herein.

118. No compensation has been paid to Mr. KempvanEe or to Oro Fino Consolidated Mines, Inc., by defendant for the closing of the mine as hereinbefore described.

FINDINGS RELATING TO PLAINTIFF ALASKA-PACIFIC CONSOLIDATED MINING COMPANY

119. Alaska-Pacific Consolidated Mining Company (hereinafter referred to as Alaska-Pacific) has been since prior to October 8, 1942, and still is a corporation organized and existing under the laws of the State of Washington. Alaska-Pacific is the successor in interest by way of merger of two predecessor corporations and has been, since 1938, the sole operator of the mining properties referred to hereinafter.

120. Alaska-Pacific is the owner and operator of certain mining properties located in the Willow Creek (Wasilla) Mining District in the Territory of Alaska. With the exception of two groups of mining claims hereinafter noted, all of Alaska-Pacific's properties on October 8, 1942, and thereafter were held in fee or by location notices which later matured into patents in fee issued to Alaska-Pacific by the defendant. As to one of the excepted groups, that known as the "Alaska Free Gold" claims, bearing General Land Office Survey No. 980, Alaska-Pacific held the mining rights on October 8, 1942, and has continued to hold them since then, by virtue of a lease and royalty agreement, coupled with a purchase option, which does not expire until 1961. The other excepted group, namely, the Hamburger, Red Eye and Weeny claims, were held by Alaska-Pacific on October 8, 1942, and are still so held by virtue of location notices.

121. On the aforesaid properties, Alaska-Pacific, since 1938, and its predecessors before them, operated an underground or lode mine, consisting of about 5 miles of underground workings with two entries.

122. Geographically, Alaska-Pacific's mine is located about 20 miles from Wasilla and 28 miles from Palmer, in an isolated section of the Wasilla precinct, there being no other

inhabitants except a few miners employed in neighboring mines. Except for timber which was purchased locally, all supplies, including foodstuffs, were imported from the States. These supplies moved by ship to the port of Seward, thence by railroad a distance of about 400 miles to Wasilla and thence by truck to the mine. Because of climatic conditions, as a result of which the road was often blocked, the isolation of the mine and the uncertainty of steamship schedules, Alaska-Pacific customarily followed a practice of carrying a substantial inventory of parts, equipment and supplies. At the time of the closure of the mine by virtue of Order L–208, Alaska-Pacific had in inventory, parts, equipment and supplies sufficient to permit continued operations for at least one and one-half years, special efforts having been made to accumulate a substantial inventory not only because of the foregoing factors but in anticipation of possible shortages.

123. Because of its isolated location, a company village was maintained at the mine, consisting of the mine and mill buildings, various warehouses, shops, dormitories, a school and an office building, a store, a messhall and various recreation facilities. All buildings were of frame construction and were serviced with central underground water and sewage systems. Because of severe winter conditions with snows ranging to 25 feet in depth and temperatures ranging to minus 50 degrees, and because of heavy rains in other periods of the year, constant maintenance and attention to surface installations were required to prevent early deterioration and serious damage from the elements.

124. Normally, Alaska-Pacific operated its mine with a crew of about 125 men. In October of 1942 it had a mining crew in its employ of 101 men. Of these, only three had experience in mining other than gold mining, that being in the employ of either of the two coal mines then operated in Alaska.

Aside from the two coal mines, there were no other types of mines in Alaska except gold mines.

125. Alaska-Pacific not only produced gold from its mine but also, as a kind of byproduct, a type of concentrate essential to the smelting of copper. Alaska-Pacific's concentrates were shipped to the Tacoma Smelter, Washington, and furnished about 10 percent of its requirements.

126. Under date of October 15, 1942, Alaska-Pacific submitted an appeal to the WPB for relief from the provisions of Order L–208. This appeal emphasized:

* * * * *

> First: The position of the company as a tungsten producer, actually and potentially.
>
> Second: The position of this company as the supplier of valuable and necessary materials to the copper smelting operations of A. S. & R.'s Tacoma Smelter.

* * * * *

It also referred to the hardship upon the company and its employees of closing the mine, and requested:

* * * * *

> In the light of these showings, and particularly in view of the progress made by this company in the production of a strategic metal, we again request the Board to restore the P–56 rating which had been revoked by the general order of March 2nd last. If the said rating is granted, the company will agree to curtail its gold production by at least 50% by ceasing development of sections of its mine where no deposits of scheelite in recoverable quantities exist.

* * * * *

The WPB granted this appeal, by telegram reading as follows:

> RE YOUR APPEAL FROM ORDER L–208 YOU ARE HEREBY AUTHORIZED TO CONTINUE OPERATIONS UNTIL DECEMBER 8TH, AT YOUR INDEPENDENCE MINE UNDER THE FOLLOWING CONDITIONS: DURING THAT PERIOD YOU WILL DRILL, BREAK AND DEVELOP, AS RAPIDLY AS POSSIBLE, THE SCHEELITE ORE SHUTE YOU HAVE OPENED, IN ORDER TO SHOW THE MONTHLY TONNAGE OF SCHEELITE WHICH YOU CAN MINE, TREAT AND SHIP TO THE METALS RESERVE COMPANY'S STOCKPILE AT ANCHORAGE (STOP) YOU ARE, UNDER THE TERMS OF THE ORDER, PERMITTED TO REMOVE FROM THE MINE ANY OTHER ORE BROKEN AND IN THE MINE AS OF OCTOBER 15TH, AND MILL THE SAME (STOP) YOU ARE AT THE SAME TIME REQUIRED TO PREPARE THAT PART OF YOUR MINE NOT CARRYING [T]HE SCHEELITE ORE TO BE IN STAND BY CONDITION BY DECEMBER 8TH (STOP) ON OR BEFORE NOVEMBER 30, YOU MUST FURNISH A COMPLETE PROGRESS REPORT TO US ON YOUR TUNGSTEN DEVELOPMENT AND ALSO ON THE AMOUNT OF BROKEN ORE YOU HAVE REMOVED FROM YOUR MINE AND MILLED, WITH METALLIC CONTENT (STOP)

127. Under date of November 27, 1942, Alaska-Pacific submitted to the WPB a report on its scheelite (tungsten) production, as requested in the grant of the appeal. This report pointed out that approximately 2,000 tons of ore had been processed since the grant of the appeal, yielding 113 pounds of gold, 56 tons of concentrates for the Tacoma smelter, and about 20 tons of crude scheelite ore containing at least 80 units of tungsten trioxide. In the letter transmitting the report, Alaska-Pacific stated that:

> * * * By no stretch of the imagination is scheelite likely to become anything more than an important by-product of our gold operation. Actual financial loss will attend the scheelite phase of our operations, and such losses are likely to persist for the entire period during which scheelite is produced, unless subsidies are granted, or scheelite prices raised. * * *
>
> * * * * *
>
> The scheelite situation at Independence is in the same category. Frankly, it is a case of no gold, no scheelite. We cannot waste the economic metal in order to produce the uneconomic one. This company would be hard put to maintain its predominantly gold workings in standby condition and at the same time undertake production of scheelite at a loss, unless income from its gold production was continued.
>
> We submit this letter and the accompanying Progress Report with confidence that the evidence offered will justify the issuance to us, at an early date, of a priority rating which will affectively [sic] suspend L–208 as it may apply to our operation at Independence. In the event that your Board should determine upon action according further time extension in the application of the order, we wish to suggest that not less than six months be accorded us, as any shorter time would be inadequate to bring our scheelite potentialities into production upon an efficient basis. The extension should permit continued normal gold production, so that the hardships referred to in our Appeal of October 15th would not materialize, and so that scheelite production, carried on at a loss, would be reasonably compensated for.

Under date of December 11, 1942, the WPB granted Alaska-Pacific an additional period of operation, its letter of authorization reading in material part as follows:

After careful consideration of the facts presented in your Appeal, the following relief from Order L–208 is hereby authorized:

> Permission is granted until June 8, 1943, to continue your normal lode mine operations of breaking, drawing and milling gold-bearing ore, for the purpose of producing tungsten-bearing ore and upon the condition that plans for proceeding with this operation shall meet with the approval of the War Production Board.

The provisions of Order L–208 are waived to the extent required to obtain the relief authorized above, provided that Order L–208 in all other respects and all other Orders and Regulations of the War Production Board are fully complied with.

128. Alaska-Pacific submitted certain additional reports and requests for relief in the succeeding months. In a report submitted under date of January 26, 1943, it stated that approximately 35 tons of scheelite ore had been produced in two full months, which "exceeded the 3% minimum of contained WO–3 prescribed by Metals Reserve Company."

129. Under date of April 14, 1943, the Director of the Mining Equipment Division of WPB wrote to Alaska-Pacific in part as follows:

> * * * Your report on the recovery and production of tungsten, and the information contained in the report by the United States Geological Survey, would indicate that it is neither desired or advisable, to attempt to continue your operations on any other basis than for the production of gold with tungsten as a by-product. The limited amount of tungsten that might be produced by hand-sorting of the ore is not impressive. Additional tungsten might be recovered by proper mill treatment of the ore, but the time involved in determining the method of recovery to be used in making installations in your plant, the manpower required in the operation of your mine and mill, the materials consumed, and the potential tungsten production, do not justify the continuation of your project.
>
> It is the opinion of all groups concerned, after a thorough review of your case, that neither your present production of tungsten or potential production under either of the proposed plans for recovery, justifies the continued operation of your gold mine.
>
> The production of a high iron sulphur concentrate as diluent, for use at the Tacoma Smelter, through the

mining and treating of an estimated 30,000 tons of ore annually, to produce 1,000 tons of concentrates, is not economical in the use of manpower or materials consumed. Every possible effort is being made to provide that type of flux from other than a gold mine. For these reasons, the issuance of a serial number under Order P–56 for your gold mine, has not been recommended.

The grant permitting continuation of your gold mining operations at the Independence Mine, Wasilla, Alaska, expires June 8, 1943. You are hereby advised that your mine and mill should be placed in standby condition by that date. This is in accordance with the policy of the War Production Board, established through the issuance of Limitation Order L–208, directing the closing of all nonessential mines in the United States. This policy has been extended to Latin America and other foreign countries, through the curtailment of supplies and materials being furnished for gold mining. The reduced consumption of materials, supplies and equipment, through the cessation of gold mining, transfer of idle equipment for use in production of strategic materials and defense projects, has been effective in stimulating production, accelerating completion of projects and reducing the load on the production lines, which are needed to produce for direct military requirements, as well as our vital industries.

130. Under date of May 12, 1943, Alaska-Pacific submitted to WPB a final and voluminous appeal, emphasizing the hardship to itself and its employees which would result from the close down of operations.

By telegram of June 6, 1943, the WPB allowed a further extension of operations to August 8, 1943. On June 21, 1943, the administrator of Order L–208 wrote to Alaska-Pacific advising that after August 8, 1943, the mine must be placed in standby condition.

131. On July 29, 1943, Alaska-Pacific sent the following letter to the WPB Mining Branch:

This is to advise you and the various members of the Board that on or before August 8th, 1943, our operations near Wasilla, Alaska, will be closed down pursuant to the above referred to Order and the various directions issued thereunder. This step is taken by us under the threat of the criminal and other penalties which are provided for in the order. It is not voluntary on our part, but under express protest.

We hereby advise you of such protest and that we reserve all of our legal rights against those responsible for the promulgation and enforcement of this order, it being the position of this company that the order itself and the various actions taken under it are without sufficient foundation in law and are illegal.

We are unable at this time to estimate the extent of the damage which we may sustain by virtue of the enforcement of this order. However, you are advised that it will amount to a substantial sum.

On August 13, 1943, the administrator of Order L–208 wrote the following letter to Alaska-Pacific:

Your letter of July 29 with reference to the closing of your Independence Mine at Wasilla, Alaska, has just been brought to my attention.

We regret that conditions necessitated the action which made the closing of your mine necessary, however, we feel that you are following the wisest course by ceasing operations at the expiration of the extension of the grant made to your company. Little hope of extension could be anticipated in view of present conditions in Alaska, with respect to coal shortage and the difficulty in securing men to work in those mines.

We trust that your company will encourage in every way possible the transfer of men released from your operations, to coal mines. That is one of the most important contributions that could be made to the war effort at this time.

132. The plaintiff received a formal notice dated August 13, 1943, from the WPB in the following terms:

This is with reference to your appeal filed under date of May 12, 1943, requesting relief from the provisions of Limitation Order L–208.

An extension of time was given you on the grant under which you had been operating, permitting you to continue your operations until August 8, 1943, under the same limitations and prohibitions as the original grant.

You ask that an exception be made in your case by the grant of permission to continue your lode mine operations in the Independence Mine located at Wasilla, Alaska, for the purpose of extracting gold in conjunction with your tungsten ore production.

The Appeals Board has given full and careful consideration to all of the facts brought out in your appeal and has consulted the War Manpower Commission as to the advisability of permitting your workers to con-

tinue in a non-essential mine. It is the War Manpower Commission's belief that your workers can be utilized to better advantage in the war effort in the coal mining operations in your immediate vicinity.

Therefore, we regret to inform you that your appeal for relief from Order L–208 must be denied.

133. There is no competent evidence in the record to show the employments to which former employees of Alaska-Pacific transferred upon the closing of the mine on August 8, 1943. On the whole, gold miners are unfavorably inclined toward employment in coal mines, partly because of the hazards involved and partly because equipment and machinery are different. Although the record does not establish the exact number of gold miners who transferred to the two coal mines, at least four, and possibly a few others, did. There were no other strategic metal mines in Alaska for the gold miners to transfer to.

134. Subsequent to the closure of the mine, Alaska-Pacific sold most of the perishable items in its inventory to such agencies as the Alaska Road Commission and the Alaska Railroad, and stored at the mine the other items.

135. Prior to the closure pursuant to L–208, Alaska-Pacific was operating its mining properties at a profit.

136. By reason of the issuance of L–208 Alaska-Pacific was deprived of the use and benefit of ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

137. No compensation has been paid to Alaska-Pacific by defendant for the closing of its mines as hereinbefore described.

FINDINGS RELATING TO PLAINTIFF BALD MOUNTAIN MINING COMPANY

138. Bald Mountain Mining Company (hereinafter referred to as Bald Mountain) is a corporation incorporated under the laws of the State of South Dakota.

139. On October 8, 1942, Bald Mountain was the owner of certain gold-bearing lands in Lawrence County, South Dakota. On that date it was engaged in mining gold on said properties.

140. Subsequent to the issuance of Limitation Order L–208 by the War Production Board, Bald Mountain filed an appeal for relief from its provisions, and was granted permission to remove broken ore from the mine and to operate its mill up to June 1943. This firm continued operations on that basis to that date. The War Production Board granted permission to continue operations to August 8, 1943, but notification of this action was received by this plaintiff after it had already ceased operations.

141. Bald Mountain had approximately 150 employees shortly before October 8, 1942. The record does not disclose the nature of the employments to which these men shifted after the closing of the mine.

142. The record does not disclose the nature or size of Bald Mountain's inventory of mining equipment, materials and supplies as of October 8, 1942, or the length of time it could have continued to operate without replenishment of such inventory. The record does not disclose the extent, if any, to which this plaintiff may have sold or otherwise disposed of any of its mining equipment during the period its mine was shut down.

143. Bald Mountain reopened its mine shortly after the revocation on June 30, 1945 of Limitation Order L–208, and has remained in operation since.

144. By reason of the issuance of L–208 Bald Mountain was deprived of the use and benefit of its ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

145. No compensation has been paid to Bald Mountain by defendant for the closing of its mine as hereinbefore described.

FINDINGS RELATING TO PLAINTIFF ALABAMA-CALIFORNIA GOLD MINES COMPANY

146. Alabama-California Gold Mines Company (hereinafter referred to as Alabama-California) is a corporation organized under the laws of the State of Washington.

147. On October 8, 1942, Alabama-California was the owner of certain gold-bearing lands located in the State of California.

148. On August 8, 1942, Alabama-California closed its gold mine, and ceased all operations at the mine either that day or the next. This closing was the result of a shortage of manpower and materials, and the possibility that such a closing would be necessary had been contemplated by the Board of Directors for several months.

149. During the year 1943, Alabama-California sold $40,000 to $50,000 worth of supplies and materials from its mine. Additional sales were made thereafter, and in 1949 most of the balance of the machinery and equipment at the mine was sold.

150. Alabama-California has never reopened its gold mine since its closing in August of 1942.

FINDINGS RELATING TO PLAINTIFF CONSOLIDATED CHOLLAR GOULD & SAVAGE MINING COMPANY

151. Consolidated Chollar Gould & Savage Mining Company (hereinafter referred to as Consolidated Chollar) is a corporation organized under the laws of the State of California.

152. On October 8, 1942, Consolidated Chollar owner certain gold-bearing lands in Story County, Nevada.

153. On October 8, 1942, the above-named firm was operating a mine producing gold and silver on this property, the proportion of the two metals produced being about fifteen ounces of silver to one of gold. Its method of operation at that date was an open-pit one, that is to say, it had explored the location and size of the veins of gold and silver through an underground shaft, but finding the cost of mining through that shaft to be excessive, had stripped off the rock above the veins containing precious metal, and was recovering ore by use of power shovels. It had limited its operations exclusively to open-pit mining sometime prior to the middle of 1942 when the underground mining was discontinued.

154. Prior to the issuance of Order L–208, from about March 1942 until such issuance, it had been apparent to this plaintiff's officers that the pit operations of stripping off the surface rock, or overburden, preliminary to mining the gold and silver ore, were becoming prohibitively curtailed because of the shortage of rubber essential to the trucking of waste

from the stripping operations. For several months prior to October 30, 1942, in anticipation of that point when the development of new ore would no longer be practicable, Consolidated Chollar's management had been making preparations to conduct operations which would consist of the rehandling of previously mined and processed ore. Machinery was installed for this purpose.

The record does not show the extent of the open-pit operations which had been conducted by this firm.

155. On October 30, 1942, Consolidated Chollar requested of the WPB permission to conduct operations which would consist of the rehandling of previously mined and processed ore called tailings. It stated that the operations would require a crew of only six men and that they would be available from the local community and were of advanced age so they were precluded from employment in copper mines or defense plants. It also stated that the planned operations would require no steel consumption and that the supplies on hand and available from mines already closed down would enable the operations to be carried to completion.

On November 25, 1942, Consolidated Chollar was notified by the WPB that it was authorized to conduct the rehandling operations desired, and on February 26, 1943, this authority was extended to June 30, 1943.

156. Consolidated Chollar's operations involving the rehandling of previously processed ore turned out to be unsuccessful and resulted in financial loss. On April 28, 1943, it advised WPB of this and requested permission to resume its normal operations consisting of open-pit mining. It informed the WPB that a resumption of such operations had been impossible three to six months previously because of the lack of adequate equipment but that it then anticipated equipment would be available for a resumption of normal operation as a result of the completion of defense projects in the area of its operations.

Consolidated Chollar anticipated that its return to open-pit operations would require not to exceed 20 men from the locality whose ages averaged over 50 years. This plaintiff also anticipated that steel consumption in the open-pit operations would be extremely low and estimated that there were sufficient steel-contained materials on hand to last about six

months. Necessary operating supplies and fabricated repair parts were expected to amount to about $6,000 per month.

On June 19, 1943, the WPB refused to transfer the application of serial number 36–209, which had authorized Consolidated Chollar's rehandling operations, to the resumption of open-pit mining, and thereby refused it permission to resume open-pit operations.

157. On June 23, 1943, in furtherance of its attempts to obtain permission to conduct open-pit operations, Consolidated Chollar advised the WPB by letter that there were 15 men not suitable for work in war industries available in the locality and that there were sufficient operating supplies and fabricated repair parts on hand, with the exception of sodium cyanide, for the conduct of operations for six months. It stated in this letter that if such operations were authorized, priority assistance for supplies and equipment would not be required for six months except in the event of unexpected equipment breakdown.

158. On August 28, 1943, the WPB issued Serial No. 36–26–T under Preference Rating Order P–56 which had the result of removing Consolidated Chollar from the restrictions of Order L–208. It was permitted to conduct open-pit operations as a result of the issuance of this serial number. Also, it was authorized by the serial number the use of a priority rating under P–56 for the obtaining of maintenance, repair, and operating supplies. The rating was extended at least through the first and second quarters of 1944.

By letter dated December 10, 1943, Consolidated Chollar reported to the WPB in respect to its operations under the serial number for the previous ninety days, as follows:

> Owing to inefficiency of available labor and lack of adequate equipment in the form of power shovels and trucks for the pit operation we have as yet been unable to bring the operation up to capacity. As time goes on we hope this condition will improve.

The letter also stated that up to and including November 30, 1943, it employed 23 men and that the average daily tonnage of ore produced was 320 tons. These figures compared with the 1942 operations which resulted in a total

tonnage of 144,192 tons, or roughly 400 tons per day, with about 23 or 24 employees.

The record does not disclose how long this plaintiff continued operations under the aforementioned serial number or its reasons for discontinuing its operations, if it did.

159. After the war when Consolidated Chollar resumed operations, it conducted open-pit operations. At that time this plaintiff found it necessary to first remove overburden from above the ore vein because no ore was clear for breaking. The reason for this was that during the effective period of Order L–208, it had been able to process all of the ore which it had stripped of overburden prior to the close of 1942.

160. From the issuance of L–208 to August 28, 1943, Consolidated Chollar was permitted to carry on the rehandling of previously mined and processed ore in accordance with plans the company had made early in 1942. From August 28, 1943, to the end of the war, Consolidated was in possession of a serial number which permitted it to carry on open-pit mining operations and to use a priority rating under P–56 to obtain maintenance, repair and operating supplies. Consolidated Chollar was never required to close its mine under L–208.

FINDINGS RELATING TO PLAINTIFF ERMONT MINES, INC.

161. Ermont Mines, Inc. (hereinafter referred to as Ermont), is a corporation organized under the laws of the State of Oregon.

162. On October 8, 1942, Ermont was the owner of a compact block and contiguous Quartz Lode Mining Claim, designated Nos. 1 through 34 inclusive, located in Montana unorganized Mining District, County of Beaverhead, State of Montana.

163. In October 1942, Ermont was working claims numbered 1 (with drifts on claims numbered 2, 3 and 4), 2 (working over into claim No. 6), 7, 9, 19, 20, 23, 24, 28, and 32. After receiving WPB order to close down in October 1942, Ermont continued taking out the ore already mined during the latter part of October and into November, ran it through the mill and the refinery and shipped it to the mint.

Thereafter the mine and buildings were closed and a watchman was employed to look after the property.

164. On October 8, 1942, Ermont employed a crew of men, number not established, adequate to work the above claims. The men had their homes in the vicinity of the mine. The mine had sufficient supplies, machinery and equipment, in good working order to continue operations for at least a year from October 8, 1942, if the owner had not closed down in compliance with L–208. Mining operations were resumed at Ermont at some time subsequent to the revocation of L–208 in 1945.

174. By reason of the issuance of L–208 Ermont was deprived of the use and benefit of its ownership of its gold mining properties, i. e., the right to obtain gold from the ore bodies on its properties and to sell such gold.

175. No compensation has been paid to Ermont by defendant for the closing of its mine as hereinbefore described.

CONCLUSION OF LAW

Upon the foregoing findings of fact, which are made a part of the judgments herein, the court concludes that as a matter of law plaintiffs Homestake Mining Company, No. 50195; Idaho Maryland Mines Corporation, No. 50182; Central Eureka Mining Company, No. 49468; Alaska-Pacific Consolidated Mining Company, No. 49693; Bald Mountain Mining Company, No. 50214, and Ermont Mines, Inc., No. 50214, are entitled to recover, the amounts to be determined in further proceedings under Rule 38 (c) before a commissioner of the court.

The court further concludes that as a matter of law plaintiffs Oro Fino Consolidated Mines, Inc., No. 49486; Alabama-California Gold Mines Co., No. 50214, and Consolidated Chollar Gould & Savage Mining Company, No. 50214, are not entitled to recover and their petitions are therefore dismissed.

Mr. Kendall M. Barnes, with whom was *Mr. Assistant Attorney General Warren E. Burger*, for the defendant.

ON DEFENDANT'S MOTION FOR NEW TRIAL

LITTLETON, *Judge*, delivered the opinion of the court:

In support of its motion for a rehearing in the above cases, the Government says that the court erred in holding that the issuance of War Production Board Limitation Order L-208 amounted to an exercise of the Government's wartime power of requisitioning or eminent domain because (1) in issuing L-208 the Government did not expressly intend or purport to exercise such requisitioning powers and (2) if L-208 was an "invalid" order, as defendant insists the court held it was, it conferred no right on the plaintiffs to just compensation. On the whole record the court is of the opinion that defendant's motion should be denied.

Defendant attempts to create the impression that this court held that the War Production Board purported to act under a single act, i. e., the Act of October 16, 1941, 55 Stat. 742, containing certain requisitioning powers, when it issued L-208, whereas, defendant says, the record in these cases will not support such a conclusion.

The court did not hold that WPB purported or intended to exercise any of its several requisitioning powers when it issued L-208. The court noted the various authorities actually cited at the conclusion of L-208 including Executive Order 9024 which contained a delegation of the President's requisitioning authority conferred by section 120 of the National Defense Act of 1916 (39 Stat. 312). Beyond that, the court merely noted the various statutes in effect on the date of the issuance of L-208 which gave the Government wide powers to take private property needed by the Government to carry on the defense of the country in wartime, and held that under such a statutory scheme the Government appeared to have had adequate power to take what it in fact took from the plaintiff gold mine owners and operators.

On the matter of whether WPB "intended" or "purported" to act under any of the statutes giving the Government the power to take or requisition private property for war purposes, the court held that WPB purported to issue a priorities and allocation regulation; that to the extent that L-208 prevented the gold mine owners and operators from acquiring new equipment, material and facilities, L-208 was a proper priorities and allocation order, but that to the extent that L-208 denied those owners the right and clear authority which they and every other citizen have to make use of the materials, facilities and equipment which they owned and had on hand, in the operation of their legitimate and legal mining enterprises, L-208 had the effect of completely depriving them of a valuable property right. The court then held that because the Government had the authority to exercise the power of eminent domain and thus to deprive the gold mine owners of that property right, the Government must pay just compensation therefor whether this was done by the WPB in one form or another.

The court did not hold, as counsel for the defendant says it did, that L-208 was an invalid order. The court held that to the extent that L-208 actually allocated scarce materials away from the gold mine owners and operators it was a valid allocation order but that to the extent that it deprived the gold mine owners of the right to use their mining properties by "immobilizing" the materials, equipment and facilities owned by them and which they had on hand and needed to use to operate their mines, the order amounted to a temporary taking of their right and authority to profitably operate their mines.

The court expressly stated that an unauthorized taking is not compensable. It also stated that where there exists authority for a taking of a type of property and the Government, as it did here, takes that property, the use by the Government of a means of acquiring that property, which means was not specifically spelled out by some specific statute, does not relieve the Government of the obligation of paying just compensation, citing, among others, the case of *Edward P. Stahel & Co., Inc., et al.* v. *United States*, 111 C. Cls. 682, cert. den. 336 U. S. 951. Where there is authority to take and a taking is accomplished it is compensable. In the *Stahel* silk cases the Government had the statutory authority to take the plaintiffs' silk; the Government did not "purport" to exercise that power but rather it purported to exercise a regulatory power by issuing Order M-251 freezing or immobilizing the silk in the hands of the owners themselves until the Government should place mandatory orders requisitioning the silk. This freezing order was held to be a taking and, because the Government had the necessary power and statutory authority to "take" the silk, the court held that it must pay just compensation for it and it did so.

Defendant next attempts to analyze some of the requi-

sitioning statutes noted by the court, in order to indicate that WPB did not in fact invoke any of those statutes when it issued L-208. This court did not hold that WPB invoked those statutes any more than it held that the Government invoked the requisitioning statutes available to it in the *Stahel* silk cases. In fact, this court noted that WPB issued L-208 with the express (see preamble to the order) intention of exercising only its priority and allocation powers. The court held that what WPB said it was doing and what it in fact and law did, were two different things and that the Government could not escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a "priorities order" or an "allocation order."

Defendant's counsel also says that the expression used by the court, "war necessity," does not appear in the "taking statute" of October 16, 1941, *supra*. In using that expression the court was merely paraphrasing, as it had a right to do, the statutory language concerning the basis for the President's determination that the property proposed to be taken was necessary to the prosecution of the war; that the property was needed for the defense of the United States; that the need was immediate and impending and that all other means of getting the property had been exhausted. Inasmuch as that statute and other requisitioning statutes then in existence required no particular procedure to be followed in the making of those determinations and provided no appeals therefrom, the court held such determinations were within the discretion of the President or his delegees.

The main complaint of defendant's counsel seems to be that this court held that the Government had the necessary authority to take plaintiffs' property whereas the question of "authority" was not exhaustively briefed by the parties to the court.

It should be noted that this is the *first* occasion in this lengthy litigation on which the Government has taken the position that it lacked authority to take plaintiffs' property. No such contention has heretofore been made. Up to this point, defendant has contended that it did not take the property but merely "regulated" it. It would seem that as a defense "lack of authority to take", if there was any such lack of authority, which we think there was not, should have been raised and supported at an earlier stage. However, both parties may have felt that authority to take this property in wartime was perfectly clear, or they may have felt the point was decided in the court's decision in *Oro Fino Consolidated Mines, Inc.* v. *United States,* 118 C. Cls. 18, in which the court held that if the Government took anything from the gold mine owners when it issued L-208, "it cannot escape liability by pleading that it lacked authority to take what it did in fact take and retain," citing *International Paper Co.* v. *United States,* 282 U. S. 399. The court in the *Oro Fino* case even went so far as to say that if L-208 resulted in an *unauthorized* taking, "it was a taking of which the Government retained the benefit and for which it would therefore be obligated to pay."

In the *Central Eureka* opinion, the court did not go as far as suggested in the *Oro Fino* decision because the court found that the existing statutory scheme at the time of the issuance of L-208 contained sufficient authority to cover the taking complained of and thus avoided that twilight area involving the right to just compensation where authority to take the property involved is not clear. On that point, in the recent decision of the Supreme Court in *Bill Hatahley et al.* v. *United States,* No. 231, decided May 7, 1956, the Court stated:

> * * * The fact that the agents [of the Government] did not have actual authority for the pro-

> cedure they employed does not affect liability. There is an area, albeit a narrow one, in which a government agent, like a private agent, can act beyond his actual authority and yet within the scope of his employment. * * *

The point involved in the *Central Eureka* opinion was not the lack of authority to take, but rather the use by the Government of an *unauthorized means* of accomplishing an *authorized* taking. The court held that the use of an unauthorized means of taking what the Government had the authority to take, did not relieve the Government of the obligation to pay just compensation for what it took, citing *Edward P. Stahel, supra,* (silk cases), and *Hurley* v. *Kincaid,* 285 U. S. 95, (in which the Government took by *flooding* what the statute said it must take by *condemnation proceedings*).

The final position of defendant's counsel seems to be that the only cases in which the Government may be required to pay just compensation for property which it is authorized to take and does take, are those cases in which the Government has expressly invoked a particular taking or requisitioning statute, has used the precise means of taking provided for in that statute, and has then refused to pay for what it has taken. This theory, if adopted, would rule out many taking cases among which are cases such as the silk cases, the set-aside order cases, the flooding cases, the Causby chicken farm case, and, in fact, most of the "taking" cases.

In these cases the court held simply that what the War Production Board did through the issuance of L-208 amounted to and constituted a taking through the placing of a servitude upon the use by plaintiffs of their property and plaintiffs were accordingly held entitled to recover. From this it seems clear, under the decisions, that there was a temporary taking under the Fifth Amendment. The court did not hold that there

was anything illegal about the issuance of L-208 so far as its provisions were concerned. It merely held that when a Government agency has the power to take private property, as the War Production Board did, it does not have to act in some particular formal way in order that its action shall amount to a taking.

In view of the fact that defendant's allegations of error are based on a demonstrably mistaken understanding of the court's opinion and upon conclusions clearly not warranted by that opinion, inasmuch as the court did not hold that L-208 was an invalid order and did not hold that the War Production Board purported to act under or invoke the requisitioning powers contained in any particular statute, defendant's motion for a new trial is overruled.

MADDEN, *Judge*, and WHITAKER, *Judge*, concur.

LARAMORE, *Judge*, and JONES, *Chief Judge*, dissent.

SUPREME COURT OF THE UNITED STATES

No. 1, October Term, 1956

THE UNITED STATES, PETITIONER

vs.

CENTRAL EUREKA MINING COMPANY (A CORPORATION), ET AL.

ORDER EXTENDING TIME TO FILE PETITION FOR WRIT OF CERTIORARI

UPON CONSIDERATION of the application of counsel for petitioner,

IT IS ORDERED that the time for filing petition for writ of certiorari in the above-entitled cause be, and the same is hereby, extended to and including October 24th, 1956.

(S.) EARL WARREN,
Chief Justice of the United States.

Dated this 9th day of October, 1956.

Question presented	2
Statutes and regulations involved	3
Statement	4
1. Regulations adversely affecting the gold industry prior to Limitation Order L–208	5
2. Issuance of Limitation Order L–208	8
3. The closing of respondents' mines	11
4. The decision of the Court of Claims	13
Summary of argument	15
Argument:	
Introduction	23
I. Wartime restrictions on the operation of the nation's gold mines to promote the national defense did not constitute a taking of private property for public use compensable under the Fifth Amendment	26
A. The general principles applicable to allocation and limitation orders	26
1. The elements of a constitutional taking	26
2. Limitations upon the acquisition, use and disposition of private property pursuant to regulatory war powers of the Federal Government do not involve a taking	29
3. In particular, wartime allocation, limitation, and priority orders do not result in a taking	38
B. Limitation Order L–208 was a rational and valid exercise of the allocation authority, was in the public interest, and was designed to and did promote the national defense	45

Argument—Continued

In the Supreme Court of the United States

OCTOBER TERM, 1957

No. 29

THE UNITED STATES; PETITIONER

v.

CENTRAL EUREKA MINING COMPANY (A CORPORATION), ALASKA-PACIFIC CONSOLIDATED MINING COMPANY, IDAHO MARYLAND MINES CORPORATION, HOMESTAKE MINING COMPANY, BALD MOUNTAIN MINING COMPANY, ERMONT MINES, INC.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

BRIEF FOR THE UNITED STATES

OPINIONS BELOW

The original opinions of the Court of Claims (R. 11–62) are reported at 134 C. Cls. 1 and 138 F. Supp. 281. The opinion denying the Government's motion for a new trial (R. 142–147) is reported at 134 C. Cls. 130 and 146 F. Supp. 476.[1]

---

[1] Related opinions of the Court of Claims, on the Government's demurrer to the petitions, are as follows: *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, certiorari denied, 341 U. S. 948; *Alaska-Pacific Consolidated Mining Co.* v. *United States*, 120 C. Cls. 307; *Idaho Maryland*

JURISDICTION

The judgment of the Court of Claims was entered on February 20, 1956 (R. 58). A motion by the United States for a new trial, seasonably filed, was denied July 12, 1956 (R. 147). By order of the Chief Justice, dated October 9, 1956, the time for filing a petition for a writ of certiorari was extended to and including October 24, 1956. The petition for a writ of certiorari was filed on October 24, 1956 and was granted on January 14, 1957. 352 U. S. 964. The jurisdiction of this Court rests upon 28 U. S. C. 1255.

QUESTION PRESENTED

In order to conserve scarce war materials, to divert mining machinery and equipment to essential wartime enterprises, and to bring about the voluntary relocation of manpower to vital mining activities and essential war work, the War Production Board on October 8, 1942, issued Limitation Order L–208. This order, as amended, required gold mines deemed nonessential to this country's war effort to be closed in the shortest possible time; prohibited operators of nonessential gold mines from acquiring or using any material, facility or equipment for mining purposes except the minimum amounts necessary for adequate maintenance; and prohibited the sale or disposition of mining machinery and equipment without the permission of the War Production Board. Without reference to the requirement as to the closing of the gold mines,

---

Mines Corp. v. *United States*, 122 C. Cls. 670; *Homestake Mining Co.* v. *United States*, 122 C. Cls. 690; and *Central Eureka Mining Co.* v. *United States*, 122 C. Cls. 691.

the other restrictions had the inevitable effect of precluding the further mining of gold by the corporations affected. The Government did not otherwise interfere with respondents' exclusive possession and control of the mines.

The question is whether Limitation Order L–208 should be deemed a temporary restriction upon the use and enjoyment of private property in the interest of the national defense, or an authorized temporary taking of private property for public use under the Fifth Amendment.

STATUTES AND REGULATIONS INVOLVED

1. Section 301 of the Second War Powers Act, 56 Stat. 176, 177 amending Section 2 (a) (2) of the Act of June 28, 1940, 54 Stat. 676 (50 U. S. C. App. (1946 ed.) 633) provides, in material part, as follows:

> * * * Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense.

2. The Act of July 14, 1952, 66 Stat. 605, provides as follows:

> That the United States Court of Claims be, and hereby is, given jurisdiction to hear, determine, and render judgment, notwithstanding any statute of limitations, laches, or lapse of time, on the claim of any owner or operator of a

gold mine or gold placer operation for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions imposed by War Production Board Limitation Order L–208 during the effective life thereof: *Provided,* That actions on such claims shall be brought within one year from the date this Act becomes effective.

3. Orders and Regulations of the War Production Board, so far as pertinent, are set out in Appendix B, *infra,* pp. 111–125.

STATEMENT

Respondents are owners and operators of gold mining properties who at varying points of time in the course of World War II suspended gold mining operations pursuant to War Production Board Limitation Order L–208. By these actions, consolidated by the Court of Claims for trial on the issue of liability, each respondent seeks compensation under the Fifth Amendment for the alleged temporary "taking" of its mines or rights therein[2] effected by Limitation Order L–208. The Court of Claims (R. 11–58), two judges dissenting (R. 58–62), held that L–208 amounted to a temporary taking of the profitable use of mining property for which the United States was,

[2] Each respondent is, in whole or in part, the owner of mining property affected by L–208. Alaska-Pacific, in addition to outright ownership of mine properties, holds mining rights in two groups of claims, one by virtue of a lease and royalty agreement coupled with a purchase option expiring in 1961, and the others held by virtue of location notices.

under the Fifth Amendment, obliged to pay just compensation.[3]

In Appendix A (*infra*, pp. 73–110), we set out in detail the somewhat lengthy history and background of Limitation Order L–208. A brief summary of this history and background follows:

1. *Regulations Adversely Affecting the Gold Industry Prior to Limitation Order L–208.*—As early as May 1941, requirements for strategic and critical metals and the machinery to produce these metals began to outdistance supply and productive capacity. In recognition of the importance of the mining machinery and equipment industry to the defense preparedness requirements of the United States and the lend lease requirements of the Allies, the Office of Production Management (OPM), predecessor of the War Production Board (WPB), on July 29, 1941, issued its Preference Rating Order P–23. This order permitted producers of mining machinery and equipment to use a priority rating of A–3 in acquiring materials to be used in the production of mining machinery and equipment.[4]

---

[3] While sustaining the claims of the present respondents, the Court of Claims at the same time dismissed, on independent grounds, the complaints of Oro Fino Consolidated Mines, Inc., Alabama-California Gold Mining Co., and Consolidated Chollar Gould & Savage Mining Co. (R. 141). Approximately 150 claims predicated upon Limitation Order L–208 remain pending in the Court of Claims.

[4] Priority ratings assigned to various industries by OPM, and subsequently by WPB, ranged from A–1 to A–10, with further breakdowns in the forms of A–1–a, A–1–b, A–1–c, etc.

Further, to assure the continuous operation of the nation's mining industry, OPM recognized the industry's need not only for new equipment but also for maintenance and repair equipment. On September 17, 1941, OPM issued Preference Rating Order P–56 (R. 1255). Under this order, which applied to approximately 15,000 mines, a mine operator whose operations were "important from the standpoint of defense or essential civilian needs" (R. 1167) was granted a serial number and could then apply for a priority rating entitling him to priority in the delivery of mine supplies and maintenance and repair parts.

Gold placer operations were expressly excepted from the priority benefits of P–56 (R. 1256), thus marking the first instance in which gold mining operations were singled out for special governmental treatment. In the fall of 1941, the shortage of critical mining material and supplies became increasingly acute. Since the gold mining industry was competing with essential nonferrous metal mines for the available machinery, equipment and material, the need for an overall governmental policy with respect to gold production was recognized. After obtaining the views and recommendations of various departments of the Government (R. 69–71), the Supplies, Priorities and Allocation Board adopted the policy with respect to domestic gold mining that "materials should not be allowed for expansion of production although minimum amounts for maintenance and repair may be provided" (R. 72). On December 18, 1941, OPM issued Preference Rating Order P–100

under which gold mines were entitled to the lowest priority, an A–10 priority rating, in acquiring maintenance, repair and operating supplies (R. 1369).

On December 31, 1941, P–56–a was issued, superseding P–23 and continuing the A–3 priority rating for manufacturers of mining machinery and equipment (R. 1260). On March 2, 1942, the War Production Board, successor to OPM, amended P–56 by uprating the priorities on mining machinery for essential mines and denying priority ratings to all mines whose production in dollar value consisted of 30 percent or more of gold and/or silver (R. 1268). Though the 30 percent exclusion clause was eliminated from P–56 on May 15, 1942 (R. 74), WPB in practice denied priority ratings to over 200 mines, including respondents' mines, not producing substantial quantities of materials critical to the war effort or to the civilian economy (R. 74–75).

Thus, as of March 2, 1942, by a series of OPM and WPB orders, respondents were operating, under the then scheme of wartime industry regulation, as one of the least essential industries. They were precluded from obtaining critical materials which might be needed in the operation of a mine producing material essential to the war effort and, while it was possible for gold mines excluded from the priority benefits of P–56 to apply for equipment, repair parts and operating supplies under Preference Rating Order, P–100 (the general repair order), with the very low A–10 priority rating, the wartime demands for such material so far exceeded supply that the possibility of gold mines obtaining material was remote (R. 75).

2. *Issuance of Limitation Order L–208.*—As of the spring of 1942, the progressively stringent restrictions upon the gold mining industry were deemed necessary because of the inadequate production, and increasingly acute shortage, of nonferrous metals—copper, lead, zinc, etc. (R. 74–75); a shortage of mining equipment and machinery—new and used (R. 73–74); and a shortage of equipment and materials used to manufacture mining equipment and machinery (R. 73–74). The gold industry was singled out for particularly restrictive treatment because gold was not of importance to the war effort, yet its production consumed material in short supply, badly needed by essential nonferrous metal mines (R. 69).

In the summer of 1942, an additional factor became apparent that was to precipitate the more drastic restriction of the gold industry in the form of Order L–208, in October 1942. In July, August, and September, 1942, the shortage of labor in nonferrous metal mines reached such a point that inadequate production of essential metals became a threat to the entire armaments program (R. 75–76). When the concerted efforts of the WPB, the War Manpower Commission, the United States Employment Service and the Army and Navy (R. 76–77) failed appreciably to alleviate this labor shortage, the attention of WPB and other agencies of government turned to the gold mining industry since, in the words of the Chief of the Mining Branch, WPB, "[t]he gold and silver miners constitute the last reservoir of the skilled mining labor" (R. 79, 492–493). Upon the expectation that a sizable number of the laborers re-

leased by a further restriction of the gold industry would be diverted to the nonferrous metal mines as well as other essential industries (R. 86–87, 92), the WPB on October 6 agreed that an order should be issued suspending all nonessential gold mining operations within 60 days (R. 101).

On October 8, 1942, the WPB issued its Limitation Order L–208. Addressed exclusively to the gold mining industry, L–208, as originally promulgated, directed each operator of a nonessential mine[5] immediately to take steps to close down operations and, after seven days, not to acquire, consume or use any material, facility or equipment to break new ore or to proceed with development work or any new operations in or about the mine. The order further directed that, after sixty days, material, facilities, or equipment should not be acquired, consumed, or used to remove ore or waste from the mine or to conduct operations in or about the mine except to the minimum amount necessary to maintain buildings, machinery and equipment in repair and to keep access and development workings safe and accessible. Preference ratings were not to be applied to acquire any equipment or material for consumption or use in the

[5] Specifically, the order applied to all gold mine operators not holding serial numbers under Preference Rating Order P–56. P–56, as of October 8, 1942, was addressed to the mining industry generally and provided for the assignment of serial numbers to mines whose production included significant quantities of material important to national defense (R. 102). Gold mines, including respondents' mines, not producing substantial quantities of critical materials, were, as noted above, denied P–56 serial numbers.

operation, maintenance or repair of a nonessential mine except with the express permission of the Director General of Operations, WPB, after application made to the Mining Branch, WPB. Lode mines which produced 1,200 tons or less ore and placer mines which treated less than 1,000 cubic yards of material in 1941, were, with limitations, excepted from the operation of the order. Provision was made for appeal to the WPB by any person affected by the order who considered that compliance would work an exceptional and unreasonable hardship (R. 104).

On November 19, 1942, L–208 was amended (R. 1574 C–D, 7 Fed. Reg. 9613, App., B, *infra*, pp. 114–115) to prohibit the sale or other disposition, or acceptance of delivery, of any mining machinery or equipment of the type listed in Schedule A to Preference Rating Order P–56 (R. 1276–1277), except with the express permission of the Director General of Operations, WBP, and each operator was required to submit to WPB an itemized list of Schedule A equipment and machinery indicating each item available for sale or rental.

On August 31, 1943,[6] L–208 was further amended (8 Fed. Reg. 12007, App., B, *infra*, pp. 118–123) by adding a Schedule A listing 74 items of mining equipment and machinery (App., B, *infra*, pp. 123–125) and prohibiting the sale, transfer or disposition of this equipment and machinery except (1) with the express permission of WPB or (2) to a producer holding a

[6] The amendment to L–208 of November 25, 1942 (7 Fed. Reg. 9810) merely changed the time within which the inventory of equipment and machinery was to be submitted to WPB.

serial number under Preference Rating Orders P–56, P–58, P–73.[7] As thus amended, L–208 further required that after August 31, 1943, the sale or transfer of equipment and machinery to holders of P–56, P–58, or P–73 serial numbers was to be immediately reported to the WPB mining division.

L–208, as amended, remained in effect until revoked by WPB on June 30, 1945 (10 Fed. Reg. 8110).

While a dominant consideration underlying its issuance was the release and expected diversion of labor from the gold mines to nonferrous metal mines (*supra,* pp. 8–9), L–208, as issued, was by its terms designed to conserve the critical material and equipment normally consumed in gold mining operations, and, as amended, to allocate to essential enterprises the substantial reservoir of mining equipment and machinery rendered idle by the suspension of gold mining operations. None of the respondents, by legal proceeding, questioned the validity of L–208 or the authority of WPB to issue the order.

3. *The Closing of Respondents' Mines.*—Respondent Homestake Mining Company discontinued breaking new ore on October 15, 1942. On November 25, 1942, the WPB, on Homestake's appeal, denied permission to break any new ore or to proceed with development work or new operations but authorized, for a period of six months commencing December 8, 1942, the removal of broken ore from underground and the re-

[7] Preference Rating Order P–58 applied to South American copper mines and P–73 (8 Fed. Reg. 3667) applied to smelters and refiners of thirteen critical metals.

filling of stopes with suitable material. After June 1, 1943, the Homestake mine was closed down for all purposes except necessary maintenance. Operations were resumed on July 1, 1945 (R. 111–116).

On October 8, 1942, respondent Central Eureka Mining Company employed 117 men. Immediately following the issuance of L–208 all but 64 employees left the mine. The balance were retained by the Company to maintain the mine until January 1943, when the National War Labor Board ordered that no more than 42 employees be permitted to maintain the mine. Central Eureka resumed operations in 1947 or 1948 (R. 116–120).

Respondent Idaho Maryland Mine Corporation completely closed down the operation of its gold mining properties on October 15, 1942. However, in the period between December, 1941 and October 8, 1942, the Idaho Maryland payroll had been reduced from 800 employees to 212 and only curtailed operations were being conducted at the time L–208 was issued. On May 3, 1944, after appeal to WPB, Idaho Maryland was permited to resume operations on a limited basis (R. 120–124).

Respondent Alaska-Pacific Consolidated Mining Company closed its mines on August 8, 1943 (R. 134);[8] respondent Bald Mountain Mining Company, with permission of WPB, removed broken ore from the mine and operated its mill up to June, 1943, when mining operations ceased. Operations were resumed shortly after June 30, 1945 (R. 135–136).

---

[8] The court made no finding as to the date Alaska-Pacific resumed gold mining operations.

Ermont Mines, Inc. removed broken ore during October and into November, 1942, ran it through the mill and the refinery, and shipped it to the mint. Thereafter, the mine and buildings were closed and a watchman employed to look after the properties. Mining operations were resumed sometime subsequent to June 30, 1945 (R. 140).

4. *The Decision of the Court of Claims.*—In holding that L–208 amounted to a temporary compensable taking of the profitable use of respondents' mining properties, the Court of Claims acknowledged that a nonessential industry such as the gold industry could be strictly regulated in wartime and that losses resulting from such regulation are not ordinarily compensable (R. 43). Order No. L–208, however, in the court's opinion, exceeded the permissible bounds of regulation because, as an order allocating machinery, equipment and material, no provision was made whereby the machinery, equipment and material made idle by the order would be held for the use of the Government or some essential user designated by the Government (R. 31–32); nor, the court said, did L–208 require that the owners deliver material to essential users but rather "left them free to dispose of the critical materials in any way or to anyone they pleased" (R. 40). "The [respondents] might have sold their inventories of machinery, supplies and equipment to any user whether or not that user was conducting a business which was essential to the defense effort" (R. 27). In the court's view, the respondents' loss of their right to mine gold was not a

consequential loss because "L–208 neither allocated nor took [respondents'] inventory and supply of critical materials, equipment and facilities" (R. 31) but was, instead, an authorized (R. 41–42) taking of the profitable use of their mining properties (R. 45).[9]

Chief Judge Jones dissented (R. 58–61) on the ground that the provisions of L–208 which forbade the use and acquisition of critical materials in gold mining operations were valid wartime allocations of critical materials, that the closing of the mines was incident to such allocations, and the closings thus within the court's ruling in *St. Regis Paper Co.* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U. S. 815. Judge Larramore's dissent (R. 61–62) was grounded on the premise that L–208 was not an allocation order; that the closing of the mines was unauthorized, therefore not compensable and should have been enjoined.

---

[9] The Court of Claims in effect reasoned, *not* that L–208 went too far in the exercise of the nation's wartime powers, but that it did not go far enough, because the order did not explicitly require that the machinery, equipment, and material of the affected mines be held for the use of the Government or essential users designated by the Government. The decision implies that, if L–208 had contained such a provision, the resulting losses would not be compensable. In this connection, it is appropriate to note that, although the record discloses references to the November 19 amendment to L–208 (R. 479–482; 1574C–D, 1575), neither the findings of the Court of Claims nor its opinions make any reference to the November 19 and 25, 1942 and August 31, 1943 amendments to L–208 (*infra*, pp. 111–125). See the discussion, *infra*, pp. 50–52.

SUMMARY OF ARGUMENT

In World War II, the task of converting the economy of the United States from a peace to a war basis, and the task of mobilizing and directing the economy to meet the exigencies of total war fell primarily to the War Production Board (WPB). To discharge its responsibilities, the WPB, by delegation from the President, was armed with (among other things) the statutory war power of the President to allocate material and facilities "in such manner, upon such conditions and to such extent" as "necessary or appropriate in the public interest and to promote the national defense." Section 301 of the Second War Powers Act, *supra*, p. 3. Under these powers, WPB regulated the nation's economy on an unprecedented scale with the objective that all of our resources be utilized with maximum efficiency to produce the munitions and implements necessary to the successful prosecution of the war.

Regulation by the War Production Board assumed a variety of forms but it was primarily through thousands of priorities orders, material conservation orders, and orders limiting, curtailing, or prohibiting production of nonessential products, or prohibiting and restricting the use of critical war materials, that industry was converted to, and mobilized for, war production. Through WPB regulation, raw materials, machine tools, machinery and equipment were channeled from nonessential users to enterprises essential to the war effort and manpower was made

available to the mines, factories, shipyards, aircraft plants, and other industries engaged in production vital to the war economy.

Limitation Order L–208, involved in this case, was but one instance of WPB's wartime regulation of American industry. By this order, WPB dealt with the problems of the mining industry which, in the fall of 1942, were so acute that the inadequate production of nonferrous metals—copper, lead, zinc, tungsten, etc.—posed a grave threat to the war program. L–208 directed gold mines not producing substantial quantities of critical materials to close down, and the order also prohibited, within certain time limits, the acquisition or use of any material, facility, or equipment for mining purposes except for restricted uses. By WPB Priorities Regulation 13 and Order L–208, as amended on November 19, 1942, the material, machinery, and equipment thus rendered idle were subject to being channelized to essential users and only to them. Order L–208 was issued because WPB reasonably believed (on the basis of repeated and careful studies, and after other expedients had been tried and had failed) that it was necessary to forbid the operation of nonessential gold-mining so as to channel and force mining equipment, material, and personnel into nonferrous mining which was then vital to the developing war effort.

I

In these circumstances, Order L–208 was a valid wartime regulation under the Executive's power of allocation of the nation's resources, and did not con-

stitute a taking of private property for public use compensable under the Fifth Amendment. While as a result of its restrictions the owners of mines suffered financial loss, a similar hardship was sustained by their employees and the mining communities dependent, in whole or in part, upon the operation of the mines. It does not follow, however, that the losses sustained by operators of mines who, by reason of L–208, were required until June 30, 1945, to suspend gold mining operations, are constitutionally compensable.

A. 1. The necessary elements of all constitutional takings are (1) an authorized intention on the part of the Government officials to take a recognized property interest from the owner and transfer it to the United States (as in the normal condemnation or requisition case), *or* (2) in the absence of such intent, an invasion into the possession of private property, of such character and magnitude that it cannot be accomplished without compensation under the Government's regulatory and non-eminent domain powers (as in the flooding cases). An actual invasion of property by the United States is required, as is *use by the Government.* We show in Point II that WPB had no intention or authority to take respondents' property; in this Point I, we show that Order L–208 did not result in an unintended taking.

2. In time of war, when national survival is at issue, the government's demands upon its citizens become most exacting; property rights cease to be inviolate, liberty is subject to restriction, and life itself is subject to sacrifice. Economic hardship, loss

of profits, inconvenience, and personal sacrifice, though far removed from the field of battle, are concomitants of present day warfare, as this Court has repeatedly recognized in the past. Most recently, the Court has held that the Fifth Amendment is "no comprehensive promise that the United States will make whole all who suffer from every ravage and burden of war." *United States* v. *Caltex,* 344 U. S. 149, 155. And the Court has held that restrictions placed upon the use and disposition of private property, in time of war and in the interest of national defense, impose no obligation upon the United States to compensate for losses or hardship which inevitably follow such restrictions. For example, within this sound rule fell the adverse economic consequences of wartime price and rent control restrictions imposed by the federal government in World War II.

3. In the same category are the losses and the economic hardships attributable to the allocation of material and facilities by the WPB pursuant to the Second War Powers Act. Such orders have been upheld as valid wartime regulations. And the Court of Claims has, prior to the present cases, correctly held that the exercise of this power to allocate material and facilities is not a "taking" of private property and gives rise to no constitutional claim to compensation for losses attributable thereto. *St. Regis Paper Co.* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U. S. 815; *Oro Fino Consolidated Mines, Inc.* v. *United States,* 118 C. Cls. 18, certiorari denied, 341 U. S. 948.

A rigid constitutional doctrine which would require the United States to assume such indirect costs of war could well result in a prohibitive financial burden. The claims arising out of L–208 alone are estimated to exceed forty million dollars. And the gold mining industry is but one of any number of other industries and businesses which sustained severe economic hardship in consequence of WPB orders and regulations curtailing or stopping production of nonessential products or prohibiting or restricting the use, acquisition, and disposition of personal property.[10] Congress, of course, may as a matter of grace award compensation for such losses. To hold, however, that an industry is entitled to such compensation as a matter of constitutional right, is to impose a serious limitation upon the war power of the federal government.

B. 1. Limitation Order L–208 deprived respondents of no gold. The United States did not seize, condemn or take respondents' gold and as much gold remained for extraction when the restrictions of L–208 were lifted as when they were imposed. The United States made no public use of respondents' property; neither did the Government seize or occupy any part of the realty nor dispossess respondents of

[10] In the spring of 1942, WPB predicted that, as a result of its orders, about 25,000 manufacturing establishments would be compelled to shut down and it was estimated about 80,000 establishments would not be needed in war production. From 1942 through 1944, about 200,000 business concerns went out of existence; and since only a small percentage of these were "business failures," it is plain that World War II had a widespread and substantial adverse economic impact upon American business.

title or possession. Similarly, the United States did not requisition or take any material or equipment of the mines nor otherwise disturb respondents' title to or possession of personal property. Order L–208 merely required the temporary suspension of mining operations by respondents during the period of the war emergency in the interest of the nation's defense and should have been treated by the court below in the same way as other allocation orders—as valid wartime regulation. The legal right claimed to be invaded is the right to mine gold for private profit during the wartime emergency, regardless of the exigencies of the nation's safety, immune from governmental regulation of the character involved unless accompanied by legal liability of the Government. But such a claim clearly does not stand upon any different constitutional footing than other hardships and losses sustained by individuals and businesses in World War II.

2. The decision of the Court of Claims that L–208 results in a "taking" rests largely upon the mistaken belief that L–208 placed no restriction upon the disposition of idle material and equipment by operators of nonessential mines subject to L–208. WPB Priorities Regulation No. 13 (7 Fed. Reg. 5167) was in effect throughout the period L–208 was operative and restricted the sale of "war material" idled by action of the WPB. Moreover, by L–208, as amended on November 19, 1942 (App. B, infra, pp. 114–118), operators of L–208 mines were required to submit to WPB inventories of machinery and equipment indicating which, if any, was available for sale or rental.

The sale or disposition of such material was therafter prohibited except with the express permission of WPB. These provisions show the error in the court's conclusion that there were deficiencies in L–208 depriving it of its allocation and regulatory character.

3. The uncalled-for expressions by the Court of Claims that Order L–208 was unnecessary, unjustified and unsuccessful are equally unsound. While it is doubtful that the courts may properly inquire into the motivation underlying otherwise valid executive action, there can be no serious question that L–208 was both necessary and justified. L–208 was issued upon the unanimous recommendation of the War Production Board, with the approval and at the urging of the War Department, and was approved by the President. While recognizing that hardships would result, the WPB, the War Department, and the President were satisfied that L–208 was essential to the defense effort. Their judgment was, of course, without the aid of hindsight but was based upon a knowledge of the strategic and logistical problems of a world at war which a court record, fifteen years later, cannot possible reflect. The exigencies of the world situation in 1942 are matters of public knowledge, well known to this Court. The necessity for L–208 is traceable to these exigencies and its justification lies in the critical production problems which plagued the nonferrous metal mines in 1942 and which posed a threat to the entire war production program.

Similarly, the court's conclusion that L–208 was not devised nor intended as an allocation order is belied

not only by the terms of the order but by its accomplishments. Apart from its preamble, L–208, by its terms, prohibited the acquisition of materials essential to maintenance and operation of gold mines. And L–208 prohibited the consumption of material, facilities, and equipment by nonessential mines. By these devices, demand upon manufacturers and suppliers of mining supplies was thereby reduced; demand was thus brought more nearly in line with supply and facilities, manpower and equipment were released for the production of products essential to the war effort. In these respects, L–208 was a typical exercise of the allocation authority of WPB. By prohibiting the use or consumption of material by nonessential gold mines, the material and equipment inventories were conserved, thereby assuring its availability if the demands of a war of uncertain duration required. Through Priorities Regulation No. 13, and Order L–208, as amended on November 19, 1942, WPB retained ultimate control over idle inventories of material, machinery and equipment, and the prohibitions placed upon the sale or other disposition of such material assured that transfers of war material and equipment would be made only to enterprises with some degree of essentiality to the war effort.

Moreover, as a result of L–208, a reservoir of used mining equipment and machinery estimated to exceed $75,000,000 became available for transfer to other mining activities and other enterprises of wartime value. Within seven months of its issuance and while many nonessential mines still operated, WPB issued

a substantial number of releases of used mining equipment, which moved in increasing amounts to essential users. In addition, by reducing the load upon manufacturers of mining machinery and equipment, L–208 permitted these concerns to concentrate on essential war production. L–208 also alleviated in some measure the burden upon an over-loaded transportation system and reduced power consumption. Of particular significance is the fact that L–208 freed the manpower theretofore employed by nonessential gold mines for transfer and employment in essential activities, including nonferrous metal mines where it was most urgently needed.

II

There was no intention, or authority, on the part of WPB, to take respondents' property or business. Such a "taking" clearly did not fall under any power of requisitioning exercised by Congress or delegated to WPB, and in addition it is undisputed that that agency did not intend to exercise any power of eminent domain. It was functioning solely as a regulatory agency.

ARGUMENT

INTRODUCTION

In World War II, the task of converting the economy of the United States from a peace to a war basis, and the task of mobilizing and directing the economy to meet the exigencies of total war fell primarily to the War Production Board (WPB). To discharge its responsibilities, the WPB, by delegation from the President, was armed with (among other

things) the statutory war power of the President to allocate material and facilities "in such manner, upon such conditions and to such extent" as "necessary or appropriate in the public interest and to promote the national defense." Section 301 of the Second War Powers Act, *supra,* p. 3. Under these powers, WPB regulated the nation's economy on an unprecedented scale with the objective that all of our resources be utilized with maximum efficiency to produce the munitions and implements necessary to the successful prosecution of the war.

Regulation by the War Production Board assumed a variety of forms but it was primarily through thousands of priorities orders, material conservation orders, and orders limiting, curtailing, or prohibiting production of nonessential products, or prohibiting and restricting the use of critical war materials, that industry was converted to, and mobilized for, war production. Through WPB regulation, raw materials, machine tools, machinery and equipment were channeled from nonessential users to enterprises essential to the war effort and manpower was made available to the mines, factories, shipyards, aircraft plants, and other industries engaged in production vital to the war economy.

Limitation Order L–208, involved in this case, was but one instance of WPB's wartime regulation of American industry. By this order, WPB dealt with the problems of the mining industry which, in the fall of 1942, were so acute that the inadequate production of nonferrous metals—copper, lead, zinc, tungsten, etc.—posed a grave threat to the war program.

L–208 directed gold mines not producing substantial quantities of critical materials to close down and the order also prohibited, within certain time limits, the acquisition or use of any material, facility, or equipment for mining purposes except for restricted uses. By WPB Priorities Regulation 13 and Order L–208, as amended on November 19, 1942, the material, machinery, and equipment thus rendered idle were subject to being channelized to essential users and only to them.

In the Statement, *supra*, pp. 4–14, we have summarized the reasons for, and the necessity of, the issuance of Order L–208. We also set forth in Appendix A, *infra*, pp. 73–110, a detailed history and description of the War Production Board—its creation, its objectives, its powers, and its procedures—as well as a similarly detailed survey of the regulations adversely affecting the gold-mining industry prior to Limitation Order L–208, and a step-by-step study of the evolution of that particular regulation.[11]

The gist of this historical material is, first, that WPB reasonably believed (on the basis of repeated and careful studies, and after other expedients had been tried and had failed) that it was necessary to forbid the operation of nonessential gold-mining so as to channel and force essential mining equipment, material, and personnel into the nonferrous mining which was then vital to the developing war effort; and, second, that Order L–208 did not materially differ from the thousands of other allocation orders

[11] See also the discussion in the Argument, *infra*, pp. 50–69.

issued by WPB to all segments of the economy. It is against this background that the question whether the Fifth Amendment requires the payment of just compensation for the economic hardship sustained by the gold mining industry as a result of this World War II regulation by WPB must be considered.

I

WARTIME RESTRICTIONS ON THE OPERATION OF THE NATION'S GOLD MINES TO PROMOTE THE NATIONAL DEFENSE DID NOT CONSTITUTE A TAKING OF PRIVATE PROPERTY FOR PUBLIC USE COMPENSABLE UNDER THE FIFTH AMENDMENT

A. THE GENERAL PRINCIPLES APPLICABLE TO ALLOCATION AND LIMITATION ORDERS

1. The elements of a constitutional taking

Federal eminent domain law recognizes two general classes of constitutional takings. The *first* is the traditional exercise of the eminent domain power, in which Government officials (*a*) intend to take private property for public purposes, under definite and valid statutory authority, and (*b*) carry out the prescribed formal steps, such as the issuance of a requisition declaration or the filing of a court petition and completion of the judicial condemnation process. Frequently, the Government also takes immediate possession of, and dominion over, the property,[12] but there are

[12] Examples are condemnations of interests in land under the Act of August 1, 1888, 25 Stat. 357, 40 U. S. C. 257, requisitions of war materials under the wartime requisitioning statute (Act of October 16, 1941, 55 Stat. 742, as amended, 50 U. S. C. App., 1940 ed., Supp. V, 721), and requisitions of merchant vessels under Section 902 of the Merchant Marine Act, 1936, as amended, 46 U. S. C. 1242.

occasions in which dispossession of the owner is unnecessary to consummate the taking, as under the Declaration of Taking Act, 46 Stat. 1421, 40 U. S. C. 258a–f, providing for irrevocable vesting of title in the United States upon the filing of a declaration of taking and deposit of the estimated award, even though possession has not yet been surrendered. See the Brief for the United States in *United States* v. *Dow*, No. 102, this Term, at pp. 13–18, 27 *et seq.* In both instances, however, it is the admitted purpose of the Government officials to divest the owner of some legally recognized property interest and to transfer that interest to the United States.

The *second* class, on the other hand, does not depend upon the intention of the Government officials. Whatever the official intention may be, certain governmental actions may entail such an actual invasion of property rights that a constitutional taking may be implied, if the actions are not to be held invalid. See *Penna. Coal Co.* v. *Mahon*, 260 U. S. 393, 413; *Block* v. *Hirsh*, 256 U. S. 135, 155–6; *United States* v. *General Motors Corp.*, 323 U. S. 373, 378; *United States* v. *Dickinson*, 331 U. S. 745, 748; *United States* v. *Pewee Coal Co.*, 341 U. S. 114.[13] But though subjective purpose to "take" is unnecessary in this class, it is an essential prerequisite that the governmental invasion affect a

[13] The prime instance, in federal eminent domain, is the destruction of privately owned land by flooding. *United States* v. *Kansas City Ins. Co.*, 339 U. S. 799, 809–810. See also *United States* v. *Causby*, 328 U. S. 256 (taking by flights of governmental aircraft) and *Portsmouth Co.* v. *United States*, 260 U. S. 327 (repeated firings of projectiles over owner's land).

legally recognized "property right", and not merely some other economic interest of the plaintiff's (*United States* v. *Willow River Co.*, 324 U. S. 499, 502; *Bowles* v. *Willingham*, 321 U. S. 503, 517–519), and also that the interference with use or possession be so extensive and of such a character that it cannot be done without compensation under the Federal Government's regulatory powers. *Penna. Coal Co.* v. *Mahon*, *supra*; *United States* v. *General Motors Corp.*, *supra*; *United States* v. *Causby*, 328 U. S. 256, 261–3, 264; *United States* v. *Kansas City Ins. Co.*, 339 U. S. 799, 804–808. In such cases in which an unintended taking is found to result from federal interference with property interests there must generally be (a) an actual invasion by the Federal Government of private property, (b) some public *use* of that property, and (c) that *use* must be *by* the United States. Perhaps, there are rare instances (hardly likely in wartime) in which mere regulation (without affirmative invasion of property interests) may go so far that it can only be upheld as a taking. But in those cases it must first be determined that the regulation would be unlawful if supported only by the Government's various powers of regulation; the requirement of "just compensation" may then be used in such circumstances to save the Government's action from being stricken as unlawful.[14]

[14] Where a constitutional taking is implied, it is assumed that the United States has acquired a definite interest in the property, permanent or temporary, such as title, an easement, a servitude, or a leasehold, *United States* v. *Causby*, *supra*; *United States* v. *Dickinson*, 331 U. S. 745, 748, 751; *United States* v. *Lynah*, 188 U. S. 445, 470–1.

Limitation Order L–208 falls into neither of these two categories. We show below (Point II, *infra,* pp. 69–71) that WPB did not *intend* to requisition or "take" respondents' gold mines, either permanently or temporarily, and that in any event that agency would not have had the power to make such a requisition or "taking". In this point, we show that Order L–208 did not come under the second class of "taking"—that it did not exceed the limits of valid regulation and did not amount to a "taking" of possession or of a property right.

2. Limitations upon the acquisition, use and disposition of private property pursuant to regulatory war powers of the Federal Government do not involve a taking

This Court long has recognized that the Fifth Amendment is not a comprehensive promise to pay for every impairment of use of private property, or for every diminishment in its value, which may be attributable to the exercise of governmental powers. Instances abound in which, under the constitutional powers of the national government, private property is subject to governmental regulation and restriction substantially affecting its use and disposition, and hence its utility and value, but for which there is no constitutional obligation to compensate. This subserviency of private interests to the paramount national welfare is most pointedly demonstrated in time of war when national survival is at stake and the government's demands on its citizens become exacting to the point that, with a common high purpose, private property rights cease to be inviolate, liberty

is restricted, and life itself is subject to sacrifice. Cf. *United States* v. *Macintosh*, 283 U. S. 605, 622; *Legal Tender Cases*, 12 Wall. 457, 461. As the Court said in *Lichter* v. *United States*, 334 U. S. 742, 754:

> In total war it is necessary that a civilian make sacrifices of his property and profits with at least the same fortitude as that with which a drafted soldier makes his traditional sacrifices of comfort, security and life itself. * * *

It is settled, for instance, that under the war powers the Government may confiscate the property of alien enemies in the United States. *Miller* v. *United States*, 11 Wall. 268; *United States* v. *Chemical Foundation, Inc.*, 272 U. S. 1, 11; cf. *Johnson v Eisentrager*, 339 U. S. 763. In World War II, even citizens were compulsorily relocated, and restrictions on their personal freedom in the form of curfews and of exclusion from designated areas were imposed and sanctioned by this Court. *Hirabayashi* v. *United States*, 320 U. S. 81; *Korematsu* v. *United States*, 323 U. S. 214. And, of course, in World War II, millions of citizens were conscripted for military service, divorced from normal pursuits, and exposed to the hardships and hazards of combat, including possible injury and loss of life.

Recently, the Court, in *United States* v. *Caltex*, 344 U. S. 149, held that the destruction of private property by the military to prevent its falling into the hands of the advancing enemy was not a "taking" compensable under the Fifth Amendment. The Court thus affirmed a principle first announced in 1887 in *United States* v. *Pacific R. Co.*, 120 U. S. 227, arising

out of the Civil War, and later the basis for the holding in *Juragua Iron Co.* v. *United States,* 212 U. S. 297, involving the destruction of property by American soldiers in Cuba because the property was thought to house germs of a contagious disease.[15] In *Caltex,* the Court said (344 U. S. at 155):

> The terse language of the Fifth Amendment is no comprehensive promise that the United States will make whole all who suffer from every ravage and burden of war. This Court has long recognized that in wartime many losses must be attributed solely to the fortunes of war, and not to the sovereign. * * *

The era when loss of and damage to property and personal inconvenience in wartime were primarily confined to the immediate battlefield has long since passed. The power to "wage war successfully"[16] in the present age is "not restricted to the winning of victories in the field and the repulse of enemy forces. It embraces every phase of the national defense, including the protection of war materials and the members of the armed forces from injury and from the dangers which attend the rise, prosecution and progress of war." *Hirabayashi* v. *United States,* 320 U. S. 81, 93. The power to wage war successfully "permits the harnessing of the entire energies of the people in a supreme cooperative effort to preserve the nation" (*ibid.*). Losses incidental to restric-

---

[15] See also, *Respublica* v. *Sparhawk,* 1 Dall. (Pa.) 357.

[16] Charles Evans Hughes, *War Powers Under the Constitution,* 42 A. B. A. Rep. 232, 238; *Home Bldg. & L. Ass'n.* v. *Blaisdell,* 290 U. S. 398, 426.

tive governmental measures adapted to these ends are, though remote from the field of battle, nonetheless attributable to "the fortunes of war" and must rest where they fall.

In this category belong the losses and economic hardships stemming from price and rent control measures of World Wars I and II, sustained by this Court as valid wartime restrictions upon private property free of the "just compensation" provision of the Fifth Amendment. *Bowles* v. *Willingham*, 321 U. S. 503, and *Yakus* v. *United States*, 321 U. S. 414. In *Bowles* v. *Willingham*, the Court recognized that it is the nature of regulation to reduce the value of the property regulated and that a member of a regulated class may suffer economic losses not shared by others; a landlord's property "may lose utility and depreciate in value as a consequence of [rental] regulation." And even though rent restrictions were claimed to deprive the landlord of a fair return on his property, the Court said (321 U. S. at 519):

> A nation which can demand the lives of its men and women in the waging of * * * war is under no constitutional necessity of providing a system of price control on the domestic front which will assure each landlord a "fair return" on his property.[17]

---

[17] See, also, *Block* v. *Hirsh*, 256 U. S. 135; *Morrisdale Coal Co.* v. *United States*, 259 U. S. 188; *Highland* v. *Russell Car Co.*, 279 U. S. 253; *Wilson* v. *Brown*, 137 F. 2d 348 (Em. Ct. App.); *Taylor* v. *Brown*, 137 F. 2d 654 (Em. Ct. App.), certiorari denied, 320 U. S. 787; cf. *United States* v. *Rock Royal Co-operative, Inc.*, 307 U. S. 533, 569–570; *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381, 392–396.

The Court has also held it not to be a taking for the Government to restrict the right to earn profits in wartime, by the recouping of excessive profits. *Lichter* v. *United States*, 334 U. S. 742, 787.

In World War I, Congress, "for the purpose of conserving the man power of the nation, and to increase efficiency in the production of arms, munitions, ships, food, and clothing for the Army and Navy" (40 Stat. 1046), declared it unlawful to sell for beverage purposes distilled spirits and prohibited the removal of spirits in bond for beverage purposes for the duration of the war. This Act was sustained by the Court as a valid war measure, and, although substantial damage to the distilleries from the restrictions thus placed on their property was apparent, it was held that the restrictions upon the sale of distillers' property could not be regarded as a "taking" in the constitutional sense. *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146, 156–158. See, also, *Mugler* v. *Kansas*, 123 U. S. 623; *Kidd* v. *Pearson*, 128 U. S. 1.

In *Jacob Ruppert* v. *Caffey*, 251 U. S. 264, also arising out of the World War I prohibition acts, the Court sustained a prohibition upon the manufacture and sale of beer which became effective immediately upon passage of the Volstead Act (41 Stat. 305). *Inter alia*, the petitioner contended that, because of the loss resulting from the inability to use its property for brewery purposes, the prohibition could be legally effected only provided compensation was made (251 U. S. at 302). The Court rejected the argument. Petitioner's loss "is an incident of the peculiar nature of the property and of the war need which, we must

assume, demanded that the discontinuance of use be immediate" (251 U. S. at 302). "Here, as in *Hamilton* v. *Kentucky Distilleries & Warehouse Co.* [251 U. S. 146], there was no appropriation of private property, but merely a lessening of value due to a permissible restriction imposed upon its use" (251 U. S. at 303).[18]

In the *Hamilton* and *Ruppert* cases, *supra*, Mr. Justice Brandeis analogized the regulative-restrictive, but noncompensatory, powers of the federal government over private property to the regulative-restrictive powers of state governments under the police power.[19] The latter, without any constitutional necessity of compensation, embraces, of course, not only the power to prohibit the manufacture and sale of an otherwise lawful commodity (*Mugler* v. *Kansas*, 123 U. S. 623; *Powell* v. *Pennsylvania*, 127 U. S. 678) but, in its extreme, the power to destroy in the pub-

[18] See also, *Omnia Commercial Co.* v. *United States*, 261 U. S. 502, where it was held that a frustration of a purchaser's rights under a private contract because of government requisition of the seller's product was not a taking compensable under the Fifth Amendment: "That provision has always been understood as referring to a direct appropriation, and not to consequential injuries resulting from the exercise of lawful power. It has never been supposed to have any bearing upon or to inhibit laws that indirectly work harm and loss to individuals. A new tariff, an embargo, a draft, or a war, may inevitably bring upon individuals great losses; may, indeed, render valuable property almost valueless. They may destroy the worth of contracts." *Ibid.*, at p. 510, quoting 12 Wall. 457 at 551 and *Louisville & Nashville R. R. Co.* v. *Mottley*, 219 U. S. 467 at 484.

[19] To the same effect, see *Bowles* v. *Willingham*, 321 U. S. 503, 518; *Block* v. *Hirsh*, 256 U. S. 135.

lic interest private property without state liability (*Miller* v. *Schoene*, 276 U. S. 272; *North American Storage Co.* v. *Chicago*, 211 U. S. 306; *Lawton* v. *Steele*, 152 U. S. 133).[20] In *Mugler* v. *Kansas*, 123 U. S. 623, involving a state prohibition statute, the Court said (123 U. S. at 668–669):

> A prohibition simply upon the use of property for purposes that are declared, by valid legislation, to be injurious to the health, morals, or safety of the community, cannot, in any just sense, be deemed a taking or an appropriation of property for the public benefit.

And again (123 U. S. at 669):

> The power which the States have of prohibiting such use by individuals of their property as will be prejudicial to the health, the morals, or the safety of the public, is not—and, consistently with the existence and safety of organized society, cannot be—burdened with the condition that the State must compensate such individual owners for pecuniary losses they may sustain, by reason of their not being permitted, by a noxious use of their property, to inflict injury upon the community. The exercise of the police power by the destruction of

[20] In some circumstances, private property may be destroyed even to promote the public convenience or the general prosperity of the state. *Miller* v. *Schoene*, 276 U. S. 272; *C. B. & Q. Railway* v. *Drainage Comm'rs.*, 200 U. S. 561. And it is settled that the destruction of private property in the path of a conflagration to prevent the spread of the fire is not a "taking". *Bowditch* v. *Boston*, 101 U. S. 16; *Field* v. *City of Des Moines*, 39 Iowa 575; *American Print Works* v. *Lawrence*, 23 N. J. L. 590, 605–607, 615; *McDonald* v. *City of Red Wing*, 13 Minn. 38.

> property which is itself a public nuisance, or the prohibition of its use in a particular way, whereby its value becomes depreciated, is very different from taking property for public use, or from depriving a person of his property without due process of law. In the one case, a nuisance only is abated; in the other, unoffending property is taken away from an innocent owner.

It is thus clear that there is no inherent right to use property in a way that is detrimental to the public interest. The *Hamilton* and *Ruppert* cases and other decisions of this Court attest that—where the public interest is involved, and particularly in wartime—to restrict and even to destroy is not to "take" in a constitutional sense, and that the power of a nation at war to restrict or to prohibit the use of property because, in the judgment of those whose responsibility it is to determine, the use impairs or its non-use contributes to the war effort, is no less extensive than the power of the state to impose similar restrictions upon property in the name of the health, morals, or safety of the community.[21]

To be sharply contrasted with these principles and these decisions are the cases, relied upon by respondents, in which a taking was found. *E. g., United States* v. *Pewee Coal Co., Inc.*, 341 U. S. 114; *International Paper Co.* v. *United States*, 282 U. S. 399;[22]

---

[21] See also *Marion & Rye Valley Railway* v. *United States*, 270 U. S. 280; *Morrisdale Coal Co.* v. *United States*, 55 C. Cls. 310, affirmed, 259 U. S. 272; 19 Geo. Wash. L. Rev. 184.

[22] In *International Paper Co.* v. *United States*, 282 U. S. 399, the Court held that, by requisitioning the entire power potential of the Niagara Falls Power Co., the United States was obliged

Portsmouth Co. v. *United States*, 260 U. S. 327; *Kimball Laundry Co.* v. *United States*, 338 U. S. 1; *United States* v. *Causby*, 328 U. S. 256; *United States* v. *General Motors Corp.*, 323 U. S. 373; *United States* v. *Welch*, 217 U. S. 333. In each of these cases where compensation was allowed, there was actual dispossession of the owner, physical invasion, occupation or use of the property by the United States. See *supra*, pp. 26–29. Short of such actual appropriation, however, the decisions of the Court make it clear that temporary wartime restrictions upon the use or disposition of private property, such as were imposed by L–208, are not "takings" in the constitutional sense but are valid as wartime economic regulations.[23]

---

to compensate the International Paper Co., which by lease and conveyance from the Power Co. was entitled to a fixed proportion of the power potential. The lease and conveyance under New York law was a corporeal hereditament and real estate. In holding that the Government had taken the Paper Company's right for public use, the Court said: "Our conclusion upon the whole matter is that the Government intended to take and did take the use of all the water power in the canal; that it relied upon and exercised its power of eminent domain to that end; that, purporting to act under that power and no other, it promised to pay the owners of that power * * *." *Ibid.*, at 408.

[23] In *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393, at 415, the Court, as an aside, said that "while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking." The question in that case arose against a peacetime background, the extent of public interest involved was limited, and the restriction was permanent and for the particular benefit of a single private house. We think the statement has little applicability in time of war when the national interest is supreme and the restriction upon private

3. In particular, wartime allocation, limitation, and priority orders do not result in a taking

(*a*) Economic hardships or losses, such as underlie respondents' claims, attributable to wartime allocation of materials and facilities have been specifically upheld as not constituting a taking; and such allocation orders have been sustained as valid regulation. *St. Regis Paper Co.* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U. S. 815; see *Steuart & Bro.* v. *Bowles,* 322 U. S. 398; *Brown* v. *Wilemon,* 139 F. 2d 730 (C. A. 5), certiorari denied, 322 U. S. 748; *Gallagher's Steak House* v. *Bowles,* 142 F. 2d 530 (C. A. 2), certiorari denied, 322 U. S. 764; *Shreveport Engraving Co.* v. *United States,* 143 F. 2d 222 (C. A. 5), certiorari denied, 323 U. S. 749; *Henderson* v. *Bryan,* 46 F. Supp. 682 (S. D. Cal.).

The economic hardship resulting from such allocations and its non-compensatory character was recognized in *Steuart & Bro.* v. *Bowles, supra,* where the Court said (322 U. S. at 405):

> * * * Certainly, we could not say that the President would lack the power under this Act [the Second War Powers Act] to take away from a wasteful factory and route to an efficient one a precious supply of material needed for the manufacture of articles of war. That power of allocation or rationing might indeed be the only way of getting the right equipment to our

---

property, addressed to an industry, is only for the temporary period of hostilities. "A limit in time, to tide over a passing trouble, well may justify a law that could not be upheld as a permanent change." *Block* v. *Hirsh,* 256 U. S. 135, 157.

> armed forces in time. From the point of view of the factory owner from whom the materials were diverted the action would be harsh. He would be deprived of an expected profit. But in times of war the national interest cannot wait on individual claims to preference. The waging of war and the control of its attendant economic problems are urgent business.

The loss due to the wartime allocation of materials, foreseen in *Steuart & Bro.* v. *Bowles, supra,* came to light in *St. Regis Paper Co.* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U. S. 815. The WPB had ordered that no plant in a defined area should, after October 28, 1942, consume, process, or deliver soft pulpwood except with the specific authorization of WPB.[24] This order, as it affected St. Regis, required that its plant remain closed from November 1, 1942 to April 1, 1944. St. Regis brought suit in the Court of Claims, claiming damages of over 3¼ million dollars as a result of the WPB orders and directives, which, it was alleged, amounted to a Fifth Amendment taking of its property requiring just compensation. On demurrer to the petition, the court phrased the issue before it in the following terms (110 C. Cls. at 274):

> * * * [W]hether the exercise of the President's war powers through general orders and directives of the War Production Board allocating and controlling the consumption of pulpwood as a defense measure constituted taking by the Government of plaintiff's property

[24] WPB Order M-251 (7 Fed. Reg. 8424), Schedule I (7 Fed. Reg. 8686).

> for public use within the meaning of the Fifth Amendment to the Constitution..

The petition was dismissed, the court stating: "This is a case of actual hardship. The damages are both real and substantial" (*id.*, at 279). But the "action was taken [by WPB] as a defense measure" and (*id.* at 274 and 275):

> It is not sufficient that damages have resulted or that hardships have occurred. War inevitably produces hardships, suffering and losses, some of which cannot be measured in money. Legitimate war powers must be exercised, whatever the cost. Otherwise everything is lost. * * *

(*b*) With our complex society, the United States cannot assume a rigid and unlimited liability for the adverse economic consequences of such wartime allocations (and similar) orders. The claims of respondents and approximately 150 other claimants based on L–208 have an aggregate value estimated to exceed forty millions of dollars. L–208 is but one of approximately 350 similar L orders and one of thousands of L, M, P and other type orders issued by the WPB and the OPM (Office of Production Management) during the course of the war, resulting in severe financial losses to innumerable businesses. It is difficult to distinguish between the legal effect of these orders and L–208. If the economic consequences of L–208 and similar orders were to be assumed by the Government, serious financial burdens upon the public treasury would result.

Forty-eight curtailment or shut-down orders were issued by WPB prior to March 14, 1942, and in the same period a total of 91 conservation orders effecting curtailment or prohibiting the use of critical or scarce materials, or controlling their distribution, were issued. Between March 16 and April 9, 1942, 25 "L" orders were issued by WPB stopping or curtailing the manufacture of such products as passenger automobiles, stoves, refrigerators, office equipment, domestic laundry equipment, automatic phonographs, metal windows, metal toys and games, metal signs, domestic vacuum cleaners, vending machines, metal household furniture, metal caskets and vaults, and lawnmowers.[25] In addition, as the Truman Committee was advised in April, 1942:[26] "Many industries are shut down or drastically curtailed today because required materials have been cut off by conservation orders although no shut-down or curtailment order addressed to the specific industry has been issued."

Each of the allocation orders issued by WPB, in varying degree, had serious economic repercussions, sometimes on an industry-wide basis, more often perhaps on an individual basis. Thus, as a result of a survey conducted in May of 1942, WPB predicted that 24,308 manufacturing establishments, out of a total of 183,241, would be forced to shut down before October 1, 1942, as a result of more than 250 "L" and "M" orders then issued by the Board. The net sales

[25] 77th Cong., 1st Sess., Special Committee Investigating the National Defense Program, U. S. Senate, *Hearings*, Pt. XII, Exh. No. 497, p. 5341.

[26] *Ibid.*, p. 4993.

of these manufacturers in 1939 accounted for approximately 8 per cent or $4,127,000,000 of total net sales of all manufacturers. Altogether, it was estimated that some 78,695 establishments would not be needed in war production.[27]

The accuracy of WPB's 1942 prediction as to business shut-downs as a result of its regulation is unknown. The decline in the number of business concerns, however, indicates that the adverse economic consequences of World War II upon American business were widespread and substantial. In the years 1942, 1943, and 1944, the total concerns in business in the United States, exclusive of finance, insurance, real estate, transportation, and amusement enterprises, declined by 201,417. Of this total, only 13,848 were "business failures." *Statistical Abstract of the United States,* 1956: United States Department of Commerce, p. 501. It is fair to assume that a large part of this decline was due to the demands of the wartime economy, and the interacting effects of wartime regulation.

To hold the United States liable for "just compensation" for these losses would impose an incalculable and staggering financial burden on the nation, and at the same time would discriminate against those who suffered monetary loss, of one kind or another, by being drafted into the armed forces or who vol-

---

[27] Industrial Mobilization For War, *History of the War Production Board and Predecessor Agencies, 1940–1945,* Vol. I, p. 322; cf., 77th Cong., 1st Sess., Special Committee Investigating the National Defense Program, U. S. Senate, *Hearings,* Pt. XII, pp. 5283–5341.

unteered their services for military or civilian work. And to single out the gold industry for full compensation would be an even grosser discrimination.

In light of the experience of World War II and more recently the Korean conflict, it may be reasonably assumed that a preponderant majority of people and business concerns will continue to accept in the spirit of patriotism the hardships, inconveniences, and economic sacrifices required by present day warfare in the same fashion that they are accepted by military personnel who must do the actual fighting. If the World War II hardship to the gold mining industry merits redress by the Government—which we do not believe—Congress is the appropriate organ of Government to make a voluntary grant of compensation, just as Congress has done in certain instances of particular hardship.[28] That Congress has never made such a grant emphasizes the lack of equity in respondents' position and the similarity of the losses of the gold mining industry to those of innumerable other busi-

And see the Philippine Rehabilitation Act of 1946, 60 Stat. 128, 50 U. S. C. App. (1946 ed.) 1751 *et seq.*, which provides a scheme for compensation of losses attributable to military action by enemy and friendly forces on the Philippines in World War II. See, Schein, *War Damage Compensation Through Rehabilitation: The Philippine War Damage Commission*, 16 Law & Contemp. Prob. 519.

nesses prejudiced by wartime measures.[29] To compensate as a matter of legislative grace is one thing; it is, however, a far different matter to formulate a rigid constitutional doctrine which would require the United States to bear the indirect costs of war such as are typified by respondents' claims. To impose this indirect limitation upon the war power of the federal government is, apart from the possibly prohibitive cost, a step of the gravest sort, in view of the demands of modern war for the full mobilization of the nation's resources.

---

[29] Congress has been unwilling to go further (see Appendix A, *infra*, p. 107, n. 20) than to authorize the Court of Claims to hear and render judgment on the claims of gold mine operators without regard to any statute of limitations, laches, or lapse of time. Act of July 14, 1952, 66 Stat. 605, *supra*, pp. 3–4. Respondents unsuccessfully urged in the Court of Claims that this Act was a mandate from Congress to the court to award compensation wherever it was proved that losses were incurred as a result of L–208. The Act, passed more than six years after any claim based upon L–208 could have accrued, shows on its face that it is nothing more than a Congressional waiver of the statute of limitations or the defense of laches which would otherwise be applicable to many if not all of the L–208 claims filed in the Court of Claims after the decision in *Idaho Maryland Mines Corp.* v. *United States*, 122 C. Cls. 670. See S. Rept. No. 1605, 82d Cong., 2d Sess.; H. Rept. No. 2220, 82d Cong., 2d Sess. (R. 1559–1572). "At the present time many other claimants who may have as good a right for an adudication of their claims as does the Idaho Maryland Mines Corp. may not prosecute such claims due to the running of the statute of limitations. Many of the claimants after the ruling of the Oro Fina case undoubtedly felt that to file in the Court of Claims would be useless and, therefore, allowed the statute to run against them * * *" (R. 1561).

B. LIMITATION ORDER L–208 WAS A RATIONAL AND VALID EXERCISE OF THE ALLOCATION AUTHORITY, WAS IN THE PUBLIC INTEREST, AND WAS DESIGNED TO AND DID PROMOTE THE NATIONAL DEFENSE

1. (*a*) It is indisputable, in the first place, that Limitation Order L–208 took absolutely nothing for the Government in the physical sense. In nonessential gold mines, the order prohibited the acquisition and use of critical materials; as amended on November 19, 1942, the disposition of vital mining machinery and equipment was subjected to WPB control and provision was made for channeling this material to essential enterprises. But the operators of nonessential mines were not required to sell or otherwise dispose of any material or equipment (*Bowles* v. *Willingham*, 321 U. S. 503, 517); the title and possession of personal property was not disturbed, nor was there dispossession or occupation of any part of the realty. The United States took no gold; as much gold remained for extraction when the restrictions of L–208 were lifted as when they were imposed. *Or Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, 29–30, certiorari denied, 341 U. S. 948. There was no public *use* of respondents' property *by the Government.*

(*b*) Likewise, the case presents no question as to the power of Congress as a war measure to allocate material and facilities, no question as to the validity of its delegation of that power to the President, and no issue as to the validity of the President's delegation

to the WPB.[30] It is, moreover, common ground that respondents' mines, pursuant to this power, were subject to regulation. As said by the Court of Claims (R. 43): "That such an industry could be regulated, and strictly regulated in wartime, is unquestioned, and resulting losses are not compensable if the action taken is truly regulatory in nature."

(*c*) The most casual consideration of the losses sustained by innumerable other businesses as a consequence of the impact of government wartime regulations suggests that, if respondents' contentions were successful, the result would be to create a unique privileged class of corporations mining gold immune from the common burdens and sacrifice of war. The fact is, however, that one producing and dealing in gold would appear to have less standing for a claim to a constitutional grievance than other businesses affected. This Court pointed out in *Norman v. Baltimore & Ohio Railroad Co.* (the Gold Clause Cases), 294 U. S. 240, 304, that by virtue of the national power over the coinage of money, there attaches to the ownership of gold special limitations which public policy may require. The Court pointed out that those limitations arise from the fact that the law gives to gold "a value which does not attach as a

[30] The Court of Claims expressly disclaimed that it was holding L–208 to be an invalid order. In denying the Government's motion for a new trial, the court stated: "The court did not hold, as counsel for defendant says it did, that L–208 was an invalid order. [R. 144.] * * * The court did not hold that there was anything illegal about the issuance of L–208 so far as its provisions were concerned." (R. 147.)

mere consequence of intrinsic value," and the power to coin money includes the power to forbid the exportation of gold to prevent its outflow from the country of its origin.

As Attorney General Homer Cummings said in his oral argument to the Court in that case (p. 257):

> Those who insist upon the strict letter of the bond are insisting upon it in a matter dealing with gold, and gold lies at the basis of our financial structure. Gold is the subject of national legislation. Gold is the subject of international concern. Gold is not an ordinary commodity. It is a thing apart, and upon it rests, under our form of civilization, the whole structure of our finance and the welfare of our people. Gold is affected with a public interest. These gold contracts, therefore, deal with the very essence of sovereignty, for they require that the Government must surrender a portion of that sovereignty. To put it another way, these gold contracts have invaded the federal field. It is not a case of federal activity reaching out into a private area. So obsessed are our opponents by the idea of the sanctity of contracts that they are even prepared to assert their validity when they preempt the federal field. To me this seems a monstrous doctrine. These claimants are upon federal territory. They are squatters in the public domain, and when the Government needs the territory they must move on.

Whether the national power under the coinage authority of the Constitution extends to the suspension of gold production, in addition to its exportation, is

not at issue because there was no purported exercise of that power. Reference to the power merely emphasizes that those engaging in gold production have no special immunities from the hardships of war.

2. In these circumstances, this case would seem plainly controlled by the prior decision of the court below in *St. Regis* (discussed *supra*, pp. 39–40), with respect to a wartime pulpwood allocation order. And the Court of Claims held in its earlier gold-mining decision, *Oro Fino, supra,* that L–208 was no different in effect from Order M–251, involved in *St. Regis,* and differed in form only in that, in recognition of the lack of adaptability of nonessential mines to a war economy, it directed that operators of nonessential mines close down. This distinction, the Court of Claims correctly held in *Oro Fino* to be without relevance (118 C. Cls. at 29) for the obvious reason that the closing would in any event have been an inevitable consequence of the prohibitions imposed upon the use and acquisition of material and machinery essential to any mining operation. As stated by a unanimous court (*ibid.* at 29): "We decline to hold that the government may not do directly what we have already held [in the *St. Regis* case] it may do indirectly."[31] The prohibitions in L–208 upon the acquisition, use and disposition of material and

[31] While the United States does not agree with the Court of Claims' decision in *Edward P. Stahel & Co., Inc.*, v. *United States*, 111 C. Cls. 682, certiorari denied, 336 U. S. 951 (see, Cross-petition for a Writ of Certiorari, No. 623, Oct. T., 1948), it is clear that that case is presently inapposite since respondents do not seek compensation for their inventories of material, equipment and machinery immobilized by L–208.

equipment necessarily resulted in the suspension of gold mining operations independently of paragraph (b) (1) of the order directing the closing of the mines. As Chief Judge Jones of the Court of Claims pointed out in dissenting in this case (R. 58–59):

> * * * paragraphs (b) (2) and (3) of the same order, which forbade the use of critical materials in nonessential industry, were valid exercises of the President's power under the allocation statute and they would have produced the closing down of the mines whether or not paragraph (b) (1) had been included. * * * Since the valid portions of the order would have produced the closing of the mines, the added part of the order becomes immaterial.

Doubtless, Order L–208 resulted in hardship to respondents, but, as we have pointed out (*supra*, pp. 40–44), that hardship was by no means unique. The gold-mining industry would appear to have been treated no differently and no more harshly than numerous other industries and business concerns. The burden placed upon nonessential industries by various WPB orders was a heavy one even if insignificant when compared to the hardship and sacrifice of those who manned the battlefields. And if the economic burden was onerous in the case of the gold-mining industry it was because there was no role for it to play in the war economy. But Congress, in authorizing the wartime allocation of materials and facilities, made no provision for the compensation of losses attributable to the exercise of this broad and essential power.

3. When it came to the present cases, the Court of Claims declined to follow the *St. Regis* case because L–208 did not in its view:

> * * * require the gold mine owners to hold for the use or disposition of the Government their inventories and supplies of the personal property covered by the order but left the owners free to use that personal property in any way they wished except in the mining of gold. The plaintiffs might have sold their inventories of machinery, supplies and equipment to any user whether or not that user was conducting a business which was essential to the defense effort [R. 27]. * * * [and because L–208] distributed nothing because the order contained nothing which required the gold mine owners to sell those items to the more essential users [R. 32].

These assertions, and others by the court to the same effect,[32] are demonstrably inaccurate.

---

[32] "* * * Despite numerous appeals and a desire on the part of WPB officials to modify the order to permit the gold mines to operate at least on a break-even basis, the order was continued in effect and unchanged until the summer of 1945 [R. 19].

"* * * In L–208 WPB did not even attempt to assure that those critical materials, equipment and facilities would be held for possible future requisition or order, but left the owners free to sell them to anyone they pleased, whether the prospective purchaser was engaged in essential defense work or not [R. 19].

* * * * * * * * *

"* * * If L–208 had not only denied the gold mines the right to acquire materials, equipment and facilities but had ordered the mine owners to cease using what they had on hand, to hold them for the possible use of the Government, and not to dispose of them to anyone but the Government or its designees, such an order would have amounted to a taking by the Gov-

Section (k) of L–208 provided as follows (R. 104):

> This order and all transactions affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

Priorities Regulation No. 13 was issued by WBP on July 7, 1942 (7 Fed. Reg. 5167) and was in effect throughout the period L–208 was in effect. See 8 Fed. Reg. 4502, 32 C. F. R. Cum. Supp. 944.34. Priorities Regulation No. 13 set out rules governing sales of "idle or excess materials * * * by persons who, by reason of the effect of priority orders or for other reasons, cannot use such materials in the regular course of their business" (7 Fed. Reg. 5167). In general, this regulation permitted the sale of any material *other than a war material* without restriction. War material was defined to mean "any material consisting in whole or in substantial part of one or more materials listed in Schedule 'A'." *Ibid.* Schedule "A" (7 Fed. Reg. 5169–5173) enumerated approximately 160 metals, chemicals, and miscellaneous items, including steel, copper, lead, zinc, tin, glycerine, cyan-

---

ernment of those materials, facilities and equipment, whether the Government or its designees ever actually took physical possession of them or not, and the loss of the gold mine owners' ability to carry on their business would have been consequential to the taking of the materials, equipment and facilities and would not have been compensable under the Fifth Amendment.

"L–208 did not do any of the above things except to deny the gold mine owners and operators the right to acquire additional materials, facilities and equipment. * * *" (R. 44).

amid, rubber, to name but a few.[33] Sales of "war material" were authorized only to designated defense agencies of the Government or only with the specific authorization of WPB or only to buyers within the classes described in Schedule "A." 7 Fed. Reg. 5167–5168. Thus, it is clear that only as to material other than war material were the mine operators free to do as they liked with material and equipment idled by L–208; on the other hand, war material was subject to rigid WPB control.

Moreover, the amended form of L–208 (R. 1574C–D), issued November 19, 1942 (7 Fed. Reg. 9613, App. B, *infra,* pp. 114–118), prohibited the sale or other disposition or acceptance of delivery of machinery or equipment except with the express permission of the WPB. See, also, L–208, as amended August 31, 1943 (8 Fed. Reg. 12007–12008, App. B, *infra,* pp. 118–125). In the light of Priorities Regulation No. 13 and the amendments to L–208, it is clear, we submit, that the court's conclusion that there were deficiencies in L–208, depriving it of its allocation character, is entirely without foundation.[34]

---

[33] A rough tabulation of Homestake's "net requirements" for 1942, submitted by Homestake on January 13, 1942 (R. 1586–1587), includes the following critical items (R. 1588): 43 tons "straight" iron and steel, 8,453 tons fabricated iron and steel; 46 tons machined iron and steel; 135 tons manganese steel; 12 tons of copper; 13 tons of lead; 0.50 ton of tin; 28 tons of zinc; 0.14 ton aluminum; 0.75 ton asbestos; 80 (*sic*) tons mercury; and 11.75 tons of rubber.

[34] These inaccuracies in the court's opinion, critical to its decision, indicate a lack of awareness of the existence of these amendments to L–208.

4. While the ruling of the court below that L–208 was a taking, rather than a noncompensable regulation of the use and disposition of respondents' property, is unsound because of the court's apparent oversight with respect to Priorities Regulation No. 13 and the amendments to L–208, other statements in the court's opinion also require consideration. These are the conclusions that (*a*) L–208 "was not in fact necessary to the successful prosecution of the war" (R. 43); (*b*) that L–208 was not devised for the purpose of conserving or allocating materials and, with a particularly myopic appraisal of the results of L–208, that it did not in fact do so; and (*c*) that the issuance of L–208 in order to divert manpower to essential nonferrous mines was, in effect, ill conceived, unwise, and unsuccessful. We now show that each of these other conclusions by the Court of Claims cannot be sustained.

(*a*) *Necessity.*—In *Hirabayashi* v. *United States,* 320 U. S. 81, at 93, the Court, in passing upon the validity of the World War II curfew order, said:

> Where, as they did here, the conditions call for the exercise of judgment and discretion and for the choice of means by those branches of the Government on which the Constitution has placed the responsibility of war-making, it is not for any court to sit in review of the wisdom of their action or substitute its judgment for theirs.

Again, in *Block* v. *Hirsh,* 256 U. S. 135, at 158, with respect to World War I rental restrictions applicable to the District of Columbia:

> * * * we have no concern of course with the question whether those means [of Congress] were the wisest, whether they may not cost more than they come to, or will effect the result desired.

In *Hamilton* v. *Kentucky Distilleries Co.*, 251 U. S. 146, at 161, Mr. Justice Brandeis said:

> No principle of our constitutional law is more firmly established than that this court may not, in passing upon the validity of a statute, enquire into the motives of Congress. [Citations omitted.] Nor may the court enquire into the wisdom of the legislation. [Citations omitted.] Nor may it pass upon the necessity for the exercise of a power possessed, since the possible abuse of a power is not an argument against its existence. [Citation omitted.]

We submit that these principles, delineating the limits of judicial inquiry into legislative and executive action in time of war, are fully applicable in the present circumstances.

L–208 was issued by the WPB as an exercise of the allocation powers delegated by Congress to the President in the Second War Powers Act, and, in turn, delegated by the President to WPB (*infra*, pp. 76–77). The necessity for the exercise of the delegated power, the "manner" in which it was to be exercised, the "conditions" upon and the "extent" to which it was to be exercised, were validly entrusted to the WPB. It cannot be denied that these were matters which required the exercise of judgment and discretion in the plainest sense. In the considered and deliberative judgment of the WPB, there was ne-

cessity and justification for prohibiting the use and acquisition of materials to stop gold production in mines not producing substantial quantities of critical materials. See Appendix A, *infra*, pp. 86–108. We doubt that it is wise or proper for a court now to sit in judgment on the wisdom or necessity of the Board's action.

The decision to issue L–208 was made upon the unanimous recommendation of the WPB (R. 101) and with the approval and at the urging of the War Department (R. 99, 101). Upon its issuance, L–208 was, in effect, approved by the President (R. 107). It hardly needs saying that these were responsible men, selflessly dedicated to winning the war in the shortest possible time. Though fully aware that hardships would follow, they were satisfied with the necessity of the order and it is not unfair to say that, with their intimate knowledge of the world situation and of the strategic and logistical problems of a nation and world at war, they were in a better position to judge the necessity of L–208 than others far removed from the stress of the emergency conditions which prevailed in 1942.

And the judgment of these men is not the less sound nor the less entitled to respect because the Chief of the WPB Mining Branch, Dr. Nelson, opposed the order.[35] The WPB was purposely staffed

[35] Dr. Nelson's opposition to the order appears to have been based, not upon its necessity, but upon the fear that the mine labor released from the gold mines could not effectively be diverted to the nonferrous metal mines (R. 78–79, 488–494).

by its Chairman, Donald M. Nelson, so as to include all shades of opinion within the Board. In addition to men from big business, there were brought into WPB men from small business, men from trade unions, economists from within and without the Government, university professors, and government career administrators.[36] Unanimity of opinion within such a heterogeneous staff could hardly be expected. Few major policy decisions were made without dissenters, if not on the Board itself, then from within the ranks.[37] The issuance of L–208 was no exception. But it was the responsibility of the Board and its Chairman to resolve differences of opinion and this they did when it became necessary to make a policy decision with respect to nonessential gold mines. Their decision had to be made without benefit of hindsight; L–208 was deemed necessary to the national defense and to the public interest in 1942; it must be accepted as such in 1957.

Viewed, as it must, in a wartime context, there can be small room for doubt as to the necessity and justification for L–208. The exigencies of the world situation in 1942 are matters of public notoriety (Appendix A, *infra*, pp. 73–75, 108), well known to this Court. *Hirabayashi* v. *United States*, 320 U. S. 81; *Korematsu* v. *United States*, 323 U. S. 214; *Bowles* v. *Willingham*, 321 U. S. 503; *Yakus* v. *United States*, 321 U. S. 414; *Steuart & Bro.* v. *Bowles*, 322 U. S. 398;

[37] 77th Cong., 1st Sess., Special Senate Committee Investigating the National Defense Program, *Hearings*, pp. 4957 *ff.*

Lichter v. *United States*, 334 U. S. 742. The necessity for L–208 was born of these wartime exigencies; the lack of adaptability of the gold mining industry to the economy of a nation geared and mobilized for total war provided the justification.

The short of it is that the United States was engaged in a global war that, on an ever increasing scale, was, in October 1942, already taxing national resources to the utmost. It was a war of uncertain duration and, as later events proved, was only in its infancy in October 1942. The drain of offensive warfare on manpower and material had yet to be experienced when the WPB formulated its policy with respect to non-essential gold mines.

In October 1942, inadequate production of nonferrous metals was imperiling the entire war production program which was already falling far short of the production objectives fixed by the President in January 1942.[38] The acute shortage of vital nonferrous metals—copper, lead, tungsten, etc.—was traceable to the tremendous demands of the munitions program and lagging production was attributable primarily to a shortage of mining labor and also to shortages of mining equipment and machinery and a host of other materials essential to the maintenance and operation of mines. WPB sought to remedy these problems and to do so logically directed its attention to the gold mining industry which was utilizing and consuming manpower, machinery and equipment and other material but, with the exception of gold mines producing

[38] *Industrial Mobilization for War*, *op. cit.*, p. 507.

substantial quantities of critical materials, was making no contribution to the war program. We show below (pp. 61–69) that L–208, in varying degree, effectively accomplished its objectives (R. 8). But whether it did or did not, or whether it cost more than its accomplishments were worth, it cannot be said even at this late date that L–208 was unnecessary or unjustified or had no reasonable relation to its legitimate end, much less that it was arbitrary as respondents would have it.[39]

(*b*) *Purpose.*—Neither can it be said that L–208 was not devised nor intended to conserve and allocate critical material, equipment or supplies (R. 19). The preamble to the order was as follows (R. 102):

> The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

[39] The fact that mining equipment and machinery was shipped abroad in limited quantities for use in gold mines in South Africa and Canada, at the same time such material was being denied to domestic gold mines, affords no ground for argument against the necessity or justification for L–208. The continued shipment of such material to foreign countries was a policy decision made at the highest level of government and was based upon economic, political and monetary considerations of broad international implication (R. 100–101, 1170–1171, 1173, 1174, 1175, 1179, 1607). These considerations were, of course, utterly foreign to the domestic production of gold and to the domestic gold mining industry.

By its terms, L–208 prohibited the acquisition of new material essential to maintenance and operation. The demand for such material was thereby reduced, thus bringing demand more nearly in line with supply.[40] L–208 prohibited the use or consumption of any material, facility, or equipment, and thus the inventories of nonessential mines were conserved, thereby assuring their future availability if the demands of a war of uncertain duration required. L–208 prohibited the use or consumption of material and facilities on hand and such items thereby became available for sale, rental, lease or exchange to essential enterprises. Through Priorities Regulation No. 13, and the amendments to L–208 (*supra*, pp. 50–52), WPB retained ultimate control over inventories; this assured that "war material" and vital mining machinery and equipment idled by the order would be disposed of only where its disposition would contribute to the war effort.[41]

---

[40] "* * * Through the L orders the Board took direct action to cut down on the authorized demand for materials for the purpose of bringing that demand somewhere near the available supply of materials. And this was precisely what had to be done, for to make it possible for a system of materials allocation to work it was essential to lop off the excess demand for materials. This the Board did by banning the manufacture of nonessential products. * * *" *Industrial Mobilization For War*, *op. cit.*, p. 309.

[41] The technique employed by WPB in L–208 was typical of that used in any number of "L" orders as can be seen from the description of "L" orders given the Truman Committee in 1942 by the Director of Industry Operations, WPB (77th

To deny that L–208 was an allocation order or that it was not intended as an allocation order is to deny what is apparent from the face of the order, its amendments, and Priorities Regulation No. 13, to which it was subject. Nor is it any the less an allocation order because, as a necessary consequence of the order, manpower theretofore employed by nonessential mines would become available for employment in essential enterprises. Concededly, the diversion of manpower to essential mines was a motivating factor in the issuance of L–208. But neither respondents

---

Cong., 1st Sess., Special Senate Committee Investigating the National Defense Program, *op. cit.*, p. 5058):

> * * * our first step is basically to put industry on notice that they are in jeopardy; to make, so far as we can, a quick study of the inventory situation, the amount of material in process, the amount of the end production which is necessary for war purposes or minimum civilian economy, and then to decide upon the nearest date when a prohibition or limitation should, in the light of all these factors, be made effective. An order is then issued which, in the usual case, prohibits as of the date of issuance the purchase and receipt of any further critical materials except insofar as they may be necessary in small quantities to complete partly fabricated articles, and also provides a final cut-off date for production, generally 30 or 60 days from the date of issuance of the order.
>
> During this interim period, operations are permitted at a reduced rate based upon the extent to which it is deemed advisable to permit the use of the inventory, and the desirability of keeping the management and key personnel of the plant together during the conversion period. The orders generally provide for permission to fabricate repair parts to the extent possible without the use of scarce materials. The orders require reports on inventories of scarce material on hand at the date of issuance and an estimated inventory at the cut-off date.

nor the Court of Claims have suggested that manpower considerations were not a legitimate subject of WPB concern or that this motive on the part of WPB was ulterior or evilly-inspired; rather, the most that can be said is that L–208, considered as an instrument for diverting manpower to nonferrous metal mines, was not as effective as it was expected to be. Cf. *infra,* pp. 65–69. Disregarding the hindsight inherent in this attack upon L–208, it is settled that if executive action is justified by a lawful purpose, it is not rendered unlawful by the motive of those responsible for the action even if that motive were otherwise illegal. *Isbrandtsen-Moller Co.* v. *United States,* 300 U. S. 139, 145, and cases cited; *United States* v. *Rock Royal Co-operative,* 307 U. S. 533, 559–560. L–208 was a rational and reasonable exercise of the allocation authority of WPB; the motives of WPB in issuing the order were proper ones and the fact that its objectives may not have been fully achieved did not deprive it of its allocation character nor convert the order, regulatory in purpose and terms, into a "taking" within the meaning of the Fifth Amendment.

(*c*) *Results.*—The positive accomplishments of L–208 further belie the contention that it was not an allocation order. As a result of L–208, a reservoir of used mining equipment and machinery estimated to exceed $75,000,000 in value was created (R. 1232). This material was "pitifully short of requirements" (R. 1777) and, as of November 19, 1942, when L–208 was first amended, this material was moving into channels leading to essential work at the rate of $82,600 per week. In April and May 1943 this transfer

of material accelerated to the rate of $100,000 per week (R. 1232). By May 24, 1943, WPB had issued 171 releases of equipment under L–208, releasing equipment with an estimated used value of $2,147,480.[42] Sixty-five releases were made to metallic mining operations, 17 to non-metallic mining operations, 26 to construction, 18 to the military, 20 to used equipment dealers for release to holders of serial numbers under Orders P–56, P–58, and P–73,[43] and 25 to "all others", principally agriculture (R. 1250).

This data was compiled at a time when many gold mines, including two of the present respondents, were still in operation (albeit curtailed) under the appeals provisions of L–208. While exact data on equipment releases subsequent to May 1943 is not available, if the $100,000 per week figure compiled on May 24, 1943 is projected over the balance of the life of the order, it is a fair approximation that equipment of over $12,000,000 in used value ultimately found its way from the nonessential gold mines into essential operations.

The diversion of used equipment to essential enterprises was of immediate and direct benefit to the war effort. And not only did this diversion serve to alleviate the shortage in such equipment by partially satisfying the requirements of essential industry, it correspondingly reduced the demand upon manufacturers for such machinery. The significance of this

---

[42] These facts were brought to the attention of the WPB at its meeting of June 15, 1943, at which time the Board determined that L–208 should not be rescinded (R. 1605–1607).

[43] *Supra*, p. 11, n. 7.

factor to the war program is demonstrated by Dr. Wilbur Nelson's statement in March 1942 (R. 1183):

> * * * The makers of mining machinery have the finest machine shops in the United States, and every one of them has been in part, you might say, taken over by the Army and Navy. The capacity of every mining machinery plant in the United States is taken up in part in making munitions and machine tools or parts of machine tools.

The reduced demand effected by L–208 thus reduced the load upon manufacturers (R. 1610)[*] and in turn released machinery, manpower and material for other war purposes. And to these less direct beneficial achievements of L–208 may be added such incalculable accomplishments as the reduction in power consumption (R. 1610) and the easing of the burden on an

---

[*] "A summary of the critical situation in mining machinery and equipment was given by A. I. Henderson on July 31, 1942. 'The mining machinery companies are already behind on deliveries. Shipments of mining equipment and supplies from certain of the largest mining machinery companies have declined as much as 35% in July below June shipments. Most of them have mining machinery orders booked for nine months or more in advance. This makes it imperative that these plants produce more machines and repair parts in the future than they are now making if mine production is to be maintained, much less increased.

"'Many makers of mining machinery operating under Processing Directive PRD 39 are fulfilling Army and Navy orders carrying AAA and AA–1 ratings on direct ordnance contracts calling for full production for several quarters ahead. These ratings are making it increasingly difficult and in many cases impossible to obtain materials and fabricating components from suppliers for mining equipment which the Mining Branch is directing them to produce in order to maintain mining production.' Memorandum, A. I. Henderson to J. A. Krug and C. H. Matthiessen, July 31, 1942." (R. 1197.)

overburdened transportation system which necessarily followed from the suspension of mining operations by over 150 nonessential gold mines.[45]

It is obvious that none of these accomplishments would have been possible under the limited restrictions in effect and applicable to nonessential gold mines prior to L–208 (R. 1505, 1595). The restrictions imposed on the gold mining industry by denying them serial numbers under Preference Order P–56 related to the acquisition of material for maintenance and operation. Operations were restricted only by the loss of manpower due to the Selective Service System and the migration of workers and the inability to acquire materials necessary to operation because of low priority ratings. Since respondents now claim that they could have operated indefinitely on their inventories, it is plain that the conservation of war material effected by L–208 would not have been possible under P–56 or other WPB orders. (R. 1505, 1595.)[46] And we take it that "to conserve" does not,

---

[45] Neither the record nor the history of L–208 reflects data on the quantum or value of war material other than machinery and equipment which may have been channeled from idle inventories of L–208 mines into essential war enterprises. We think, however, that there can be little quarrel with Chief Judge Jones' dissenting statement that (R. 59): "If indeed these materials were critical, then it is natural to expect that, under the operation of supply and demand, such materials would find their way into essential uses. In fact it would have been wholly impracticable in a great national emergency for any agency of government to allocate and assign every bolt, nut, and piece of critical materials. * * *"

[46] See, *e. g.*, Homestakes "rough tabulation" of net operating requirements for 1942 (R. 1586, 1588), *supra*, p. 52, n. 33.

as the court below would have it, require that the material be put "to some more important use" (R. 33). The purpose of conservation, as is clear from the dictionary definition, [47] is to preserve, guard or protect, and this L–208 did with respect to respondent's material inventories. If the war proved of such duration that it was not necessary to requisition the idle inventories, that is all to the good but hardly a legitimate or appealing point of complaint.

Respondents, of course, belittle the constructive accomplishments of L–208 and emphasize that, as an instrument for diverting manpower to nonferrous metal mines, L–208 failed of its purpose. The gold mining industry as a whole, as could be expected, concurs in this view (R. 1547) as do the political representatives of gold mining states (R. 1524–1534). Aside from the irrelevancy of the criticism, the success or failure of L–208, as an instrument for the diversion of manpower, remains a debatable question, difficult to resolve because of the understandably inconclusive information available with respect to the post-L–208 migrations of gold mine workers. However this may be, it is safe to say that no one was more concerned than WPB with the effect of L–208 as a possible solution to the critical manpower problem which prevailed in the nonferrous metal mines and with the smelters and refiners of metals.

On November 5, 1942, the United States Employment Service, (USES), pursuant to a request of Donald M. Nelson, advised that, on the basis of Octo-

[47] Webster's *New International Dictionary (unabridged)*.

ber 30 reports from 40 USES local offices, 642 gold mine workers were known to have been released. Of these 642, 281 registered with the USES for new employment and 206 were placed, with 188 going to nonferrous metal mines (R. 1495). At Homestake Mining Company, as of October 21, 1942, 334 workers had been released, 309 of which were from its mining department. Other mines in the South Dakota area released 91 workers. Employment contracts were signed by 121 men, 81 with the Anaconda Copper Mining Company and 40 with the Climax Molybdenum Company (R. 1495–1496). This data was, of course, assembled before the 60 day cut-off date for operations under L–208 had expired.

On April 22, 1943, the Vice-Chairman of WPB was advised (R. 1503) that L–208 was responsible for the transfer of over 2,000 miners to war industries; 1,156 were placed in nonferrous mines, 515 in other essential industries, and 500 in other war industries and copper mines (R. 1504). As a result of labor transferred from gold mines, the Vice-Chairman was advised, 11,000 tons of copper, 4,000 tons of zinc, 2,400 tons of lead, 13,000 units of tungsten, and 6,000,000 pounds of molybdenum were added to the annual production of these metals (R. 1504).[48] On May 26, 1943, Mr. Knoizen, the Director, Mining Division, WPB, and Administrator of L–208, was advised (R. 1292) that of 3,217 employees displaced by L–208, 2,564 registered with the USES; of 1,571 referred to

[48] From a sample study of 1,000 gold miners displaced. Report of the Labor Production Division, WPB (R. 1504).

metal mines, 1,156 were placed; and of 894 referred to other industries, 515 were placed (R. 1299).

The accuracy of this data and the effectiveness of L–208 as a manpower measure were disputed, within the WPB, by Dr. Wilbur Nelson (1351–1358; 1504–1506) who, as we have pointed out, was convinced before it was issued that L–208 would be ineffective to divert manpower to essential mines (R. 1311, 1319). Dr. Nelson's disagreement with the statistical data (R. 1352–1358), furnished WPB by the USES and the War Manpower Commission (WMC), appears to have been based upon his own data compiled at an unspecified date by personal inquiries to a limited number of nonferrous metal mining companies (R. 1353). The disparity between Dr. Nelson's figures and those of WMC is further explained by the fact that his inquiries were apparently confined to "underground miners and muckers" (R. 1353) whereas the WMC figures relate to "gold miners" generally (R. 1228, 1229, 1353). The Court of Claims did not resolve this statistical conflict other than to state (R. 106) that "approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year." If L–208 is to be judged by the number of gold miners transferred to essential mines and other enterprises, the court's finding, confined as it is to "hardrock miners" who remained in the nonferrous metal mines for a year, is arbitrary on its face (R. 994–995) and affords no sound basis for a conclusion as to the effectiveness of L–208 as a meas-

ure for diverting manpower to essential wartime enterprises.

But we think the controversy over the number of miners who may have migrated to essential mines and other wartime activities need not be resolved. No matter how much the WMC data may be discounted, or whether Dr. Nelson's figures are accepted, or whether the limited finding of the Court of Claims is accepted, the incontrovertible fact is that the manpower displaced by L–208 did not disappear from the face of the earth, but in part moved to essential nonferrous mines, as WPB hoped, and to essential enterprises (R. 1230–1231) just as WPB anticipated.[49] These facts, of course, belie any contention that L–208 was a total failure as a manpower measure and that WPB's expectation that partial relief to nonferrous mines would follow L–208 was unfounded. And, insofar as L–208 is to be judged by its contribution to the nation's war effort, it would seem immaterial whether manpower displaced by the order moved to nonferrous metal mines, to west

[49] By the war's end, manpower was generally accepted as the primary production problem. While the problem was the primary concern of the War Manpower Commission, it was of concern to the Army, the Navy and the WPB. Army and Navy procurement policies were revised so as to avoid placing contracts for production of items and use of materials in labor shortage areas whenever it was practicable to procure the needed items elsewhere. In 1944, WPB revised a number of limitation and conservation orders to include labor clauses, in effect, permitting production only if labor were available and if the production would in no way interfere with existing and potential war contracts. *Industrial Mobilization For War*, *op. cit.*, pp. 837–854.

coast aircraft plants,[50] shipyards and other war plants where the labor problem was as acute as in the nonferrous metal mines.

II

THERE WAS NO INTENTION, OR AUTHORITY, ON THE PART OF WPB TO TAKE RESPONDENTS' PROPERTY OR BUSINESS

It is clear from the evolution of Order L–208 that WPB never had any intention to "take" respondents' property or business for public use. See *supra*, pp. 29–40, and Appendix A, *infra*, pp. 73–110. WPB was acting solely under the allocation authority it possessed, by delegation from the President, under the Second War Powers Act. It was functioning solely in the field of regulation, not of eminent domain. The Court of Claims so recognized in its opinion on rehearing (R. 143).

Nor would WPB have had any authority to "take" respondents' right to mine gold. Section 9 of the Selective Service and Training Act of September 16, 1940, 54 Stat. 885, authorized only the placing of mandatory orders with firms "for such product or material as may be required, and which is of the na-

[50] In 1943, a critical shortage in manpower threatened aircraft production goals on the west coast and led to the inauguration of the "West Coast Manpower Program" by James F. Byrnes, Director of the Office of War Mobilization. This plan was a frontal attack upon the manpower problem on the west coast and included, *inter alia*, direction to cancel contracts on the west coast whenever a national program was to be reduced, shifting contracts to areas where the labor supply was more adequate, requiring sub-contracts to be placed outside critical labor areas, and curtailing less essential production in critical labor areas, including production of civilian goods and services. *Ibid.*, pp. 707–710.

ture and kind usually produced or capable of being produced by such" firm. The Act of October 10, 1940, 54 Stat. 1090, authorized the requisition of "military or naval equipment or munitions, or component parts thereof, or machinery, tools or materials, or supplies necessary for the manufacture, servicing, or operation thereof * * *" held for export. And the Act of October 16, 1941, 55 Stat. 742, authorized the requisition of military or naval equipment, supplies, or munitions, or component parts thereof, etc., when needed for the defense of the United States, when such need "is immediate and impending and such as will not admit of delay or resort to any other source of supply" and when all other means of obtaining the property upon fair and reasonable terms have been exhausted. Broad though this authority was, it is apparent that the particular property that respondents claim has been taken—*viz.*, the right to mine gold—does not fall within the terms of these acts. In absence of the legal authority to take or requisition, it is clear that the Government may not be held liable if a taking occurs. *United States* v. *Goltra*, 312 U. S. 203; *United States* v. *North American Co.*, 253 U. S. 330; *Hooe* v. *United States*, 218 U. S. 322; cf. *Mitchell* v. *Harmony*, 13 How. 115; *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U. S. 579.

The Court of Claims attempted to by-pass this established principle by holding that the WPB had merely used "an *unauthorized* means of accomplishing an *authorized* taking" (emphasis in original) (R. 146). But, as we have just pointed out, WPB—the agency which issued Order L-208—had not been given

any power at all to take this kind of property. There could be no *authorized* taking by WPB, whatever means it sought to use. Unless the principle that the Government may not be held responsible in damages for an unauthorized taking is to be jettisoned (and the Court of Claims did not purport to abandon it), there must be, at the least, some authority in the agency to seize or requisition the particular property. The authority to requisition or condemn property has been granted only with great care and its use has been carefully controlled to prevent abuse. The ruling of the court below runs directly counter to these established principles.[51]

---

[51] The Court of Claims relies on *Hatahley* v. *United States*, 351 U. S. 173 (R. 146), but that decision has no bearing on the present problem. That case arose under the Federal Tort Claims Act, which imposes liability upon the Government for the torts of its employees "while acting within the scope of his office or employment, under circumstances where the United States, if a private person, would be liable to the claimant in accordance with the law of the place where the act * * * occurred." 28 U. S. C. 1346 (b). The Court held the Government liable since "[u]nder the law of Utah, an employer is liable to third persons for the willful torts of his employees if the acts are committed in furtherance of the employer's interests or if the use of force could have been contemplated in the employment." 351 U. S. at 180. In contrast to this principle, which is generally applied in tort law and is necessary if the doctrine of *respondeat superior* is to be effective, no such rule has ever been followed in the field of eminent domain. On the contrary, the Government has been held liable only for those takings for which the requisite general authority has been granted. See the cases cited, *supra*, p. 70.

CONCLUSION

For the foregoing reasons, we respectfully submit that the judgment of the Court of Claims should be reversed with directions to dismiss respondents' petitions in that court.

OCTOBER 1957.

APPENDIX A

History and Background of Limitation Order L–208

A. *The War Production Board—Its Creation, Powers, and Procedures.*—(1) The military peril with which the United States was confronted in late 1941 and in the early months of 1942 has not yet receded into history. The existence of the United States as a sovereign nation was in jeopardy. The devastating attack upon Pearl Harbor on December 7, 1941 was followed in quick succession by a series of allied military reverses marked by the Japanese conquest of the Philippines, the Dutch East Indies, Java, Singapore and a host of island outposts in the South Pacific. The threat of actual invasion of the west coast of the United States was real. To the east, at the same time, most of Europe was under Axis domination. In January 1942, the British advance along the Mediterranean coast was in check and the long retreat of the British Army to Egypt began. Moscow was under siege and the Battle of the Atlantic was only in its beginning.

Such was the critical world situation when on January 6, 1942, the President called for the total mobilization of every American resource and outlined a production program in terms of airplanes, tanks, guns and ships [1] with which the enemy might be repulsed

[1] The production program was, in part:

1. To increase our production rate of airplanes so rapidly that in this year, 1942, we shall produce 60,000 planes, 10,000 more than the goal set a year and a half ago. This

and swiftly and overwhelmingly defeated. The immensity of the task which lay ahead and the measures required for its fulfillment were fully realized. In the President's words:

> Our task is hard—our task is unprecedented—and the time is short. We must strain every existing armament-producing facility to the utmost. We must convert every available plant and tool to war production. That goes all the way from the greatest plants to the smallest—from the huge automobile industry to the village machine shop.
>
> Production for war is based on men and women—the human hands and brains which collectively we call labor.
>
> * * * * *
>
> Production for war is based on metals and raw materials—steel, copper, rubber, aluminum, zinc, tin. Greater and greater quantities of them will have to be diverted to war purposes. Civilian use of them will have to be

---

includes 45,000 combat planes—bombers, dive bombers, pursuit planes. The rate of increase will be continued, so that next year, 1943, we shall produce 125,000 airplanes, including 100,000 combat planes.

2. To increase our production rate of tanks so rapidly that in this year, 1942, we shall produce 45,000 tanks; and to continue that increase so that next year, 1943, we shall produce 75,000 tanks.

3. To increase our production rate of antiaircraft guns so rapidly that in this year, 1942, we shall produce 20,000 of them; and to continue that increase so that next year, 1943, we shall produce 35,000 antiaircraft guns.

4. To increase our production rate of merchant ships so rapidly that in this year, 1942, we shall build 8,000,000 deadweight tons as compared with a 1941 production of 1,100,000. We shall continue that increase so that next year, 1943, we shall build 10,000,000 tons. 88 Cong. Rec. 32, 34.

> cut further and still further—and, in many cases, completely eliminated.
>
> War costs money. * * * It means cutting luxuries and other nonessentials. In a word, it means an all-out war by individual effort and family effort in a united country.[2]

The task of converting, mobilizing and directing the entire economy to meet the astronomical production demands of total war and the civilian economy fell, primarily, to the War Production Board. Created by Executive Order on January 16, 1942,[3] the Board was originally composed of a Chairman, Donald M. Nelson, Secretary of War Stimson, Secretary of Navy Knox, Federal Loan Administrator Jesse Jones, the Director General and the Associate Director General of the Office of Production Management, William S. Knudsen and Sidney Hillman, respectively, the Administrator of the Office of Price Administration (Leon Henderson), the Chairman of the Board of Economic Warfare (Vice President Wallace), and Special Assistant to the President, Harry L. Hopkins. By the terms of Executive Order 9024, the Chairman, with the advice and assistance of Board members, was charged with the general direction over the war procurement and production program and was directed to:

> Determine the policies, plans, procedures, and methods of the several Federal departments, establishments, and agencies in respect to war procurement and production, including purchasing, contracting, specifications, and construction; and including conversion, requisitioning, plant expansion, and the financing thereof; and issue such directives in respect

[2] Message on the State of the Union, January 6, 1942, 88 Cong. Rec. 32, 33–34.

[3] Executive Order No. 9024 (7 Fed. Reg. 329).

thereto as he may deem necessary or appropriate.[4]

By Executive Order No. 9024 and a series of subsequent Orders,[5] the Board, in April 1942, became the super-governmental agency responsible for industrial mobilization and production and for this purpose, by direct delegation and by succession to the functions and powers of predecessor defense agencies, the Board was ultimately vested with the full wartime statutory powers of the President with respect to production.

Principal among the Board's delegated power was the power granted the President by Section 2 (a) of the Act of June 28, 1940, 54 Stat. 676, which, as amended on May 31, 1941, 55 Stat. 236, and as amended and incorporated in Section 301 of the Second War Powers Act (56 Stat. 176, 177; 50 U. S. C. App. (1946 ed.) 633) provided, in material part, as follows:

> * * * Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem

[4] *Ibid.*

[5] By Executive Order No. 9024, the Board succeeded to the functions and powers vested in the Supply Priorities and Allocation Board by Executive Order 8875, August 28, 1941 (6 Fed. Reg. 4483). Executive Order No. 9040, January 24, 1942 (7 Fed. Reg. 527), abolished the SPAB and the Office of Production Management, established by Executive Order No. 8629, January 7, 1941 (6 Fed. Reg. 191). By Executive Order No. 9040, *supra*, the functions and powers of OPM, as derived from Executive Orders No. 8629, *supra*, and No. 8875, *supra*, were transferred to the Board. By Executive Order 9125, April 7, 1942 (7 Fed. Reg. 2719) the WPB was delegated the powers conferred upon the President by Title III of the Second War Powers Act, *supra*, p. 3.

necessary or appropriate in the public interest and to promote the national defense.

It was through this grant of authority, together with the authority to assign priority to deliveries of material for military contracts,[6] that substantially all controls and restrictions upon industry were imposed prior to and throughout World War II. And it was pursuant to this authority that, between December 7, 1941 and August 13, 1945, when victory on all fronts was finally achieved, every segment of the industrial economy was regulated "on a scale and of an intensity unprecedented in the annals of our nation."[7]

(2) While the regulation of industry by the Board assumed a variety of forms, it was largely through a series of "P", "M" and "L" orders that industry was mobilized and all the resources necessary for war and essential to the civilian economy were produced, processed, allocated, conserved, fabricated and manufactured.

The "P" (preference) orders, first in point of time, were generally addressed to buyers of materials and had the effect of authorizing the holder to attach to a purchase order a letter or symbol entitling that order to preference in delivery (R. 63). The "P" orders were originated by the OPM in the pre-Pearl Harbor preparedness period and under these orders preference ratings ranging from A–1 to A–10 were assigned (R. 64). These "A" ratings generally reflected the relative importance of a buyer's product to the defense and war program or to the civilian economy.

"M" orders made their appearance in the fall of 1941, following the Act of May 31, 1941, 55 Stat. 236.

---

[6] Section 2 (a) of the Act of June 28, 1940, 54 Stat. 676.

[7] O'Brian and Fleischmann, *The War Production Board Administrative Policies and Procedures*, 13 Geo. Wash. L. Rev. 1, 4.

which gave the President authority to allocate materials. "M" orders were usually directed to the manufacturers or distributors of particular materials. These orders served several ends: They frequently prohibited a producer from selling to a buyer unless the buyer had some preference rating (R. 63) or prohibited a producer from delivering a particular material except upon specific authorization from the OPM, before its abolition, and WPB thereafter (R. 311). In addition, "M" orders were employed to prohibit the use of particular materials in designated end or component products. The aluminum order of August 18, 1942 (M–1–i, 7 Fed. Reg. 6519), for example, prohibited the use of aluminum except in specified items. And the copper order of October 21, 1941 (M–9–c, 6 Fed. Reg. 5394) prohibited the use of copper in a long list of materials and products.

"L" orders, generally, were used to limit, curtail or prohibit the manufacture or production of end-products containing critical material (R. 63), or requiring the use of facilities or equipment adaptable to war production. Through these orders, demand for critical materials was reduced, materials were conserved, and plant facilities, equipment, and manpower became available for war production purposes. Illustrative "L" orders are L–6 as amended October 13, 1943 (8 Fed Reg. 14003), prohibiting the production of domestic laundry equipment; L–2–g (7 Fed. Reg. 473), issued January 21, 1942, prohibiting, after February 1, 1942, producers of passenger automobiles from manufacturing passenger cars for civilian or military use; L–52 (7 Fed. Reg. 5509), issued July 17, 1942, prohibiting, after September 1, 1942, bicycle manufacturers from processing, fabricating or assembling any material for use in the production of bicycles and prohibiting the manufacture or assembling of bicycles

after that date; L–18–b (7 Fed. Reg. 2462), issued March 30, 1942, prohibiting the manufacture or production of domestic vacuum cleaners after April 30, 1942; L–5–c (7 Fed. Reg. 1493), prohibiting, after April 30, 1942, the production of domestic mechanical refrigerators; and, of course, L–208 (R. 102–105), issued October 8, 1942, which prohibited gold production by mines within the terms of the order.

B. *Regulations Adversely Affecting the Gold Mining Industry Prior to Limitation Order L–208.*—As early as May 1941, requirements for strategic and critical metals and the machinery to produce these metals began to outdistance supply and productive capacity. Shortages of both raw materials and facilities threatened to hold production under the level required for our own expanding military needs and the imperative lend-lease requirements of the Allies. In recognition of the priority requirements of the mining machinery and equipment industry, on July 29, 1941, OPM issued Preference Rating Order P–23. This order permitted producers of mining machinery and equipment to use a preference rating of A–3 for the acquisition of materials to be used in the manufacture of mining machinery and equipment (R. 1250–1254).

By September 1941, the necessity for assuring the availability of maintenance and repair equipment and operating supplies for the nation's mines was also apparent. On September 17, OPM issued Preference Rating Order P–56 (R. 1255–1260).[8] This or-

[8] On September 9, 1941, OPM had issued Preference Rating Order P–22, known as the General Repair Order (R. 1364–1369). It authorized a broad variety of industries, including mines and quarries, to use an A–10 rating for the acquisition of material needed for the repair of their property or equipment.

der covered approximately 15,000 mines and was intended to facilitate the uninterrupted flow of equipment and material to mines whose production was essential to the defense effort. Under this order, a mine operator whose operations were "important from the standpoint of defense or essential civilian needs" (R. 1167) was granted a serial number and could then apply for a priority rating under the order. In order to minimize the delay in the resumption of production, a priority rating of A–1–a was assigned to deliveries of repair material to a mine in the event of an actual breakdown. Mine supplies and repair parts in general were assigned an A–8 rating.

Gold placer mines were expressly excepted from the priority benefits of Order P–56[9] (R. 1278, 1430), thus marking the first instance in which gold mining as opposed to other mining enterprises received special treatment.[10] The exceptive treatment of gold placer

[9] Gold placer mining consists of the derivation of gold from gravels or other stream-borne material that have been displaced or carried away from the original ore bodies. The principal type of modern placer operations consists in the handling of these gravels by connected-bucket floating dredges. Other methods of placer mining include operation of dragline and power-shovel excavators in connection with dry-land and hand washing, hydraulicing, drift mining (in frozen ground or ancient buried river channels), sluicing and rocking (R. 1282, 1284).

Lode mining is the underground working of auriferous quartz veins in hard rock (R. 65; *Minerals Yearbook*, 1941, United States Bureau of Mines, pp. 69–77).

[10] Out of a total of 7,891 gold and silver producing mines in United States and Alaska in 1941, 3,349 were placer operations. In Alaska alone, out of a total of 855 gold and silver producing mines, 799 were placer operations. *Minerals Yearbook*, 1941, United States Bureau of Mines, p. 67. The number of placer operations declined from a total of 3,349 in 1941 to 1,758 in 1942. *Minerals Yearbook*, 1942, United States Bureau of Mines, p. 95.

operations was justified by Dr. Wilbur A. Nelson, the administrator of Order P–56, on the ground that "we felt that we must start restricting mining activities where they were not essential to the production of materials needed in a defense effort" (R. 1168). This comment was a reference to the fact that placer mines produced only gold while many lode mines produced other metals. A further reason for exclusion of the placer gold mines was that placer operations could be discontinued without deterioration of equipment. In contrast, as stated by Donald Nelson, then Director of the Supply Priorities and Allocation Board (R. 65–66):

> * * * Most lode mines are underground, and consequently subject to the hazards of rapid depreciation if they are shut down. Flooding by water is the chief hazard. Though not all lode-mining is deep enough to suffer seriously if a shutdown occurs, continuity of operation is clearly desirable to prevent depreciation of installed equipment and structures. On the other hand, placer operations can be discontinued (and often are, seasonally) without injury to equipment * * *

Because of the similarity of most metal mining operations in the underground drilling and blasting, in the loading and transporting, and in the crushing and elevation of ores, the same industrial concerns that supplied machinery and equipment to the essential nonferrous metal mines also supplied the nonessential gold mines (R. 1283). In the fall of 1941, the shortage of critical mining material and supplies continued to become increasingly acute. Since the gold mining industry was consuming critical materials and utilizing mining equipment in short supply, an overall governmental policy determination with respect to gold mining was recognized as necessary and was the subject

of active consideration by the SPAB and at Cabinet level (R. 69–71).

In a memorandum submitted to SPAB on November 18, 1941, Donald A. Nelson reviewed the problems relating to furnishing mining materials both to gold mines in the United States and to gold mines in foreign countries, principally Canada and South Africa. In his report to SPAB, Mr. Nelson pointed to the necessity of obtaining a formal opinion from the Treasury Department on the importance of gold production to monetary policy. In this respect, he said (R. 66):

> * * * It is to be emphasized that from a consumption of scarce materials standpoint, this whole issue is a minor one. Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political. It is political from two opposing standpoints—that of popular reaction to the continuation of an industry widely regarded as unnecessary (to the point of jocularity), and contrariwise, that of the regional interests delineated in the report.

Mr. Nelson posed several alternative methods of varying stringency for dealing with the material and equipment requirements of domestic mines and suggested that all foreign mine needs be reviewed continuously with the Economic Defense Board so that consideration of inter-American and British American policy could be consistently applied to decisions authorizing or forbidding shipments of gold-mining machinery and repair parts to foreign countries (R. 67).

On November 24, 1941, a meeting concerned with priorities and export licenses for gold mining machinery was called by A. A. Berle, Jr., then Assistant

Secretary of State. This meeting was attended by representatives of the Treasury Department, the Federal Reserve Board, and OPM, as well as the State Department. The consensus of opinion at this meeting, as reported (R. 68–69), was that:

> * * * preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output and to refusing equipment for any expansion of output; subject to exceptions in cases where extraordinary hardship might result—as in the case of isolated communities having no alternative forms of employment—preference ratings for exports of gold mining equipment should be made to depend on a showing that the maintenance of the present level of gold production is necessary (*a*) to supply dollars for an otherwise deficit dollar position in the balance of payments of the country (or in the case of South Africa, for the dollar position of the sterling area), or (*b*) for special political reasons; whenever the current gold mining is maintained mainly to prevent a dollar deficit and especially where the labor could be used for more direct contribution to defense production, this Government should endeavor to find other means of meeting this deficit such as lend-lease activities, purchase of gold "in the ground" for postwar delivery, and the like. To give effect to the foregoing conclusions, no general priority ratings for gold mining equipment, including repair and replacement parts, should be granted but individual consideration should be given to each application on its merits unless adequate periodic compliance investigations can be made (particularly in Canada) as is done in the United States.

On December 2, 1941, SPAB directed Mr. Nelson to obtain the official opinions of the State Department,

Treasury Department, Federal Reserve Board and the Board of Economic Warfare on "supplying gold mining equipment abroad and on other possibilities of providing dollars to offset probable dollar deficit positions" (R. 69). In response to Mr. Nelson's request, the Secretary of Treasury stated, in part, as follows (R. 69):

> * * * Domestic gold production in wartime serves no military purpose, but does consume labor and materials that have usefulness in military production, particularly in the mining of scarce metals. We do not believe, therefore, that domestic gold mines should receive any preference rating for machinery unless the gold is produced with a substantial amount of much needed by-product metals or ores, or unless it is produced in a mine so peculiarly situated that serious and sustained unemployment of men not eligible for defense jobs would result from its shutdown.

The Secretary of State's reply was confined to the question of supplying gold mining equipment abroad. It stated, in pertinent part, as follows (R. 69):

> It is the Department's opinion that preference ratings for gold mining equipment should be granted only after careful scrutiny with a view to maintaining, at the very most, existing rates of output, and to refusing equipment for any expansion of output. * * *

The Chairman of the Board of Governors of the Federal Reserve System stated, in part, that:

> Priority measures tending to reduce new gold production under present circumstances are, in my judgment, highly desirable. The United States stock of gold is already redundant. Its dollar value is more than five times as great as in the 1920's. From the standpoint of credit control in this country further additions to gold

stock are not only unnecessary; they are harmful. By swelling excess bank reserves, they add to inflationary dangers and make the maintenance of a stable and productive economy more difficult. From the standpoint of war output of the allied countries, the materials, machinery, and labor devoted to gold production are largely wasted.

* * * * *

Since new gold output is largely unnecessary and diverts materials, machinery, and labor from production of war supplies, I strongly favor curtailing it so far as is practicable through the priorities system. I would suggest that no machinery be allowed to foreign mines for the expansion of gold output; and that machinery and supplies for the maintenance and repair of gold mines should be restricted to the minimum consonant with the principles adopted by the Supply Priorities and Allocation Board for other nondefense industries (R. 70).

Based upon these reports, it "was the judgment of the [SPAB] that in view of the military program only limited priorities and export licenses should be granted to the gold mining industry" and it was agreed "that in granting priorities and export licenses for gold mining machinery, materials should not be allowed for expansion of production although minimum amounts for maintenance and repair may be provided" (R. 72). This policy-determination by SPAB was reflected in Preference Rating Order P–100 (R. 1369), issued by OPM on December 18, 1941, and Preference Rating P–56–a (R. 1260), issued on December 31, 1941. P–100 revoked Preference Rating Order P–22 (R. 1364) (the General Repair Order). Thereafter, industries within the terms of P–100, including gold mines, were entitled only to an A–10 priority rating for their maintenance, repair and

operating supplies. The A–10 rating was the lowest preference rating used (R. 73). P–56–a superseded P–23 (*supra*, p. 79) and continued to authorize the manufacturers of mining machinery to use an A–3 priority rating to acquire material entering into the production of machinery and equipment ordinarily used in the mining industry, including the gold-mining industry (R. 73).

C. *The Evolution of Limitation Order L–208.*—(1) After Pearl Harbor and the declaration of war by the United States against the Axis, the whole metals and mining machinery problem became acute. Sources of large supplies of alloying materials, especially chrome and manganese, were cut off by enemy action at a time when demands for steel, copper, zinc and lead for war production were soaring. An all-out expansion of domestic production of these metals in the early months of 1942 came at a time when the metals and fabricating equipment necessary to produce mining machinery were at a premium and used mining equipment was pitifully short of requirements (R. 1177). In these critical circumstances, the further restriction of the gold mining industry, because of nonessentiality to the war program, was an increasingly prominent subject of discussion by those responsible for the war production program.

On January 20, 1942, Wilbur Nelson, by then Administrator of the Mining Branch of WPB, requested authority from the Chairman of the Board to make final decisions in the sale of mining machinery for use both in domestic and foreign mines. He said:

> * * * We must have this power if we are to divert the limited supply of mining machinery into the most important channels, both domestic and foreign. There are other types of min-

ing besides gold which may also have to be given harsh treatment in future months (R. 1178).

By letter of February 11, 1942, to the Chairman of the WPB, E. R. Stettinius, Jr., Administrator of the Office of Lend-Lease Administration, wrote, in part, as follows (R. 1179):

> Originally the British asked us for 100,000 tons of steel to increase their South African gold production. Naturally, in view of the steel and shipping shortage here, we turned them down. However, one of the most acute shortages in this country is nitroglycerin which is used extensively in gold mining. In addition, gold mining requires large amounts of hardened steel and the use of a considerable body of capable mining labor which might well be used in other fields.
>
> In order to divert this extremely valuable stockpile of men and material we would like to suggest that both nitro-glycerin and hardened steel be denied the gold mining companies for the duration of the war. If we could set this example in the United States it might be possible to speed up the whole British war effort by getting the British to concentrate on the production of war materials rather than on the production of dollars as exemplified by their request for 100,000 tons of steel for gold mining in South Africa.
>
> In order to allay their fears of a shortage of dollars for exchange it might be possible to make them a loan based on future gold production, or better still, to buy their normal production for the next two years in the ground, said production to be delivered to us when the war is over. The important thing is to put to war uses the men and labor supply that are now being consumed in gold mining.

In reply to this letter, Donald Nelson stated, in part, as follows (R. 1179–1180):

> * * * The decision on the large volume of requests for material and equipment on the part of South African gold mine operators will have important economic and political implications. Under these circumstances and in view of several communications received from General Smuts in the last few months, the Board of Economic Warfare is now in the process of preparing an agenda of specific subjects to be investigated by a commission which it is contemplated will be sent to South Africa and which General Smuts has indicated would be most welcome. I understand that one of the principal subjects for investigation will comprise the possibilities and requirements for the development and operation of mines both in the Union itself and in Rhodesia for the production of copper, chrome, asbestos, manganese and other available materials required for the war effort.
>
> Pending a final decision on a general policy, together with the receipt of further information from the South African gold mines concerning the circumstances surrounding their requirements, little or no equipment or materials including nitro-glycerin are being exported to South African or other foreign mines.

On February 18, 1942, John P. Gregg, Assistant Chief of the Bureau of Priorities, proposed to C. H. Matthiessen, Jr., Chief of the Bureau, that gold and silver mines be closed forthwith in order to conserve materials. The letter stated in pertinent part (R. 1181):

> The Committee is of the view that the restrictions with respect to materials to be used in the mining of gold and silver are not sufficiently restrictive and that a limitation order

> should be drafted forthwith to stop production of gold and silver in the United States, appropriate consideration being given to the continuance of such production in Canada, Mexico, South Africa, and other areas now permitted to obtain materials and equipment from this country under Lend-Lease or direct purchase.

The proposed closing of the gold mines was rejected. Instead, on March 2, 1942, WPB amended Preference Rating Order P–56 which had the effect of uprating the priorities on mining machinery for essential mines and depriving mines of all preference ratings whose production, in dollar value, consisted of more than 30 per cent gold and/or silver (R. 1181–82; 1268).

The "30 percent exclusion clause", in amended P–56, resulted in the revocation of 373 P–56 serial numbers held by mines producing gold. Although, in practice, serial numbers were eventually restored to mines whose production included significant quantities of materials important to national defense, over 200 mines, including respondents' mines, never again received serial numbers under P–56 (R. 74). These mines thus were reduced to the same priority position as the least essential industries. They were precluded from obtaining any critical materials which might be needed by a nonferrous metal mine essential to the war effort. While it was possible for gold mines excluded from the benefits of P–56 to apply for equipment and repair parts under the general repair order P–100 with an A–10 rating,[11]

[11] Preference Rating Order P–100 was revoked on April 2, 1943 (8 Fed. Reg. 4242). The A–10 priority rating for nonessential gold mines was, however, in effect, continued under Controlled Materials Plan Regulation 5, issued February 9, 1943 (8 Fed. Reg. 1793).

the demand for such material was so far above available supply that the possibility of gold mines obtaining material was remote. Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment necessary to maintenance and operation (R. 75).

The "30 percent exclusion clause" evoked a wave of protest from mining districts, and public meetings in protest against the clause were held in Reno and Denver. These meetings were attended by the Governors of five mining states, Congressional representatives, and Wilbur Nelson of the WPB. At the Nevada meeting, Nelson explained the WPB policy with respect to gold and silver mines and, in part, said as follows:

> I know you are all wondering why all of the mines cannot have what they need. The answer is the mining machinery situation. The makers of mining machinery have the finest machine shops in the United States, and everyone of them has been in part, you might say, taken over by the Army and Navy. The capacity of every mining machinery plant in the United States is taken up in part in making munitions and machine tools or parts of machine tools (R. 1183).

The exclusion clause in P–56 was the subject of extensive hearings by a Subcommittee of the Special Committee on the Investigation of Silver in May 1942. (R. 1184). On May 15, 1942, WPB amended P–56 so as to eliminate the exclusion clause (R. 1278). However, this amendment effected no practical change since the ratings assigned by P–56 could be used only if WPB granted a serial number and after March 2, 1942, serial numbers were not granted or restored to

gold and silver mines not producing substantial quantities of critical materials (R. 1188).

The predicate for restrictive treatment by the OPM and WPB of the gold mines was, of course, that with a gold reserve of $22,737,000,000 at the end of 1941,[12] gold was of no importance to the United States as a monetary standard (R. 1090, 1285) [13] and, as a commodity, had no significant role to play in the war production program.[14] In contrast to the nonessential character of gold, all agencies of the Government were in agreement that the success of the country's armament program was basically dependent on the increased production of basic raw materials such as copper, lead, zinc, and other nonferrous metals. As of May 1942, the progressively stringent restrictions upon the gold mining industry had been necessary because of the increasingly acute shortage of nonferrous metals, a shortage of mining equipment and machinery, and a shortage of equipment and materials used to manufacture equipment and machinery. In the spring and summer of 1942, an additional problem became apparent which, together with these factors, brought about the complete curtailment of operations in gold mines not producing substantial quantities of strategic materials.

---

[12] *Minerals Yearbook*, 1942, United States Bureau of Mines, p. 80.

[13] In contrast to the nonessentiality of gold production to the economy of the United States, the economy of South Africa was based almost exclusively upon gold production and, in both Canada and South Africa, gold was essential to supply dollars for an otherwise deficit dollar position and to sustain the dollar position of the sterling area (R. 1170–71, 1173, 1174, 1175).

[14] As to the limited industrial use of gold, see *Minerals Yearbook*, 1942, United States Bureau of Mines, p. 88.

(2) By July 1942, the Labor Division of the War Production Board, the War Department, and the War Manpower Commission were all concerned that the production of nonferrous metals in the United States, particularly copper, would not be adequate to meet current and anticipated demands for war production (R. 1191–1193). The conditions contributing to unsatisfactory production records in the nonferrous mines were (1) the migration of workers from nonferrous mines to other war industries offering higher wages and better working conditions; (2) the drafting of workers for the armed services; (3) excessive labor turnover; (4) low morale of the workers; (5) the short workweek in the mines; and (6) the lack of organized and effective program of recruitment of workers for mining industry (R. 75).

To remedy these conditions, the War Department submitted a report on July 8, 1942, recommending that the War Manpower Commission formulate a program for the recruitment of mine labor and suggested "a program for the orderly transfer of workers in gold mines and other nonessential industries to the nonferrous mines" (R. 76), as well as assistance in securing Selective Service deferments for mining occupations. To the WPB, the War Department recommended a Labor-Management Production Drive Committee to secure increased production through improved morale and greater efficiency; the report then recommended that:

> Production of gold, with the exception of required amounts of essential silicious gold ores, should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines which are essential to the war effort. * * * [R. 76].

The report also recommended that the War Labor Board give careful consideration to the wage dif-

ferential problem in cases before it involving about one-half of the copper mining industry. The recommendations for the Army and Navy were that they were to establish morale building programs for the miners and that they exert influence on Army-Navy contractors to prevent the further recruitment of labor from the nonferrous mines (R. 76).

The manpower shortage was also a subject of independent study and recommendation by the Labor Production Division of WPB. In a memorandum to the Director of Operations of the War Manpower Commission on July 4, 1942 (R. 76–77), it was observed that the 15 largest producers of gold in 7 Western States had some 6,700 employees; that the gold mines of these producers were sometimes located in the vicinity of nonferrous metal mines; and that in some cases one company would own both a gold mine and a nonferrous metal mine in the same area.[15] The memorandum concluded as follows:

> Steps should be taken to remedy the critical labor situation in nonferrous metal mining, including arrangements for the transfer of miners from gold and silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for

[15] The 6,700 figure appearing in the memorandum represented employees of all kinds and no figure was given as to the number of hard-rock miners—the type of employees most needed in the nonferrous metal mines. The statistics quoted in the memorandum were based on the year 1941 and were later found not to represent the situation in the summer of 1942 because the gold mines as well as the nonferrous metal mines had been losing workers to the war industries and to the draft.

metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover (R. 77–78).

On July 9, 1942, the General Counsel of the War Manpower Commission sent to a member of his staff a memorandum concerning the possibility of transferring gold miners to nonferrous mines. The memorandum stated (R. 78):

> At a meeting of the War Manpower Commission yesterday, the following problem was referred to this office.
>
> General McSherry [Director of Operations of WMC] wishes to secure the release of men employed in the gold mining industry for transfer to the copper mining industry. Concededly the War Manpower Commission cannot accomplish this result directly. May the result be accomplished (1) by the War Production Board refusing to the gold mine operators critical materials used in their operations thus compelling the closing of the mines; (2) may the Chairman of the War Manpower Commission direct the War Production Board to take that action?
>
> The specific situation suggested is simply illustrative of the general problem in this field.

By August 1942, the proposed curtailment of nonessential gold mines was gaining momentum, although the proposal was not without opposition. The Chief of the Mining Branch, WPB, Wilbur Nelson, expressed his opposition to the proposal for the reason that gold and silver miners were the last reservoir of skilled mining labor. It was his fear that such miners could not be effectively diverted from the gold mines into the critical nonferrous metal mines (R. 78–79).

Later in August, the General Manager of the Homestake Mining Company conferred with several

officials of the WPB and expressed his opposition to the closing of the mines, basically for the same reason as that given by Wilbur Nelson. Senator McCarran, similarly, in a letter to Donald Nelson, set forth his reasons why the curtailment of gold mining operations would not be effective for the purpose of obtaining any considerable number of miners for the nonferrous mines (R. 80).

The minutes of the meeting of the War Production Board held September 1, 1942 (R. 81–84), reveal that the labor supply problem for copper, lead, and zinc industries was the subject of extensive consideration and discussion by the Board. The minutes reflect that (R. 81–82):

> Mr. King [Chief, Copper Branch, WPB] reported that 6,000 miners have been lost by the copper, lead, and zinc mines to other industries during the past several months and that the shortage of labor will become increasingly acute next year when new facilities will require 2,000 additional miners. Preliminary reports indicate a shortage of 2,100 workers in smelters and refineries. Mr. King pointed out that the loss of 5 or 6 thousand workers at the copper mines might so influence the subsequent fabricating processes that 100 thousand workers in war plants at the end product state would be affected. Although monthly production of copper increased steadily from early 1941 to a peak of 95,000 tons in May and June 1942, output in July dropped 5,000 tons to 90,000. The copper outlook is even more critical than shown by the drop in production, since at many mines labor is being transferred from developmental and stripping operations, necessary to provide for future production, to current ore extraction. The position of the smelters and refineries is exemplified by a smelter at Tacoma where output of 2,000 tons

of copper per month is being lost for lack of only 300 unskilled common laborers. Mr. King emphasized that production at the mines, smelters and refineries will continue to fall unless the exodus of labor is checked and the supply of workers augmented. Output of lead and zinc likewise declined in July, and the labor-production situation in these metals is similar to that in the copper industry.

The steps which had been taken or were under consideration to remedy the labor problem in nonferrous mines were detailed (R. 82–83):

Mr. King reported that following a resolution of the War Production Board (See WPB Minutes, March 3, 1942, Item 7), labor-management committees were established in the metal mining areas and the importance of having mine workers stay at their jobs was publicized. On June 13, 1942 the Chairman of the War Production Board formally launched the War Production Drive in the nonferrous metals industries by a radio address to the miners at Butte, Montana.

As further steps in halting out-migration, the Inter-Departmental Committee on Nonferrous Metals was established on August 11 and various letters and literature had been prepared for distribution to mine operators and labor unions; an order has been prepared to prohibit the use of materials in nonessential gold mines, which may free about 8,000 workers; plans to prevent employment of miners on Army and Navy construction projects are being considered; and training programs are being introduced into mining properties. To increase the efficiency of present working forces, mine equipment is being accorded high priority ratings, and labor is being trained and upgraded by improving working and living conditions, and by lowering age and other restrictions on hiring. Mr. Lund observed that in many cases

labor standards have shown no change from those existing in normal times when a surplus of labor is available. He suggested that the pooled employment interviews which the War Manpower Commission is now conducting in some parts of the country should be pursued with increasing vigor.

Mr. Lubin [acting for Harry L. Hopkins] inquired if the order to prohibit the use of materials in nonessential gold mines had actually been issued and, if not, what steps are being taken toward its issuance. Mr. King, replied that a first problem is to define a nonessential gold mine since gold is frequently found in association with other metals and it is necessary to avoid denying materials to mines that produce important quantities of critical metals jointly with gold. It is hoped that an appropriate definition can be developed very shortly and an order issued promptly thereafter.

After further discussion, the Board agreed that (R. 84):

Inadequate production of copper, lead, and zinc will result inevitably in reduced output of munitions, including small arms ammunition needed by the fighting forces. The output of these metals is now being reduced by a shortage of manpower in mines, smelters and refineries.

The War Production Board is charged with the primary responsibility for providing the maximum possible production of critical metals, but the solution of the problem of assuring a sufficient supply of labor involves the responsibilities of other agencies of the Government as well. The coordination of the efforts and activities of other agencies of the Government with those of the War Production Board is needed; therefore, to ensure an adequate supply of critical metals.

The War Production Board urges all agencies involved to promote and support such ac-

> tions as may be necessary to provide to nonferrous mines, smelters, and refineries a supply of labor adequate for the maximum possible output of such metals. It is especially important that the facilities of the United States Employment Service be expanded and strengthened to meet this particular need.

The first draft of an order which would stop production in mines primarily or exclusively producing gold was submitted, on September 9, 1942, to the Deputy Director General for Industry Operations, WPB, by the Miscellaneous Minerals Branch (R. 85). An accompanying memorandum (R. 85–90) recapitulated all the varying problems involved in a partial cessation of gold mine operations. The memorandum estimated the number of mines to be affected, the labor involved, and gave an estimate that 25 percent of the mine laborers might be diverted to work in other mines (R. 86–87). The memorandum weighed the possible effect of the order on the economy of the states and communities in which mines to be affected were located. As a counterbalance to the anticipated economic hardship of the order upon affected mines and mining communities, the memorandum, besides referring to the labor factor involved, stated that (R. 87):

> Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available but the general order of magnitude of such consumption is indicated by the fact that in 1939 gold mines in the United States (excluding Alaska) spent about $17,000,000 on supplies and materials, $2,000,000 for fuel and about $5,000,000 for purchased electric energy.

On September 11, 1942, a draft order dealing with gold mines was submitted to Donald Nelson. A

memorandum, which accompanied the draft order, explained (R. 91) that the proposed order would close only those mines already determined to be nonessential to the war effort and that (R. 91):

> The result of closing these nonessential mines will be to conserve all the material which they have been using for operational and development purposes. Heretofore they have merely been denied the right to use the high preference ratings granted by Order P–56, but have been able not only to obtain certain material under P–100, but also to use their own inventories.

The anticipated effect of the order was further summarized in the following terms (R. 92):

> The basic purpose of this curtailment of gold mining is, of course, to free manpower for the mining of essential minerals, particularly nonferrous metals such as copper, zinc and lead. Because many of the gold mines are located much closer to other mines producing such strategic metals as mercury, molybdenum, tungsten, vanadium, chromium, manganese, etc., it is expected that workers will also be made available to these industries.
>
> The War Manpower Commission through the Employment Service is now taking steps to insure orderly recruiting of these gold miners and to provide for a minimum of delay in reemployment as well as to provide transportation expenses. It is expected that this procedure will make possible the maximum diversion of labor to essential mining industries where their skills can be used to best advantage.
>
> Besides diverting manpower to essential industries, this order, when in effect, will also conserve some materials and supplies used in gold mining, such as mercury, drill steel, etc.

The proposed order, which by September 25 had been designated as L–208, was circulated among several interested branches of the WPB throughout the month of September (R. 96) and was the subject of a memorandum to Donald Nelson by Morris Creditor, Special Assistant to Nelson, in which the pros and cons of the order were discussed and suggestions as to form were made (R. 1204–1205).

On September 30, 1942, Senators McCarran and Gurney and Representatives Case and Englebright, at a meeting with WPB officials (R. 97), voiced the hardships that would be imposed on the inhabitants of gold mining communities and the detrimental effect on morale if the order were issued (R. 97). On October 1, a meeting was held attended by WPB officials (R. 1212), representatives of the gold mining industry (R. 1213), the War Department, the War Manpower Commission and Senator Gurney and Representatives Case and Englebright. Arguments for and against the order were advanced, and its possible effectiveness as a partial solution to the manpower problem was questioned.[16]

On October 2, Under Secretary of War Robert P. Patterson wrote the WPB, in part as follows (R. 99):

> I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other nonferrous metals as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will

[16] On October 3, 1942, Wilbur Nelson reported that based on figures supplied by gold mine operators the proposed order would make available "only about 600 miners and muckers [underground workers] for other mining enterprises" (R. 99).

be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.

If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's approval, and I believe that Mr. Forrestal will do the same for the Navy.

And on October 5, Under Secretary of War Patterson and Under Secretary of the Navy Forrestal sent the following memandum to Donald Nelson (R. 99–100):

> The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.
>
> The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided.

The proposed gold order was presented to the WPB at its meeting of October 6, 1942. The minutes of this meeting, so far as pertinent, are as follows (R. 100–101):

Mr. Batt reported that the matter of shutting down United States gold mines had been receiving detailed attention. On conferring with Brigadier General McSherry of the War Manpower Commission and representatives of the gold mining companies, it had been found that at present the gold mining industry employs 3,270 workers; 750 are engaged in dredging and only 896 are hard-rock miners. Loss of labor to the Services and to war industries, and higher costs have already sharply curtailed operations of all domestic mines except Homestake. Homestake's labor force has dropped from a peak of slightly over 2,000 workers to 1,876, including lumbermen and machine shop workers. If Homestake were shut down except for standby operations, all but 500 of these workers could be released for work elsewhere. Lead and Deadwood, South Dakota, with aggregate populations of 16,000 are totally dependent on the mine's operation.

Although it has recently emphasized other forms of production, the State Department, because of broad international considerations, heretofore has urged that gold mining in South Africa and Honduras be maintained. The South African economy and the stability of the present government are largely dependent on gold mining. The basic industries of Honduras are the cultivation of bananas, of which exportation to the United States has been reduced to 20 percent of normal, and gold mining. Mr. Leon Henderson reported that Canadian gold mining is being curtailed very sharply. The Vice President pointed out that questions pertaining to production of gold abroad should appropriately be discussed with the Board of Economic Warfare.

Mr. Batt stated that after investigation he recommends that: (1) All nonessential domestic mining of gold other than that incident to the mining of critical metals be stopped as soon as

possible and not later than within 60 days; and (2) gold mines not producing critical metals be allowed to continue standby maintenance operations lest it be impossible to reopen them at the close of the war.

General Somervell stated that because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, failure to stop gold production immediately would be inexcusable.

After further discussion it was agreed that:

> An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition.

Limitation Order L–208 was issued by WPB on October 8, 1942 (7 Fed. Reg. 7992, Appendix B, *infra*, pp. 111–114). As originally issued (R. 102–105), L–208 recited that "The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense" (R. 102). The order required that operators of nonessential mines take steps to close down and prohibited, after seven days, an operator of a nonessential mine from acquiring, consuming, or using any material, facility, or equipment to break new ore or to proceed with any development work or any new operation. Sixty days after the issuance date, material, facilities, and equipment were not to be used to remove ore or waste from a mine except to the minimum amount necessary to main-

tain buildings, machinery, and equipment in repair. The order excepted from its operation, with limitations, mines which produced 1,200 tons or less ore in 1941, and provided that the order did not prohibit the use or operation of a mill, machine shop, or other facilities in the manufacture of articles bearing a preference rating of A–1–k or higher or in milling ores for the holder of a serial number under P–56. Provision was made for appeal where compliance would work "an exceptional and unreasonable hardship" (R. 104).[17]

L–208 was amended (R. 1574 C–D) on November 19, 1942 (7 Fed. Reg. 9613, App. B, *infra,* pp. 114–118) so as to prohibit the sale or other disposition or acceptance of delivery of any machinery or equipment of the types listed in Schedule A to Preference Rating Order P–56 (R. 1276–1277) except with the specific permission of the Director General of Operations, WPB, and each operator was required to submit an itemized list of Schedule A machinery and equipment indicating each item available for sale or rental.[18]

The possible recission of L–208, as then amended, was considered by the WPB at its meeting of June 15, 1943 (R. 1601–1607). The history of L–208 was reviewed by Chairman Donald Nelson, who recalled that L–208 was issued to divert men and materials into essential nonferrous mines, particularly copper mines, to relieve a situation that became particularly acute in the last half of 1942. Referring to L–208 and the fact that the Army in 1942 had furloughed 4,000 hard-rock miners for work in the copper mines, Nelson said that these actions had relieved the situation

---

[17] On October 10, 1942, United States Senators from twelve gold-producing states wrote the President requesting that he personally stay WPB Limitation Order L–208 (R. 107–111).

[18] The amendment to L–208 on November 25, 1942 (7 Fed. Reg. 9810) effected no substantive change in the original order.

to some extent—that the net gain in 1943 output of copper, lead, and zinc was estimated at 6,000 tons. Although not all the gold miners displaced by L–208 transferred to other mining operations, many were placed in other war industries. In addition, Nelson said (R. 1606–1607):

> By closing the nonessential gold mines a great deal of equipment was made idle and became available for essential activities. It is estimated that by the middle of May 1943, 2,200,000 dollars of used gold mining equipment had been transferred to essential activities and transfers are continuing at the rate of about 100,000 dollars per week. It is also pointed out that nonessential gold mines normally consume a large quantity of critical materials and their closing may have made as much as 10–20,000,000 dollars of materials available for essential consumption, less a small amount which they continue to absorb for maintenance and standby operations. Rescission would undo these benefits. The Chairman stated that he is unwilling to approve the production of gold at the expense of copper, a most critical material. Mr. Ickes concurred.
>
> The Chairman emphasized that the copper situation is still critical. Requirements for the third quarter this year were 40,000 tons in excess of indicated supply and our stockpile has been seriously depleted. (See WPB Minutes, April 27, 1943, Item 2.) Production has again turned downward. The present labor shortage in the copper mines, mills, smelters, and refineries is estimated at 4,700 workers. This shortage must be corrected and additional 3–4,000 workers supplied to the copper mining industry if the present capacity and projected increased facilities are to be fully utilized during the balance of this year and in 1944. Other non-ferrous mining industries are facing sim-

ilar shortages. The War Production Board has discussed with Army officials the furloughing of 7,000 additional soldiers for work in the copper mining industry. The War Department is reluctant to do this until assured that all other practical solutions have been exhausted, such as diverting all possible miners from gold mines.

The Chairman stated that the principal argument made by the proponents of gold mining is the economic dependence of the various mining communities on continued operation of gold mines. Another argument is that gold mining machinery is being exported to Latin America and South Africa. The Vice President stated that South African economy is vitally dependent on gold mining and its cessation there would have vastly more serious results than in the United States. It may well be true that in order to preserve the economic and political stability of other countries, a smaller quantity of critical materials would have to be exported in the form of gold mining machinery than in other forms if gold mining were discontinued there. Our exports of gold mining machinery have been far less than requested. The Chairman observed that even if materials were saved by prohibiting the export of gold mining machinery, our domestic economy would not benefit from the labor released by closing foreign mines. He stated that he would have a study made of the volume of gold mining machinery exported.

Upon motion by Mr. Lubin [Economic Adviser to the President, acting for Mr. Harry L. Hopkins] and seconded by Mr. Ickes, it was unanimously agreed that:

Limitation Order L–208 shall be continued with exceptions allowed on appeal only if

(a) The critical material output of the individual mine makes an equal or larger contribution to the war effort than the ma-

terials, equipment, and labor used in operating the mine, considering the relative urgencies of the critical materials involved, or

(b) the necessary labor can be obtained without drawing upon any essential war activities, and certification to this effect can be obtained from the War Manpower Commission.

On August 31, 1943, L–208 was again amended (8 Fed. Reg. 12007–12008, App. B, *infra*, pp. 118–123), by adding a Schedule A (App. B, *infra*, pp. 123–125) which enumerated 74 items of mining equipment and machinery and required each operator of a nonessential mine to submit an inventory of such equipment and machinery, and prohibited the owner from selling, transferring, or otherwise disposing of such material except to a producer holding a serial number under Orders P–56, P–58, or P–73 [19] or with the specific permission of the WPB after a request submitted to the Mining Division of the WPB. Each transfer to a P–56, P–58, or P–73 holder was required to be reported to WPB with the name of the transferee and the identity of the items transferred.[20]

---

[19] Preference Order P–58 provided for the assignment of preference ratings for material for maintenance and operation of South American copper mines. P–73 as amended, 8 Fed. Reg. 3667, provided for preference ratings for smelters and refiners of thirteen metals ranging from antimony through zinc.

[20] On November 17, 1943, Representative Engle introduced a bill (H. R. 3682) to rescind L–208. The bill, referred to the Committee on the Judiciary (89 Cong. Rec. 9653), was never reported. Other measures providing for varied forms of relief for gold mine operators forced to suspend operations because of wartime restrictions were introduced but uniformly failed of passage. See, *e. g.*, in the 78th Congress, S. 27 (89 Cong. Rec. 34), reported, S. Rep. No. 271, 78th Cong., 1st Sess. (89 Cong. Rec. 5187), amended and passed (89 Cong. Rec. 6094–6095), re-

(3) By the issuance date of L–208, the Allied counter-offensive against the Axis forces had begun. United States forces had landed on Guadalcanal and the Aleutian Islands, and the Allied invasion of North Africa was in the offing. The Germans had been halted at El Alamein, and the retreat to Tunisia was soon to follow. In November 1942, the German defeat at Stalingrad marked the start of the Russian winter offensive. With the Allies assuming the offensive, the necessity for mountains of war material to sustain the offensives underway and those still in the planning stage was imperative and was to continue unabated until August 1945.

The task of producing the hundreds of thousands of varied implements necessary to modern global warfare, of course, rested, primarily, upon the productive might of the United States. That American industry, under the strictest of governmental regulation, was equal to the occasion is attested by the defeat of the Axis powers and confirmed by the production records over the five-year period—July 1940 to August 1945. In this period, 299,300 military and special purpose

---

ferred to House Committee on Mines and Mining (89 Cong. Rec. 6180); S. 344 (89 Cong. Rec. 141); H. R. 3009 (89 Cong. Rec. 6181); H. R. 5093 (90 Cong. Rec. 6587); in the 79th Congress, H. R. 4393 (91 Cong. Rec. 9726); in the 80th Congress, H. R. 950 (93 Cong. Rec. 329).

In the 81st Congress, S. 45, introduced by Senator McCarran (95 Cong. Rec. 39), provided that operators of mines affected by L–208 present their claims to the Treasurer of the United States, who would then determine the validity and amount of the claims by use of any government facility (95 Cong. Rec. 2764). Though favorably reported (95 Cong. Rec. 14811) by the Senate Judiciary Committee (S. Rep. No. 79, 81st Cong., 1st Sess.), S. 45 was objected to (95 Cong. Rec. 2764, 13297, 14722; 96 Cong. Rec. 1278, 14691, 16592) and never received floor consideration. See also, H. R. 7851, 81st Congress (96 Cong. Rec. 4066).

aircraft were produced; 72,100 naval ships totalling 8.5 million displacement tons were built; merchant ships built for the Maritime Commission totalled 4,900 with a dead-weight tonnage of 51.4 million; the production of tanks reached 86,700; and the production of planes, ships, and tanks was paralleled by the equally impressive production of other weapons.[21] These achievements are the more remarkable when it is realized that the civilian economy during the same period was provided with a greater total amount of commodities and services than in such prewar years as 1937 or 1939.[22]

The success of the United States in accelerating its output of munitions rested principally upon two major factors: The sharp increase in the nation's total production of goods and services, which, measured in terms of 1939 dollar values, increased 52 per cent and the disproportionately great increase in manufacturing, mining, and construction industries, which doubled production between 1939 and 1944. The manufacturing industries alone trebled their output, and production of raw materials rose by 60 per cent.[23]

Those achievements were possible only through the maximum utilization of plant facilities, machinery, tools, raw materials, and manpower. For this reason, WPB at the height of the war regulated 100,000 transactions a week and controlled the activities of 250,000 manufacturers, wholesalers, and

APPENDIX B

War Production Board Orders

1. War Production Board Limitation Order L–208, issued October 8, 1942 (7 Fed. Reg. 7992–7993), provided as follows:

> The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.
>
> § 3093.1 *Limitation Order L–208*—(a) *Definitions.* For the purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P–56.
>
> (b) *Restrictions upon production.* (1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all such steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.
>
> (2) In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any develop-

ment work or any new operations in or about such mine.

(3) In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the issuance date of this order, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after the issuance date of this order, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A–1–k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P–56.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in paragraph (b) (3) above.

(e) *Records.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(f) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to: War Production Board, Mining Branch, Washington, D. C., Ref.: L–208.

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith

would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(k) *Applicability of priorities regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the priorities regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7 F. R. 561; E. O. 9024, 7 F. R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R. 2719; sec. 2 (a), Pub. Law 671, 76th Cong., as amended by Pub. Laws 89 and 507, 77th Cong.)

Issued this 8th day of October 1942.

ERNEST KANZLER,
Director General for Operations.

2. War Production Board Limitation Order L–208, as amended November 19, 1942 (7 Fed. Reg. 9613–9614), provided as follows:

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense:

§ 3093.1 *Limitation Order L–208*—(a) *Definitions.* For the purposes of this order

(1) "Nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P–56.

(2) With respect to any nonessential mine, "effective date" means October 8, 1942, or the date of cancellation by the Director General for Operations of the serial number for such mining enterprise, whichever is the later.

(b) *Restrictions upon production.* (1) On and after the effective date, each operator of a nonessential mine shall immediately take all such steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.

(2) In no event on or after seven days from the effective date shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.

(3) In no event on or after sixty days from the effective date shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1,200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the effective date, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1,000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after the effective date, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the

mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A–1–k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P–56.

(6) Nothing contained in this order shall prohibit any owner of a mining claim from performing not more than the minimum assessment work required by the provisions of section 2324 of the Revised Statutes of the United States and by Public No. 542, 77th Congress, 2d Session.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in paragraph (b) (3) above.

(e) *Restrictions on disposition of machinery and equipment.* No person shall sell or otherwise dispose of any machinery or equipment of the types listed in Schedule A to Preference Rating Order P–56, which has been used in a nonessential mine, and no person shall accept delivery thereof, except with specific permission of the Director General for Operations. On or before November 19, 1942, or within sixty days after the effective date, whichever is later, each operator of a nonessential mine shall

file with the War Production Board, Washington, D. C., Reference: L–208, an itemized list of such machinery and equipment, signed by such operator or an authorized official, indicating each item available for sale or rental. Upon receipt of such itemized list, the War Production Board will furnish to the operator appropriate forms to be filled out for each item which the operator desires to dispose of.

(f) *Records and reports.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore, and shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to: War Production Board, Mining Branch, Washington, D. C., Ref.: L–208.

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by a fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith

would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(k) *Applicability of priorities regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the priorities regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7, F. R. 561; E. O. 9024, 7 F. R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R. 2719; sec. 2 (a), Pub. Law 671, 76th Cong., as amended by Pub. Laws 89 and 507, 77th Cong.)

Issued this 19th day of November 1942.

ERNEST KANZLER,
Director General for Operations.

3. War Production Board Limitation Order L–208, as amended August 31, 1943 (8 Fed. Reg. 12007–12008), provided as follows:

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense:

§ 3201.6[1] *Limitation Order L–208*—(a) *Definitions.* For the purposes of this order

(1) "Nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the opera-

[1] Formerly Part 3093, § 3093–1.

tor of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P–56.

(2) With respect to any nonessential mine, "effective date" means October 8, 1942, or the date of cancellation by the War Production Board of the serial number for such mining enterprise, whichever is the later.

(3) "Operation" means any and all work in or about a mining enterprise; and includes not only mining but also treatment of ore or placer material from such enterprise. It also includes all prospecting, exploration work, and development work.

(b) *Restrictions upon production.* (1) On and after the effective date, each operator of a nonessential mine shall immediately take all such steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.

(2) In no event on or after seven days from the effective date shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.

(3) In no event on or after sixty days from the effective date shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1,200 tons or less of commercial ore in the year 1941,

provided the rate of production of such mine, after the effective date, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after the effective date, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A–1–k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P–56.

(6) Nothing contained in this order shall prohibit any owner of a mining claim from performing not more than the minimum assessment work required by the provisions of section 2324 of the Revised Statutes of the United States and by Public No. 542, 77th Congress, 2d Session.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the War Production Board issued after application made to the Mining Division, War Production Board.

(d) *Assignment of preference ratings.* The War Production Board, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary to maintain such nonessential mine on the basis set forth in paragraph (b) (3) above.

(e) *Restrictions on disposition of machinery and equipment.* (1) On or before October 30,

1943, or within 60 days after the effective date, whichever is later, each operator of a nonessential mine shall file with the Mining Division, War Production Board, Washington, 25, D. C., Reference: L–208, an itemized list of all machinery and equipment of the types listed in Schedule A, which were in use in, or held in connection with, such nonessential mine on such date. Such schedule shall be signed by such operator or an authorized official, giving complete specifications and conditions for each item. This provision, with respect to reporting, applies only to mines for which an itemized list of machinery and equipment has not been filed with the War Production Board as required by this order prior to August 31, 1943. Any operator who so desires may report items which he wishes to sell or rent on WPB Form 2574 in triplicate and transmit to the nearest regional War Production Board office.

(2) On and after August 31, 1943, no person who owns on the effective date machinery or equipment of the types listed in Schedule A, which was in use in, or held in connection with, a nonessential mine on the effective date, shall sell, transfer, or otherwise dispose of any thereof, and no person shall accept delivery thereof, except:

(i) With specific written permission of the War Production Board, issued after request to the Mining Division; or

(ii) To a producer holding a serial number under Orders P–56, P–58, or P–73.

(3) On and after August 31, 1943, any operator who sells, transfers, or otherwise disposes of any item listed in Schedule A to a producer holding a serial number under Orders P–56, P–58, or P–73 shall immediately report such transaction to the Mining Division of the War Production Board, Washington 25, D. C., Reference: L–208, giving the following information:

a. Name of company and mine from which transferred.

b. Identity of items transferred.

c. Name of producer acquiring equipment and serial number of mine for which equipment is acquired.

(f) *Records and reports.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore, and shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to: War Production Board, Mining Division, Washington 25, D. C., Ref.: L–208.

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by a fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting

forth the pertinent facts and the reasons he considers he is entitled to relief. The War Production Board may thereupon take such action as it deems appropriate.

(k) *Applicability of priorities regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the priorities regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7 F. R. 561; E. O. 9024, 7 F. R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R. 2719; sec. 2 (a), Pub. Law 671, 76th Cong., as amended by Pub. Laws 89 and 507, 77th Cong.)

NOTE: The reporting requirements of paragraph (e) have been approved by the Bureau of the Budget, pursuant to the Federal Reports Act of 1942.

Issued this 31st day of August 1943.

WAR PRODUCTION BOARD,
By J. JOSEPH WHELAN,
Recording Secretary.

Schedule A

1. Aerial tramway equipment
2. Agitators
3. Assay and testing laboratory equipment
4. Automatic feeders, ore, reagent
5. Blowers (flotation)
6. Blowers (ventilation)
7. Cable, electrical
8. Cable, steel
9. Cages and skips
10. Chain blocks
11. Churn drills and accessories
12. Classifiers
13. Compressors, vacuum pumps [2]
14. Concentrating tables

[2] Release for transfer of compressors, covered by Limitation Order L–100, must be secured in accordance with the provisions of that order, and should be identified as an L–208 case.

15. Conveyors, belt, chain, or gravity
16. Crushers (stationary types)
17. Draglines [1]
18. Dredges (mining)
19. Drill presses
20. Drill steel
21. Drills (diamond)
22. Drills (rock, except portable mounted)
23. Dump, rotary track, other
24. Dust control equipment
25. Electrical equipment, other than electric motors
26. Electric motors
27. Explosive equipment
28. Filters
29. Filter presses
30. Flotation machines
31. Furnaces, oil fuel, electric
32. Generators and motor generator sets
33. Granulators, ball mills, etc.
34. Grinders (air and electric)
35. Hack saws, power
36. Head frames
37. Hoists (mine)
38. Hydraulic monitors
39. Jacks (roof)
40. Jigs
41. Lamps, ore exploration
42. Lathes
43. Locomotives (mine)
44. Mucking machines
45. Ore bins (steel)
46. Power tools (portable)
47. Power units (Diesel, gasoline accessories)

---

[1] Transfer or any change in status of these types of equipment which come under the provisions of Order L–196, Used Construction Equipment, should also be reported on WPB Form 1333 to the Used Construction Equipment Regional Specialist in the War Production Board Regional Office in the region in which such equipment is located, and marked L–208 case.

48. Presses, hydraulic
49. Pumps (dewatering and supply, larger than 90,000 gallons per hour)[1]
50. Pumps (other, deep well, diaphragm, centrifugal, plunger, sand, and vacuum)
51. Rail and track accessories
52. Receivers (air)
53. Rubber hose (air, water)
54. Safety and defense equipment
55. Saws (power (swing) table)
56. Scrapers (slusher type)
57. Scrapers (carrying or hauling, both drawn and self propelled)[1]
58. Screens
59. Sheaves and sheave blocks
60. Sharpeners (steel)
61. Shovels, power[1]
62. Slusher hoists
63. Storage batteries
64. Tanks (steel and wood)
65. Thickeners

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

REPLY BRIEF FOR THE UNITED STATES

I

THE GOVERNMENT HAS NOT CHANGED ITS POSITION

A reading of the Government's brief will show respondents' numerous assertions with respect to the factual and record inadequacies allegedly contained in the Government's brief,[1] and the faults respondents

[1] The record reference, "1777", which appears at p. 61 of the Government's brief includes a typographical error. (See Resps. Br., App. A., p. 55). The quoted phrase, preceding the record reference, is taken from Plaintiff's Exhibit 1 and appears at p. 1177 of the printed record.

find with the Government's organization of its brief (Resps. Br., pp. 9–10), to be either unfounded or trivial. We shall not, however, let pass without more detailed comment respondents' charge that the Government in its brief has now reversed "the position which it took in the petition for certiorari" (Br., p. 35) and that its present contentions are inconsistent with and not comprised within the question presented in the petition for a writ of certiorari (Br., pp. 17, 58, 60–62).

The Government's position in these and other L–208 cases has from the very outset been that the limitations imposed upon the gold mining industry in World War II, pursuant to the wartime allocation powers of the Federal Government, did not involve a taking of private property within the meaning of the just compensation clause of the Fifth Amendment. We think the Government's position on this, the principal point in these cases, is accurately and consistently stated in the petition for a writ of certiorari, and in the Government's brief on the merits. There is, moreover, no substantial variation in the "Question Presented" as stated in our petition and brief. Respondents' fault-finding in this respect (Br., pp. 60–62) is captious.

It is true that the Government's brief puts before this Court Priorities Regulation 13 as well as the two amendments to L–208 which apparently were not considered by the Court of Claims and were not referred to in the petition for a writ of certiorari. If, however, this additional regulatory action by the WPB,

taken from the Federal Register and of equal dignity to the original L–208, is material in determining the legal consequences of L–208, there can be no serious question of the propriety or of our responsibility of bringing it to this Court's attention. While our position on the legal merits of respondents' claims would be the same without Priorities Regulation No. 13 and the amendments to L–208, we do not think that, because this material cuts the ground from under the apparent rationale of the Court of Claims' decision in these cases, our partial reliance on that material warrants respondents' charge (Resps. Br., p. 35) that we have reversed the position taken in the petition for a writ of certiorari or (Resps. Br., p. 17) that we are endeavoring to put before this Court questions and argument inconsistent with and not fairly comprised within the question presented in the petition for a writ of certiorari.

Two other facets of respondents' brief warrant reply.

II

LIMITATION ORDER L–208 WAS NOT AN EXERCISE OF CONDEMNATION AUTHORITY UNDER TITLE II OF THE SECOND WAR POWERS ACT

In our main brief (p. 69), we pointed out that in issuing L–208 the WPB acted under the allocation authority coming to it, by delegation from the President, from Title III of the Second War Powers Act. In addition, we demonstrated that WPB had no authority to "take" respondents' right to mine gold. Respondents repeatedly state (Br., pp. 3, 68, 69, 70,

78, 83, 116) that the effect of L–208 was the same as if the Government had taken physical possession of the mines and closed them down until the Order was revoked. The same argument could be made, of course, wherever regulatory action by the state or federal government restricts or limits the profitable use of private property. Cf. *Mugler* v. *Kansas,* 123 U. S. 623; *Hamilton* v. *Kentucky Distilleries Co.,* 251 U. S. 146; *Jacob Ruppert* v. *Caffey,* 251 U. S. 264.

Respondents now argue (Br., pp. 115–122), however, that specific statutory authority for the "taking" allegedly effected by L–208 is to be found in Title II of the Second War Powers Act, 56 Stat. 177. Title II gave to the Secretaries of War and Navy, or any other officer, board, commission or governmental corporation authorized by the President, the authority to "cause proceedings to be instituted in any court having jurisdiction of such proceedings, to acquire by condemnation, any real property, temporary use thereof, or other interest therein * * *, that shall be deemed necessary, for military, naval, or other war purposes * * *."

The WPB, by L–208, did not, and did not purport to, acquire respondents' realty or personalty, or any interest therein for a war purpose or otherwise. In addition, the WPB was never authorized by the President to institute the condemnation proceedings prescribed in Title II. It is, therefore, a fiction for respondents now to suggest that L–208, in terms and effect an order allocating material and equipment, was an exercise of the condemnation authority under Title II of the Second War Powers Act.

III

THE ACT OF JULY 14, 1952, IS NOT AN ADMISSION OF GOVERNMENTAL LIABILITY

As an alternative argument in support of the judgment of the Court of Claims, respondents urge in this Court, as they did in the Court of Claims, that the Act of July 14, 1952, 66 Stat. 605, is a mandate from Congress to the Court of Claims to award compensation wherever it is proved that losses were incurred as a result of L–208. We pointed out in our main brief (p. 44, n. 29) that this contention is refuted by the language of the Act as well as by its legislative history. In the light of respondents' extended argument on this point (Resps. Br., pp. 130–146), further elaboration is appropriate.

The 1952 Act is as far as Congress has been willing to go toward granting legislative relief to the mines affected by L–208. The Act is the third of three legislative measures sponsored by Senator McCarran which, in varying degree, were designed to afford relief to mines affected by L–208. S. 27, "a bill to provide for suspending the enforcement of certain obligations against the operators of gold and silver mines" (89 Cong. Rec. 34), introduced in the 78th Congress, was reported by the Senate Judiciary Committee (S. Rep. 271, 78th Cong., 1st Sess., 89 Cong. Rec. 5187), and though, as amended, it passed the Senate (89 Cong. Rec. 6094–6095), it died in the House Committee on Mines and Mining (89 Cong. Rec. 6180). S. 45, a bill designed to compensate extra-judicially mining concerns affected by L–208, introduced by Senator McCarran (95 Cong. Rec. 39)

and favorably reported by the Senate Judiciary Committee (S. Rep. 79, 81st Cong., 1st Sess.), met a similar fate but as the result of action on the floor of the Senate (95 Cong. Rec. 2764, 13297, 14722; 96 Cong. Rec. 1278, 14691, 16592). S. 3195, which became the Act of July 14, 1952, was introduced by Senator McCarran on May 19, 1952 (98 Cong. Rec. 5394), following the Court of Claims' decision in *Idaho Maryland Mines Corporation* v. *United States*, 122 C. Cls. 670, on May 6, 1952, which held that Idaho Maryland was "entitled to a trial on the merits to prove its claim that the action of the War Production Board was far more than a regulation and [that L–208] amounted to a taking of plaintiff's right to mine and sell gold" (122 C. Cls. 670, 689). By the date of the *Idaho Maryland* decision, the six-year limitation period (28 U. S. C. 2501) on L–208 claims had long since expired and thus posed a jurisdictional bar to most claims based upon L–208. As the pertinent congressional reports confirm, it was this impediment that S. 3195 was designed to remove.

The purpose of S. 3195, as stated in the Senate Report submitted by Senator McCarran (S. Rept. No. 1605, 82d Cong., 2d Sess.), was as follows:

> The purpose of the proposed legislation is to authorize the United States Court of Claims to have jurisdiction to hear, determine, and render judgment, *notwithstanding any statute of limitations, laches, or lapse of time* on the claim of any owner or operator of a gold mine or gold placer operation for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions

> imposed by War Production Board Limitation Order L–208 during the effective life thereof. [Emphasis added.]

Identical language appears in the House report (H. Rep. 2220, 82d Cong., 2d Sess., p. 1) and both reports reflect extended reference to the holding in *Idaho Maryland, supra*. Referring to the *Idaho Maryland* decision, the Senate and House Reports, *supra*, state (p. 2):[2] . . .

> At the present time many other claimants who have as good a right for an adjudication of their claims as does the Idaho Maryland Mines Corp. may not prosecute such claims due to the running of the statute of limitations. Many of the claimants after the ruling in the Oro Fina case undoubtedly felt that to file in the Court of Claims would be useless and, therefore, allowed the statute to run against them. It must be noted that the great majority of the mine operators affected by the order were the small operators who were mining in many out-of-way places and did not have the facilities to employ legal staffs to keep them informed of

[2] In support of their argument that the 1952 jurisdictional act was intended as a Congressional admission of liability, respondents rely (Br., p. 144) upon a quotation from a House subcommittee report on H. R. 4393, reproduced *in extenso* in the Senate and House Reports on S. 3195 (pp. 3–7). But respondents' reliance upon language from a subcommittee report on H. R. 4393 is misplaced and, we believe, misleading. H. R. 4393 was introduced in the 79th Congress by Representative Engle (91 Cong. Rec. 9726). Unlike S. 3195, H. R. 4393 was designed to compensate administratively mine operators affected by L–208. Significantly, H. R. 4393 was never reported by the Committee on War Claims to which it was referred (91 Cong. Rec. 9726, Index, p. 913). Language from the subcommittee report on H. R. 4393 hardly affords a reliable guide as to the Congressional purpose underlying S. 3195.

> their possible rights. They accepted the order under duress and then had no facilities with which to overcome the great prestige of Government.
>
> * * * * * *
>
> The Idaho Maryland Mines Corp. decision is ample evidence of the fact that the least that can be done is to allow those persons affected by Order L–208 their day in court for such recompense as may seem justified * * * [p. 7].

S. 3195 passed both the Senate (98 Cong. Rec. 6322) and House (98 Cong. Rec. 8931) without floor debate, an unlikely event if Congress was admitting to a liability running well into the millions of dollars. But we think it clear that the 1952 Act is susceptible of no such meaning. Rather, in accordance with the canon that acts of this character are to be strictly construed,[3] the jurisdictional act should be accepted for what it was obviously intended to be—a waiver of the jurisdictional bar of the statute of limitations which would otherwise stand in the way of a determination on the merits of most of the 150 claims, based upon L–208 which have now been filed with the Court of Claims.[4]

---

[3] *United States* v. *Goltra*, 312 U. S. 203, 210, and cases cited, n. 20.

[4] If the Act of July 14, 1952, is, as respondents argue, a Congressional mandate to the Court of Claims to award compensation wherever it is proved that losses were incurred as a result of L–208, there would have been, of course, no necessity for the Court of Claims to decide, as it did, the constitutional question in these cases. In these circumstances, we feel fully justified in saying (Br. p. 44, n. 29) that respondents "unsuccessfully urged" this argument in the Court of Claims. The majority of the Court of Claims considered respondents' contentions "unnecessary to discuss" and the argument must necessarily have been rejected by the two dissenting judges.

CONCLUSION

For these reasons, together with those set forth in our main brief, we respectfully submit that the judgment of the Court of Claims should be reversed with directions to dismiss respondents' petitions in that court.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

BRIEF IN OPPOSITION OF RESPONDENTS HOMESTAKE MINING COMPANY, CENTRAL EUREKA MINING COMPANY (a corporation), ALASKA-PACIFIC CONSOLIDATED MINING COMPANY and IDAHO MARYLAND MINES CORPORATION

Opinions Below

The original opinion of the Court of Claims is printed at pages 1-50 of the Appendix to the Petition and is reported at 138 F. Supp. 281. The opinion denying the Government's motion for a new trial is printed at pages 123-130 of the Appendix to the Petition.[1]

[1] The Appendix to the Petition will be referred to hereafter as "Pet. App.".

Questions Presented

QUESTION NO. 1:

The first question stated by the Petitioner is whether War Production Board Order L-208 resulted in a temporary taking of the respondents' right to mine gold (Pet. p. 2). The Petitioner prefaces its statement of the question with the assertion that Order L-208 was issued "In order to conserve scarce war materials and to bring about the voluntary relocation of skilled manpower to more vital mining activities" (Pet. p. 2).

The assertion that Order L-208 was issued "in order to conserve scarce war materials" disregards the Findings made by the Court of Claims on the principal issue below. That issue was whether, as contended by the Government, the Order was a regulation of the use of war materials and the shut-down of the mines was a mere consequential result of such a regulation, or whether, as contended by the respondents, Order L-208 was not issued "in order to conserve scarce war materials" but involved a direct, intentional taking of the respondents' rights to mine gold in the unfounded hope that a transfer of manpower would result.

On this principal issue the Court of Claims found in favor of the respondents and against the Government. Specifically, the Court found (1) that orders of the War Production Board (hereinafter called "the WPB") issued many months before Order L-208 "had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment" (Finding 17, Pet. App. p. 62; see also Finding 50, Pet. App. p. 90), (2) that the "dominant consideration" in the issuance of the Order was the transfer of mine labor from the gold mines to mines producing other metals (Finding 46, Pet. App. p. 89) and (3) that, although the preamble to Order L-208

stated that it was issued to conserve critical materials, supplies and equipment, the Order was in fact not adapted to do so (Finding 48, Pet. App. p. 89-90). As the Court's opinion said, "The record establishes that no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines" (Pet. App. p. 8).

The question whether Order L-208 was issued "in order to conserve scarce war materials", as the Government contended below and suggests in the Petition, was predominantly a question of fact. It was decided in favor of the respondents by the Court of Claims, whose conclusion was supported by extensive Findings (see below, p. 12).

The legal conclusion drawn from the facts, that the WPB's direct, intended closing of the respondents' mines constituted a "taking" of the respondents' right to mine and sell their gold, involves no novel concept but, on the contrary, is fully supported by many decisions of this Court.

QUESTION No. 2:

The second question sought to be raised by the Petition is whether the WPB was authorized to effect the taking here involved (Pet. p. 2).

The Government did not attempt to raise this question in the Court of Claims until it made a motion for a new trial after the Court below had decided in the respondents' favor (Pet. App. p. 128).

In now raising the question, the Petition asserts that none of the statutes referred to by the Court below "in its original opinion" authorized a taking (Pet. p. 16, footnote 12). In the Appendix to this brief we quote the relevant portions of the three statutes which are mentioned in the Petition and also quote the other pertinent statutes and

Executive Orders which are listed in a footnote below.[2] These statutes and Executive Orders establish that the WPB had ample authority to take the respondents' property rights.

The Constitutional Provision, Statutes, Executive Orders and Regulations Involved.

The Fifth Amendment to the Constitution provides in part:

> "* * * nor shall private property be taken for public use, without just compensation."

As already stated, the pertinent statutes and Executive Orders dealing with the powers of WPB and other Governmental agencies are set forth in the Appendix hereto.

The Special Jurisdictional Act of July 14, 1952 (66 Stat. 605) provides:

---

[2] The statutes are as follows:

§ 120 of the National Defense Act of 1916, 39 Stat. 166, 213;

The Act of March 4, 1917, 39 Stat. 1192;

§ 9 of the Selective Training and Service Act of 1940, 54 Stat. 892;

The Act of October 10, 1940, 54 Stat. 1090;

The Requisitioning Act of October 16, 1941, 55 Stat. 742, as amended 56 Stat. 181;

Title II of the Second War Powers Act, 56 Stat. 177;

Title III of the Second War Powers Act, 56 Stat. 177-178.

The Executive Orders are the following:

Ex. Order 8629, 6 F.R. 191
Ex. Order 8875, 6 F.R. 4483
Ex. Order 8942, 6 F.R. 5909
Ex. Order 9024, 7 F.R. 329
Ex. Order 9040, 7 F.R. 527
Ex. Order 9125, 7 F.R. 2719
Ex. Order 9138, 7 F.R. 2919

"The United States Court of Claims be, and hereby is, given jurisdiction to hear, determine and render judgment, notwithstanding any statute of limitations, laches, or lapse of time, on the claim of any owner or operator of a gold mine or gold placer operation for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof: *Provided,* That actions on such claims shall be brought within one year from the date this Act becomes effective."[3]

The text of Order L-208 is set out in the Findings of Fact (Pet. App. p. 86-88).

STATEMENT

The origin, promulgation and general effect of Order L-208 are the subject of 52 Findings of Fact which will be found at pages 51-94 of the Appendix to the Petition. The other Findings relate severally to the respective plaintiffs below.

---

[3] The respondents here had file l their petitions in the Court of Claims prior to the enactment of the quoted statute. However, the respondents argued below that, if for any reason the Court might hold that the issuance of Order L-208 had not amounted to a "taking", the Court was still authorized by the Congress to render a judgment in favor of any gold mine owner which could prove that it had incurred losses because of the closing of its mine as a result of the issuance of Order L-208. The majority opinion adverts to this (Pet. App. p. 2-3) but, since the Court found that the issuance of the Order effected a taking, the Court held that it was unnecessary to determine the effect of the Special Jurisdictional Act (Pet. App. p. 46).

There has been no decision in this or any other case that the Special Jurisdictional Act has the limited effect suggested in footnote 14 to the Petition (p. 18). Indeed, the Court of Appeals for the Ninth Circuit recently held that the Congress, in enacting the Special Jurisdictional Act, elected to compensate operators of the gold mines affected for all losses caused by Order L-208. *Brinker-Johnson Co.* v. *Reconstruction Finance Corporation*, 236 F. 2d 195, 197, 198.

As the Government's Statement explicitly acknowledges (Pet. p. 4-5), seven months before the issuance of Order L-208 "the War Production Board had effectively eliminated the possibility of acquisition by the gold mines of critical materials or supplies" (Findings 17, 48, 50, Pet. App. p. 62, 89, 90).

In the summer of 1942 the WPB, War Manpower Commission and War Department began to be alarmed by the growing exodus of workers from the strategic metal mines, principally copper mines (Findings 18, 19, 20, 21, Pet. App. p. 62-65). Investigation of this loss of miners disclosed (1) that the miners were being attracted by higher wages and better working conditions available in the aircraft and shipbuilding industries and in the Armed Services building construction projects, (2) that many experienced miners were being drafted into the Armed Services instead of being deferred by the Selective Service as essential workers, and (3) that production was also hampered by the low morale of the miners, the short workweek in the mines and the lack of any effective means of recruiting workers (*id.*).

In July, 1942, a War Department Committee suggested that production of gold be curtailed and a program be established for the transfer of gold mine workers to the nonferrous metal mines (Finding 19, Pet. App. p. 63). More or less simultaneously the Labor Production Division of the WPB made a similar suggestion (Finding 20, Pet. App. p. 64, 65).

The proposal to close the gold mines in the hope of diverting hard rock miners to nonferrous mines was the subject of vigorous debate within and without the WPB from early in August, 1942 until Order L-208 was issued on October 8, 1942. Among other things, it was questioned whether a shutdown of the gold mines would be effective to bring about the voluntary transfer of a significant number of hardrock miners to the nonferrous metal mines. Findings 22 to 38, both inclusive, set forth in detail

hat took place between the beginning of August and Octo-
er 2, 1942, when the Under Secretary of War wrote the
ice Chairman of the WPB a letter which is referred to
ter (Pet. App. p. 65-83). Those Findings contain the
xts of several contemporary memoranda and they afford
undant support for the statement in the opinion below
at (Pet. App. p. 8):

> "The record establishes that no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines."

By mid-September, 1942, strong opposition to the issu-
nce of a gold mine closing order was being heard from
nportant voices within the WPB (Findings 31, 36, 38, Pet.
pp. 79, 82, 83). However, at this point the Army started
o bring great pressure to bear on the WPB to close down
he gold mines (Pet. App. p. 7). By September 15 the
War Department was "impatient at the delay" in issuing
closing order (Finding 30, Pet. App. p. 78). At a meeting
f WPB officials and gold mine representatives on October
, when the gold mine owners expressed numerous reasons
hy their mines should not be closed, several WPB officials
n attendance "questioned the possible effectiveness of the
roposed order", but the representative of the Army
spoke strongly in support of a closing order". (Finding
6, Pet. App. p. 82.)

On October 2, 1942, the Under Secretary of War wrote
o the Vice Chairman of the WPB urging immediate issu-
nce of a gold mine closing order and saying "The matter
as hung fire for some time, and I trust that there will be no
urther delay" (Finding 39, Pet. App. p. 83-84). In the
tter he offered to give approval of the Order on behalf
f the War Department and indicated that he could secure
he approval of the Navy Department (*id.*).

The next day, October 3, the Chief of the Mining Branch of the WPB, who had undertaken at the October 1 meeting to "determine how many miners and muckers would actually be released by a closing order" (Finding 36, Pet. App. p. 81-83), reported to the Vice Chairman of the WPB "that if all the gold mines and dredges in the United States were put on a stand-by basis, it would make available only about 600 miners and muckers for other mining enterprises 'provided they [could] all be induced to go into other mines'" (Finding 37, Pet. App. p. 83). The estimated 600 represented only a small fraction of the numbers previously estimated within the WPB (Findings 20, 25, 27, 36, 40, Pet. App. p. 64, 69, 72, 82, 84) and there was no reason to expect that anything like all of the 600 could be induced to go into other mines (Finding 50, Pet. App. p. 90).

This was one of the bases for the Finding made by the Court below that "in issuing L-208 WPB acted without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines" (Finding 51, Pet. App. p. 91). This Finding of the Court of Claims was supported by an earlier Finding, setting forth in detail facts known to the WPB which made it unreasonable to expect that the Order would bring about the transfer of a significant number of hardrock miners to the nonferrous metal mines (Finding 50, Pet. App. p. 90).

Nevertheless, the forces which led to the issuance of Order L-208 continued to gather momentum. On October 5 the Under Secretaries of War and the Navy sent a memorandum to the Chairman of the WPB which opened with the statement that "The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production". The memorandum closed with the statement "The matter has

hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided" (Finding 40, Pet. App. p. 84).

On the next day, October 6, 1942, the War Production Board formally met and approved the issuance of Order L-208.[4] The Commanding General of the Services of Supply told the Board that in view of the fact that "the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines * * * failure to stop gold production immediately would be inexcusable" (Finding 41, Pet. App. p. 85).[5]

On October 8, 1942, the WPB issued Order L-208 "in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines" (Pet. App. p. 8) and "without any justifiable anticipation that the order

---

[4] Among the Board and staff members present at this meeting were Chairman Donald Nelson; Vice President Wallace, Chairman, Board of Economic Warfare; Under Secretary of War Patterson "acting for Mr. Henry L. Stimson, Secretary of War", and Vice Admiral Robinson "acting for Mr. Frank Knox, Secretary of the Navy"; Lt. General Knudsen, Director of Production, War Department; Mr. Isador Lubin "acting for Mr. Harry L. Hopkins, Special Assistant to the President supervising the Defense Aid Program"; and Mr. John Lord O'Brian, General Counsel of the Board. Among those present by invitation were Lt. General Somervell, Commanding General, Services of Supply, War Department; Chairman Paul V. McNutt of the War Manpower Commission; and Mr. Robert R. Nathan, Chairman of WPB's Planning Committee (Pltfs. Ex. 92).

[5] In a report which the Policy Analysis and Records Branch of WPB submitted in May, 1944, concerning the history and effect of Order L-208, it was stated that "General Somervell's position * * * amounted almost to an ultimatum which permitted no alternative" (Pltfs. Ex. 1, p. 46).

The Petition states that the Army's decision to furlough 4,000 men for work in the copper mines was "an action the Army had not been willing to institute so long as the gold mines continued in operation" (Pet. p. 6). Actually, the findings show that the Army had determined to furlough these soldiers prior to the WPB's decision to issue Order L-208 (Findings 40, 41, Pet. App. p. 84-85). The Court below characterized the Army's objection to the continued operation of the gold mines as "largely political rather than practical" (Pet. App. p. 7).

would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines" (Finding 51, Pet. App. p. 91).

Paragraph (b)(1) of the Order provided (Pet. App. p. 86):

> "(1) On and after the issuance date of this order, each operator of a nonessential [gold] mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine."

Paragraph (i) of the Order provided (Pet. App. p. 87-88):

> "(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. * * *"

The Order thus deprived the respondents directly of their right to extract gold from their mines and sell it, under penalty of fine or imprisonment.

While the preamble contained a reference to "a shortage in the supply of critical materials for defense" and the Order contained certain provisions relating to "any material, facility or equipment" (Pet. p. 5-6; Pet. App. p. 86), the Court of Claims held (Pet. App. p. 29):

> "Despite its preamble and the authority cited for its issuance, the language of the order itself and the circumstances surrounding its issuance indicate that neither its purpose nor its effect was to conserve or allocate critical materials, equipment and facilities needed for defense, but was rather to deprive the gold mine owners of their right to make profitable use of their gold mines."

This holding in the Court's opinion was based on its Finding 48 (Pet. App. p. 89-90).

On October 10, 1942, two days after the Order was issued, 21 United States Senators wrote the President of the United States urging that the President "stay" Order L-208 (Finding 52, Pet. App. p. 91-93). The President did not stay the Order and it was not rescinded until June 30, 1945 (Finding 90, Pet. App. p. 102).

Following the issuance of the Order only an insignificant number of hardrock miners actually went to work in the nonferrous metal mines (Findings 47, 52; Pet. App. p. 89, 94). The Petition concedes this (p. 6). In March, 1944, officials of the WPB agreed "that the number of gold mine workers who went into other mines and remained there for a year or more was not over 100" (Finding 52, Pet. App. p. 94).

Upon the basis of the facts so found, the Court below determined that Order L-208 was not "a *bona fide* limitation order" (Pet. App. p. 20-23), and held that (Pet. App. p. 23):

> "L-208 was aimed, in all its provisions, directly at the beneficial use of the mining properties of the gold mine owners, and the only intention reasonably inferrible from the language of the order itself and the circumstances surrounding its issuance was an intent to temporarily deprive them of that property right."

In holding that the Order was not in fact a "regulation", the Court said (Pet. App. p. 13):

> "What the order did do, and do directly, was to prohibit the continued operation of the gold mines".

It concluded that the closing of the gold mines was not the incidental or consequential result of a regulation dealing with the allocation or conservation of critical materials but was the direct, intended result of the Order, and that therefore the action constituted a "taking" within the meaning of the Fifth Amendment (Pet. App. p. 23, 32-33).

ARGUMENT

I.

Based on a very full record of the circumstances leading to the issuance of Order L-208 and a careful analysis of the Order itself, the Court of Claims found that the shut-down of the respondents' mines was not a mere incidental result of a bona fide regulation of the use of critical materials and that the Order effected a "taking".

The Court's decision was not inconsistent with its prior decisions in *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, certiorari denied, 341 U. S. 948, and *St. Regis Paper Co.* v. *United States*, 110 C. Cls. 271, certiorari denied, 335 U. S. 815.

The question whether Order L-208 was issued in order to conserve war materials and the shut-down of the respondents' mines was a mere consequential result of a regulation of the use of war materials, as the Government contended, or whether the Order involved a direct taking of the respondents' right to mine gold in the hope that a transfer of manpower would result, as the respondents contended, was predominantly a question of fact.

At extensive hearings a comprehensive record was made of the circumstances leading to the issuance of Order L-208. After considering that record and very full briefs, and after hearing oral argument, the Court below made 52 Findings which set forth the story of Order L-208 in detail; they take up 43½ pages of the Appendix to the Petition (Pet. App. p. 50-94). Those Findings and the Court's analysis of Order L-208 itself (Pet. App. p. 20-23) fully sustained the respondents' contention.

The Court of Claims did not base its holding upon the ground that "Order L-208 went beyond the bounds of permissible regulation", as the Government now contends (Pet. p. 7). Rather the Court held that, "What the order did do, and do directly, was to prohibit continued operation of the

gold mines" (Pet. App. p. 13) and thus constituted a "taking" as distinguished from a regulation (see Pet. App. p. 16-17, 23 and Point II at p. 15-19 below).

The principal ground for the issuance of a writ of certiorari advanced in the Petition (p. 8-12) is that the decision of the Court of Claims is inconsistent with its prior decisions in *Oro Fino Consolidated Mines, Inc.* v. *United States,* 118 C. Cls. 18, certiorari denied, 341 U. S. 948, and *St. Regis Paper Co.* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U. S. 815.

Even if the asserted inconsistency existed, it would not appear to call for action by this Court under Rule 19. However, we submit that there is no inconsistency.

Oro Fino involved Order L-208 and the Court of Claims dismissed the petition on the Government's demurrer. However, the *Oro Fino* petition did not allege any facts showing that the Order had no relation to the allocation or conservation of critical materials. No "taking" was alleged, the property right involved was not described, and the plaintiff did not seek to recover the value of the property taken (compare *United States* v. *Causby,* 328 U. S. 256, 267). On the meagre allegations of the *Oro Fino* petition the Court of Claims viewed the closing of the *Oro Fino* mine as merely an incidental result of a valid exercise of the WPB's power to allocate critical materials; and in opposing *Oro Fino's* petition for a writ of certiorari the Government described Order L-208 as an exercise of the President's "wartime authority to allocate critical material and facilities" (Brief for the United States in Opposition, No. 667, October Term, 1950, p. 2, 6, 7).

As indicated in the opinion below (Pet. App. p. 14-15), the order in the *St. Regis* case (Order M-251) was of a very different nature. The preamble of the Order stated that there was a shortage of pulpwood needed for defense purposes. Order M-251 provided that the WPB's Director General could declare certain localities to be

shortage areas and could allocate the available supply away from and to specific persons; that he could direct the holders to make their supplies of pulpwood available for disposition; and that no one in that area might acquire or process any pulpwood except as the Director General might order. As a result of the application of the Order to the Puget Sound area where the St. Regis plant was located and the consequent inability of the St. Regis plant to process pulpwood, that plant was compelled to close down. The Court of Claims in effect held that any loss to St. Regis was consequential, and was the indirect result of an order dealing in fact with the allocation and conservation of critical supplies. The Court said (110 C. Cls. at 279):

> "This does not mean, however, and the petition does not purport to so charge, that it was the Board's objective to shut down plaintiff's plant. It did not issue its General Preference Order No. M-251 to accomplish such an end."

Here, on the other hand, the direct, intended result of Order L-208 was to shut down the respondents' gold mines. Clearly, therefore, the decision in *St. Regis* offers no parallel to the instant case.[6]

---

[6] The Government contends (Pet. p. 11) that even without the shutdown requirement Order L-208 would have resulted in the closing of the gold mines because of other provisions preventing the mine operators from acquiring or using "any material, facility, or equipment" (Pet. App. p. 86). The Court of Claims found that the latter provisions were not directed at the allocation or conservation of critical materials (indeed they were not even limited to the acquisition or use of "critical" materials) but were inserted as "part and parcel of the express order to cease doing business" (Pet. App. p. 33; Finding 48, Pet. App. p. 89-90).

II.

Order L-208 directly deprived each of the respondents of valuable property—the right to produce and sell gold from its mine over a period of two and one-half years.

In determining whether there was a compensable taking it is immaterial that the Government did not itself operate the mines or effect a physical entry.

The "property" of each of the respondents, within the meaning of the Fifth Amendment, was not limited to the "physical thing", i. e., the mine. The right to produce gold from the mine and sell it was itself property. The right to do so over a period of two and one-half years was a very substantial property right.

The opinion below correctly held (Pet. App. p. 10):

> "The property which plaintiffs contend has been taken from them, and which defendant urges was merely limited in its usefulness to plaintiffs as a consequence of a valid regulation of scarce materials, was plaintiffs' right to make profitable use of their gold mining properties. As pointed out by Mr. Justice ROBERTS in *United States* v. *General Motors Corporation*, 323 U. S. 373, while 'property' as that term is used in the Fifth Amendment certainly means the physical thing with respect to which the citizen exercises rights recognized by law, it also means the group of rights inhering in the citizen's relation to the physical thing, as the rights to exclusively possess, use and dispose of the physical thing. In this sense, the right of a gold mine owner to extract gold from his mine and to sell it for a profit, is a property right protected by the Constitution. *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393."

The Government argues that the respondents are not entitled to compensation because "there was no affirmative use or invasion of the mines by the Government, nor was ownership or possession transferred to the Government" (Pet. p. 12). But under this Court's decisions it is clearly immaterial that when the Government deprived the re-

spondents of their property, the right to mine and sell gold, the Government did not itself make any "affirmative use" of the right of which the respondents were deprived. It is equally immaterial that there was no physical "invasion of the mines by the Government" and that ownership was not transferred to the Government.

In *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393, 414, cited by the Court below, Mr. Justice HOLMES wrote for the Court that

> "As said in a Pennsylvania case, 'For practical purposes, the right to coal consists in the right to mine it.' *Commonwealth* v. *Clearview Coal Co.*, 256 Pa. St. 328, 331. What makes the right to mine coal valuable is that it can be exercised with profit. To make it commercially impracticable to mine certain coal has very nearly the same effect for constitutional purposes as appropriating or destroying it."

In *United States* v. *General Motors Corp.*, 323 U. S. 373, also cited by the Court below, Mr. Justice ROBERTS enunciated for this Court, at pages 377-378, the concepts which were summarized in the opinion below (Pet. App. p. 10; see above, p. 15) and also said (p. 378):

> "The courts have held that the deprivation of the former owner rather than the accretion of a right or interest to the sovereign constitutes the taking. Governmental action short of acquisition of title or occupancy has been held, if its effects are so complete as to deprive the owner of all or most of his interest in the subject matter, to amount to a taking."

The *General Motors* opinion cited *United States* v. *Welch*, 217 U. S. 333, and *Richards* v. *Washington Terminal Company*, 233 U. S. 546. In *U. S.* v. *Welch* compensation was awarded when the flooding of land by the Government rendered an easement over land ineffectual. *Richards* v. *Washington Terminal Company* was an action brought by

the owner of a house near a portal of a terminal which the Washington Terminal Company had built by authority of Acts of Congress and from which there was a continuing emission of gases and smoke because of the operation of trains in the tunnel. In reversing a judgment in favor of the defendant this Court said (p. 557): "Construing the acts of Congress in the light of the Fifth Amendment, they do not authorize the imposition of so direct and peculiar and substantial a burden upon plaintiff's property without compensation to him."

In *United States* v. *Causby*, 328 U. S. 256, the Court held that flights of aircraft over a dwelling and chicken farm near a military airport, which were so low and frequent as to be a direct and immediate interference with the enjoyment and use of the land, were as much an appropriation of the use of the land as a more conventional entry upon it. Mr. Justice DOUGLAS said for the Court (p. 261, 262):

> "* * * the United States conceded on oral argument that if the flights over respondents' property rendered it uninhabitable, there would be a taking compensable under the Fifth Amendment. It is the owner's loss, not the taker's gain, which is the measure of the value of the property taken. *United States* v. *Miller*, 317 U. S. 369 * * *. If, by reason of the frequency and altitude of the flights, respondents could not use this land for any purpose, their loss would be complete. It would be as complete as if the United States had entered upon the surface of the land and taken exclusive possession of it."
>
> * * * * *
>
> "The fact that the planes never touched the surface would be as irrelevant as the absence in this day of the feudal livery of seisin on the transfer of real estate. The owner's right to possess and exploit the land—that is to say, his beneficial ownership of it—would be destroyed."

Kimball Laundry Co. v. *United States*, 338 U. S. 1, involved the condemnation of a laundry for use by the Army for a temporary period. The Laundry Company had developed valuable "trade routes", which, of course, neither the Company nor the Army could use while the Army was operating the laundry. In discussing the question whether the Government had to compensate the Laundry Company for the value of the use of the trade routes, Mr. Justice FRANKFURTER wrote for the Court (p. 13):

> "* * * the situation is apt for the oft-quoted remark of Mr. Justice HOLMES, 'the question is what has the owner lost, not what has the taker gained.' *Boston Chamber of Commerce* v. *Boston*, 217 U. S. 189, 195."

The Court's decision (p. 16) was "that since the Government for the period of its occupancy of petitioner's plant has for all practical purposes preempted the trade routes, it must pay compensation for whatever transferable value their temporary use may have had".

In *William C. Atwater, Jr., et al.* v. *United States*, 106 C. Cls. 196, the plaintiffs were the owners of certain property on Fire Island. The military authorities built a target range near the plaintiffs' property and established a safety zone which included the plaintiffs' property and from which all persons, including the plaintiffs, were excluded during the Government's use of the target range from December, 1941 until June 30, 1944. Although there was no "affirmative use or invasion" of the plaintiffs' property, the Court of Claims held that there was a compensable taking because the plaintiffs were denied access to their property (p. 206, 207).

In *Edward P. Stahel & Co., Inc.* v. *United States*, 111 C. Cls. 682, certiorari denied, 336 U. S. 951, the WPB had issued a directive requiring certain owners of raw silk to hold their silk subject to Government direction. The Court of Claims held that the issuance of the directive itself

effected a taking even though at the time the directive was issued the Government did not take physical possession of the silk or require the owners of the silk to surrender such possession.

The "taking" of the respondents' rights to operate their gold mines under Order L-208 was as clear and direct as the taking in any of the cases cited above.

Indeed, the taking of the respondents' property was just as complete as if the Government had stationed soldiers at each of the mines to enforce compliance with Order L-208. The entire Executive arm of the Government appeared to be behind the Order and the posting of soldiers would have added little, if anything.

• • • •

There is no basis for the Government's argument (Pet. p. 12) that "since there was as much gold in the mine when Order L-208 was revoked as when it was issued, the effect of the Order was simply to suspend until after the war the extraction of the gold". An owner of a gold mine has the same right to a profitable use of his property as the owner of a farm or factory. If the Government deprives the owner of a farm or factory of the right to use his property, it is no answer to a suit for compensation to say that the Government later returned the farm or factory in as good condition as when it was taken.

III.

The Court below did not pass upon the respondents' alternative ground for a recovery, viz., that Order L-208, if viewed as a regulation, constituted a taking because it was arbitrary.

The Government argues that this case does not fall "within the very limited category of takings" resulting from a regulation which "interferes too severely or extensively" with property rights and in this connection

refers to *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393 (Pet. p. 13).

The Government thus takes cognizance of an *alternative* ground for recovery which the respondents advanced in the Court of Claims but on which that Court did not pass. In support of that alternative ground the respondents cited *Chicago, Burlington & Quincy Railway Co.* v. *People of the State of Illinois, ex rel. Drainage Commissioners*, 200 U. S. 561, 593-594, and *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393, 415-416.

The Court's opinion below summarized the first and second grounds advanced by the respondents for a recovery (Pet. App. p. 9):

> "Plaintiffs contend that L-208, while in form a regulation restricting their acquisition and use of critical materials needed for defense, was in substance a requisition or taking, for the life of the order, of plaintiffs' right to make profitable use of their gold mining properties for which taking the Government is liable to pay just compensation under the Fifth Amendment to the Constitution. Plaintiffs also contend that if the court should decide that L-208 was actually a regulation in substance as well as in form, it was arbitrary in that it went far beyond what was required by the exigencies of the war situation existing at the time of its issuance, bore no reasonable relation to its ostensible purpose of conserving critical materials needed in the defense effort, and in fact and law amounted to a taking of valuable property rights of plaintiffs for which just compensation should be paid."

The Court sustained the respondents on the first ground (Pet. App. p. 23, 32-33) and hence found it unnecessary to pass on the second, or alternative, ground.

The Government's discussion of this question in its Petition (p. 13-15) tends to suggest that this Court ought to review a question which the Court below did not find it necessary to decide.

While, as the Petition points out (p. 14, footnote 11), the Court of Claims held that the issuance of Order L-208 was "arbitrary" (Pet. App. p. 28-29), that holding was not made in connection with the respondents' alternative ground for recovery but rather in connection with the Government's contention below that, if the Order was arbitrary, it was unauthorized (Pet. App. p. 23-29).

However, the Government now insists that the Order was not arbitrary and urges that the prospects of the Order's success "justified the War Production Board's action" (Pet. App. p. 15, footnote 11).[7] The Findings of the Court below dispose of this argument conclusively (see above, p. 8, 9-10, 11).

* * * *

This case bears no resemblance to cases cited in the Petition (p. 14) involving wartime rent controls (*Woods v. Miller*, 333 U. S. 338; *Bowles* v. *Willingham*, 321 U. S. 503; *Block* v. *Hirsh*, 256 U. S. 135), regulation of commodity prices (*Yakus* v. *United States*, 321 U. S. 414; *Morrisdale Coal Co.* v. *United States*, 259 U. S. 188), renegotiation of war profits (*Lichter* v. *United States*, 334 U. S. 742), allocation of critical materials (*L. P. Steuart & Bros., Inc.* v. *Bowles*, 322 U. S. 398), or the incidental frustration of contract rights (*Omnia Commercial Co.* v. *United States*, 261 U. S. 502). In all of those cases the injury, usually of only a limited nature, was merely the *indirect* effect of reasonable and legitimate action taken to promote the public good.

---

[7] In the same footnote 11, the Government cites *Youngstown Sheet & Tube Co.* v. *Sawyer*, 343 U. S. 579 for the proposition that, if the Order was arbitrary, respondents should have sought an injunction against its enforcement, not compensation for damages. The cited case simply does not stand for the Government's proposition and it has never been the law that the possible availability of a remedy in equity defeats a remedy at law. This Court has explicitly held that the availability of an injunction against a taking does not defeat an action at law for just compensation. *United States* v. *Great Falls Manufacturing Company*, 112 U. S. 645, 656.

The wartime prohibition cases (*Ruppert* v. *Caffey*, 251 U. S. 264; *Hamilton* v. *Kentucky Distilleries and Warehouse Company*, 251 U. S. 146), also cited in the Petition (p. 14), present no analogy, for reasons pointed out in the opinion below (see Pet. App. p. 30-31).

IV.

There is no occasion for this Court to provide "more authoritative guidance which will be useful in current planning for future periods of stress, as well as in the actual operation of controls in times of emergency".

The Government argues that this Court should grant certiorari so that there may be "more authoritative guidance which will be useful in current planning for future periods of stress, as well as in the actual operation of controls in times of emergency" (Pet. p. 18). It says also that "a more definitive delineation between 'regulation' and 'taking' is needed as a guide for use in the current and continuing preparation for possible future national or war emergencies" (p. 8).

The Findings of the Court of Claims (Pet. App. p. 50-94) indicate the *sui generis* nature of the drastic, unprecedented—and never repeated—action taken by the WPB in depriving those owners of gold mines who were not exempted from Order L-208 of their right to mine gold by directly ordering them, under penalty of fine or imprisonment (Pet. App. p. 87-88), "to take all steps as may be necessary to close down" the operation of their mines (Pet. App. p. 86)—an action which was taken in the hope that skilled labor in the mines would move to other mining activities.

There is no reason to suppose that anything like Order L-208 will ever be repeated. There was nothing like it prior to World War II, there was nothing else like it during World War II, and it is inconceivable that "current planning for future periods of stress" will or should embrace anything remotely similar.

V.

It was not until after the decision of the Court of Claims that the Government argued for the first time, on its motion for a new trial, that there was a lack of authority to take the respondents' property.

The WPB had ample authority to issue Order L-208.

The Petition argues "that (1) the War Production Board did not have the authority to requisition property in circumstances such as are here involved and (2) the Board did not intend, nor did it purport, to exercise any requisitioning authority that it had" (Pet. p. 15-16).

This ground for denying the respondents compensation was not advanced by the Government until after the Court of Claims' decision on February 20, 1956 in favor of the respondents; the ground was the basis for the Government's motion for a new trial (Pet. App. p. 29-30, 128). That motion was denied on July 12, 1956 (Pet. App. p. 123-130).

In view of the tardiness with which the Government has urged that there was no authority for it to take what it in fact did take, the language of Mr. Justice HOLMES for the Court in *International Paper Company* v. *United States*, 282 U. S. 399, 406, seems particularly apt:

> "The Government has urged different defenses with varying energy at different stages of the case. The latest to be pressed is that it does not appear that the action of the Secretary [of War] was authorized by Congress. We shall give scant consideration to such a repudiation of responsibility. The Secretary of War in the name of the President, with the power of the country behind him, in critical time of war, requisitioned what was needed and got it. Nobody doubts, we presume, that, if any technical defect of authority had been pointed out it would have been remedied at once. The Government exercised its power in the interest of the country in an important matter, without difficulty, so far as appears, until the time comes to pay for what it has

> had. The doubt is rather late. We shall accept as sufficient answer the reference of the petitioner to the National Defense Act * * * [39 Stat. 166, 213], giving the President in the time of war power to place an obligatory order with any corporation for such product as may be required, which is of the kind usually produced by such corporation."

In the *International Paper* case, the Secretary of War by telegraphic order requisitioned the water power used by the plaintiff. In this case, Order L-208 was issued with the unanimous approval of all members of the WPB who were present at the Board's meeting of October 6, 1942, and those participating at that meeting in the decision to issue the Order included Vice President Henry Wallace, Under Secretary of War Patterson "acting for Mr. Henry L. Stimson, Secretary of War", Vice Admiral Robinson "acting for Mr. Frank Knox, Secretary of the Navy", Lieutenant General Knudsen, Director of Production, War Department, Lieutenant General Somervell, Commanding General Services of Supply, War Department, and Mr. Isador Lubin, "acting for Mr. Harry L. Hopkins, Special Assistant to the President" (see footnote 4, p. 9, above).

Not only was the order issued at the insistence of the War and Navy Departments (Findings 39, 40, Pet. App. p. 83-84) but it was brought to the attention of the President himself when 21 United States Senators urged him to "stay" the Order; the President did not do so (Finding 52, Pet. App. p. 91-93).

If ever the full power of the Executive arm of this Government was brought to bear in a taking of property, it was done in this instance.

The petitioner's narrow argument appears to be that the power to requisition the precise type of property taken in these cases was not explicitly conferred upon the WPB (Pet. p. 15-17). Actually, as the Court of Claims found, by October, 1942 the Congress had conferred upon the Presi-

dent authority to requisition any real or personal property or interest therein which he deemed necessary successfully to prosecute the war and all of these powers, except the power to condemn real property, had been explicitly delegated to the WPB (Pet. App. p. 3, 29).[8]

---

[8] The relevant statutes and Executive Orders are collected in the Appendix to this brief (referred to in this footnote as "App.").

The President was authorized to place mandatory orders with a company for any product or material required "of the nature and kind usually produced or capable of being produced by such * * * company" and to take over the company's plant upon its refusal to comply with any such order (Section 120 National Defense Act of 1916, 39 Stat. 166, 213, App. p. i). This was the statutory authority deemed sufficient by this Court in the *International Paper* case and the President's powers under this statute were delegated to the WPB (Ex. Order No. 9040, App. p. xix, xx).

Section 9 of the Selective Training and Service Act of 1940 (54 Stat. 892, App. p. iii) was substantially identical with the foregoing section of the National Defense Act of 1916, except that it authorized the President to act "through the head of the War Department or the Navy Department". The President's powers under this Act were also delegated to the WPB (Ex. Orders No. 8629 and 9040, App. p. xii, xiii; xx).

The Requisitioning Act of October 16, 1941 (55 Stat. 742, App. p. vi) authorized the President to requisition military or naval equipment, supplies, munitions, machinery, tools or materials necessary for the manufacture of such equipment and these powers too were delegated to the WPB (Ex. Orders No. 8942 and 9040, App. p. xvi, xx).

Title III of the Second War Powers Act (56 Stat. 177, App. p. x, xi) provided that

> "Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense."

The President's powers under the foregoing statute were similarly delegated to the WPB (Ex. Order No. 9125, App. p. xxi).

The Act of March 4, 1917, 39 Stat. 1192 (App. p. ii) authorized the President to requisition "any factory, or any part thereof without taking possession of the entire factory" and the word "factory" was defined to include "any factory, workshop, engine works, building used for manufacture, assembling, construction, or any process, and any shipyard or dockyard".

Title II of the Second War Powers Act (56 Stat. 177, App. p.

Of the various laws embraced in this broad statutory scheme, perhaps the most significant is Title II of the Second War Powers Act. It is clear that under that and the other related statutes and Executive Orders, all referred to in footnote 8, there was ample authority to take the gold mines or any "interest therein".

Moreover, the WPB's action was taken at the instance of and approved by the War and Navy Departments (Findings 30, 36, 39, 40, 41, 42, Pet. App. p. 77-78, 81-85; Pltfs. Ex. 92; see above p. 7, 10, 24) and substantially ratified by the President himself (Finding 52, Pet. App. p. 91-94; see above p. 11, 24).

The Government's present contention that the WPB acted without authority is a complete reversal of the position taken by the Government in the Supplemental Brief which it filed in the Court of Claims after argument below. On the oral argument below the Government insisted that the respondents were not entitled to compensation because the shutdown of their mines was required by a "valid" regulation, and in its Supplemental Brief the Government undertook to establish the validity of Order L-208 by showing that there had been a Congressional ratification of the WPB's action in issuing the Order.

To show that there had been such a ratification the

---

ix) authorized the Secretary of War, the Secretary of the Navy "or any other officer, board, commission or governmental corporation authorized by the President" to acquire "any real property, temporary use thereof, or other interest therein, together with any personal property located thereon or used therewith, that should be deemed necessary for military, naval or other war purposes".

While these powers under the two last-mentioned statutes were not specifically delegated to the WPB, Executive Order No. 9024 (7 FR 329, App. p. xix) gave the Chairman of the WPB the power to "Determine the policies, plans, procedures and methods of the several Federal departments, establishments and agencies in respect to war procurement and production, including purchasing * * * [and] requisitioning * * * and issue such directives in respect thereto as he may deem necessary or appropriate".

Government established that the Congress had enacted legislation relating to the suspension of the requirements of annual assessment work on mining claims with knowledge of the prior issuance of Order L-208 and giving effect thereto (57 Stat. 74, House Report 351, 75th Congress, 1st Session, 89 Cong. Rec. 3758).[9]

The Government complains, lastly, that the Court of Claims "ignored" the fact that "the Board did not intend, nor did it purport, to exercise any requisitioning authority that it had" (Pet. p. 16). This argument was fully disposed of in the opinion of the Court of Claims denying the Government's motion for a new trial (Pet. App. p. 125-127, 129).

CONCLUSION

For the most part this case involved issues of fact which were resolved by the Court of Claims in respondents' favor. There is no conflict between the decision below and any decision of this Court or of any Court of Appeals. On the contrary, the legal conclusions which flow from the facts as found are in accord with numerous decisions of this Court.

---

[9] In its Supplemental Brief, the heading of the Government's first point was this:

"Congressional ratification of WPB's action in issuing L-208"

Under that heading the Government urged that the Congress had "recognized Limitation Order L-208 as an existing legal fact, and adopted subsequent legislation in the light of it" (p. 2). The presentation of this point concluded by stating that (p. 5):

"We thus have clear Congressional recognition of L-208."

The argument in the brief was that any possible legal deficiency in the authority for Order L-208 was remedied by the "clear Congressional recognition", i. e., by Congressional ratification. Compare *Shoshone Tribe of Indians* v. *United States*, 299 U. S. 476, 495-496.

It is respectfully submitted that the Government's petition for a writ of certiorari should be denied.

APPENDIX

The Statutes

(In Chronological Order)

1. Section 120 of the National Defense Act of 1916, 39 Stat. 166, 213, pertinent provisions.

"The President, in time of war or when war is imminent, is empowered, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement, to place an order with any individual, firm, association, company, corporation, or organized manufacturing industry for such product or material as may be required, and which is of the nature and kind usually produced or capable of being produced by such individual, firm, company, association, corporation, or organized manufacturing industry.

"Compliance with all such orders for products or material shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof and shall take precedence over all other orders and contracts theretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any plant equipped for the manufacture of arms or ammunition, or parts of ammunition, or any necessary supplies or equipment for the Army, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any manufacturing plant, which, in the opinion of the Secretary of War shall be capable of being readily transformed into a plant for the manufacture of arms or ammunition, or parts thereof, or other necessary supplies or equipment, who shall refuse to give to the United States such preference in the matter of the execution of orders, or who shall refuse to manufacture

the kind, quantity, or quality of arms or ammunition, or the parts thereof, or any necessary supplies or equipment, as ordered by the Secretary of War, or who shall refuse to furnish such arms, ammunitions, or parts of ammunition, or other supplies or equipment, at a reasonable price as determined by the Secretary of War, then, and in either such case, the President, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement herein provided for, is hereby authorized to take immediate possession of any such plant or plants, and through the Ordnance Department of the United States Army, to manufacture therein in time of war, or when war shall be imminent, such product or material as may be required, and any individual, firm, company, association, or corporation, or organized manufacturing industry, or the responsible head or heads thereof, failing to comply with the provisions of this section shall be deemed guilty of a felony, and upon conviction shall be punished by imprisonment for not more than three years and by a fine not exceeding $50,000.

"The compensation to be paid to any individual, firm, company, association, corporation, or organized manufacturing industry for its products or material, or as rental for use of any manufacturing plant while used by the United States, shall be fair and just."

2. The Act of March 4, 1917, 39 Stat. 1192, pertinent provisions.

"(a) That the word 'person' as used in paragraphs (b), (c), next hereafter shall include any individual, trustee, firm, association, company, or corporation. The word 'ship' shall include any boat, vessel, submarine, or any form of aircraft, and the parts thereof. The words 'war material' shall include arms, armament, ammunition, stores, supplies, and equipment for ships and airplanes, and everything required for or in connection with the production, thereof. The word 'factory' shall include any factory, workshop, engine works, building used for manufacture, assembling, construction, or any process, and any

shipyard or dockyard. The words 'United States' shall include the Canal Zone and all territory and waters, continental and insular, subject to the jurisdiction of the United States.

"(b) That in time of war * * * the President is hereby authorized and empowered, in addition to all other existing provisions of law:

* * * * *

"FOURTH. To requisition and take over for use or operation by the Government any factory, or any part thereof without taking possession of the entire factory, whether the United States has or has not any contract or agreement with the owner or occupier of such factory.

"(d)[1] That whenever the United States shall cancel or modify any contract, make use of, assume, occupy, requisition, or take over any factory or part thereof, or any ships or war material, in accordance with the provisions of paragraph (b) of this section, it shall make just compensation therefor, to be determined by the President, and if the amount thereof so determined by the President is unsatisfactory to the person entitled to receive the same, such person shall be paid fifty per centum of the amount so determined by the President and shall be entitled to sue the United States to recover such further sum as added to said fifty per centum shall make up such amount as will be just compensation therefor, in the manner provided for by section twenty-four, paragraph twenty, and section one hundred and forty-five of the Judicial Code."

3. Section 9 of the Selective Training and Service Act of 1940, 54 Stat. 892.

"The President is empowered, through the head of the War Department or the Navy Department of the Government, in addition to the present authorized methods of purchase or procurement, to place an order with any individual, firm, association, company, corporation, or organ-

[1] This should be "(c)".

ized manufacturing industry for such product or material as may be required, and which is of the nature and kind usually produced or capable of being produced by such individual, firm, company, association, corporation, or organized manufacturing industry.

"Compliance with all such orders for products or material shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof and shall take precedence over all other orders and contracts theretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any plant equipped for the manufacture of arms or ammunition or parts of ammunition, or any necessary supplies or equipment for the Army or Navy, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any manufacturing plant, which, in the opinion of the Secretary of War or the Secretary of the Navy shall be capable of being readily transformed into a plant for the manufacture of arms or ammunition, or parts thereof, or other necessary supplies or equipment, who shall refuse to give to the United States such preference in the matter of the execution of orders, or who shall refuse to manufacture the kind, quantity, or quality of arms or ammunition, or the parts thereof, or any necessary supplies or equipment, as ordered by the Secretary of War or the Secretary of the Navy, or who shall refuse to furnish such arms, ammunition, or parts of ammunition, or other supplies or equipment, at a reasonable price as determined by the Secretary of War or the Secretary of the Navy, as the case may be, then, and in either such case, the President, through the head of the War or Navy Departments of the Government, in addition to the present authorized methods of purchase or procurement, is hereby authorized to take immediate possession of any such plant or plants, and through the appropriate branch, bureau, or department of

the Army or Navy to manufacture therein such product or material as may be required, and any individual, firm, company, association, or corporation, or organized manufacturing industry, or the responsible head or heads thereof, failing to comply with the provisions of this section shall be deemed guilty of a felony, and upon conviction shall be punished by imprisonment for not more than three years and a fine not exceeding $50,000.

"The compensation to be paid to any individual, firm, company, association, corporation, or organized manufacturing industry for its products or material, or as rental for use of any manufacturing plant while used by the United States, shall be fair and just: *Provided,* That nothing herein shall be deemed to render inapplicable existing State or Federal laws concerning the health, safety, security, and employment standards of the employees in such plant.

"The first and second provisos in section 8(b) of the Act entitled 'An Act to expedite national defense, and for other purposes', approved June 28, 1940 (Public Act Numbered 671, Seventy-sixth Congress), are hereby repealed."

4. The Act of October 10, 1940, 54 Stat. 1090.

"That whenever the President determines that it is necessary in the interest of national defense to requisition and take over for the use or operation by the United States or in its interest any military or naval equipment or munitions, or component parts thereof, or machinery, tools, or materials, or supplies necessary for the manufacture, servicing, or operation thereof, ordered, manufactured, procured, or possessed for export purposes, the exportation of which has been denied in accordance with the provisions of section 6 of the Act approved July 2, 1940 (Public, Numbered 703, Seventy-sixth Congress), he is hereby authorized and empowered to requisition and take over for the said use or operation by the United States, or in its interest, any of the foregoing articles or materials, and to sell or otherwise dispose of any such articles or materials, or any portion thereof, to a person or a corporation of the United States whenever he shall determine such action to be in the public interest. Any moneys received by the

United States as the proceeds of any such sale or other disposition of any such articles or materials or any portion thereof shall be deposited to the credit of that appropriation out of which was paid the cost to the Government of the property thus sold or disposed of, and the same shall immediately become available for the purposes named in the original appropriation: *Provided, however,* That nothing in this section shall modify or repeal section 14 of Public Law Numbered 671, 76th Congress, approved June 28, 1940.

"Sec. 2. Whenever the President shall requisition and take over any article or material pursuant to the provisions of this Act, the owner thereof shall be paid as compensation therefor such sum as the President shall determine to be fair and just. If any such owner is unwilling to accept, as full and complete compensation for such article or material, the sum so determined by the President, such owner shall be paid 50 per centum of the sum so determined by the President and shall be entitled to sue the United States for such additional sum as, when added to the sum already received by such owner, such owner may consider fair and just compensation for such article or material, in the manner provided by sections 41 (20) and 250, title 28, of the Code of Laws of the United States of America: *Provided,* That recovery shall be confined to the fair market value of such article or material, without any allowance for prospective profits, punitive or other damages.

"Sec. 3. The authority granted in this Act shall terminate June 30, 1942, unless the Congress shall otherwise provide."[2]

5. The Act of October 16, 1941 (sometimes called the Requisitioning Act), 55 Stat. 742.

"That whenever the President, during the national emergency declared by the President on May 27, 1941, but not later than June 30, 1943, determines that (1) the use

---

[2] Such authority was extended to June 30, 1945; 56 Stat. 468, 58 Stat. 625.

of any military or naval equipment, supplies, or munitions, or component parts thereof, or machinery, tools, or materials necessary for the manufacture, servicing, or operation of such equipment, supplies, or munitions is needed for the defense of the United States; (2) such need is immediate and impending and such as will not admit of delay or resort to any other source of supply; and (3) all other means of obtaining the use of such property for the defense of the United States upon fair and reasonable terms have been exhausted, he is authorized to requisition such property for the defense of the United States upon the payment of fair and just compensation for such property to be determined as hereinafter provided, and to dispose of such property in such manner as he may determine is necessary for the defense of the United States. The President shall determine the amount of the fair and just compensation to be paid for any property requisitioned and taken over pursuant to this Act and the fair value of any property returned under section 2 of this Act, but each such determination shall be made on the basis of the fair market value of the property at the time it is requisitioned or returned, as the case may be.[3] If, upon any such requisition of property, the person entitled to receive the amount so determined by the President as the fair and just compensation for the property is unwilling to accept the same as full and complete compensation for such property he shall be paid 50 per centum of such amount and shall be entitled to sue the United States in the Court of Claims or in any district court of the United States in the manner provided by sections 24 (20) and 145

---

[3] This sentence was amended by Title VI of the Second War Powers Act 56 Stat. 181, so as to read as follows:

> "The President shall determine the amount of the fair and just compensation to be paid for any property requisitioned and taken over pursuant to this Act and the fair value of any property returned under section 2 of this Act, but each such determination shall be made as of the time it is requisitioned or returned, as the case may be, in accordance with the provision for just compensation in the fifth amendment of the Constitution of the United States."

of the Judicial Code (U. S. C., 1934 ed., title 28, secs. 41 (20) and 250) for an additional amount which, when added to the amount so paid to him, he considers to be fair and just compensation for such property. Such courts shall also have power to determine in an appropriate proceeding any questions that may arise with respect to the amount of the fair value to be paid upon the return of any property under section 2 of this Act, regardless of the amount in controversy in any such proceeding.

"Nothing contained in this Act shall be construed—

(1) to authorize the requisitioning or require the registration of any firearms possessed by any individual for his personal protection or sport (and the possession of which is not prohibited or the registration of which is not required by existing law),

(2) to impair or infringe in any manner the right of any individual to keep and bear arms, or

(3) to authorize the requisitioning of any machinery or equipment which is in actual use in connection with any operating factory or business and which is necessary to the operation of such factory or business.

"Sec. 2. Wherever the President determines that property acquired under this Act and retained is no longer needed for the defense of the United States, he shall, if the original owner desires the property and pays the fair value thereof, return such property to the owner; but, in any event, property so acquired and retained shall, if the owner desires the property and pays the fair value thereof, be returned to the owner not later than December 31, 1943.

"Sec. 3. The President from time to time, but not less frequently than once every six months, shall transmit to the Congress a report of operations under this Act."[4]

---

[4] This subsection (3) was deleted by the Act of March 27, 1942, 56 Stat. 181.

"Sec. 4. The President may issue such rules and regulations and require such information as may be necessary and proper to carry out the provisions of this Act, and he may exercise any power or authority conferred on him by this Act through such department, agency, board, or officer as he shall direct or appoint."

6. Title II of the Second War Powers Act, approved March 27, 1942, 56 Stat. 177.

"Sec. 201. The Act of July 2, 1917 (40 Stat. 241), entitled 'An Act to authorize condemnation proceedings of lands for military purposes', as amended, is hereby amended by adding at the end thereof the following section:

'Sec. 2. The Secretary of War, the Secretary of the Navy, or any other officer, board, commission, or governmental corporation authorized by the President, may acquire by purchase, donation, or other means of transfer, or may cause proceedings to be instituted in any court having jurisdiction of such proceedings, to acquire by condemnation, any real property, temporary use thereof, or other interest therein, together with any personal property located thereon or used therewith, that shall be deemed necessary, for military, naval, or other war purposes, such proceedings to be in accordance with the Act of August 1, 1888 (25 Stat. 357), or any other applicable Federal statute, and may dispose of such property or interest therein by sale, lease, or otherwise, in accordance with section 1 (b) of the Act of July 2, 1940 (54 Stat. 712). Upon or after the filing of the condemnation petition, immediate possession may be taken and the property may be occupied, used, and improved for the purposes of this Act, notwithstanding any other law. Property acquired by purchase, donation, or other means of transfer may be occupied, used, and improved, for the purposes of this section prior to the approval of title by the Attorney General as required by section 355 of the Revised Statutes, as amended.' "

7. Title III of the Second War Powers Act, 56 Stat. 177, 178, pertinent provisions.

"Sec. 301. Subsection (a) of section 2 of the Act of June 28, 1940 (54 Stat. 676), entitled 'An Act to expedite national defense, and for other purposes', as amended by the Act of May 31, 1941 (Public Law Numbered 89, Seventy-seventh Congress), is hereby amended to read as follows:

'Sec. 2. (a) (1) That whenever deemed by the President of the United States to be in the best interests of the national defense during the national emergency declared by the President on September 8, 1939, to exist, the Secretary of the Navy is hereby authorized to negotiate contracts for the acquisition, construction, repair, or alteration of complete naval vessels or aircraft, or any portion thereof, including plans, spare parts, and equipment therefor, that have been or may be authorized, and also for machine tools and other similar equipment, with or without advertising or competitive bidding upon determination that the price is fair and reasonable. Deliveries of material under all orders placed pursuant to the authority of this paragraph and all other naval contracts or orders and deliveries of material under all Army contracts or orders shall, in the discretion of the President, take priority over all deliveries for private account or for export: * * *'

'(2) Deliveries of material to which priority may be assigned pursuant to paragraph (1) shall include, in addition to deliveries of material under contracts or orders of the Army or Navy, deliveries of material under—

> '(A) Contracts or orders for the government of any country whose defense the President deems vital to the defense of the United States under the terms of the Act of March 11, 1941, entitled "An Act to promote the defense of the United States";
>
> '(B) Contracts or orders which the President shall deem necessary or appropriate to promote the defense of the United States;

'(C) Subcontracts or suborders which the President shall deem necessary or appropriate to the fulfillment of any contract or order as specified in this subsection (a).

Deliveries under any contract or order specified in this subsection (a) may be assigned priority over deliveries under any other contract or order; and the President may require acceptance of and performance under such contracts or orders in preference to other contracts or orders for the purpose of assuring such priority. Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense."

The Executive Orders.

(In Chronological Order)

1. Executive Order No. 8629, dated January 7, 1941, 6 Fed. Reg. 191, pertinent provisions.

"ESTABLISHING THE OFFICE OF PRODUCTION MANAGEMENT IN THE EXECUTIVE OFFICE OF THE PRESIDENT AND DEFINING ITS FUNCTIONS AND DUTIES.

"1. There shall be in the Office for Emergency Management of the Executive Office of the President, an Office of Production Management which shall consist of (1) a Director General, and (2) an Associate Director General, each to be appointed by the President, (3) The Secretary of War, and (4) the Secretary of the Navy.

"2. With such advice and assistance as it may require from other departments and agencies of the Federal Government, and subject to such regulations or directions as the President may from time to time prescribe, and subject further to the general policy that the Departments of War and Navy and other departments and agencies of the Government will be utilized to the maximum extent compatible with efficiency, the Office of Production Management shall:

a. Formulate and execute in the public interest all measures needful and appropriate in order (1) to increase, accelerate, and regulate the production and supply of materials, articles and equipment and the provision of emergency plant facilities and services required for the national defense, and (2) to insure effective coordination of those activities of the several departments, corporations, and other agencies of the Government which are directly concerned therewith.

b. Survey, analyze, and summarize for purposes of coordination the stated requirements of the War and Navy and other departments and agencies of the Government, and of foreign governments for materials, articles, and equipment needed for defense.

c. Advise with respect to the plans and schedules of the various departments and agencies for the purchase of materials, articles, and equipment required for defense, to coordinate the placement of major defense orders and contracts and to keep the informed of the progress of the various programs of production and supply.

d. Plan and take all lawful steps necessary to assure the provision of an adequate supply of raw materials essential to the production of finished products needed for defense.

e. Formulate plans for the mobilization for defense of the production facilities of the Nation, and to take all lawful action necessary to carry out such plans.

f. Determine the adequacy of existing production facilities and to assure their maximum use; and, when necessary, to stimulate and plan the creation of such additional facilities and sources of production and supply as may be essential to increase and expedite defense production.

* * * * *

h. Perform the functions and exercise the authorities vested in the President by Section 9 of the Selective Training and Service Act of 1940.

* * * * *

"5. There shall be within the Office of Production Management a Priorities Board composed of six members. A chairman and three other members shall be appointed or designated by the President; the Director General and Associate Director General shall be members, ex officio. The Priorities Board shall serve as an advisory body and from time to time as may be required by the Office of Production Management, shall make findings and submit recommendations with respect to the establishment of priorities, the placing of mandatory orders, the assignment of preference ratings, the allocation of deliveries, and other related matters. In making its findings and recommendations, the Priorities Board shall take into account general social and economic considerations and the effect the proposed actions would have upon the civilian population."

* * * * *

2. Executive Order No. 8875, dated August 28, 1941, 6 Fed. Reg. 4483, pertinent provisions.

"DELEGATION AND COORDINATION OF PRIORITY AUTHORITY

"1. The Office of Production Management, in addition to the responsibilities and duties described in paragraph 2 of Executive Order No. 8629 of January 7, 1941, is authorized and directed to discharge and perform the following responsibilities and duties, subject to such policies or regulations as the Supply Priorities and Allocations Board, hereinafter described, may from time to time determine:

a. Serve as the coordinating center for the execution of the powers and activities of the several departments and agencies relating to priorities; in this connection, review, clear, and approve for execution all requests or proposals originating from other Federal agencies, private industry, or other sources for priority action with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel, and other commodities; issue or provide for the issuance of all priority orders, warrants, certificates, or ratings with respect to the supply, production, transmission, or transportation of materials, articles, power, fuel, and other commodities; and, with reference to specific priority authorities vested by law in established departments and agencies of the Government certify to such departments and agencies, when the Office of Production Management deems such action necessary to national defense, that preferential treatment is essential for certain materials, commodities, facilities, or services.

* * * * *

"2. The Office of Production Management may exercise the powers, authorities, or discretion conferred upon it by this Order through such officials and in such manner as it may determine, subject to such policies or regulations as the Supply Priorities and Allocations Board may from time to time determine.

"3. In order to assure unity of policy and coordinated consideration of all relevant factors involved in the supply

and allocation of materials and commodities among the various phases of the defense program and competing civilian demands, there is hereby established within the office for Emergency Management a Supply Priorities and Allocations Board. The Board shall consist of the Director General and Associate Director General of the Office of Production Management, the Secretary of War, the Secretary of the Navy, the Special Assistant to the President supervising the defense aid program, the Administrator of the Office of Price Administration, and the Chairman of the Economic Defense Board. The Chairman of the Supply Priorities and Allocations Board shall be designated by the President from among the members of the Board. The President shall also appoint an Executive Director of the Board, who will preside in the absence of the Chairman.

* * * * *

"5. Consistent with the basic defense policies of the President, the Supply Priorities and Allocations Board shall:

a. Determine the total requirements of materials and commodities needed respectively for defense, civilian, and all other purposes; establish policies for the fulfillment of such requirements, and, where necessary, make recommendations to the President relative thereto.

b. Determine policies and make regulations governing allocations and priorities with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel, and other commodities among military, economic defense, defense aid, civilian, and other major demands of the total defense program.

"6. The Office of Production Management through its Division of Priorities or any other of its divisions or subdivisions shall formulate general plans and programs providing for allocations and priorities with respect to the procurement, production, transmission, or transporation of materials, articles, power, fuel, and other commodities among military requirements, economic defense needs, total

civilian demands, defense aid needs, and other major elements of the total defense program. Such general plans and programs shall be submitted to the Supply Priorities and Allocations Board for approval or modification.

3. Executive Order No. 8942, dated November 19, 1941, 6 Fed. Reg. 5909, pertinent provisions.

"PROVIDING FOR THE ADMINISTRATION OF THE REQUISTIONING OF PROPERTY REQUIRED FOR NATIONAL DEFENSE.

"By virtue of the authority vested in me by the Constitution and the statutes of the United States, and particularly by the Act of October 10, 1940, entitled 'An Act to Authorize the President to requisition certain articles and materials for the use of the United States, and for other purposes,' and the Act of October 16, 1941, entitled 'An Act to authorize the President of the United States to requisition property required for the defense of the United States' (hereinafter referred to as the Acts), and in order to provide for the effective administration of the requisitioning of property required for the defense of the United States, it is hereby ordered:

"1. The Office of Production Management, in addition to the responsibilities and duties described in Executive Order No. 8629 of January 7, 1941, and Executive Order No. 8875 of August 28, 1941, shall, except as may otherwise be provided hereinafter, exercise the powers and authorities conferred upon the President by the Acts.

"2. Whenever the Office of Production Management determines, in accordance with the provisions of the Acts, the necessity for requisitioning property, that Office may:

a. requisition and dispose of such property on its own account; or

b. provide for the requisitioning and disposition of such property through the Department of War, the Department of the Navy, or any other department or agency of

the Government authorized to engage in the procurement of property of the type subject to requisition under the Acts.

"3. Whenever requested by the Office of Production Management, any department or agency of the Government is hereby authorized to requisition and dispose of property in accordance with the provisions of the Acts and to make available to the Office of Production Management such personnel, including officers of the armed services, as may be necessary to enable that Office to carry out its functions under this Order. The United States Marshals also are hereby authorized and directed, when requested by, and in accordance with directions of the Office of Production Management or the head of any department or agency of the Government authorized to requisition property pursuant to this Order, to requisition and dispose of property.

"4. The Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Agriculture, the Chairman of the United States Maritime Commission, the Executive Director of the Economic Defense Board, or the head of such other agency as the President may from time to time designate, may initiate action for the requisitioning of property by submitting proposals for the requisitioning and disposal of such property to the Office of Production Management, whenever he determines that:

a. such property is of the type which may be requisitioned under either of the Acts;

b. with respect to proposals for requisitioning property under the Act of October 16, 1941:

(1) the use of such property is needed for the defense of the United States,

(2) such need is immediate and impending and such as will not admit of delay or resort to any other source of supply,

(3) all other means of obtaining the use of such property for the defense of the United States upon fair and reasonable terms have been exhausted,

(4) if the property to be requisitioned is machinery or equipment, such machinery or equipment is not in actual use in connection with any operating factory or business or is not necessary to the operation of such factory or business, and

(5) the property to be requisitioned is not a firearm possessed by an individual for his personal protection or sport, the possession of which is not prohibited by existing law;

c. with respect to proposal to requisition property under the Act of October 10, 1940, there exists a necessity for requisitioning the property in accordance with the provisions of section 1 of the Act.

The head of any department or agency acting pursuant to the provisions of this paragraph shall be authorized to requisition and dispose of such property, provided that the Office of Production Management determines that the proposed requisitioning and disposal of such property is consistent with the priorities and allocations program and the general production and supply plan of the Office of Production Management.

"5. The Office of Production Management or the head of any department or agency which requisitions property pursuant to this Order shall determine the amount of the fair and just compensation to be paid for any property requisitioned pursuant to the Acts, and the fair value of any property returned in accordance with section 2 of the Act of October 16, 1941."

4. Executive Order No. 9024, dated January 16, 1942, 7 Fed. Reg. 329, pertinent provisions.

"ESTABLISHING THE WAR PRODUCTION BOARD IN THE EXECUTIVE OFFICE OF THE PRESIDENT AND DEFINING ITS FUNCTIONS AND DUTIES.

"1. There is established within the Office for Emergency Management of the Executive Office of the President a War Production Board, hereinafter referred to as the Board. The Board shall consist of a Chairman, to be appointed by the President, the Secretary of War, the Secretary of the Navy, the Federal Loan Administrator, the Director General and the Associate Director General of the Office of Production Management, the Administrator of the Office of Price Administration, the Chairman of the Board of Economic Warfare, and the Special Assistant to the President supervising the defense aid program.

"2. The Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall:

a. Exercise general direction over the war procurement and production program.

b. Determine the policies, plans, procedures, and methods of the several Federal departments, establishments, and agencies in respect to war procurement and production, including purchasing, contracting specifications and construction; and including conversion, requisitioning, plant expansion, and the financing thereof; and issue such directives in respect thereto as he may deem necessary or appropriate.

c. Perform the functions and exercise the powers vested in the Supply Priorities and Allocations Board by Executive Order No. 8875 of August 28, 1941.

* * * * *

"3. Federal departments, establishments, and agencies shall comply with the policies, plans, methods and procedures in respect to war procurement and production as

determined by the Chairman; and shall furnish to the Chairman such information relating to war procurement and production as he may deem necessary for the performance of his duties.

* * * * * *

"5. The Chairman may exercise the powers, authority, and discretion conferred upon him by this Order through such officials or agencies and in such manner as he may determine; and his decisions shall be final.

* * * * * *

"7. The Supply Priorities and Allocations Board established by the Executive Order of August 28, 1941 is hereby abolished, and its personnel, records and property transferred to the Board. The Executive Orders No. 8629 of January 7, 1941, No. 8875 of August 28, 1941, No. 8891 of September 4, 1941, No. 8942 of November 19, 1941, No. 9001 of December 27, 1941 and No. 9023 of January 14, 1942 are hereby amended accordingly, and any provisions of these or other pertinent Executive Orders conflicting with this Order are hereby superseded."

5. Executive Order No. 9040, dated January 24, 1942, 7 Fed. Reg. 527, pertinent provisions.

"DEFINING ADDITIONAL FUNCTIONS AND DUTIES OF THE WAR PRODUCTION BOARD.

"1. In addition to the responsibilities and duties described in paragraph 2 of Executive Order No. 9024 of January 16, 1942, the Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall:

a. Perform the functions and exercise the powers heretofore vested in the Office of Production Management.

b. Perform the functions and exercise the powers vested in the Supply, Priorities and Allocations Board by Executive Order No. 8942 of November 19, 1941.

c. Perform the functions and exercise the authority vested in the President by Section 120 of the National Defense Act of 1916 (39 Stat. 213).

• • • • • •

"4. The Office of Production Management, established by Executive Order No. 8629 of January 7, 1941 is abolished and its personnel records, property and funds are transferred to the War Production Board.

"5. Executive Order No. 8629 of January 7, 1941 is rescinded and Executive Order No. 9024 of January 16, 1942 and any other Executive Orders, the provisions of which are inconsistent with the provisions of this order, are amended accordingly."

6. Executive Order No. 9125, dated April 7, 1942, 7 Fed. Reg. 2719, pertinent provisions.

"DEFINING ADDITIONAL FUNCTIONS, DUTIES AND POWERS OF THE WAR PRODUCTION BOARD AND THE OFFICE OF PRICE ADMINISTRATION.

"1. In addition to the responsibilities and duties described in Executive Order No. 9024, of January 16, 1942, and in Executive Order No. 9040 of January 24, 1942, the Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall perform the additional functions and duties, and exercise the additional powers, authority and discretion conferred upon the President of the United States by Title III of the Second War Powers Act 1942.

"2. The Chairman of the War Production Board may perform the functions and duties, and exercise the powers, authority, and discretion conferred upon him by this or any other order through such officials or agencies, including the Office of Price Administration (created by the Act of January 30, 1942, Pub. Law 421, 77th Cong., 2d Sess.), and in such manner as he may determine. In any and all such cases the decision of the Chairman of the War Production Board shall be final."

7. Executive Order No. 9138, dated April 17, 1942, 7 Fed. Reg. 2919, pertinent provisions.

"PROVIDING FURTHER FOR THE ADMINISTRATION OF THE REQUISITIONING OF PROPERTY REQUIRED FOR THE PROSECUTION OF THE WAR.

"1. In addition to the authority conferred upon the Chairman of the War Production Board and the heads of certain departments and agencies by Executive Order No. 8942 of November 19, 1941, and Executive Order No. 9040 of January 24, 1942, such officials shall exercise in the manner provided in such Executive orders the authority conferred by Title VI of the Second War Powers Act, 1942,[5] except that the determination described in paragraph 4 b (4) of Executive Order No. 8942 shall not be required.

"2. Paragraph 4 b (4) of Executive Order No. 8942 of November 19, 1941, is hereby revoked."

Respondents.

On Petition for a Writ of Certiorari to the United States Court of Claims

---

BRIEF FOR RESPONDENTS, BALD MOUNTAIN MINING COMPANY (A CORPORATION) AND ERMONT MINES, INC., IN OPPOSITION.

OPINIONS BELOW

The opinion of the Court of Claims is printed in Pet. App. pp. 1-50 and the opinion on rehearing is printed in Pet. App. pp. 123-130. The opinion is reported at 138 F. Supp. 281.

JURISDICTION

The judgment of the Court of Claims was entered on February 20, 1956. A motion by the United States for a new trial was denied on July 12, 1956. By order

of the Chief Justice signed on October 9, 1956, the time for filing a petition for writ of certiorari was extended to and including October 24, 1956. Respondents' time for filing a brief in opposition was extended to and including December 7, 1956. The jurisdiction of this Court is invoked under 28 USC 1255.

QUESTIONS PRESENTED

1. Whether Limitation Order L-208 was under the Fifth Amendment a temporary taking of the respondents' rights to make profitable use of the gold mining properties.

2. Whether, if there was a temporary taking, such action by the War Production Board was authorized so as to impose liability therefor upon the United States.

THE CONSTITUTIONAL PROVISION, STATUTES, EXECUTIVE ORDERS AND REGULATIONS

The Fifth Amendment to the Constitution;

§ 120 of the National Defense Act of 1916, 39 Stat. 166, 213;

The Act of March 4, 1917, 39 Stat. 1192;

§ 9 of the Selective Training and Service Act of 1940, 54 Stat. 892;

The Act of October 10, 1940, 54 Stat. 1090;

The Requisitioning Act of October 16, 1941, 55 Stat. 742, as amended 56 Stat. 181;

Title II of the Second War Powers Act, 56 Stat. 177;

Title III of the Second War Powers Act, 56 Stat. 177-178.

The Executive Orders are:

Ex. Order 8629, 6 F.R. 191
Ex. Order 8875, 6 F.R. 4483
Ex. Order 8942, 6 F.R. 5909
Ex. Order 9024, 7 F.R. 329
Ex. Order 9040, 7 F.R. 527
Ex. Order 9125, 7 F.R. 2719
Ex. Order 9138, 7 F.R. 2919

STATEMENT

Respondent, Bald Mountain Mining Company, is a South Dakota Corporation and the owner in fee simple of gold-bearing lands in Lawrence County, South Dakota. Respondent, Ermont Mines, Inc., is an Oregon corporation owning a compact and contiguous group of quartz lode mining claims in Beaverhead County, Montana.

This is an action to recover just compensation under the Fifth Amendment for a taking of the respondents' right to make use of the materials, facilities, and equipment which they owned and had on hand in the operation of their legitimate and legal mining enterprises.

During the early part of World War II, Congress enacted a number of statutes which gave the President power of allocation and priority with respect to scarce materials which might be used or needed during the course of the War. Other legislation conferred upon the President the power to requisition or take by requisition or by the placing of mandatory order materials, facilities, or other things needed for national defense. The President delegated his powers under the various acts to the War Production Board or its predecessors in a series of Executive Orders. (Pet. App. p. 3 note).

The mining industry along with other industries was subject to regulations with respect to its acquisition and use of materials, supplies, and equipment needed in the defense effort. As is noted (Pet. App. pp. 4, 5) in the earlier findings in the case, the priority orders applicable to the mining industry issued prior to Order L-208 had succeeded in controlling the use of facilities, machinery, and equipment, and it was possible for this country to authorize exports of large amounts of mining machinery to foreign countries.

Copper mining and other non-ferrous metal mines were, of course, very essential to the war effort whereas it was alleged that gold mining was not. A serious manpower situation developed with respect to what is known as the non-ferrous metal mining industry. In the states where non-ferrous metal mining was an important industry, agriculture was also an important industry, and the Selective Service Board was unwilling to defer both agricultural workers and mining workers. Agricultural workers were deferred but mine labor was not. The aircraft manufacturing industry badly needed non-ferrous metal, particularly copper, but the supply of available miners was insufficient to satisfy the requirements. The rate of wages in the non-ferrous metal mines was low and working conditions were bad. There was no power in any arm of the Government to force gold miners into non-ferrous metal mines. Workers in the non-ferrous metal mines left those mines and went to the West Coast to get higher wages and better working conditions in the aircraft industry, or they stayed closer to home and found new employment in the nearby Army and Navy installations and defense projects. Similarly, some employees of the gold mines left the

gold mines in order to take advantage of war-time opportunities. However, the exodus from the gold mines was not considerable, for the reason that conditions in the gold mines were, on the whole, much better than in the non-ferrous metal mines.

The War Production Board and the armed services were concerned with the manpower problem in the non-ferrous metal mines. Everyone involved with this problem was aware of the fact that there was no legal way to force gold miners to work in the non-ferrous metal mines. Despite this fact, the idea was conceived that, if the gold mines were shut down, the gold miners would perhaps go to work in the copper mines where, however, wages and working conditions were far less desirable than in the gold mines and certainly less desirable than in other industries where the gold miners could readily get employment.

War Production Board Order L-208 was issued in the hope shared by the War Production Board and the War Department that the gold miners would go to work in the copper mines and would not go to work in the aircraft plants and shipbuilding industries. Because the War Production Board and, in fact, no agency of the Government had the right to require civilian manpower to work in any particular industry, War Production Board Order L-208 said nothing at all about manpower. The ostensible purpose of L-208 was that of allocating scarce materials, and the preamble of the Order read as follows (Pet. App. p. 86):

> "The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines;

and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

The statutory authority cited at the conclusion of the Order was Section 2(a) of the Act of June 28, 1940 (54 Stat. 676).

The order falls into two parts. It prevents the gold mine owners and operators from acquiring any new equipment, materials, and facilities. To that extent the Order merely duplicated existing priorities and allocation orders although it made them more stringent. The Court of Claims held that, had Order L-208 stopped at this point, this would not have amounted to a taking (Pet. App. p. 32, 126). But the order went on to prohibit the owners of the gold mines from even using materials, facilities, and equipment which they already owned and had on hand in the operation of their gold mining enterprises. The Court held that to the extent that L-208 denied those gold mine owners the right and authority to make use of the materials, facilities, and equipment that they had on hand in the operation of their legitimate and legal mining enterprises, L-208 had the effect of depriving those gold mining owners of the right to carry on their mining enterprise, and that that right was a valuable property which, when taken, must be paid for by just compensation by the Government. The Court held that the general statutory scheme authorizing the President to take private property or to deprive owners of its effective use was sufficiently broad to constitute an authorization to the War Production Board to deprive the gold mine owners of their right to do business, and the Court concluded that the Government must pay just compensation for a taking which is authorized.

ARGUMENT

It is clear that the basic determinations made by the Court below were:

(A) To the extent that Order L-208 denied respondents the right to make use of the materials, facilities, and equipment which they owned and had on hand in the operation of their legitimate and legal mining enterprises, L-208 deprived respondents of a valuable property right, compensable under the Fifth Amendment.

(B) The War Production Board had authority under the general statutory scheme to impose liability upon the United States for the temporary taking.

This decision does not warrant review by this Court.

A. On Page 2 of the Government's Brief in Support of the Petition for a Writ of Certiorari the Government urges that Order L-208 was issued in order to "conserve scarce war materials and bring about the voluntary relocation of skilled manpower to more vital mining activities." Yet the Order contained no provision for routing scarce war materials held by gold mine owners to the more urgent users of such material. For that matter, the owners were left free to dispose of these items as they saw fit (Pet. App. p. 90). Nor did Order L-208 say anything in the preamble or in the provisions themselves about the necessity of bringing about the voluntary relocation of skilled manpower to more vital mining activities. No agency of the Government had any explicit authority to control civilian manpower during the War. The War Production Board hoped that closing the gold mines would substantially relieve the shortage of non-ferrous metal miners, but it knew or should have known that this

desideratum would not come into being. The Court of Claims made a finding that no more than 100 gold miners went into other mines and remained there for a year or more (Pet. App. p. 8). L-208 was not intended to conserve scarce war material and was foredoomed to failure in diverting manpower.

A good portion of the Government's brief is devoted to showing that the opinion of the Court of Claims in the instant case departs from some of the statements and holdings in its decision in *Oro Fino* v. *United States,* 118 C. Cls. 18, certiorari denied, 341 U.S. 948, and *St. Regis Paper Company* v. *United States,* 110 C. Cls. 271, certiorari denied, 335 U.S. 815, in which cases the claims were rejected.

These cases can be readily distinguished from the instant case. The rationale of the Court of Claims is thoroughly consistent. The *Oro Fino* case sought recovery of damages which the plaintiff incurred in protecting its property. No taking was alleged and the plaintiff did not seek to recover the value of the property taken. The Court pointed out in the *St. Regis* case that M-251 amounted to a taking of plaintiff's inventory of pulpwood. However, plaintiff in the St. Regis case did not sue for the taking of the pulpwood, probably because shortly after M-251 was issued, the plaintiff received what it considered just compensation for the requisition on mandatory sale to the designees. The closing of plaintiff's pulpwood plant itself was really consequential to the taking of its supply of pulpwood; therefore, it amounted to a taking which was not compensable. It clearly appears that the United States under the Second War Powers Act had a right to issue an order that during a certain period of time no plant in the certain area could consume,

process, or deliver any such pulpwood except upon a specific authorization of the War Production Board. In the instant case, as we have shown above, Order L-208 was not in fact issued to conserve critical materials needed in the defense effort. No attempt was made to requisition or otherwise purchase these materials from the mines which were closed by Order L-208. In fact, the United States exported some of these materials prior to the issuance of Order L-208 and throughout the war.

On page 12 the Government's Petition urges that there was no affirmative use or invasion of the gold mines by the Government. The Government urged the same position without success in the case of *Edward P. Stahel & Co. et al* v. *United States,* 111 C. Cls. 682, certiorari denied, 336 U.S. 951. In the *Stahel* case, the O.P.M. amended General Preference Order M-22 to provide that the plaintiff could not sell to anyone but the Government or persons designated by the Government. Two months after the issuance of M-22, the Government and its designees placed mandatory orders with the plaintiffs. The Court of Claims held that by its Order of October 16 the Government took the plaintiff's silk for public use. It required the plaintiffs to sell their silk, upon request, to those who would use it for the Government's purposes, or to the Government itself, and it forbade the delivery or use of the silk for any other purpose except by the specific license of the Government, which license, so far as appears, was in no case granted. Until the silk was actually taken some two or more months afterwards, there was no affirmative use of their silk. The deprivation itself was the legal taking.

The fact that there was as much gold in the mines when Order L-208 was revoked as when it was issued is immaterial. The plaintiffs are not suing for the taking of their gold, but for the right to operate their gold mines at a profit during the period of closure.

It has been held by the Supreme Court on numerous occasions that action short of acquisition of title or short of physical occupancy may constitute a taking. *United States* v. *General Motors Corporation,* 323 U.S. 373; *United States* v. *Welch,* 217 U.S. 333; *Richards* v. *Washington Terminal Co.,* 233 U.S. 546; *Kimball Laundry Co.* v. *United States,* 338 U.S. 1.

B. The second issue is whether or not the War Production Board had authority under the general statutory scheme to impose liability upon the United States for the temporary taking. Here, too, the reasoning of the Court of Claims goes to the very heart of the matter and results in a fair and equitable determination as to which there can be no room for doubt.

On page 15 of the Petition the Government urges that "the Court of Claims has ignored the significant factors that (1) the War Production Board did not have the authority to requisition property in circumstances such as are here involved and (2) that the Board did not intend, nor did it purport, to exercise any requisitioning authority that it had." The Court of Claims did not ignore either of those factors. In the first place, the Court specifically decided that the War Production Board did have authority to requisition property in the circumstances here involved under the general statutory scheme of war-time control. The Court found that these statutes were broad and generous in their terms and required very little by way

of procedure or findings of fact, leaving such matters to the discretion of the War Production Board (Pet. App. pp. 11-12). The opinion of the Court of Claims rests squarely on substance, not shadow. The Court held that while the Board may not have intended or purported to exercise any requisitioning authority, that factor was unimportant if what the Board did amounted to a requisition and if it had authority, as the Court held it had, to requisition (Pet. App. p. 127). This is in line with the reasoning of the Court of Claims in the *Stahel* case which held that a taking in the constitutional sense occurred *ipso facto* when the Government forbade those plaintiffs from selling or delivering their silk to any user but the Government or its designees.

The Government has suggested that the Supreme Court should provide more authoritative guidance than has the Court of Claims in current planning for future periods of stress, as well as in the actual operation of controls in times of emergency. It is difficult to conceive of a more definitive delineation between "regulation" and "taking" than that laid down by the Court of Claims in this case. In view of the fact that L-208 represents the only attempt by the Government agencies in peacetime or wartime to regulate by immobilization, it seems clear that the distinction between regulation and taking discussed by the Court of Claims was one of which those agencies were aware. Any holding other than that of the Court of Claims would open the door to wholesale violation of constitutional rights by war agencies of the Government in the name of expediency rather than by due process of law.

CONCLUSION

The opinion of the Court of Claims to which the Government excepts is a careful and detailed analysis of the whole controversy. The Court makes clear, practical, and just distinctions between a regulation, a taking, and consequential injury, and between authorized and unauthorized takings. It provides sound guidance in this field for the foreseeable contingencies of the future.

It is therefore respectfully submitted that the petition for a writ of certiorari should be denied.

October Term, 1957

No. 29

THE UNITED STATES,
Petitioner,

vs.

CENTRAL EUREKA MINING COMPANY (A CORPORATION), ALASKA-PACIFIC CONSOLIDATED MINING COMPANY, IDAHO MARYLAND MINES CORPORATION, HOMESTAKE MINING COMPANY, BALD MOUNTAIN MINING COMPANY, ERMONT MINES, INC.,
Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF CLAIMS

BRIEF FOR RESPONDENTS

Appendices A, B, C and D, which are hereinafter described, are printed in a separate Volume.

OPINIONS BELOW

The original opinion of the Court of Claims (Judge LITTLETON) and the dissenting opinions of Judges JONES and LARAMORE (R. 11-62) are reported at 134 C. Cl. 1 and 138 F. Supp. 281. The Court's opinion (Judge LITTLETON) on the denial of the motion for a new trial (R. 142-147) is reported at 134 C. Cls. 130 and 146 F. Supp. 476.[1]

[1] The Court of Claims denied motions to dismiss three of the respondents' petitions on May 6, 1952 in *Idaho Maryland Mines Co.* v. *United States*, 122 C. Cls. 670; *Homestake Mining Co.* v. *United States*, 122 C. Cls. 690; and *Central Eureka Mining Co.* v. *United States*, 122 C. Cls. 691.

A petition filed by Oro Fino Consolidated Mines, Inc. had previously been dismissed on October 2, 1950 in *Oro Fino Consolidated Mines, Inc.* v. *United States*, 118 C. Cls. 18, cert. den. 341 U. S. 948 and the original petition filed by Alaska Pacific Consolidated Mining Company was dismissed on July 9, 1951, in *Alaska-Pacific Consolidated Mining Company* v. *United States*, 120 C. Cls. 307, on the authority of the *Oro Fino* decision.

JURISDICTION

This Court granted certiorari on January 14, 1957, 352 U. S. 964.

THE CONSTITUTIONAL PROVISION, STATUTES AND EXECUTIVE ORDERS.

The actions involve the taking of the property of the respondents under War Production Board Order L-208, which was issued on October 8, 1942 and is set out in the Findings of Fact of the Court below (R. 102-105) and as Appendix B hereto.

The Fifth Amendment to the Constitution provides in part:

> "* * * nor shall private property be taken for public use, without just compensation."

All the statutes which are relied upon with respect to the authority for Order L-208, whether by the petitioner or by the respondents in this brief, are set forth in full or in pertinent part in Appendix C.

The Executive Orders which are relevant in connection with the status, make-up and authority of the WPB are set forth in Appendix D.

The Special Jurisdictional Act of July 14, 1952 (66 Stat. 605) provides:

> "The United States Court of Claims be, and hereby is, given jurisdiction to hear, determine, and render judgment, notwithstanding any statute of limitations, laches, or lapse of time, on the claim of any owner or operator of a gold mine or gold placer operation for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof: *Provid*[illegible] That actions on such claims shall be brought within one year from the date this Act becomes effective."

QUESTIONS PRESENTED

This case does not present the question stated in the petitioner's brief. The questions actually presented arise in this way:

By October 8, 1942 the Congress had conferred on the President very broad powers to take property, real or personal, which he thought it necessary or desirable to take in order to prosecute the War. Order L-208 was issued on October 8, 1942 by the WPB, an agency of the President and, as the Government's brief acknowledges, the Order was "approved by the President".

The Order categorically directed about 150 owners of gold mines or gold placer operations, which were classified as "nonessential", to "close down". It provided that any who failed to do so were subject to fine or imprisonment.

The sole purpose of the Order was to throw "hard-rock miners" out of work in the hope that they would seek and obtain employment in copper or other nonferrous metal mines which were producing critical materials. No other order was issued by the WPB for a similar purpose.

At the time, and throughout the War, there was no labor draft, so that it was impossible to require employees of nonessential industries to transfer to essential industries. In this one instance, the WPB decided to close down a nonessential industry, in the hope that it could "maneuver" some of the skilled labor into work which would contribute directly to the War effort. The WPB acted at the instance of the War Department and the Army (the Services of Supply) and the effect of its action was exactly the same as if the Army had taken over the respondents' mines, discharged the employees and closed down operations. Nothing at all like that was done to any other group of individuals or corporations during the War.

Order L-208 was dressed up with some of the conventional features of an order for the conservation and

allocation of critical materials, and with other features which superficially suggested that the Order was a critical materials order, but the camouflage was imperfect. The respondents sustained the burden of establishing that the only purpose of the Order was to close down the nonessential gold mines in the hope of maneuvering hardrock miners to the nonferrous metal mines. The Court of Claims so found and its Finding is supported by overwhelming evidence.

The Court of Claims found *as a fact* that Order L-208 was not an allocation order, as it purported to be. Indeed, the petitioner's brief concedes (p. 53) that the Court of Claims concluded that "L-208 was not devised for the purpose of conserving or allocating materials".

The provisions of the Order, referred to in the petitioner's statement of the question presented (p. 2), which "prohibited operators of nonessential gold mines from acquiring or using *any*[2] material, facility or equipment for mining purposes except the minimum amounts necessary for adequate maintenance" were not designed to conserve *critical* materials. As the Court below held, they merely implemented the directive that the nonessential mines close down, although they helped to give Order L-208 some superficial resemblance to an order relating to the conservation or allocation of critical materials.

Nor was the Order intended to prohibit the "sale or disposition of mining machinery and equipment without the permission of the War Production Board", as suggested in the petitioner's statement of the question presented (p. 2). Such prohibitions were only added to the Order by later amendments which were designed to deal routinely with a consequence of the closing of the mines, viz., the fact that some of the operators whose mines had been closed down might wish to sell some of the machinery and equip-

[2] Italics are supplied in this brief unless otherwise indicated.

ment which had been made idle. The two amendments of the Order were considered so unimportant by counsel for the petitioner in the Court of Claims that they were never called to the attention of that Court in any way and one is not even in the record. Nor were they adverted to in the petitioner's statement of the questions presented in the petition for certiorari; in its brief on the merits the petitioner revised the statement of the questions presented in the hope of opening the door to arguments based on the amendments (see below, p. 60-62).

The questions presented are these:

1. Whether a taking is effected when, during a period in which there is no statutory authority for the drafting or allocation of labor, an agency of the President issues an order that singles out a relatively small number of individuals and corporations who operate mines and directs them to close down, thus depriving them of their right to operate their mines, in the hope that their employees, thrown out of work, will seek and obtain other employment believed to be more useful.

2. Whether if an order which effects a taking is camouflaged, so that it has some superficial resemblance to an order for the conservation or allocation of critical materials, the Government can escape liability on that account.

3. Whether the Government can escape liability on the ground stated in the petitioner's Point II (p. 69), that "there was no intention, or authority, on the part of WPB to take respondents' property or business".

Only if the Court should conclude that there was not a compensable taking would it become necessary to consider a further question:

4. Did the Special Jurisdictional Act of July 14, 1952 establish liability to those who suffered losses as a result of Order L-208?

STATEMENT OF THE CASE.

If the facts of these cases were as indicated in the petitioner's brief they would probably never have been brought; if instituted, they would have been dismissed by the Court of Claims and this Court would never have granted certiorari.

The background, purpose, provisions and effects of Order L-208 are the subject of 52 Findings of Facts made by the Court of Claims which affect all of the six respondents (R. 62-111).

There are 88 additional Findings which relate to the six respondents respectively,[3] and 35 which relate to three plaintiffs below whose petitions were dismissed (R. 111-140).

The six respondents are all owners of gold mining operations which were closed down in compliance with Order L-208, and except for the Order could have operated until the Order was revoked on June 30, 1945 (Finding 73, R. 116; Finding 82, R. 117; Finding 104, R. 123) or for at least a part of that time.

The facts with respect to the dates when their operations were shut down, the disposition of appeals made by some of them, and the time when operations were resumed are set forth in the 88 Findings already mentioned.[4] All of such facts which are pertinent for present purposes are adequately set forth in the petitioner's brief (p. 11-13). To that extent the Statement in the petitioner's brief is fair and accurate.

The treatment in the petitioner's brief of the facts covered by the 52 general Findings of Fact (R. 62-111), and particularly the crucial ultimate Findings of Fact and the related portions of the Court's two opinions, is another matter.

---

[3] The date of the revocation of Order L-208, June 30, 1945, is stated in Finding 90, which is in a group of findings relating to the respondent Central Eureka (R. 120).

[4] See table in footnote 72 at page 146 below.

The Findings of Fact made by the Court of Claims and the proceedings which led thereto.

The lower Court's 52 general Findings of Fact cover the background, purposes, provisions and effects of Order L-208 very fully. There are many detailed evidentiary or subsidiary findings; some of them give the entire text of documents or pertinent portions thereof; others set forth the Court's findings on matters with respect to which there was oral evidence.[5]

There are several ultimate Findings, such as

Finding 17, which concludes by saying that "By March 2, 1942 a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment" (R. 75);

Finding 46, which relates to the real purpose of the Order (R. 105-106);

Finding 48, which relates to the inadaptability of the Order to serve as a critical materials measure (R. 106); and

Findings 47, 50 and 51, which relate to the ineffectiveness of the Order to bring about the transfer of a significant number of hardrock miners to the nonferrous metal mines (R. 106-107).

The Findings of the Court of Claims were the culmination of formidable legal proceedings in which the Court showed itself to be outstandingly fair-minded and thorough.

The Court of Claims was certainly not predisposed in favor of claims for compensation arising under Order L-208. In *Oro Fino Consolidated Mines, Inc.* v. *United*

---

[5] For example, there is a long finding, No. 36, which relates to a five-hour meeting on October 1, 1942, seven days before L-208 was issued, at which representatives of the gold mines protested against the proposed Order and were told why it was going to be issued and what it was supposed to accomplish (R. 97-98).

States (1950) 118 C. Cls. 18, cert. den. 341 U. S. 948, it dismissed a petition which did not allege the facts pertaining to the Order that were later proved by these respondents, and the *Oro Fino* opinion leaves no doubt that the Court was prepared to indulge in every reasonable presumption in favor of the Government. When three of the respondents filed petitions containing detailed factual averments with respect to Order L-208, the motions to dismiss those petitions were denied, but the Court's opinion said that the petitioners (now respondents) would have "a most difficult burden" to sustain. *Idaho Maryland Mines Corp.* v. *United States*, (1952) 122 C. Cls. 670, 689.

There were hearings before a Commissioner lasting from November 19, 1952 to April 7, 1953, with 22 hearing days, 2100 pages of transcript and over 380 exhibits received in evidence. Detailed proposed Findings of Fact were submitted by both sides and extensive objections to the proposed Findings were also submitted to the Commissioner by both sides. On March 30, 1954 the Commissioner filed his Report (R. 1), which contains 132 findings and in its original print is 61 pages long.

Exceptions, briefs and reply briefs were filed in the Court of Claims. The exceptions, brief and reply brief of Homestake Mining Company, which had the laboring oar (R. 19-20), totaled 326 pages. The Government's exceptions and brief totaled 148 pages. There was an argument of about four hours before the Court of Claims on January 12-13, 1955 (R. 10).

The Court of Claims kept the case under advisement until February 20, 1956 when it handed down its opinion and Findings of Fact, which with short dissenting opinions of Chief Judge JONES and Judge LARAMORE take up 128 pages of the record.

A study of the Findings of Fact made by the Court of Claims, in the light of the Commissioner's Report, the objections thereto and the briefs, will reveal that the Court

of Claims was extraordinarly thorough and careful: it obviously considered all the objections to the Commissioner's Report; it made many changes in the Commissioner's findings; and it added several new findings.

While the petitioner's brief contains countless assertions which are at variance with the Findings of Fact of the Court of Claims, it fails to point out a single Finding of Fact which it contends is not supported by the evidence.

It is also significant that when the Government moved for a new trial, it did not base its motion on a contention that the Court had made any errors of fact (R. 142-147).

Despite all this, the petitioner's brief now disregards the Findings of Fact almost as completely as if this Court had the first and primary responsibility to determine the facts.

The respects in which the petitioner's brief fails to make a dependable statement of the facts.

In the petitioner's brief we find all of the following:

1. There is virtually no mention of the Findings of Fact of the Court of Claims.[6]

2. When an assertion is made on a point of fact and the record is cited, any one of a number of things may be found:

(i) the assertion may be consistent with a Finding of Fact and the citation may be to the Finding without mentioning that there is a Finding;

(ii) the assertion may be in direct conflict with a Finding of Fact and the citation may be to an item of evidence on which the petitioner relied unsuccessfully below;[7] or

---

[6] Except for two references (p. 67, 68) to the last sentence of Finding 47 (R. 106), we have not found a single reference in the petitioner's brief to *any* Finding of Fact of the Court of Claims *as a finding*.

[7] For an example, see Appendix A hereto at pages 55-56.

(iii) the assertion may relate to some evidentiary or subsidiary matter on which no Finding was made and the citation may be to material in the record which does not tend to establish the correctness of the assertion.[8]

3. The brief takes an important Finding, changes the sense of the Finding by changing a word or words or omitting part of the Finding, and then incorporates the changed Finding as a statement of fact in the text without indicating its origin other than by a citation to a page of the record.[9]

4. The petitioner's Statement is presented as a summary (p. 5) of the narrative "History and Background of Limitation Order L-208" (Appendix A, p. 73-110). The petitioner's Appendix A reads as if it were a complete story and parts of it are based on Findings of Fact, but

(i) the substance of many important Findings favorable to the respondents is completely omitted;[10]

(ii) in quoting from documents which are incorporated in the Findings, the petitioner quotes insignificant parts which might be thought favorable to the petitioner and leaves out important parts which are clearly favorable to the respondents;[11] and

(iii) there are other respects, of the type already referred to, in which the narrative is not dependable.[12]

5. By organization of the material and other devices the petitioner has frequently attempted to suggest a relationship, a connection or a continuity where in fact there was none.[13]

---

[8] For an example, see below at page 52.

[9] For examples, see Appendix A hereto at pages 4, 13-15 (three places) 24-25, 25-26, 35 and 72-73.

[10] For examples, see Appendix A hereto at pages 20, 21-22, 23-24, 24, 26-27, 30, 30-31, 47 and 85-86.

[12] See Notes 7, 8 and 9 above.

[13] For examples, see Appendix A hereto at pages 3-4 and 7-8.

The Statement of Facts in Appendix A to this Brief.

We believe that this Court's review of the Findings of Fact of the Court of Claims will be limited (see below, p. 63-64). Nevertheless, in view of the course which the petitioner has followed it has seemed to us to be prudent to set forth in Appendix A hereto a detailed statement of the background, purpose, provisions and effects of Order L-208.

In the following summary statement of the facts we will refer to our Appendix A as well as to the Findings of Fact of the Court of Claims.

Summary Statement of the Facts.

The War Production Board (WPB) was an agency of the Executive Office of the President (Executive Order No. 9024, Appendix D, p. 8). Technically all authority was vested in the Chairman, who acted "with the advice and assistance of the members of the Board" (*id.*). Order L-208 was "agreed" upon by the Board (Finding 41, R. 101), so it may be looked upon as the action of the Board as well as of its Chairman, who was Donald M. Nelson (Finding 38, R. 99).

Controls of critical materials by the WPB, and the elimination of the acquisition of critical materials by nonessential gold mines.

One of the WPB's most important responsibilities related to the allocation of critical materials.

The acquisition of critical materials by gold mines which did not produce substantial amounts of other metals that were needed in the War effort (the "nonessential" mines) was restricted by a series of regulations or orders issued

by the WPB's predecessors (the OPM and the SPAB) and then by the WPB itself (Findings 3-17, R. 63-75).

By March 2, 1942, seven months before the issuance of Order L-208, the nonessential gold mines (Finding 17, R. 74-75):

> "* * * * were reduced to the same priority position as that of the least essential industries in the United States, i.e., they were entitled only to an A-10 preference rating[14] for the acquisition of maintenance, repair and operating supplies under Order P-100. They were excluded from obtaining any critical materials which might have been needed by any of the nonferrous metal mines or by any other industry deemed by WPB to be more essential. While it was possible for gold mines excluded from any benefits under P-56 to apply for equipment under the general repair order P-100, the demand for desired equipment was so far above available supply that the possibility of the gold mines obtaining any was remote. *Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment.*"

In the petition for certiorari, the petitioner informed the Court (p. 4-5):

> "Thus, by granting the lowest possible priority rating in a market where supplies were exceedingly scarce, *the War Production Board had effectively eliminated the possibility of acquisition by the gold mines of critical materials or supplies.*"

The WPB knew that any problem relating to the acquisition of critical materials by nonessential gold mines had been solved. The Court of Claims found (Finding 50, R. 106-107):

---

[14] The lowest preference rating (Finding 10, R. 72-73).

*"On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L-208 knew (1) that existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users; * * *"*

An attempt is now made in the petitioner's Statement (p. 5-8) and Appendix A (p. 73-91) to create the impression that when the WPB issued Order L-208 on October 8, 1942, it was still trying to control the acquisition of critical materials by the nonessential gold mines (Appendix A hereto, p. 7-8). It was not. That problem had been solved and the Court below so found. Further detail is given at pages 2-10 of Appendix A hereto.

Nonessential industries generally permitted to continue operations.

Nonessential businesses had difficulties in obtaining materials because of the allocation program and they had difficulties in keeping men because of Selective Service, but there was no program or policy of closing them down. On the contrary, their continuance was to some extent encouraged (Appendix A, p. 5). The objective was "to avoid unnecessary dislocations in the civilian economy" (Finding 10, R. 73).

Why the gold mines were "singled out": the purpose of Order L-208.

As the petitioner's brief says, the nonessential gold mines were "singled out" (p. 6, 8). This is the same expression which was used by General Somervell, Commanding General of the Services of Supply of the Army, in

explaining the purpose of Order L-208 shortly after it was issued (Appendix A, p. 33; Plaintiff's Exhibit 127, R. 520, 1510-1511).

The nonessential gold mines were singled out by a unique Order, that expressly and directly deprived the operators of the mines of the only beneficial use to which their mines could be put, kept them out of business for two and one-half years, scattered their employees, and disrupted their business organizations generally.

The reason why the nonessential gold mines were thus singled out was because there was a shortage of trained underground miners in the copper and other nonferrous metal mines (Finding 46, R. 105-106), and it was hoped that the closing of the mines would bring about the "transfer" of a significant number of "hardrock miners to the nonferrous metal mines" (Finding 51, R. 107).

In the petition for certiorari this Court was told that (p. 5):[15]

> "In the summer of 1942, the Labor Division of the War Production Board became concerned with the problem of an acute shortage of hardrock or underground miners in the vital non-ferrous copper mines. The primary reasons for this shortage were the draft, and the migration of workers out of the mine fields because of higher wages and better working conditions in other war industries. Accordingly, it was suggested to the War Production Board that, if the gold mines were closed, the unemployed miners would probably be diverted to copper mining, thereby alleviating a shortage which severely threatened the national war effort. In this connection, it was recognized that there was no authority to require the miners to transfer to industries in which their services were more urgently required; and further that the workers thus made available by the closing

[15] In quoting from the petition for certiorari we have omitted references to the pages of the Appendix to the petition which contained the Findings of the Court of Claims.

of the gold mines might very well go to work in the West Coast war plants instead of in the non-ferrous copper mines."

The shortage of miners in the nonferrous metal mines had become acute by July, 1942 (Finding 18, R. 75-76), and in that month the idea first developed of shutting down the gold mines in the hope that the miners, thrown out of work, would go to the nonferrous metal mines (Finding 19, R. 76).

On October 6, 1942, a formal decision was reached to issue an order directing that the operators of the non-essential gold mines "close down" their operations except for standby maintenance (Finding 41, R. 101; Finding 43, R. 102-104).

The Order was issued for only one purpose. As the Chairman of the WPB announced (Finding 45, R. 105; Plaintiff's Exhibit 34, R. 430, 1323), that purpose was "*to maneuver our manpower* so that less essential mining can be diverted to vitally important operations".

General Somervell, Commanding General of the Services of Supply of the Army, who attended the WPB meeting of October 6, 1942 at which Order L-208 was agreed upon and who told the WPB at that time that "failure to stop gold production immediately would be inexcusable" (Finding 41, R. 101), said in a letter written three days after L-208 was issued (Plaintiff's Exhibit 127, R. 520, 1510, 1511):

> "*The gold mining industry has been singled for curtailment only because it constitutes the most readily available pool of 'hard rock' miners who are so urgently needed to further the war effort.*"

The Court of Claims found that (Finding 46, R. 105-106):

> "The dominant consideration by Chairman Donald Nelson of WPB in the issuance of Limitation Order L-208 was the releasing of mine labor from the gold mines for employment in mines that

were producing other metals, such as copper, which were in short supply and urgently needed in the war program."

By "the dominant consideration" the Court of Claims meant the only real purpose (Appendix A, p. 34-39).

If there could be any question as to the meaning of Finding 46, resort could be had to the Court's opinion to clarify its meaning (see below, p. 64-65). The Court said in its opinion (R. 19):

> "The record establishes that no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines.
>
> * * * * *
>
> "The record establishes that the purpose and intent of WPB in issuing L-208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i.e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines."

In effect, the petitioner's brief admits that the Court of Claims found that the only real purpose of Order L-208 was that given in Finding 46. For the brief says that the Court of Claims concluded that "L-208 was not devised for the purpose of conserving or allocating materials" (p. 53).[16]

Nevertheless, the petitioner's brief argues throughout

---

[16] In this instance, as in others in the petitioner's brief (see, e.g., p. 52, 61), the word "materials" was obviously used to embrace materials, machinery and equipment (Appendix A hereto, p. 1-2).

that in fact Order L-208 was intended to "conserve scarce war materials" and "to divert mining machinery and equipment to essential wartime enterprises" as well as to bring about what the petitioner euphemistically calls "the voluntary relocation of manpower" (p. 2).[17] Indeed, in the petitioner's statement of the question presented, the manpower purpose is stated last of all (*id.*).

Moreover, the petitioner's statement of the manpower purpose of L-208 is decidedly different from the statement in Finding 46. Finding 46 is to the effect that the purpose was to release "mine labor from the gold mines for employment *in mines* that were producing other metals" (R. 105-106). The petitioner's statement implies that the manpower purpose was "to bring about the voluntary relocation of manpower to vital mining activities *and essential war work*" (p. 2), and the argument in the petitioner's brief assumes that the miners who would be discharged as a result of L-208 would go into "other essential war work" (p. 68-69). That assumption conflicts not only with Finding 46 but also with Finding 45 (R. 105) and the evidence that the WPB and the War Manpower Commission both sought to discourage the gold miners from obtaining employment in war industries other than nonferrous metal mines (Appendix A, p. 85-87). Furthermore, the contention now made that the WPB wanted to have the miners go into "essential war work" other than mining is not comprised in, and is inconsistent with, the statement of the questions presented which was made in the petition for certiorari (p. 2; see below, p. 60-62).

The petitioner's brief has "edited" Finding 46 by changing the words "*the* dominant consideration" to "*a* dominant consideration" (p. 11) and "*a* motivating factor"

---

[17] Thus the petitioner now seeks to go behind the Findings of the Court of Claims, although in its petition for certiorari it appeared to be presenting the case to this Court on the basis of an acceptance of the Findings of the Court of Claims (see petition for certiorari, p. 3, and see below, p. 58-60).

(p. 60). In doing so, the petitioner has attempted to reinstate a finding of the Commissioner which the Court of Claims rejected (Appendix A hereto, p. 34).

At pages 34-39 of Appendix A we have discussed the purpose of Order L-208 in some detail, with particular reference to the Findings. The much longer prior section of Appendix A, under the heading **"The background and origin of the Order"** (p. 2-33) gives a narrative, taken principally from the Findings (and when not from the Findings, then from contemporaneous documents), which shows that the ultimate Finding of the Court of Claims, as to the purpose of L-208, is overwhelmingly supported by the record.

Indeed, if it were this Court's function to act as the trier of the facts, we are confident that it could reach only one conclusion: that there is no substantial evidence that the WPB had any purpose other than that stated by its Chairman, which was "to maneuver our manpower."

Controls over skilled labor; the taking of property "to maneuver manpower".

During World War II, both before and after the issuance of Order L-208, many unsuccessful attempts were made to secure the passage of legislation to provide for a labor draft (cf. R. 526).

The Austin-Wadsworth bill (S. 666, H. R. 1742, 78th Cong. 1st Sess.), which is referred to in Plaintiff's Exhibit 162 (R. 798, 1518-1519), was introduced in the Senate on February 8, 1943. At the preceding session of the Congress somewhat similar bills were introduced (see, e.g., S. 2788 and S. 2805) and there were hearings to which Senator Austin referred in supporting his bill (89 Cong. Rec. 666-671). The Austin-Wadsworth bill having failed of passage,

similar legislation was proposed in the 79th Congress (S. 36, S. 85, H. R. 1119, H. R. 1752).

Both before and after the closing down of the gold mines it was realized that the inability to draft labor made it difficult to "maneuver manpower", and that the results which could be obtained by shutting down a business and then trying to "maneuver manpower" were problematical.

On September 1, 1942, Chairman Donald M. Nelson of the WPB wrote to Senator McCarran of Nevada (Finding 24, R. 81):

> "We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today."

Many realized that if the nonessential gold mines were closed down, only a small percentage of the hardrock miners would go to the nonferrous metal mines (Appendix A, p. 73-83). The matter was put succinctly by Dr. Wilbur A. Nelson, the Chief of the Mining Branch of the WPB, in a memorandum on August 14, 1942 (Finding 22, R. 79):

> "I am sure that a gold miner, living in the excellent living conditions at Lead,[18] [South Dakota, where the Homestake Mine is located] is not going to leave his family and stop at Butte [Montana, where the Anaconda Copper Mines are located] if he could go to the West Coast."

---

[18] The idea of maneuvering underground miners at the Homestake gold mine at Lead, South Dakota, to the Anaconda copper mine at Butte, Montana, over 500 miles away (Finding 69, R. 115), seems to have been at the fore in connection with L-208. The issuance of the Order was announced to the President of the Homestake Mining Company by the Under Secretary of War in a telegram which stated that the Under Secretary had directed immediate action to bring officials of the War Department and of the Anaconda Copper Mining Company in cooperation with the Homestake's local management at Lead (Appendix A, p. 32; Plaintiff's Exhibit 132, R. 613, 1516).

It was no easy thing to "maneuver" gold miners from Lead to nonferrous metal mines. The latter had "low wages, bad working and living conditions" (Finding 50, clause (5); R. 107), while at Lead (Finding 66, R. 114):

> "The working conditions at Homestake and the living conditions in the communities surrounding Homestake in 1942 were superior to those at the nonferrous metal mines to which the Government sought to transfer the Homestake miners. Homestake employees enjoyed free medical and hospital services, group insurance, pensions, recreational facilities, and many of the older miners owned their own homes. In 1942, approximately 440 of Homestake's employees had seen more than 21 years of service with the mine, and some had been employed there for more than 40 years. For these reasons, Homestake had enjoyed greater employment stability than the nonferrous metal mines despite the lure of higher pay in the war industries."

Many of the miners "were middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible" (Finding 50, clause (6); R. 107). This was pointed out to the WPB (Finding 23, R. 80).

Eight months after L-208 was issued, the Under Secretary of War wrote (Plaintiff's Exhibit 162, R. 798, 1518-1519):

> "The causes of the shortage of miners are well known. For one thing, men have left to take employment in industries that offer better wages. Again, they have left to go to farms, having been assured that no farmers will be drafted into the Army. These factors have caused a drift away from the mines, and conditions cannot improve so long as the drift continues. The furloughing of soldiers to work in the mines will not stop the drift. The difficulties that are inherent in the present situation will not be remedied until effective measures are adopted to keep men at occupations as essential as that of cop-

per mining and to recruit from less essential industries the additional men needed. The troubles in copper mining furnish a striking instance of the need of legislation along the lines of the Austin-Wadsworth bill."

There being no law like the Austin-Wadsworth bill, which would have made it possible to draft miners for the nonferrous metal mines, the WPB decided, at the instance of the War Department and the Army, to close down the nonessential gold mines, throw the hardrock miners out of work and try to persuade as many as possible to go to the nonferrous metal mines. That course imposed great hardships on the operators of the mines, on their employees and on their communities and it was not well designed to accomplish its purpose (Finding 50, R. 107), but it was determined upon nevertheless.

For the purposes of these cases, *it should be emphasized that the closing of the gold mines was not an incident of a general program for the assignment of manpower. It was a unique taking of property (the right to operate the mines) in the hope that as a consequence of the taking there would be a transfer of mine labor to the nonferrous metal mines.*

All nonessential industries lost employees during the War because of Selective Service: men were drafted or went into essential industries so that they would not be drafted. Doubtless a great many businesses found it difficult to continue operations as a consequence of their inability to retain enough employees or to obtain critical materials. But only the operators of the nonessential gold mines, about 150 in number, were singled out and directly and intentionally deprived of the right to make the only beneficial use which could be made of their properties, in the hope that some of their employees, who would be thrown out of work, might be induced to seek employment in the nonferrous metal mines.

The role of the War Department and the Army.

The idea of curtailing the production of gold by an order of the WPB "to free labor"[19] which was needed in the nonferrous metal mines originated, so far as the record indicates, in July 1942 with a committee organized by officials of the War Department (Finding 19, R. 76).

At that time there had been no study of (1) the number of hardrock miners who were employed in the gold mines and (2) the prospects of inducing a significant percentage of the hardrock miners to seek employment in the nonferrous metal mines.

Indeed, there was nothing approaching a careful effort to ascertain how many hardrock miners were involved until about a week before Order L-208 was issued on October 8, 1942 (Appendix A, p. 73-83). But as early as September 15, 1942, the "War Department was impatient at the delay" in issuing a close down order (Finding 30, R. 93; Appendix A, p. 20, 77).

By October 1, 1942, a decision had already been made, at least tentatively, to shut down the gold mines. On that day a meeting was held at the WPB which representatives of the gold mining industry were invited to attend (Find-

---

[19] The euphemistic expressions to be found in the record and the Government's briefs are rather striking.

Order L-208 was designed to throw out of work "middle-aged men with families who own their own homes and would not leave their communities if any alternative were possible" and to maneuver them to "the nonferrous metal mines where wages were low and working and living conditions poor" (Finding 50, R. 107). Granted that the War made it important to have maximum production of nonferrous metals, it is still rather startling to have a committee organized by officials of the War Department refer to the program as one "to free labor" (Finding 19, R. 76) and to have the Government refer to the project as one for "the voluntary relocation of skilled manpower" (petition for certiorari, p. 2).

ing 36, R. 97). "At the opening of the meeting Mr. Batt [Vice Chairman of the WPB] stated that he had brought the gold mine operators to Washington to tell them that a decision had been made to close the gold mines in order to transfer the released labor to the copper mines" (Finding 36, R. 98). An extreme disagreement developed between the operators of the mines and the representative of the WPB's Labor Division as to the number of underground miners in the nonessential gold mines (*id.*). "Late in the meeting, Wilbur A. Nelson [Chief of the Mining Branch of the WPB] undertook to determine how many miners and muckers would actually be released by a closing order" (*id.*). But before this the representative of the Army had already spoken "strongly in support of a closing order" (*id.*).

As a result of what the Vice Chairman of the WPB learned at the October 1 meeting, he wrote to the Chairman suggesting further study and saying (Finding 38, R. 99):

> "Complete closing without exceptions will produce very serous economic dislocations, and the total possible gain in men is a small figure."

On October 3, 1942, the Vice Chairman received Dr. Wilbur A. Nelson's report that the proposed close down order "would make available only about 600 miners and muckers for other mining enterprises 'provided they [could] all be induced to go into other mines.'" (Finding 37, R. 98-99). It was known that the prospects were poor of inducing a large percentage of the 600 to go to the nonferrous metal mines "where wages were low and working and living conditions poor" (Finding 50, R. 107; Finding 51, R. 107). As already stated, many of the employees were "middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible" (Finding 50, R. 107).

Dr. Wilbur A. Nelson's figures were accepted by the War Manpower Commission and the WPB (Finding 41, R. 100-101).

But the War Department and the Army moved independently of Dr. Nelson's study and their momentum was not slowed down. On October 2 the Under Secretary of War wrote the Vice Chairman of the WPB a letter in which he said (Finding 39, R. 99):

> "The matter has hung fire for some time, and I trust that there will be no further delay."

In the same letter he offered to obtain the approval of the Navy Department.

On October 5 the Under Secretaries of War and the Navy sent the following memorandum to the Chairman of the WPB (Finding 40, R. 99-100), which the petitioner quotes (p. 101):

> "The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production.[20] These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step

---

[20] As already noted, it had previously been determined that a shutdown of the gold mines "would make available only about 600 miners and muckers for other mining enterprises 'provided they [could] all be induced to go into other mines'" (R. 99). No explanation has been given of the origin of the Under Secretaries' statement that there were "two thousand to three thousand hard-rock miners engaged in gold mining".

and others will not give complete relief if nothing is done to transfer gold miners to copper mining.

The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided."

On the next day, October 6, 1942, a WPB meeting was held at which the formal decision to issue Order L-208 was reached (Finding 41, p. 100-101). At that meeting General Somervell, who was the Commanding General of the Services of Supply of the Army, made a statement which appears in the minutes immediately before the note of the action which was agreed upon (Finding 41, R. 101):

> "*General Somervell stated that* because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, *failure to stop gold production immediately would be inexcusable.*"

The action of the WPB in issuing Order L-208 was announced to the President of the respondent Homestake Mining Company by the Under Secretary of War, not by the WPB (Appendix A, p. 32, Plaintiff's Exhibit 132, R. 613, 1516).

The part played by the Army was reviewed in the opinion of the Court below (R. 17-18). Among other things, the Court said (R. 18):

> "Army officials were furnished with facts and figures showing that few hardrock miners would be released by the closing of the gold mines and that there was no way of compelling those miners to work in the copper mines and little likelihood that they would do so. Despite this, officials of the Army continued to bring great pressure to bear on the War Production Board to close down the gold mines, indicating

that otherwise WPB would not be doing its part to increase production in the nonferrous metal mines."

The petitioner's brief twice points out that L-208 was issued "with the approval and at the urging of the War Department" (p. 21, 55).

No one reading the narrative at pages 2-33 of Appendix A hereto, particularly pages 25-33, can escape the conclusion that the War Department and the Army provided the driving force which led to the issuance of the Order.

For all practical purposes, it is as though the Army physically took over the respondents' mines and kept them idle until June 30, 1945.

The close down: Order L-208.

The decision agreed upon at the WPB meeting of October 6, 1942 was this (Finding 41, R. 101):

> "An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition."

Order L-208, which was issued on October 8, 1942 (Finding 43, R. 102-105), is set forth in Appendix B hereto.

Order L-208 defined nonessential mines as including all lode or placer operations which did not produce substantial amounts of critical materials (Finding 43, R. 102; Finding 17, R. 74).

The key provisions of the Order were paragraph (b)(1) (R. 102):

> "(1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all steps as may be necessary to

close down, and shall close down, in the shortest possible time, the operations of such mine."

and paragraph (i), which read in part (R. 104):

> "(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment."

Paragraph (b)(1) contained a specific directive "to close down". It represented an assumption of complete dominion and control over the mining operations—not in order to continue them, but in order to close them down, except for "minimum maintenance to keep mines dewatered and in standby condition" (Finding 41, R. 101; par. (b)(3) of L-208, Finding 43, R. 102-103).

Other provisions of L-208 are referred to below. The core of the Order was paragraph (b)(1). As the Court below held (R. 44-45):

> "The real substance and intent of the order was embodied in the prohibition directed at the continued operation of the gold mines."

Approval by the President.

As the petitioner's brief says twice (p. 21, 55), L-208 was "approved by the President". Twenty-one United States Senators from twelve gold-producing states sent the President a letter on October 10, 1942, two days after the Order was issued, in which they protested against the Order and requested a stay "at least until the whole subject of marshalling of manpower and the allocation of labor may be considered", but their protest and request were rejected (see below, p. 121; Appendix A hereto, p. 31-32).

Order L-208 unique.

Boldly disregarding the lower Court's Findings, the petitioner's brief attempts to liken L-208 to other "L" orders and reaches a climax with the astounding assertion that "L-208 was a typical exercise of the allocation authority of WPB" (p. 22).

In the part of the brief which attempts to frighten the Court by suggestions of "an incalculable and staggering financial burden" (p. 42), the brief refers to 25 "L" orders that stopped or curtailed the manufacture of various end products which required critical materials and says that such orders were similar to L-208.

Actually, L-208 was unique, and the Committees of the Judiciary of the House and Senate were correct when they said (see below, p. 40-42, 49):

> "No similar order was issued against any other segment of American industry."

"L" orders of the type cited by the petitioner are the subject of several paragraphs in Finding 3, which is not mentioned in the petitioner's brief (R. 63-64). Two of those paragraphs are quoted in Appendix A hereto (p. 4).

The "L" orders referred to by the petitioner were utterly different from L-208.

First, their true purpose was to conserve critical materials, not to "maneuver manpower".

Second, they merely stopped or curtailed the manufacture of end products which required the use of critical materials in significant amounts. No critical materials went into the end product of the gold mines, refined gold. This was pointed out by the Court below (R. 32).

Third, the "L" orders cited by the petitioner did not undertake to require a business to close down. The Court of Claims found (Finding 3, R. 63):

> "In most instances a prohibition against the production of a product resulted in the facilities being transferred to war production. Thus, the automobile industry's facilities were largely converted to war purposes although some of the facilities may have become inoperative because of a lack of adaptability to other purposes or to war production."

If any manufacturer of end products which required the use of critical materials was put out of business because of inability to obtain critical materials, that manufacturer suffered one of the consequences of a proper regulation of critical materials which were essential to the War effort. But the WPB did not issue orders relating to passenger automobiles, stoves, refrigerators and the like for the purpose of keeping the manufacturers from using their plants. On the other hand, Order L-208 directly and intentionally kept the operators of the nonessential gold mines from making any use of their mines so that as a consequence most of their hardrock miners would be thrown on the labor market.

The targets of the "L" orders to which the petitioner refers were critical materials. The targets of L-208 were the respondents' mining operations, which required hardrock miners.

The holding of the Court of Claims that Order L-208 was in fact not an allocation order.

As Judge LARAMORE said in his dissent, the majority opinion below "points out that L-208 was not an allocation order, as it purported to be, but rather was clearly an order closing gold mines deemed nonessential to the war effort" (R. 61). In this connection, the majority opinion shows that the Court's Findings of Fact constituted a holding *as a matter of fact* that L-208 "was not an allocation order" (see below, p. 95-97).

The camouflouge of Order L-208.

The Argument in the petitioner's brief under the subheading "*Purpose*" (p. 58-61) stresses the preamble to L-208, which read as follows (R. 102):

> "The fulfillment of requirements for the defense of the United States has created *a shortage in the supply of critical materials* for defense, for private account and for export *which are used in the maintenance and operation of gold mines;* and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

The implication in the preamble that L-208 was issued because of the shortage of critical materials "which are used in the maintenance and operation of gold mines" was not in accordance with the facts as found by the Court of Claims and as established by the overwhelming weight of the evidence. The WPB knew that the problem of critical materials had been solved, so far as the gold mines were concerned, seven months before (see above, p. 11-13). The preamble was camouflage.

On September 15, 1942, Mr. Morris Creditor, Special Assistant to the Chairman of the WPB, wrote to the Chairman about the preamble of a draft of the Order which was under discussion at the time (Finding 31, R. 94-95). That draft of the Order did not contain the "close down" direction which was in Order L-208 as issued, but the preamble of the draft order was identical with that of Order L-208. (Defendant's Exhibit 46, R. 962, 1594, 1595-6.) Mr. Creditor said (R. 95):

> "Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, *the preamble should state the real reason; which is to direct this labor to more necessary industries.*"

This forthright recommendation was not adopted.

The citations of the authority for the Order at its foot were also camouflage (R. 104-105). They would have been suitable if L-208 had been a true priorities regulation, intended to serve the purpose stated in the preamble.

Paragraphs (b)(2) and (b)(3) prohibited the acquisition, consumption, or use of "*any* material, facility, or equipment" in any of the mining operations to which they respectively related (R. 102-103).

Chief Judge JONES said that paragraphs (b)(2) and (b)(3) "forbade the use of *critical* materials in nonessential industry," that "they would have produced the closing down of the mines whether or not paragraph (b)(1) had been included" and that paragraph (b)(1) should "be construed as mere surplusage" (R. 58-59). But the Chief Judge misread the Order and disregarded its purpose.

Paragraphs (b)(2) and (b)(3) did not relate to "*critical* materials". The references therein were to "*any* material, facility, or equipment", whether needed in the war effort or not. The prohibitions of the acquisition, consumption or use of "*any* material, facility, or equipment" in any of the several mining activities mentioned in (b)(2) and (b)(3) were obviously adopted as a device to make L-208 superficially similar to an order relating to the acquisition, consumption and use of critical materials. However, the fact is that the Order contained no mention of critical materials except in the preamble.

In the light of the direction in paragraph (b)(1) that the affected gold mines "close down", nothing whatever was added to Order L-208 by the provisions in paragraphs (b)(2) and (b)(3) prohibiting the consumption, acquisition or use of "*any* material, facility, or equipment" in the conduct of the operations of the mines thus ordered to be closed down. The only significance of the provisions of paragraphs (b)(2) and (b)(3) lay in the 7-day and 60-day deadlines imposed by their terms on the mining activities

therein specified which would have required the continued use of mine labor.[21]

To say that paragraph (b)(1), which directed the close down, was surplusage seems almost to be like saying that if a man is sentenced to be hung by the neck until dead and then to be buried in the prison burying ground, the direction that he be hung by the neck until dead can be disregarded as surplusage since the burying would result in his death in any event.

The Court below said in its opinion (R. 44-45):

> "The real substance and intent of the order was embodied in the prohibition directed at the continued operation of the gold mines. The so-called limitation on the gold mine owners' use of the equipment and supplies and facilities which they owned was not intended to make those items available to the Government or to the war effort but was expressly included in the order to insure that they would not be used in the mining of gold, and was part and parcel of the express order to cease doing business."

The Court of Claims did not find, in so many words, that L-208 was camouflaged, but its Findings were in substance to that effect. The Court's opinions point up the only conclusion which can be drawn from the Findings.

In the original opinion the Court said (R. 19):

> "The record establishes that *no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or*

---

[21] Paragraph (c), which was not mentioned by Chief Judge JONES, related to the application of preference ratings "to acquire *any* material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine" (R. 103). That provision of the Order was clearly surplusage since the gold mines had already been denied access to critical materials (Finding 17, R. 74-75; Finding 50, R. 106-107).

supplies, inasmuch as existing preference orders had solved that problem in connection with the gold mines.

* * * * *

"The record establishes that *the purpose and intent of WPB in issuing L-208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i.e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines.*"

And at R. 40-41:

"*Despite its preamble and the authority cited for its issuance, the language of the order itself and the circumstances surrounding its issuance indicate that neither its purpose nor its effect was to conserve or allocate critical materials, equipment and facilities needed for defense,* but was rather to deprive the gold mine owners of their right to make profitable use of their gold mines."

Furthermore, in denying the motion for a rehearing the Court below restated its original holdings (R. 145):

"The court held that *what WPB said it was doing and what it in fact and law did, were two different things and that the Government could not escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a 'priorities order' or an 'allocation order'.*"

In saying that L-208 was camouflaged, we have no intention of impugning the motives of those of the men who were responsible for it. We heartily subscribe to the petitioner's references to them as "responsible men, selflessly dedicated to winning the war in the shortest possible time" (p. 55; see below, p. 48). However, that does not alter

the inescapable fact, confirmed by the Court of Claims, that Order L-208 *was* camouflaged. And the petitioner has tried throughout its brief to make the camouflage successful.

A fuller analysis of the provisions of the Order will be found in Appendix A (p. 40-45).

Order L-208 not adapted to serve as a priorities or allocation order relating to critical materials.

Since L-208 was not intended to serve as a priorities or allocation order relating to critical materials, it is not surprising to find that it was not adapted to serve, and did not serve, as such.

At pages 45-68 of Appendix A we have set forth in detail (1) the reasons why Order L-208 was not adapted to serve as a priorities or allocation order relating to critical materials and (2) the Findings and evidence that it did not accomplish anything significant in that field.

The portion of the Appendix which we have mentioned considers both (i) acquisitions of critical materials, machinery or equipment by the gold mines and (ii) the movement of critical materials, machinery or equipment from the gold mines.

As to acquisitions of critical materials, machinery or equipment by the gold mines (Appendix A, p. 46-48), it is enough to say that potential acquisitions of critical materials, machinery or equipment by the nonessential mines had already been "effectively eliminated" seven months before L-208 was issued—to quote from the petition for certiorari (p. 5; see above, p. 12, and Appendix A hereto, p. 6-10).

As to the movement of critical materials, machinery or equipment from the gold mines (Appendix A hereto, p.

46-48). The outstanding fact is that the Government did not requisition, or issue mandatory orders for, any critical materials, machinery or equipment owned by the gold mines which were closed down.

However, the petitioner has complicated matters by reversing the position which it took in the petition for certiorari. It now relies heavily on Priorities Regulation 13, which was issued by the WPB on July 7, 1942, and on two amendments of Order L-208 which were adopted on November 19, 1942 and August 31, 1943, and asserts that the Court below made several "demonstrably inaccurate" statements to the effect that if any of the operators of the closed gold mines wished to sell critical materials, machinery or equipment, they could sell them to whomever they pleased (p. 50).

In no less than *twelve places* the petitioner's brief refers *specifically* to Priorities Regulation 13 or one or both of the two amendments of L-208 and its presentation of the alleged facts and its argument are dependent in countless other places upon what it assumes about the Regulation and the amendments.

As we have shown at pages 58-65 of Appendix A hereto.

First: In the Defendant's Exceptions and Brief in the Court of Claims, filed November 5, 1954, comprising 148 pages, there was no reference to Priorities Regulation 13 or to either of the two amendments of Order L-208, and none of them was mentioned on the oral argument below. None of them was *ever* called to the attention of the Court of Claims in any way.

Second: Only one, the amendment of November 19, 1942, is in the record.

Third: Although the petitioner made a motion for a new trial in the Court of Claims, it made no reference to the lower Court's alleged errors of fact to which it now gives such prominence.

Fourth: The questions now raised about Priorities Regulation 13 and the two amendments of Order L-208

were not referred to in the petition for certiorari or fairly comprised therein (see below, p. 60).

Fifth: At least one of the petitioner's references to Priorities Regulation 13 is seriously incorrect, and all are incomplete. Priorities Regulation 13 did not apply to "machinery or equipment" at all. There is a complete lack of evidence as to the extent, if any, that Priorities Regulation 13 restricted sales by the gold mines after October 8, 1942 of things other than machinery or equipment.

Sixth: What the Court of Claims said about Order L-208, as issued, was clearly correct.

Seventh: The amendments of Order L-208 which were adopted on November 19, 1942 and August 31, 1943, did not change the character of the Order as issued on October 8, 1942. They undertook to deal routinely with a consequence of the closure of the gold mines which had been brought about by the Order. They simply provided that if operators of closed mines *wished to sell* machinery or equipment to which the two amendments related, respectively, they had to sell them pursuant to WPB authority.

Undoubtedly the reason why no point was made in the Court of Claims of Priorities Regulation 13 and the two amendments of Order L-208 is that the able and experienced counsel who represented the Government in the Court below considered them of no importance.

The amendments of November 19, 1942 and August 31, 1943 were afterthoughts, in the sense that they dealt routinely with consequences of the closing of the non-essential mines. The petitioner's reliance on the amendments is also an afterthought, in the sense that during more than four years of litigation the petitioner never referred to them, in brief or on argument or in its petition for certiorari.

The fundamental fact is that it was not the purpose of Order L-208 to try to channel critical material or used machinery or equipment from the gold mines to other mines.

The record discussed in Appendix A at pages 54-58 establishes conclusively that any movement of machinery or equipment to more essential industries as a result of L-208 was incidental and haphazard. While there is not enough in the record to make even an intelligent guess as to the amount of machinery and equipment which moved to the nonferrous metal mines because of Order L-208, such data as there are indicate that the amount was probably very small.

The practical failure of L-208 to maneuver hardrock miners to the nonferrous metal mines.

The practical effects of L-208 as a manpower measure were stated succinctly and accurately in *the petition for certiorari, which said that the problem involved a "shortage of hardrock or underground miners in the vital nonferrous copper mines"* (p. 5) and that as a result of the Order *"only an insignificant number of hardrock miners actually transferred to the copper mines"* (p. 6).

However, the petitioner's brief on the merits now asserts that "the success or failure of L-208, as an instrument for the diversion of manpower, remains a debatable question" (p. 65), and it suggests that the question does not pertain to hardrock miners but to all employees and that the WPB wished to divert them to "esential war work" (p. 65-69). The presentation of this subject in the petitioner's brief is truly remarkable.

The Findings and the record establish that (1) the shortage was of hardrock miners and (2) the purpose of L-208 was to divert hardrock miners to the nonferrous metal mines. The shortage was not of mining company employees of all sorts (including employees on the surface) and it was not the purpose of L-208 to divert mining company labor of all sorts to essential industries other than

nonferrous metal mines. These subjects are covered in detail at pages 68-92 of Appendix A hereto.

We have already quoted Finding 46 which sets forth the purpose of L-208 (p. 15-16).

Finding 51 reads (R. 107):

> "It is reasonable to conclude that in issuing L-208 WPB acted without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines."

Finding 18 sets forth the reasons for the shortage of hardrock miners in the nonferrous metal mines (R. 75):

> "The reasons for the poor production of nonferrous metals were found to be (1) the out-migration of workers in the nonferrous mines to other war industries offering higher wages and better working conditions, (2) drafting of the workers for the armed services by Selective Service, (3) excessive labor turnover within the industry, (4) low morale of the workers, (5) the short workweek in the mines, and (6) the lack of an organized and effective program of recruitment of workers for this industry."

Obviously Order L-208 did not deal with any of these causes of the shortage.

The Court of Claims found (Finding 50, R. 106-107).[22]

> "On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L-208 knew * * * (2) that the closing of the gold mines would release only a small number of hardrock miners and helpers; (3) that no agency of the Government had the power to compel these men to accept employment in the nonferrous metal mines; (4) that in all likelihood unemployed gold miners would accept employment in shipbuilding, aircraft

[22] The omitted portions of this Finding relate to other subjects and are quoted elsewhere.

and construction industries rather than go to work in the nonferrous metal mines where wages were low and working and living conditions poor; (5) that L-208 was not in fact directed at the known reasons for the shortage of underground workers in the nonferrous metal mines, i.e., low wages, bad working and living conditions, and the refusal of Selective Service to defer miners; (6) that a substantial number of the employees of the gold mines were middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible; • • •"

As to the results, the Court below found (Finding 47, R. 106):

"47. The closing of the gold mines did very little to relieve the manpower shortage in the nonferrous metal mines because (1) a relatively small number of the type of workers needed in those mines, i.e., hardrock miners, were released (finding 37); (2) a number of these men were required to remain in the gold mines to keep them in safe condition; (3) the older and more settled experienced miners remained in their home communities doing what they could to make a living or remaining idle; (4) most of the younger hardrock miners released sought employment in the better paying war industries, construction projects, or were drafted in the armed services. *Approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year.*"

We reserve for consideration in the Argument (see below, p. 103-105) the suggestion in the petitioner's brief that it is irrelevant whether or not L-208 failed of its purpose (p. 65).

The Congressional findings with respect to Order L-208.

Shortly after the opinion of the Court of Claims was handed down in *Idaho Maryland Mines Corporation* v. *United States*, 122 C. Cls. 670, denying the Government's motion to dismiss the petitions of three of the respondents, the Senate Committee on the Judiciary reported favorably on a bill (S. 3195, 82nd Cong., 2nd Sess.) relating to claims for losses incurred because of the shutdown of the gold mines under Order L-208 (Plaintiff's Exhibit 178, R. 855, 1559-1572). An identical favorable report was made by the House Committee on the Judiciary, and on July 14, 1952, the bill, a Special Jurisdictional Act, became law (66 Stat. 605). The Act is quoted at page 2 above.

The Reports of the two Committees are significant.

After a statement of the "purpose of the proposed legislation" (which is merely a repetition of the language of the Act itself), the Reports said in part (Senate Report No. 1605, House Report No. 2220, 82nd Cong., 2nd Sess.; Plaintiff's Exhibit 178, R. 855, 1559-1560):

"Statement

"On October 8, 1942, the War Production Board issued order L-208 which summarily closed the gold mines in this country. The order was rescinded on July 1, 1945, having been in effect approximately 2½ years.

"The records of the War Production Board show that the gold mining industry was selected as a guinea pig to test the policy of shutting down so-called nonessential industries during the war. The issuance of the order was based upon dubious if not nonexistent authority. The order failed completely to make any substantial contribution to the war effort and inflicted ruinous costs on the gold mining

industry. No similar order was issued against any other industry in the Nation during the war years."

The Reports contained extensive quotations from the Report of a Subcommittee of the House Committee on War Claims, on H. R. 4393, 79th Congress (R. 1561-1570).[23] By doing so the two Committees indicated their agreement with unequivocal statements to the effect that compensation should be paid to those who suffered as a result of the issuance of Order L-208.

Significant statements in the Report of the Subcommittee of the House Committee on War Claims which were quoted by the two Committees in May and June of 1952 include the following (R. 1561-1562, 1570):

> "Your committee believes that this order inflicted a sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve.
>
> • • • • •
>
> "It is clear, in the opinion of your committee, which opinion is supported by expert testimony and is uncontroverted by Government witnesses, that there was little or no basis for issuing Order L-208, and that it was not only an administrative error but that the War Production Board proceeded on dubious authority. *The conclusion further has been reached that the order should have provided a mechanism for*

[23] H. R. 4393, 79th Congress, provided that the Secretary of the Treasury should be authorized to determine the validity of claims of operators of gold mines closed down by Order L-208 and to reimburse a gold mine operator for the "financial loss due to the closing or curtailment of operations of such mine • • • but not including payment for lost production". Hearings on H.R. 4393 were held by the Subcommittee of the House Committee on War Claims in December, 1945 and in February and March, 1946 and the Subcommittee unanimously rendered a favorable Report on July 19, 1946 to the full Committee on War Claims. The Report of the Subcommittee is referred to in Plaintiff's Exhibit 175 (R. 846, 1524, 1525-1534), as well as in Plaintiff's Exhibit 178, from which we have quoted above. H.R. 4393 was never reported out by the Committee on War Claims so that it never reached the floor.

> *compensation and that, as such was not provided, the Congress should so provide, even while realizing that much of the loss and damage is irreparable.* Your committee believes that the prompt repayment of such losses as are covered in the pending bill, H. R. 4393, will not only do substantial justice to an industry which was selected for a unique experiment, but will greatly aid in reestablishing an important industry, provide thousands of jobs to veterans and start a flow of taxes into county, State, and the Federal treasuries."

After the quotations from the earlier Subcommittee Report, the Senate and House Committees each stated its own conclusions as follows (R. 1570):

> "The committee has carefully studied the facts relating to the situation that arose as a result of the proclamation of the War Production Board Limitation Order L-208 and is convinced that the gold mining industry was dealt with in a fashion which *merits the consideration of the court in the adjudication of the losses which may have been occasioned by this order.* The Idaho Maryland Mines Corp. decision is ample evidence of the fact that the least that can be done is to allow those persons affected by Order L-208 their day in court for such recompense as may seem justified. * * *"

SUMMARY OF ARGUMENT

The judgment of the Court of Claims is based on Findings of Fact which are supported by abundant evidence. In the petition for certiorari the Government did not indicate any intention to challenge the adequacy of the Findings or the support therefor and this Court's review of the Findings would in any event be limited.

Yet the presentation in the Government's brief on the merits is consistently and fundamentally in conflict with the Findings of Fact. The brief does not even indicate what Findings were made, to say nothing of specifying

what Findings the petitioner challenges or the basis of any challenge. The arguments on matters of law are predicated on the petitioner's assumptions or assertions on points of fact, not on the facts as found by the Court of Claims. If the parts of the brief which are dependent upon an acceptance of the petitioner's factual assumptions and assertions were to be deleted, the brief would be in shreds.

* * * * *

Because of the petitioner's reliance on its version of the facts, rather than on the Findings, and because it has materially modified the statement in the petition for certiorari of the questions presented, the case is very different from the one which this Court must have thought was presented by the petition for certiorari.

* * * * *

On October 8, 1942 the WPB, an agency of the President, issued Order L-208, which directed the owners of about 150 gold mines and gold placer operations to "close down" in the shortest possible time. It provided that any violation was punishable by fine or imprisonment.

All of the respondents owned gold mines which were in operation on October 8, 1942, which were shut down in compliance with the Order and which remained shut down until the revocation of the Order on June 30, 1945.

The key paragraph of the Order was a peremptory and explicit direction to "close down" mining operations except for standby maintenance. It constituted an exercise of complete dominion and control over the respondents' mines.

The Order effected a direct taking of the respondents' property, viz., their right to produce and sell gold from their mines. That right was itself property. Only that right made the mines of any value or in any way useful.

It is immaterial that the Government did not take physical possession of the mines or operate them itself. The deprivation suffered by the respondents of the right

to use their mines constituted a taking. "The question is what has the owner lost, not what has the taker gained." Moreover, the Government got what it wanted.

The respondents' gold mines were closed down by the WPB in the hope that the hardrock miners employed in the mines would seek and obtain other employment in copper and other nonferrous metal mines where there was a labor shortage.

The Order was unique. Admittedly gold mining was not essential, but it was not the policy to try to close down nonessential industries; they were permitted to continue and to some extent helped to do so. The operators of the gold mines were "singled out" so that the hardrock miners would be discharged and thrown on the labor market. No other segment of any industry was similarly treated in World War II, or at any other time in our history.

The WPB camouflaged the Order so that it had some superficial resemblance to an order for the allocation of critical materials. The preamble to the Order referred only to critical materials; subordinate paragraphs of the Order mentioned materials; and the Order closed with a citation of Executive Orders and a statute which related to critical materials. No reference was made in the Order to its real purpose. But the camouflage of the Order did not hide the all-important first directive, that "each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time the operation of such mine." And the Findings below, abundantly supported by the record, establish that the purpose of that directive was to "maneuver" miners, not to conserve critical materials, and that the Order was *in fact* "not an allocation order".

St. Regis Paper Co. v. *United States* (1948) 110 C. Cls. 271, cert. den. 335 U. S. 815, frequently cited in the peti-

tioner's brief, has no application for the reason, among others, that the closing down of the gold mines by Order L-208 was the direct, intended effect of the Order—not, as in *St. Regis*, the consequential result of an order which in fact dealt with the allocation of critical materials.

Since Order L-208 was not intended as an allocation order, it was naturally not adapted to serve as one. As the Court below found, the "existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users", so that the Order was wholly unnecessary to keep the owners of gold mines from acquiring critical materials. Nor was the Order intended or effective to make critical materials or used equipment or machinery owned by the gold mines available for use by more essential industries.

The notion of closing the gold mines to relieve the shortage of miners in the nonferrous metal mines was advanced as early as July, 1942 with almost incredibly confused assertions about the number of miners in the gold mines and the total number of all employees of the mining companies. Shortly before the decision was made to issue Order L-208, the Chief of the Mining Branch of the WPB was directed to ascertain the facts, and he reported that the Order would make available only about 600 miners and muckers if they all could be persuaded to go into the nonferrous mines. There were reasons, well known to the WPB, why only a small percentage of the 600 could be expected to go to the nonferrous mines. Hence the Court of Claims found that the WPB had no reason to anticipate that the Order would bring about a transfer of a significant number of hardrock miners to the nonferrous metal mines.

The issuance of the Order by the WPB was all the more extraordinary because the minutes of the meeting at which the decision was made to issue the Order show that the WPB actually accepted the figures just summarized but issued the Order nevertheless. The explanation is that the

WPB acted at the instance of the War Department and the Army which, clinging to incorrect figures, told the Board that it was "of the utmost importance that prompt action be taken and that half measures be avoided", and that "failure to stop gold production immediately would be inexcusable".

As a manpower measure, the Order proved a failure.

Everything said above is supported by Findings of Fact made by the Court of Claims, which were supplemented by statements in the opinion of the Court. Of the two Judges who dissented, Judge LARAMORE agreed with the majority as to the purpose of Order L-208 and, so far as appears from his opinion, on all the other points referred to above except the President's authority to close the mines.

Long prior to the decision of the Court below, the Committees on the Judiciary of the Senate and the House had concluded that Order L-208 "completely failed to accomplish its purpose, or any purpose whatever, and inflicted irreparable and unjustifiable loss on the gold-mining industry".

The basic issue is whether, when an agency of the Chief Executive with his approval has taken dominion and control of the property of a relatively small number of individuals and corporations, so as to close down their operations and throw their skilled employees out of work in the hope that the skilled labor can be "maneuvered" into more essential industries, the Government can escape its obligation to pay compensation for the taking by camouflaging the taking order with a preamble and citations relating to critical materials. As the Court below said, "what the WPB said it was doing and what in fact and law it did, were two different things". If an agency of the President dresses up a taking order which ought to provide for compensation in an effort to make it appear to be a non-compensable regulation of critical materials, can the Government escape liability?

The issue should not be confused by the circumstance that Order L-208 related to gold mining. The mining of gold was not a noxious activity, subject to suppression as such. Indeed, both before and after the issuance of Order L-208 critical materials, machinery and equipment subject to allocation and control by the WPB were shipped in substantial quantities to South Africa, Canada, Honduras, Nicaragua and Colombia, for use in gold mining which continued in those countries throughout the War.

After the judgment of the Court of Claims was handed down against the Government, the latter made a motion for a new trial and took the position for the first time that it lacked the authority to take the respondents' property. This Court's decision in *International Paper Co.* v. *United States* (1931) 282 U. S. 399, 406, calls for a summary rejection of such a belated repudiation of responsibility.

It is immaterial whether or not power to take the respondents' property was formally delegated by the President to the WPB. The WPB was an agency of the President and, as the petitioner's brief twice concedes, the Order was approved by the President.

The statutory authority of the President to take the respondents' property is clear. Furthermore, by the Special Jurisdictional Act of July 14, 1952, Congress waived any question as to the authority for the Order.

* * * * *

While the Court below did not find it necessary to pass on the point, the Special Jurisdictional Act went further. The Act acknowledged liability to each gold mine owner who could establish that it incurred losses because it was prevented by Order L-208 from producing and selling gold and thus made it unnecessary to prove a taking.

ARGUMENT

I

THE RESPONDENTS' CLAIMS ARE JUST, AND THEIR RIGHTS UNDER THE CONSTITUTION SHOULD NOT BE OBSCURED BY SPECIOUS OR IRRELEVANT SUGGESTIONS.

The petitioner's brief disregards the Findings of Fact of the Court of Claims and, instead of considering whether on the facts as found there was a compensable taking of the respondents' property, the brief advances sundry specious or irrelevant suggestions about the respondents' claims. We will dispose of those suggestions first.

The War leaders.

It is, of course, agreed that those who authorized Order L-208, including the President, were, as the petitioner says (p. 55), "responsible men, selflessly dedicated to winning the war in the shortest possible time." But it is not necessary to argue in this Court that the consequences of the actions of officials and agencies of the Government are determined by the Constitution and are not affected by admiration or regard for individuals who are involved. In *Ex parte Milligan* (1866) 4 Wall. 2, this Court's opinion, holding that military commissions created by Lincoln were unconstitutional, was written by Justice David Davis, who had been one of Lincoln's closest friends and was the Administrator of his estate. Justice Davis' enduring respect and affection for Lincoln did not prevent him from announcing the principle that (p. 120-121):

> "The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances."

The suggestion that the respondents are unpatriotic.

The petitioner's brief contains what appears to be a thinly veiled suggestion that these respondents and others who have similar claims against the Government[24] are unpatriotic because they do not "accept in the spirit of patriotism the hardships, inconveniences, and economic sacrifices required by present day warfare" (p. 43).

The respondents do not seek to profit from the War. They do not ask for compensation measured by values enhanced because of the War. They ask only that they not be required to sustain, without compensation, a unique deprivation which was imposed upon them by the WPB at the instance of the Army.

Order L-208, unique.

The effect of Order L-208 was to deprive about 150 individuals and corporations of the right to the beneficial use of their mines or placer operations until June 30, 1945.

The Congressional Committee Reports said (Plaintiffs' Exhibit 178, R. 855, 1559, 1562):

> "No similar order was issued against any other segment of American industry."

That statement was correct. Order L-208 was radically and fundamentally different from other "L" orders to which the petitioner attempts to liken it (see above, p. 28-29).

The petitioner says that "to single out the gold industry for full compensation would be an even grosser discrimination" (p. 43). The respondents were singled out by an Order which imposed a unique deprivation. Compensation required by the Constitution for a unique injury cannot be called discriminatory (see above, p. 28-29; Appendix A, p. 2-5).

---

[24] Said to number 150 in all (p. 5, Note 3; p. 40).

The language of this Court in *Monongahela Navigation Co.* v. *United States* (1893) 148 U. S. 312, is pertinent. In speaking of the right to compensation where property is taken, the Court said (at p. 325):

> "It in no wise detracts from the power of the public to take whatever may be necessary for its uses; while, on the other hand, it prevents the public from loading upon one individual more than his just share of the burdens of government, and says that when he surrenders to the public something more and different from that which is exacted from other members of the public, a full and just equivalent shall be returned to him."

The Government's *in terrorem* arguments.

In the prosecution of World War II the Government required private property worth many billions of dollars. It got that property by the constitutional method of paying for what it needed.

The petitioner's brief says that there are approximately 150 claims like those of the respondents, with "an aggregate value estimated to exceed forty millions of dollars" (p. 40). Certainly that number of claims, with that total liability, should not give this Court pause if, as the Committees of the Congress said, Order L-208 "inflicted a sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve" (R. 1562).

The Committees also observed that "the great majority of the mine operators affected by the order were the small operators" (R. 1561).

* * * * *

Not limiting itself to the 150 claimants, the petitioner warns against the "staggering financial burden" and discrimination which would result from the application of a rigid constitutional doctrine in these cases (p. 40-44). That argument *in terrorem* should receive short shrift. It rests

on the false premise that Order L-208 was similar to other "L" Orders. It was unique (see above, p. 28-29).

World War II ended more than 12 years ago. *St. Regis Paper Co.* v. *United States* (1948) 110 C. Cls. 271, cert. den. 335 U. S. 815, disposed of any question about claims for the indirect results of proper "L" Orders (see below, p. 87-89). If it had not, the statute of limitations would bar such claims.

The respondents' claims are not for compensation for the indirect results of a proper "L" Order. They are claims for compensation for a direct taking of their property through an Order which was not properly an "L" Order at all.

The petitioner's singular attack on gold mining in the United States and its defense of gold mining in Honduras and other foreign countries.

The petitioner's brief contains sundry rather remarkable comments about gold and gold mining, in this country and abroad.

Later herein (p. 89-95) we answer the contentions made by the petitioner which seem to be based on the premise that gold mining is "noxious". But some general observations are in order at this point.

It is not disputed that the respondents' gold mining operations were "nonessential". However, that was at least equally true of innumerable other operations which were carried on during the war and to some extent encouraged (see above, p. 13). And it would be absurd to say that the respondents' operations or the product of those operations, refined gold, were noxious. Neither the operations nor their product were in any way similar to those which have been treated as noxious by valid Congressional or state legislation.

On the other hand, the contributions made by gold mining should not be minimized. As we show in more detail later (p. 93-95), the Findings set forth that:

(1) The respondents provided splendid working and living conditions for their employees.

(2) The operations supported the communities where they were located. In particular, two communities in South Dakota with total populations of 16,000 were totally dependent on the mine of one of the respondents.

(3) The respondents paid substantial taxes to the states in which their operations were conducted and to the Federal Government.

The petitioner's brief says (p. 8):

> "The gold industry was singled out for particularly restrictive treatment because gold was not of importance to the war effort, yet its production consumed material in short supply, badly needed by essential nonferrous metal mines (R. 69)."

The nonessential gold mines could not be justly "singled out", for a taking without compensation, simply because their product was "not of importance to the war effort". That was true of countless other products (see above, p. 13).

The assertion that they were singled out because the production of gold "consumed material in short supply, badly needed by essential nonferrous metal mines" is refuted by the Findings, as well as by the record (see above, p. 11-13; see below, p. 95-97). That was the *pretext* for L-208 as set forth in the preamble; it was not the real reason. The petitioner's citation to the record is one of many examples that can be found in the petitioner's brief of citations which do not afford the slightest support for assertions which are made in the petitioner's brief.[25]

While gold mining was shut down in the United States (including Alaska), it was encouraged by the WPB in several foreign countries (Finding 49, R. 106):

[25] The petitioner's citation (R. 69) is to a memorandum written in ***December, 1941.*** The problem of the acquisition of critical materials by the gold mines was solved by ***March 2, 1942*** (see above, p. 11-13), and Order L-208 was not issued until ***October 8, 1942.***

> "Prior to the issuance of L-208, and afterwards until the end of the war, critical materials, machinery and equipment subject to allocation and control by WPB were shipped in substantial quantities to foreign countries for use in their gold mining industry. These countries included South Africa, Canada, Honduras, Nicaraugua and Columbia, in all of which gold mines continued to operate throughout the war."

At the October 6, 1942 meeting of the WPB, at which Order L-208 was agreed upon, there was discussion of gold mining in South Africa, Honduras and Canada (Finding 41, R. 100-101). Two sentences from the minutes of that meeting, dealing respectively with an area in this country and with Honduras, are especially interesting:

> "Lead and Deadwood, South Dakota, with aggregate populations of 16,000 are *totally* dependent on the mine's operations."
>
> * * * * *
>
> "The basic industries of Honduras are the cultivation of bananas, of which exportation to the United States has been reduced to 20 percent of normal, and gold mining."

We have no wish to raise any issue about the shipments of critical materials, machinery and supplies to Honduras and other foreign countries. But the petitioner's brief is notably silent about the devastating effects of L-208 in the United States and Alaska, at a time when gold mining was being supported in Honduras.

The justice of the respondents' claims.

The principal theme of the petitioner's brief is that the respondents' claims are unjust.

The outstanding fact about these cases is that the tribunals, legislative and judicial, which have had the responsibility of ascertaining the facts and the time to do

so, have come to the unqualified conclusion that a failure to compensate the operators of the nonessential gold mines would be most unjust.

* * * * * * *

The Senate and House Committees on the Judiciary both adopted in 1952 the conclusion which had been reached in 1946 by the Subcommittee of the House Committee on War Claims, after full hearings,[26] that Order L-208 "inflicted ruinous costs on the gold mining industry"—a "sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve" (see above, p. 40-42).

The reference in the petitioner's brief to the Judiciary Committee of the Senate is one of the many remarkable features of the brief. After saying that the respondents "belittle the constructive accomplishments of L-208", the brief adds (p. 65) "The gold mining industry as a whole, as could be expected, concurs in this view (R. 1547) as do *the political representatives of gold mining states* (R. 1524-1534)." At the cited place in the record the Court will find a Report of the *Judiciary Committee of the Senate* issued on February 22, 1949 to accompany S. 45 of the 81st Congress 1st Session.[27] The Senate Judiciary Committee Report, much of which was later incorporated in the 1952 Committee Reports from which we quoted in our statement of the case (see above, p. 40-42), said, among other things:

> "The conclusion further has been reached that the order should have provided a mechanism for compensation and that, as such was not provided, the Congress should so provide, even while realizing that much of the loss and damage is irreparable."

The Chairman of the Committee on the Judiciary was Senator McCarran of Nevada. It is nonetheless remarkable

---

[26] See above, p. 28, Note 3.

[27] S. 45 did not pass.

for the petitioner's brief to refer (p. 65) to the *entire* Senate Committee as "the political representatives of gold mining states".

* * * * *

The petitioner's brief says that the Court of Claims made "a particularly myopic appraisal of the results of L-208" (p. 53). But the brief fails to set forth what the Court found or to give anything even remotely approaching a fair summary of the bases for its Findings. And the record leaves no doubt that the Court of Claims reached its conclusions after a most thorough and fair-minded analysis of the evidence and the arguments.

As we have shown above (p. 7-9), the history of the claims under L-208 establishes that the Court of Claims was prepared to indulge every reasonable presumption in favor of the Government.

After the facts had been proved and the cases had been argued before the Court of Claims, the Court decided that the respondents had sustained what it had described as "a most difficult burden" *and it is evident from the Court's opinion that the majority was profoundly impressed that the respondents' claims are just.*

The comparison with other War losses and other suffering.

In many places the petitioner's brief develops the theme that the losses sustained by the respondents under Order L-208 were inevitable war losses for which no compensation should be awarded. But we submit that there is no rule of law or justice which requires or permits an indiscriminate grouping of all war losses as inevitable and not compensable.

Those who sustained monetary losses or suffered personally in the War as a result of price ceilings, the freezing of wages or the draft shared their parts of common burdens imposed by regulatory systems which were deemed

necessary to win the War. Those regulatory systems were administered with a view to their several objectives, as fairly as could be expected and without discrimination.

If a man who was entitled to Selective Service exemption was denied that exemption, it was no answer to say to him that other men had been inducted into the Service.

It was and is part of our Constitutional system that if property be taken by the Government, in war or in peace, just compensation must be paid. If land is taken for an army camp, if a ship is taken for the transportation of ammunition or food, or if any other property is taken for any other war purpose, the owner is entitled to compensation.

Indeed, in many instances where property is taken during a war, the compensation allowed will be the greater because of factors for which the war is responsible. Nothing of that kind is involved here because the War did not result in any increase of the price of gold.

The respondents' mines were not shut down as a consequence of the application of a general regulatory system for the control of critical materials. Their mines were "singled out" for one reason only: because the Government wanted to have those particular mines stand idle in the hope that hardrock miners employed in them would go to the nonferrous metal mines.

The guiding principle.

We believe that the applicable principle was stated by Mr. Justice Douglas, dissenting, with the concurrence of Mr. Justice Black, in *United States* v. *Caltex (Philippines) Inc., et al.* (1952) 344 U. S. 149, 156,[28] which involved the destruction by the Army of the respondents' terminal facilities in Manila at the time of the Japanese attack on Pearl Harbor, in order to keep them from falling into the hands of the enemy:

[28] Cited in the petitioner's brief at pages 18, 30-31.

> "It seems to me that the guiding principle should be this: Whenever the Government determines that one person's property—whatever it may be—is essential to the war effort and appropriates it for the common good, the public purse, rather than the individual, should bear the loss."

Of course, we do not contend that this statement in a dissenting opinion is binding on the Court, but we think that it is consistent with this Court's holdings over the years. The decision of the majority in *Caltex* rested on the ground that the destruction during a war of property which is about to fall into the hands of an enemy is analogous to the destruction of property to prevent the spread of a fire or of a contagious disease. *Caltex* did not establish any general proposition that the Government may destroy or otherwise take property during a war and escape liability for compensation on the broad ground that war entails sacrifices. On the contrary, *Caltex* represents an exception to the general rule that compensation must be paid if property be taken, an exception based upon the fact that the Caltex property in Manila was about to fall into the hands of the Japanese.

Order L-208 singled out a limited number of corporations and individuals who were thousands of miles from any theatre of operations and directly deprived them, for a period of 2½ years, of their right to produce and sell gold. Their mines were useless for any other purpose. No other property owners were similarly deprived of their property right to make any beneficial use of what they owned. The respondents have as just a claim for the taking of their property as any other citizen whose property was taken during the War.

II

BY DISREGARDING ESSENTIAL FINDINGS OF FACT OF THE COURT OF CLAIMS AND IN OTHER RESPECTS THE PETITIONER IS SEEKING TO RAISE QUESTIONS WHICH WERE NOT SET FORTH IN THE PETITION FOR CERTIORARI OR FAIRLY COMPRISED THEREIN.

IN ANY EVENT, THE SCOPE OF THIS COURT'S REVIEW OF JUDGMENTS OF THE COURT OF CLAIMS IS A LIMITED ONE.

THIS COURT MAY RESORT TO THE OPINION OF THE COURT OF CLAIMS, IF NECESSARY, FOR CLARIFICATION OF ANY FINDINGS.

As we have set forth at pages 6-7 above, the Court of Claims made very full Findings of Fact, covering the background, purpose, provisions and effects of Order L-208. The Court's judgment and Findings of Fact followed a vigorously contested litigation over a period of years.

The petitioner's brief presents the case virtually as if the Court of Claims had made no Findings at all. The *only* mentions of *any* Finding of Fact which we have located are two references at pages 67 and 68 to the last sentence of Finding 47 (R. 106). Innumerable assertions are made which are in direct conflict with explicit Findings; subjects which were disposed of by Findings are treated as if they were completely open; and Findings are "edited" so that their sense is changed and then used "without credit" (see above, p. 9-10).

The petitioner's brief, taken as an entirety, is an attack on all of the ultimate Findings, although it is not presented as such.

By disregarding essential Findings of Fact of the Court of Claims and in other respects the petitioner is seeking to raise questions which were not set forth in the petition for certiorari or fairly comprised therein.

Rule 23 of the Rules of this Court provides:

> "1. The petition for writ of certiorari shall contain in the order here indicated—
>
> * * * * *

> "(c) The questions presented for review, expressed in the terms and circumstances of the case but without unnecessary detail. The statement of a question presented will be deemed to include every subsidiary question fairly comprised therein. Only the questions set forth in the petition or fairly comprised therein will be considered by the court."

See *General Talking Pictures Corp.* v. *Western Electric Co.* (1938) 304 U. S. 175, 177-178.

In the petition for certiorari, the petitioner prefaced its Statement by saying (p. 3):

> "The pertinent facts *as found by the Court of Claims* may be summarized as follows:"

All references to the record were to the Findings of Fact of the Court of Claims.

The statement of the facts which followed gave no hint that the petitioner intended to present the case in this Court as if the Court were the original trier of the facts and as if the petitioner's only obligation were to present such facts, suppositions and theories as it thinks may be helpful to its defense.[29]

The basic questions now presented by the petitioner's brief necessarily relate to the adequacy of the Findings of the Court of Claims and the support in the record therefor. Unless the petitioner challenges the Findings there was no occasion for it to make the kind of presentation which it has made.

Questions as to the adequacy of the Findings of Fact of the Court of Claims and the support therefor in the record

[29] The petition did imply, in its statement of the questions presented, that L-208 was issued in "order to conserve scarce war materials" as well as "to bring about the voluntary relocation of manpower to vital mining activities" (p. 2), but it did not otherwise suggest any disagreement with the Findings of Fact of the Court of Claims.

were not "set forth in the petition or fairly comprised therein."

* * * * *

The statement of the questions presented in the petition for certiorari (p. 2-3) and the statement of the question presented in the brief on the merits (p. 2-3) are significantly different. The differences will be found in the opening paragraphs.

1. The brief on the merits states that one of the purposes of L-208 was "*to divert mining machinery and equipment to essential wartime enterprises*" and that "as amended" the order "prohibited the sale or disposition of mining machinery and equipment without the permission of the War Production Board" (p. 2). Everything which we have just quoted is new. On the other hand, the brief omits this sentence which was in the petition for certiorari (p. 2):

> "The Order contained no provision for routing the scarce war materials held by the mine owners to the more urgent users of such materials."

The purpose of the changes made by the brief on the merits is to try to pave the way for the petitioner's arguments about the two amendments of L-208 which were adopted on November 19, 1942 and August 31, 1943 (see above, p. 35-36, and Appendix A hereto, p. 58-65). No argument based thereon had *ever* been made previously (id.).

The petitioner's arguments about the two amendments clearly present a question which was not "fairly comprised" within the petition for certiorari.

2. The Government in its brief on the merits now says that Order L-208 was issued "to bring about the voluntary relocation of manpower to vital mining activities *and essential war work*" (p. 2). The words we have italicized are new; the other words quoted were in the statement of the "Questions Presented" in the petition for certiorari.

Having thus attempted to open the door to a new point that Order L-208 was intended "to bring about the volun-

tary relocation of manpower to * * * essential war work" *other than mining*, the petitioner's brief argues that the WPB was motivated by "the expectation that a sizable number of laborers released by a further restriction of the gold mining industry would be diverted to the nonferrous metal mines *as well as other essential industries*" (p. 8-9), and bases part of its argument on this latter point (p. 68-69; see Appendix A hereto, p. 86-87).

This new contention conflicts with the Findings of Fact of the Court of Claims (Appendix A, p. 33-39) and with the record (Appendix A, p. 70-73, 86-87).

* * * * *

The differences between the single question which the petitioner now presents (p. 2-3) and the two questions which were stated in the petition for certiorari (p. 2) may be summarized as follows:

The petitioner's brief now argues (p. 58-61) that Order L-208 had four purposes, which are mentioned in the statement of the "Question Presented" (p. 2).

(1) "to conserve scarce war materials",

(2) "to divert mining machinery and equipment to essential wartime enterprises",

(3) "to bring about the voluntary relocation of manpower to vital mining activities", and

(4) "to bring about the voluntary relocation of manpower to * * * essential war work".

Of these four alleged purposes, the petition for certiorari referred only to (1) and (3).

Alleged purpose (2), involving "mining machinery and equipment", was brought into the case in the petitioner's brief with Priorities Regulation No. 13 and two amendments of Order L-208, none of which was mentioned in the Court below or adverted to in the petition for certiorari (see above, p. 35-36, 60; Appendix A, p. 58-68).

Alleged purpose (4) was also not referred to in the

petition for certiorari; it was brought in at the last minute, in the teeth of the Findings of the Court of Claims and the record (see above, p. 17, 60-61; Appendix A, p. 33-39, 70-73, 86-87).

The preamble to the Order (R. 102) which the petitioner quotes (p. 58) mentioned only alleged purpose (1). The implication in the preamble was definite that the Order was "deemed necessary and appropriate in the public interest and to promote the national defense" because of "*a shortage in the supply of critical materials* for defense, for private account and for export, *which are used in the maintenance and operation of gold mines*".

The Court of Claims found that the only real purpose of the Order was (3), viz., to try to bring about what the petitioner calls "the voluntary relocation of manpower to vital mining activities" — in other words, to use the contemporaneous expression of the purpose, to maneuver hard-rock miners to the nonferrous metal mines (see above, p. 13-18; Appendix A, p. 34-39).

After introducing contentions relating to two new alleged purposes of Order L-208 and thus blurring the sharp issue, which was stated in the petition for certiorari, as to the purpose of the Order—an issue decided as a matter of fact by the Court of Claims in favor of the respondents (see above, p. 13-18; below, p. 95-97)—the petitioner's brief ranges over the whole record, and into the fields of speculation and imagination, in an effort to retry these cases on the facts in this Court, with reference to all four of the alleged purposes of the Order and substantially without regard to the Findings of the Court below.

Indeed, as a consequence of the introduction of the two new alleged purposes of Order L-208, the range of the petitioner's assertions and arguments on matters of alleged fact is much broader than the factual presentation which the petitioner made before the Commissioner or the Court of Claims.

In any event, the scope of this Court's review of judgments of the Court of Claims is limited.

The scope of this Court's review of judgments of the Court of Claims is set forth in Note 4 to the opinion in *United States* v. *Penn Foundry & Manufacturing Co., Inc.* (1949) 337 U. S. 198, 207-208. As a convenience, we set forth that Note in full just as it appears, without any quotations except those in the Note itself. Except as indicated in our Note 30, the emphasis was supplied by the writer of the opinion, Mr. Justice BURTON:

> The scope of our review of judgments of the Court of Claims is a limited one. The early practice and rules are discussed in *Luckenbach S. S. Co.* v. *United States*, 272 U. S. 533, 536-540. At the time of all the proceedings in the Court of Claims in the instant case, the authority of this Court to review causes upon petition for a writ of certiorari was set forth expressly in the Act of February 13, 1925, c. 229, 43 Stat. 939, § 3 (b), as amended by the Act of May 22, 1939, c. 140, 53 Stat. 752, which became 28 U. S. C. § 288 (b). It provided:
>
> "(b) In any case in the Court of Claims, . . . it shall be competent for the Supreme Court, upon the petition of either party, whether Government or claimant, to require, by certiorari, that the cause be certified to it for review and determination of all errors assigned, with the same power and authority, and with like effect, as if the cause had been brought there by appeal. In such event, the Court of Claims shall include in the papers certified by it the findings of fact, the conclusions of law, and the judgment or decree, as well as such other parts of the record as are material to the errors assigned, to be settled by the Court.
>
> • • • • •
>
> "In such cases the Supreme Court shall have authority to review, in addition to other questions of law,

errors assigned to the effect *that there is a lack of substantial evidence to sustain a finding of fact;*[30] *that an ultimate finding or findings are not sustained by the findings of evidentiary or primary facts; or that there is a failure to make any finding of fact on a material issue.*" (Emphasis supplied.)

The foregoing expressly controlled the practice until repealed by the new Judicial Code, effective September 1, 1948. The new Code, 28 U. S. C. § 1255, said merely:

"Cases in the Court of Claims may be reviewed by the Supreme Court by the following methods:

"(1) By writ of certiorari granted on petition of the United States or the claimant; . . ."

The Reviser's Notes to that Section said:

"Provisions for authority to review, in addition to other questions of law, 'errors assigned to lack of evidence to sustain a finding of facts; that an ultimate finding or findings are not sustained by findings of evidentiary or primary facts; or that there is a failure to make a finding of fact on a material issue,' *were omitted as unnecessary.*" (Emphasis supplied.) H. R. Rep. No. 308, 80th Cong., 1st Sess. A107 (1947).

This Court may resort to the opinion of the Court of Claims, if necessary for clarification of any Findings.

In *United States* v. *Wells* (1931) 283 U. S. 102 this Court said (p. 120-121, footnotes omitted):

"It is evident that the court did not consider the statements in its opinion, which we have quoted, as

[30] The words "that there is a lack of substantial evidence to sustain a finding of fact" were not italicized by the Court at 338 U. S. 207.

additional findings of fact, but as an argument with respect to the conclusion to be drawn from its findings. *In its opinion, the court was summarizing what it considered to be the effect of its findings, and no useful purpose would be served in returning the case for a specific finding that the motive which impelled the decedent to make the transfers was precisely that which the court has thus definitely stated.*"

In *American Propeller Co.* v. *United States* (1937) 300 U. S. 475, the Court said (p. 479-480, footnote omitted):

> "While it is true that this court is not at liberty to refer to the opinion for the purpose of eking out, controlling or modifying the scope of the findings, the rule is not absolute and does not preclude reference to the opinion for all purposes whatsoever. It is well established that in case of ambiguity, extrinsic aid may be sought in order to settle the meaning of a statute or a contract. *We see no reason why the principle of that rule does not permit reference to the opinion of the court in order to clarify the meaning of a finding otherwise in doubt.*"

See also *United States* v. *Penn Foundry & Manufacturing Co., Inc.* (1949) 337 U. S. 198, at page 209.

III

THE COURT MAY CONCLUDE THAT THE WRIT OF CERTIORARI SHOULD BE DISMISSED AS IMPROVIDENTLY GRANTED.

In the petition for certiorari the Government told this Court that the Court of Claims had "erroneously decided an issue of unusual constitutional importance in the twilight zone between non-compensable regulation and compensable takings" (p. 7.). It was certainly indicated that the issue presented was one of law, not one of fact.

The petition for certiorari summarized "the pertinent

facts as found by the Court of Claims", with citations to the Findings (p. 3-7).[31]

On the other hand, the petitioner's brief on the merits ignores the Findings of Fact almost as completely as if they had never been made, and presents a story which is in conflict with every important ultimate Finding, with many of the subsidiary or evidentiary Findings, and with the record as a whole (see above, p. 9-10).

At the same time the petitioner has changed the statement of the "Questions Presented", which it made in the petition for certiorari (p. 2), in the hope of opening the door to arguments that L-208 was intended (1) "to divert mining machinery and equipment to essential wartime enterprises", and (2) "to bring about the voluntary relocation of manpower to * * * essential war work" other than nonferrous mines (see above, p. 60-62).

It would take anyone who was not intimately familiar with the Findings of Fact of the Court of Claims and the other proceedings herein (including the petition for certiorari) many days to select such scattered portions of the petitioner's brief as do not involve either (1) a disregard of the Findings of the Court of Claims or (2) a departure from the petitioner's statement of the "Questions Presented" in the petition for certiorari.

The petitioner's arguments on points of law are predicated on the petitioner's version of the facts (expanded by

---

[31] The only suggestion in the petition that the petitioner might challenge any of the Findings was in the first sentence of the section entitled "Questions Presented", where it was implied that L-208 was issued in order "to conserve scarce war materials" as well as "to bring about the voluntary relocation of skilled manpower to more vital mining activities" (p. 2). But since the Statement of the case purported to refer only to the "pertinent facts as found by the Court of Claims" (p. 3), no one who was not thoroughly familiar with the case would have suspected that the reference to conservation of "scarce war materials" (p. 2) might indicate an intention to challenge any of the Findings of Fact of the Court of Claims.

the petitioner's new statement of four alleged purposes of L-208) rather than on the Findings of the Court of Claims.

Under similar circumstances this Court has dismissed writs of certiorari as improvidently granted. *Houston Oil Co. of Texas, et al.* v. *Goodrich, et al.* (1918) 245 U. S. 440; *Southern Power Co.* v. *North Carolina Public Service Co.* (1924) 263 U. S. 508. See also *Rice* v. *Sioux City Cemetery* (1955) 349 U. S. 70.

IV

ORDER L-208 EFFECTED A TAKING WHICH IS COMPENSABLE UNDER THE FIFTH AMENDMENT.

Under the above heading, we will consider the first of the questions presented (see p. 5 above).

The purpose, nature and effects of Order L-208.

Our analysis of the consequences under the Fifth Amendment of the issuance of Order L-208 will be based on the following premises as to the purpose, nature and effects of the Order, all of which are established by the Findings of Fact and opinions of the Court of Claims or are conceded in the petitioner's brief:

1. The operators of the "nonessential" gold mines, about 150 in number, were "singled out" by a unique Order.[32]

2. That Order directly deprived them of their right to make any beneficial use of their mines, under penalty of fine or imprisonment, so long as the Order was in effect.[33]

3. The Order was issued by the WPB at the instance of the Army and the War Department.[34]

---

[32] See above p. 13-18, 28-29, 49-50.

[33] See above p. 26-27.

[34] See above p. 22-26, and Appendix A p. 25-33.

4. The WPB was an agency of the President (Appendix D, p. 8) and the Order was approved and ratified by the President.[35]

5. The potential acquisition of critical materials by the nonessential gold mines had been eliminated seven months before the issuance of the Order, and the Order was not intended to have any relation to the allocation of critical materials.[36]

6. The Government did not requisition the critical materials, machinery and equipment in the mines which were closed down, and the Order was not intended to, and did not, allocate such critical materials, machinery and equipment to essential industries.[37]

7. The only real purpose of the Order was to "maneuver our manpower"—that is, to maneuver to the nonferrous metal mines some of the hardrock miners who were employed in the gold mines. It was hoped that if the mines were closed down, the hardrock miners who would be thrown out of work would seek and find employment in nonferrous metal mines, even though the latter might be far away and the working conditions unattractive.[38]

8. The order was "not an allocation order."[39]

9. The intent and effect of the Order were exactly the same as if the Army or the WPB had taken over the respondents' mines, discharged their hardrock miners (except those needed for standby operations), and tried to persuade them to go to the nonferrous metal mines.[40]

---

[35] See p. 11, 27, 120-122.

[36] See above p. 11-13, and Appendix A p. 6-10.

[37] See above p. 34-37, and Appendix A p. 45-68.

[38] See above p. 13-18, and Appendix A p. 34-39.

[39] See below, p. 95-97.

[40] See below, p. 77-82.

10. During World War II there was no authority for the drafting of civilian labor. Neither the Army nor the WPB could require a hardrock miner at Lead, South Dakota, to go to Butte, Montana, or Climax, Colorado. Nor did the President have any such authority.[41]

11. The President did, however, have the authority to take any interests in the respondents' mines which he thought it necessary to take for any purpose of the War.[42]

12. By Order L-208 the Government exercised as complete a dominion and control over the respondents' rights to the beneficial use of their mines as it would have exercised if members of its staff or officers and soldiers of the Army had gone to the mines and taken physical possession of them.[43]

13. By Order L-208 the Government got what it wanted, since the respondents' hardrock miners were thrown out of work, and some of them did go to work in nonferrous metal mines.[44] It was no fault of the respondents that a relatively insignificant number of hardrock miners went to the nonferrous metal mines for more than transient employment, so that the value of what the Government got was less than it had hoped.[45]

14. There was no other instance where the WPB (or any other agency of the Government) closed down a business in order to have its employees discharged and thrown on the labor market. Nor, so far as we know, has anything of that kind happened at any other time in the history of this country.[46]

---

[41] See above p. 18-21.

[42] See below p. 115-120.

[43] See below, p. 71-82.

[44] See above p. 37-39; see below, p. 85.

[45] See below p. 163.

[46] See above p. 28-29, 49-50.

15. Order L-208 was camouflaged in the hope of having it mistaken for an order dealing with the conservation and allocation of critical materials. The main effort of the petitioner's brief is to have the camouflage succeed.[47]

The "property" involved; the taking; and the reason why an issue has arisen as to compensation.

The respondent Homestake was the owner of "patented mining claims" in the Black Hills area of South Dakota near the City of Lead, South Dakota (Finding 54, R. 112). The respondent Central Eureka held the fee of gold-bearing lands at Sutter Creek, Amador County, California (Finding 77, R. 116). The respondent Idaho Maryland was the owner in fee of gold-bearing lands in the Grass Valley Mining District, County of Nevada, in the State of California (Finding 92, R. 120). The mines of the respondent Alaska-Pacific were in the Territory of Alaska; some were held in fee, others by location notices, and still others by a lease and royalty agreement, coupled with a purchase option (Finding 120, R. 127). The respondent Bald Mountain was the owner of gold-bearing lands in Lawrence County, South Dakota (Finding 139, R. 135). The respondent Ermont was the owner of a Quartz Lode Mining Claim in the County of Beaverhead, State of Montana (Finding 162, R. 140).

We will use the term "mines" to denote the respondents' interests in gold-bearing lands (whether fee, leasehold or mining claims), their mills and other surface installations, and their tangible personalty below the ground and on the surface.

In effect, the Government took over the respondents' mines, closed them down (except for the necessary standby operations), forced the discharge of the hardrock miners, and kept the mines idle until the Order was revoked on June 30, 1945.

---

[47] See above p. 30-34, and below p. 97-101.

If the Executive had done that by an order which stated what was being taken and which provided "a mechanism for compensation",[48] no actions by the respondents would have been necessary. Moreover, if the Order had stated what was being done but had not provided a "mechanism for compensation", the Government would probably not have questioned the respondents' rights to judgments for compensation in actions under the Fifth Amendment. Difficulties have arisen in these cases only because the Government chose not to say frankly what was being done but camouflaged its action as a regulation of critical materials.

A. Order L-208 deprived each of the respondents of property within the meaning of the Fifth Amendment—the right of the respondent to mine and sell gold during the period when its mine was closed down.

L-208 deprived the respondents of their right to make any beneficial use of their mines while the Order was in effect. By doing so it deprived them of their mining businesses for that period.

The Court of Claims, summarizing its Findings of Fact, said (R. 19):

> "The record establishes that the purpose and intent of WPB in issuing L-208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i. e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines."

At R. 35:

> "L-208 was aimed, in all its provisions, directly at the beneficial use of the mining properties of the

[48] See Report No. 1605 of the Judiciary Committee of the Senate (Plaintiff's Exhibit 178, R. 855, 1559, 1570) quoted at pages 41-42 above.

gold mine owners, and the only intention reasonably inferrible from the language of the order itself and the circumstances surrounding its issuance was an attempt to temporarily deprive them of that property right. By the issuance of Order L-208 the defendant prohibited the carrying on of otherwise lawful mining operations and thereby placed a definite servitude on plaintiffs' profitable use of their mines which resulted in a temporary taking of that property right."

At R. 40-41:

"Despite its preamble and the authority cited for its issuance, the language of the order itself and the circumstances surrounding its issuance indicate that neither its purpose nor its effect was to conserve or allocate critical materials, equipment and facilities needed for defense, but was rather to deprive the gold mine owners of their right to make profitable use of their gold mines."

And at the conclusion of its opinion (R. 45):

"We conclude that L-208 by prohibiting the carrying on of otherwise lawful mining operations placed a servitude on plaintiffs' profitable or beneficial use of their mines and thus amounted to a temporary taking of that property right in the case of those mine owners and operators who were forced to close their mines by virtue of their compliance with those provisions of L-208 which prohibited them from using their materials, facilities and equipment to mine gold and which ordered them to close down their mines."

The taking by L-208 was obviously direct and intended, as the Court of Claims found.

The "property right" of each of the respondents which was taken by L-208 was clearly "a legally recognized 'property right'" such as is referred to in the petitioner's brief (p. 27-28).

The right of any of the respondents to extract gold bearing ore from its mine or mines was, of course, the foundation of the respondent's business of producing and selling gold.

It is immaterial that the Government did not take any fee or leasehold interests held by the respondents or any of their patented mining claims. It did take their right to make any beneficial use of what they had, and the Court below so held (R. 19, 35, 40-41, 45). That right was "property" within the meaning of the Fifth Amendment.

The controlling definition of "property" for the purposes of the Fifth Amendment was given by this Court in *United States* v. *General Motors Corporation* (1945) 323 U. S. 373, 377-378:

> "The correctness of the decision of the court below depends upon the scope and meaning of the constitutional provision: 'nor shall private property be taken for public use, without just compensation,' which conditions the otherwise unrestrained power of the sovereign to expropriate, without compensation, whatever it needs.
>
> The critical terms are 'property', 'taken' and 'just compensation'. It is conceivable that the first was used in its vulgar and untechnical sense of the physical thing with respect to which the citizen exercises rights recognized by law. On the other hand, it may have been employed in a more accurate sense to denote the group of rights inhering in the citizen's relation to the physical thing, as the right to possess, use and dispose of it. In point of fact, the construction given the phrase has been the latter. When the sovereign exercises the power of eminent domain it substitutes itself in relation to the physical thing in question in place of him who formerly bore the relation to that thing, which we denominate ownership. In other words, it deals with that lawyers term the individual's 'interest' in the thing in question. That interest may comprise the group of rights for which the shorthand term is 'a fee simple' or it may be the

> interest known as an 'estate or tenancy for years', as in the present instance. *The constitutional provision is addressed to every sort of interest the citizen may possess.*"[49]

There can be no question that the right to mine gold-bearing ore and to produce and sell gold therefrom is "property" within the meaning of the Fifth Amendment as thus interpreted.

What Justice Holmes said about the right to mine coal is equally true of the right to mine gold, *Pennsylvania Coal Co.* v. *Mahon* (1922), 260 U. S. 393, 414:

> "As said in a Pennsylvania case, 'For practical purposes, the right to coal consists in the right to mine it.' *Commonwealth* v. *Clearview Coal Co.*, 256 Pa. St. 328, 331. What makes the right to mine coal valuable is that it can be exercised with profit. To make it commercially impracticable to mine certain coal has very nearly the same effect for constitutional purposes as appropriating or destroying it."

The Court of Claims said that Order L-208 placed a definite *servitude* on the respondents' profitable or beneficial use of their mines that amounted to a temporary taking of that property right (R. 35, 45).

Black's Law Dictionary (Fourth Ed., 1951) says, in part, in its definition of the term "servitude" (p. 1535):

> "When the freedom of ownership in land is fettered or restricted, by reason of some person, other than the owner thereof, having some right therein, the land is said to 'serve' such person. The restricted condition of the ownership or the right which forms the subject-matter of the restriction is termed a

---

[49] See also *Grand Rapids Booming Co.* v. *Jarvis* (1874), 30 Mich. 308, 320-321 and *City of St. Louis* v. *Hill* (1893), 116 Mo. 527, 533-534. Both cases involved the question whether there had been a taking of private property and both cases defined "property" in terms of the right of a person to use, enjoy and dispose of land or personalty as distinguished from the land or personalty itself.

'servitude,' and the land so burdened with another's right is termed a 'servient tenement,' while the land belonging to the person enjoying the right is called the 'dominant tenement.' The word 'servitude' may be said to have both a positive and a negative signification; in the former sense denoting the restrictive right belonging to the entitled party; in the latter, the restrictive duty entailed upon the proprietor or possessor of the servient land."

3 *Powell on Real Property* says that in Roman law the term "servitude" encompassed, among other things, "the easement proper of the English law" (p. 388-389, Note 31) and, with respect to a negative easement, that (p. 391, footnote omitted):

> "* * * a negative easement consists solely of a veto power. The easement owner has, under such an easement, the power to prevent the servient owner from doing, on his premises, acts, which, but for the easement, the servient owner would be privileged to do."

The Restatement of the Law of Property, Vol. V (1944), defines a negative easement (Section 452; p. 2912):

> "A negative easement assures to the owner thereof a particular use or enjoyment of the land subject to the easement by enabling him to prevent the possessor of the land from doing acts upon it which, were it not for the easement, he would be privileged to do."

In *United States* v. *Dickinson* (1947) 331 U. S. 745, 748 this Court said:

> "*Property is taken in the constitutional sense when inroads are made upon an owner's use of it to an extent that, as between private parties, a servitude has been acquired either by agreement or in course of time.* The Fifth Amendment expresses a principle of fairness and not a technical rule of pro-

> cedure enshrining old or new niceties regarding 'causes of action'—when they are born, whether they proliferate, and when they die."

This Court used the term "*servitude*" to describe the nature of the taking effected in *United States* v. *Causby* (1946), 328 U. S. 256, 266-267, where the servitude was imposed by frequent low level flights of military aircraft over the plaintiffs' farm.

In *Peabody* v. *United States* (1913) 231 U. S. 530, this Court had previously used the term "*servitude*" with respect to action which would have deprived the owner of land of its profitable use without any entry by the Government onto the land itself (p. 538):

> "It may be assumed that if the Government had installed its battery, not simply as a means of defense in war, but with the purpose and effect of subordinating the strip of land between the battery and the sea to the right and privilege of the Government to fire projectiles directly across it for the purpose of practice or otherwise, whenever it saw fit, in time of peace, with the result of depriving the owner of its profitable use, the imposition of such *a servitude* would constitute an appropriation of property for which compensation should be made."

To paraphrase what was said in *United States* v. *Dickinson, supra,* inroads were made by L-208 on the respondents' mines "to an extent that, as between private parties, a servitude" would have been acquired.[50] The Government took dominion and control over the mines to the extent of requiring them to remain idle except for standby maintenance.

---

[50] In Note 14 (p. 28) of the petitioner's brief it is stated: "Where a constitutional taking is implied, it is assumed that the United States has acquired a definite interest in the property, permanent or temporary, such as • • • an easement, a servitude, • • •."

B. It is immaterial that "the United States took no gold" and that there was no physical invasion of the respondents' mines.

The petitioner's brief says that "Order L-208 took absolutely nothing for the Government in the physical sense" and, after mentioning that there was no requisitioning of materials, machinery or equipment, it adds (p. 45):

> "The United States took no gold; as much gold remained for extraction when the restrictions of L-208 were lifted as when they were imposed."

This argument is so patently fallacious that it seems almost an imposition on the Court to refer to it. There is universal recognition, whether by geologists, by economists or by businessmen, that the present right to operate a profitable mine over a period of time has value, and the fact that the ore is left in the ground and can be extracted later—perhaps a great many years later—does not establish that nothing has been taken from the owner.

* * * * *

The Government emphasizes that there was no physical invasion of the respondents' mines—that neither the WPB, which issued the Order, nor the Army, at whose instance the Order was issued, took physical possession of the mines (p. 17, 27-28). That is beside the point.

The petitioner's argument amounts to this: that there cannot be a taking of a property right which relates to realty or tangible personalty unless the realty is invaded physically or the tangible personalty is taken physically. That argument obviously involves a failure to distinguish between (1) realty and tangible personalty, which are physical things and can be "invaded", and (2) property rights, which are not physical things and cannot be "invaded". Moreover, it is a mere *ipse dixit* of the petitioner, for which no authority is or could be cited.

It is clear that, for there to be a taking of the right

to the beneficial use of a mine, factory or other plant, it is not necessary for the Government physically to invade the mine, factory or plant.

By Order L-208 the WPB, with the approval of the President, exercised complete dominion and control over the respondents' mines. It directed each of the respondents to "close down in the shortest possible time, the operation of [its] mines" (Finding 43, R. 102). The petitioner's statement that "the Government did not otherwise interfere with respondents' exclusive possession and control of the mines" (p. 3) means merely that the respondents were allowed to continue "minimum maintenance to keep mines dewatered and in standby condition" (Finding 41, R. 101; Finding 43, R. 102-103). The real dominion and control was exercised by the Government, not by the respondents.

It is interesting to compare L-208 with what the Secretary of the Interior did by his "Order for Taking Possession" in *United States* v. *Pewee Coal Co.* (1951) 341 U. S. 114, 116:

> "To convince the operators, miners and public that the United States was taking possession for the bona fide purpose of operating the mines, the Government formally and ceremoniously proclaimed that such was its intention. It required mine officials to agree to conduct operations as agents for the Government; required the American flag to be flown at every mine; required placards reading 'United States Property!' to be posted on the premises; and appealed to the miners to dig coal for the United States as a public duty."

Paragraph (b)(1) of Order L-208 constituted as complete an exercise of dominion over the respondents' mines as the Order for Taking Possession in *Pewee Coal Co.* The paragraph contained a direction to "each operator of a nonessential mine" to immediately take all such steps as might be necessary to close down, and to "close down, in

the shortest possible time, the operations of such mine." Both in substance and in form it was the kind of a directive which might have been issued by the Board of Directors of an operating company to the manager of operations. The paragraph was not even worded as a prohibition, restriction or regulation of mining operations—it was a directive to take affirmative action to close down.

The opinion in *Pewee Coal Co.* mentions that the Secretary's order was accompanied by (1) a requirement that mine officials agree to conduct operations as agents for the Government, (2) a requirement that the American flag be flown at every mine, and that placards reading "United States Property!" be posted on the premises, and (3) an appeal to the miners to dig coal for the United States as a public duty. The first of these features had its counterpart in the directive in L-208 that mining operations be closed down; in *Pewee* the formal agreements to conduct operations as agents for the Government were incident to the continuance of operations, and the action of the respondents' mine officials in closing down operations in obedience to the directive in L-208 was not materially different. The appeal to the Pewee Coal Co. miners finds its counterpart in the appeal of the Chairman of the WPB and the Chairman of the War Manpower Commission to the gold miners to transfer to nonferrous metal mines (Appendix A, p. 30; Finding 45, R. 105; Plaintiff's Exhibit 34, R. 430, 1323). The only difference between what happened in *Pewee Coal Co.* and what happened under L-208 is that the operators of the nonessential gold mines were not required to fly the American flag or post placards. Any "invasion" in *Pewee Coal Co.* was purely symbolic.

In *United States* v. *Causby* (1946) 328 U. S. 256, the Court held that flights of military aircraft over a chicken farm near a military airport, which were so low and frequent as to be a direct and immediate interference with the enjoyment and use of the land as a chicken farm, were

as much an appropriation of the plaintiffs' right to the use of the land as a more conventional entry upon it. The opinion discussed the situation which would exist if by reason of the frequency and altitude of the flights the owners of the land could not use it for any purpose and the Government's concession that in that event there would be a taking. The Court said (p. 261-262):

> "We agree that in those circumstances there would be a taking. Though it would be only an easement of flight which was taken, that easement, if permanent and not merely temporary, normally would be the equivalent of a fee interest. It would be a definite exercise of *complete dominion and control* over the surface of the land. The fact that the planes never touched the surface would be as irrelevant as the absence in this day of the feudal livery of seisin on the transfer of real estate. The owner's right to possess and exploit the land—that is to say, his beneficial ownership of it—would be destroyed."

The opinion in *Causby* indicates what is decisive, viz., whether there is an exercise of "dominion and control". Under Order L-208 there was an exercise of dominion and control as complete as that in the hypothetical case put in the *Causby* opinion.

In *Causby* the fact the planes never touched the surface of the land was considered "as irrelevant as the absence in this day of the feudal livery of seisin on the transfer of real estate." When a Government agency issues an order which asserts complete dominion and control over a mine, it is similarly irrelevant whether the taking is accompanied by an entry onto the surface or a descent to the levels at which the ore is being extracted. In the Middle Ages dominion and control ordinarily had to be exercised by physical presence and word of mouth or gesture. In modern days, dominion and control of a mine, factory or plant can be exercised effectively from thousands of miles away.

In *Richards* v. *Washington Terminal Company* (1914) 233 U. S. 546, it was held that the owner of a house near a portal of a tunnel which Washington Terminal Company had built by authority of Acts of Congress, and from which there was a continual emission of gases and smoke, was entitled to compensation on the ground that the resulting depreciation of the value of plaintiff's house amounted to a "taking" of the plaintiff's property.[51] Although the case did not involve any physical invasion of plaintiff's land, this Court said at page 557:

> "Construing the acts of Congress in the light of the Fifth Amendment, they do not authorize the imposition of so direct and peculiar and substantial a burden upon plaintiff's property without compensation to him."

The burden imposed on the respondents' property rights by Order L-208 was certainly "direct and peculiar and substantial".

Other pertinent decisions are *United States* v. *Welch* (1910) 217 U. S. 333, 339, which was cited by the Court below (R. 31, Note 10; R. 43); *William C. Atwater, Jr.* v. *United States* (1946) 106 C. Cls. 196;[52] and *Edward P.*

---

[51] This taking is to be distinguished from the consequential effect of a legalised nuisance, also discussed in *Washington Terminal Company*, which is mentioned in *United States* v. *Causby*, 328 U. S. at p. 262.

[52] In *Atwater* v. *United States*, the plaintiffs were the owners of certain property on Fire Island, New York. The military authorities built a target range near the plaintiffs' property and established a safety zone which included the plaintiffs' property and from which all persons, including the plaintiffs, were excluded during the Government's use of the target range from December 1941 until June 30, 1944. Although there was no actual physical occupation or invasion of the plaintiffs' property, the Court of Claims held that there was a compensable taking because the plaintiffs were denied access to their property. The Court said (p. 207):

> "The land was not damaged; it was merely part of a safety zone. But just compensation is not to be denied the plaintiffs, for there was an actual taking and intent to take, although it took the form only of extinguishing, for the time being, the right of ingress."

Stahel & Co., Inc. v. *United States* (1948) 111 C. Cls. 682, cert. den. (1949) 336 U. S. 951, which was discussed fully in the opinion of the Court of Claims (R. 28-30).

Numerous state courts have also given expression to the rule that "any substantial interference with private property which destroys or materially lessens its value, or by which the owner's right to its use and enjoyment is in any substantial degree abridged or destroyed, is, in fact and in law, a taking, in the constitutional sense, to the extent of the damages suffered, even though the title and possession of the owner remain undisturbed".[53]

Here, at the instance of the Army and War Department, and with the approval of the President (despite a protest from 21 Senators), the WPB directly and explicitly deprived the respondents, under penalty of fine and imprisonment, of the right to make any beneficial use of their mines. The Order was announced to the respondent Homestake by the Under Secretary of War (Appendix A, p. 32). What difference can it possibly make that the Army did not send officers, or the WPB send members of its staff, to symbolize the exercise of dominion which the Order represented?

C. It is immaterial that the Government did not operate the respondents' mines.

In the discussion in the petitioner's brief of what is called "an unintended taking", it is said (p. 28, italics in original): "* * * there must generally be (a) an actual invasion by the Federal Government of private property,

---

[53] Quoted from *Stockdale* v. *Rio Grande Railroad* (1904) 28 Utah 201, 211. See also *In re Forsstram* (1934) 44 Ariz. 472, 481; *Nalon* v. *City of Sioux City* (1933) 216 Iowa 1041, 1044; *Webster County* v. *Lutz* (1930) 234 Ky. 618, 620; *Pearsall* v. *Board of Supervisors* (1889) 74 Mich. 558, 561; *City of St. Louis* v. *Hill* (1893) 116 Mo. 527, 533-534; *Forster* v. *Scott* (1893) 136 N. Y. 577, 584; *Miller* v. *Beaver Falls* (1951) 368 Pa. 189, 196; *Philadelphia Appeal* (1950) 364 Pa. 71, 74-75; *Matter of Sansom Street* (1928) 293 Pa. 483, 489-490; *Early* v. *South Carolina Public Service Authority* (1955) 228 S. C. 392, 407-408.

(b) some public *use* of that property, and (c) that *use* must be *by* the United States." The contention in the brief is that the Government did not use the respondents' property.

The petitioner's argument amounts to this: that if a mine, factory or other plant is taken by the Government, compensation need not be paid unless the Government either continues the operation theretofore conducted or commences some new operation. If this were true, it would mean that if the Government took over a related group of five factory buildings, converted three to the manufacture of a new product and left two idle, it would not be deemed to have taken the two. That is, of course, not the law.

In *Kimball Laundry Co.* v. *United States* (1949) 338 U. S. 1, this Court held that when the Army took the Kimball Company's laundry, it also took the Company's "trade routes", although it could not use them. The Court said (p. 13):

> "• • • an exercise of the power of eminent domain which has the inevitable effect of depriving the owner of the going-concern value of his business is a compensable 'taking' of property. See *United States* v. *General Motors Corp.*, 323 U. S. 373, 378; cf. *United States* v. *Causby*, 328 U. S. 256. If such a deprivation has occurred, the going-concern value of the business is at the Goverment's disposal whether or not it chooses to avail itself of it. Since what the owner had has transferable value, the situation is apt for the oft-quoted remark of Mr. Justice HOLMES, 'the question is what has the owner lost, not what has the taker gained.' *Boston Chamber of Commerce* v. *Boston*, 217 U. S. 189, 195."

The taking of the respondents' right to make a beneficial use of their mines, with the directive that operations be closed down, was analogous to a case where the Government takes property and destroys it. This was pointed out by the Court below (R. 43, italics in original):

"That the Government did not make any physical use of the gold mines does not deprive its action of its character of a taking. The Supreme Court has held that *destruction* of private property for a *public purpose* is the equivalent of a *taking* of private property for a *public use*. *United States* v. *Welch*, 217 U. S. 333; *Kimball Laundry Co.* v. *United States*, 338 U. S. 1."

The controlling principle was stated by this Court long ago in its decision in *Pumpelly v. Green Bay Company* (1872) 13 Wall. 166, 177-178:

"It would be a very curious and unsatisfactory result, if in construing a provision of constitutional law, always understood to have been adopted for protection and security to the rights of the individual as against the government, and which has received the commendation of jurists, statesmen, and commentators as placing the just principles of the common law on that subject beyond the power of ordinary legislation to change or control them, it shall be held that if the government refrains from the absolute conversion of real property to the uses of the public it can destroy its value entirely, can inflict irreparable and permanent injury to any extent, can, in effect, subject it to total destruction without making any compensation, because, in the narrowest sense of that word, it is not *taken* for the public use. Such a construction would pervert the constitutional provision into a restriction upon the rights of the citizen, as those rights stood at the common law, instead of the government, and make it an authority for invasion of private right under the pretext of public good, which had no warrant in the laws or practices of our ancestors."

So also in *United States* v. *General Motors Corporation* (1945) 323 U. S. 373, 378, this Court said:

"In its primary meaning, the term 'taken' would seem to signify something more than destruction, for it might well be claimed that one does not take what he destroys. But the construction of the phrase has

not been so narrow. The courts have held that the deprivation of the former owner rather than the accretion of a right or interest to the sovereign constitutes the taking. *Governmental action short of acquisition of title or occupancy has been held, if its effects are so complete as to deprive the owner of all or most of his interest in the subject matter, to amount to a taking.*"

When the Government exercised dominion and control over the respondents' mines, it made the use of the mines which it wanted. It so happened that that use consisted of keeping the mining operations idle except for minimum necessary maintenance. However, that was the particular kind of use, although in a sense a negative one, which the Government wanted.

As a consequence of its exercise of dominion and control over the use of the respondents' mines, the Army and the WPB accomplished their objective: the discharge of the hardrock miners. Thus the Government got what it wanted. And it was no fault of the respondents that what the Government got was so disproportionate to the injuries sustained by the respondents, their employees and the communities where their mines were located (see below, p. 103).

D. The cases cited by the petitioner which involved wartime controls of prices, rents, profits and materials are inapplicable.

At pages 32-33 the petitioner's brief cites *Bowles* v. *Willingham*, 321 U. S. 503, *Yakus* v. *United States*, 321 U. S. 414, and *Lichter* v. *United States*, 334 U. S. 742, and also a number of cases in Note 17,[54] all of which involved

[54] The petitioner's Note 17 reads:

"See, also, *Block* v. *Hirsch*, 256 U. S. 135; *Morrisdale Coal Co.* v. *United States*, 259 U. S. 188; *Highland* v. *Russell Car Co.*, 279 U. S. 253; *Wilson* v. *Brown*, 137 F. 2d 348 (Em. Ct. App.); *Taylor* v. *Brown*, 137 F. 2d 654 (Em. Ct. App.), certiorari denied, 320 U. S. 787; cf. *United States* v. *Rock Royal Co-operative, Inc.*, 307 U. S. 533, 569-570; *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381, 392-396."

wartime controls of prices, rents or profits. Such controls of prices, rents and profits are in no way analogous to Order L-208.

The legislation authorizing such controls contemplated that those subject to regulation would receive a fair and equitable compensation for their property sold or rented or for their efforts in fulfilling war contracts. The price control legislation called for the fixing of prices which in the judgment of the administrator would be "generally fair and equitable". Cf. *Yakus* v. *United States* (1944) 321 U. S. 414, 420. The rent control legislation contained a similar requirement for the establishment of "fair and equitable" maximum rents. Cf. *Bowles* v. *Willingham* (1944) 321 U. S. 503, 516. The Renegotiation Acts were designed to insure only that profits on war contracts would not be "excessive". Cf. *Lichter* v. *United States* (1948) 334 U. S. 742, 793 *et seq.*[55]

None of the statutes providing wartime controls of prices, rents or profits required the property owners to keep their property idle and nonproductive, preventing them from earning any return at all.

---

[55] The petitioner's brief quotes (p. 32) the following sentence from this Court's opinion in *Bowles* v. *Willingham:*

> "A nation which can demand the lives of its men and women in the waging of • • • war is under no constitutional necessity of providing a system of price control on the domestic front which will assure each landlord a 'fair return' on his property".

The meaning of what this Court said was not at all what might be supposed by a casual reader of the quotation.

The statement was made by this Court in a discussion as to whether the "generally fair and equitable" standard of the rent control legislation was adequate or whether it was necessary that rentals be fixed, like utility rates, so as to produce a "fair return" on an investment (321 U. S. 516-519). Since the rent control legislation called for "generally fair and equitable rentals", the quoted sentence from the Court's opinion cannot be interpreted to mean that the Government is free, for example, to deprive landlords of *any* return on their properties or to order them to "close down" their properties, without making just compensation.

Moreover, the statutes imposing wartime controls of prices, rents and profits all provided for systems of regulation which were general in their application. Any classifications which they made or authorized were reasonably related to the statutory objectives—to see that prices, rents and profits should not be more than fair and equitable. By contrast, L-208 was not the product of any general system for the control of nonessential industries. The operators of nonessential gold mines were "singled out".

Such wartime controls over prices, rents and profits may have contributed to the closing down of business enterprises but, if and when they did, the closing down was merely a consequence of the control—it was not the purpose of the control. By contrast, the closing down of nonessential gold mines was the direct intended effect of Order L-208, which prescribed that the operator of each such mine "shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time" (R. 102).

* * * * * *

At pages 38-40 the petitioner's brief cites *St. Regis Paper Co.* v. *United States* (1948), 110 C. Cls. 271, cert. den. 335 U. S. 815, *Steuart & Bro.* v. *Bowles* (1944), 322 U. S. 398, and other cases involving losses due to the wartime allocation of materials.

The distinction between Order L-208 and the cases which involve the wartime allocation of materials is made clear by comparing the instant case with *St. Regis Paper Co.* v. *United States*. In that case, which was discussed fully in the opinion below (R. 24-26), the WPB, faced with shortages in the supply of pulpwood needed in essential war industry, issued its Order M-251 prohibiting the consumption, processing and delivery of pulpwood in certain specified areas, except with the specific authorization of the WPB. As a consequence of M-251, which was ultimately found to be a proper and valid regulation of the use of materials

needed in the war effort, the plaintiff's plant was unable to obtain or use pulpwood and was compelled to discontinue manufacturing and selling all bleached and unbleached kraft pulp for a period of more than a year. St. Regis sought compensation in the Court of Claims. That Court dismissed the petition on demurrer and this Court denied certiorari. The Court below pointed out the salient distinctions between M-251 in *St. Regis* and Order L-208 (R. 26):

> "The court held that M-251 did not require the closing of plaintiff's plant nor did it interfere with plaintiff's use of the plant; that on the contrary, the order represented a valid exercise of WPB's admitted power to allocate a scarce material such as pulpwood, and that any injury to plaintiff's profitable use of its plant, or any loss in value of its plant, were merely consequential and therefore did not amount to a taking and were not compensable. The terms of the order itself certainly bore out the court's conclusion since the order merely represented an attempt by the Government to secure all the available supply of pulpwood in the area by freezing the supplies on hand with the owners in the area and immediately placing mandatory orders directing delivery to specified users elsewhere, and by prohibiting the users in the area in question from acquiring any more pulpwood."

In other words, the St. Regis Paper Company plant closed down, under the direction of the St. Regis Paper Company management, as a result of inability to obtain pulpwood. Since the WPB's Order M-251 controlled the allocation of pulpwood, the closing of the St. Regis plant may be said to have been a result of M-251. But the closing of the St. Regis plant was not an objective of the order; it was merely a consequence of a proper regulation of the use of materials needed in the war effort.

In the *St. Regis* opinion the Court of Claims emphasized that (110 C. Cls. p. 279):

> "This does not mean, however, and the petition does not purport to so charge, that it was the Board's objective to shut down plaintiff's plant. It did not issue its General Preference Order No. M-251 to accomplish such an end."

By contrast, under L-208 the nonessential gold mines were closed down by direction of the WPB which was contained in an Order that had no relation to the allocation of critical materials (see above, p. 13-18, 29-37; see below, p. 95-97; Appendix A, p. 34-39).

E. Gold mining was not a "public evil", subject to suppression on that account.

The petitioner's brief relies heavily (p. 33-36) on decisions which upheld the wartime prohibition of liquor traffic by the Federal Government in World War I (*Hamilton* v. *Kentucky Distilleries Co.* (1919) 251 U. S. 146; *Jacob Ruppert* v. *Caffey* (1920) 251 U. S. 264), and on cases sustaining prohibitions by the states of the use of property for purposes determined by state legislatures to be injurious to the health, morals or safety of the community.[56] All such cases involved statutes designed to suppress a public evil.

The principle of the cases arising out of the exercise of the police power by the states is summarized in the paragraph from the opinion in *Mugler* v. *Kansas* (1887) 123 U. S. 623, 669, which the petitioner has quoted (p. 35-36):

> "The power which the States have of prohibiting such use by individuals of their property as will be prejudicial to the health, the morals, or the safety of the public, is not—and, consistently with the

---

[56] *Mugler* v. *Kansas* (1887) 123 U. S. 623 (liquor prohibition); *Powell* v. *Pennsylvania* (1888) 127 U. S. 678 (sale of oleomargarine); *Lawton* v. *Steele* (1894) 152 U. S. 133 (prohibition against maintaining fishing nets on state waters); *North American Storage Co.* v. *Chicago* (1908) 211 U. S. 306 (diseased poultry); *Miller* v. *Schoene* (1928) 276 U. S. 272 (destruction of disease-bearing trees).

> existence and safety of organized society, cannot be burdened with the condition that the State must compensate such individual owners for pecuniary losses they may sustain, *by reason of their not being permitted, by a noxious use of their property, to inflict injury upon the community.* The exercise of the police power by the destruction of property which is itself a public nuisance, or the prohibition of its use in a particular way, whereby its value becomes depreciated, is very different from taking property for public use, or from depriving a person of his property without due process of law. In the one case, a nuisance only is abated; in the other, unoffending property is taken away from an innocent owner."

In *Hamilton* v. *Kentucky Distilleries Co., supra,* the potential evil of liquor traffic was recognized to the point that the plaintiff conceded that the Congress might temporarily regulate or forbid the sale of liquor "in order to guard and promote the efficiency" of the armed forces and defense workers (251 U. S. at p. 155). In *Jacob Ruppert* v. *Caffey, supra,* it was "assumed" that the war need demanded the immediate discontinuance of the manufacture of malt liquors (251 U. S. at p. 302).

Relying on these cases, bearing upon the right of a lawmaking body to prohibit a noxious use of property, the petitioner makes the untenable argument that gold mining was subject to suppression by the WPB.

In this connection the opinion of the Court of Claims said (R. 42-43):

> "The only circumstance under which the Government may escape the obligation to pay for property which is destroyed or taken by the authorized action of its agents, is where, in time of war, that property is inherently dangerous, or is being used in such a manner as to clearly endanger the public safety. *Hamilton* v. *Kentucky Distrilleries Co.,* 251 U. S. 146; *United States* v. *Caltex,* 344 U. S. 149.

> Gold mines which did not possess a serial number under WPB Order P-56 because they did not produce significant amounts of critical metals in addition to gold, were determined by WPB to be 'nonessential,' but we know of no precedent which would justify our holding that a nonessential industry or business was, *ipso facto,* one endangering the public safety in time of war. That such an industry could be regulated, and strictly regulated in wartime, is unquestioned, and resulting losses are not compensable if the action taken is truly regulatory in nature. But the power to regulate a nonessential but nondangerous industry in wartime is not the power to destroy, and limitation is not the equivalent of confiscation."

During World War II other nonessential industries were allowed and even encouraged to continue with the help of the WPB's policy of allowing limited priority assistance to such industries for maintenance, repair and operating supplies in order that dislocation of the civilian economy be avoided (see above, p. 13). The reason why the gold mining industry was singled out had nothing to do with the nature of gold mining as an occupation or with the nature of gold itself.

In the cases cited in the petitioner's brief, the determinations that products, occupations or activities constituted public evils were made by the Congress or by the state legislatures. Whether or not power to make such a determination could have been delegated to the President or to the WPB, certainly no power to determine that gold mining was noxious was delegated.

Moreover, neither the WPB nor the President made any such determination. Order L-208 was not issued on the theory that gold mining or gold was a public evil.

The petitioner says (p. 36, footnote omitted):

> "* * * that the power of a nation at war to restrict or to prohibit the use of property because, in the judgment of those whose responsibility it is to deter-

> mine, the use impairs or its non-use contributes to the war effort, is no less extensive than the power of the state to impose similar restrictions upon property in the name of the health, morals, or safety of the community."

If the foregoing statement is meant to be applicable to this case, it seems to imply that, *without any enabling statute,* (a) the President, or such agency as he may designate, has in time of war the unqualified power to restrict or prohibit, at will, the use of any property which the President or the agency may choose, (b) a property owner is to have no recourse if the restriction or prohibition is necessary in the judgment of the authority which decides upon the restriction or prohibition, and (c) the Fifth Amendment to the Constitution must be subordinated to any such determination. No President of the United States has ever asserted such a power.

* * * * *

In view of the foregoing, further comments about gold mining and gold may be superfluous; but a brief reply to certain suggestions in the petitioner's brief seems in order.

Two pages about the Congressional powers over gold conclude with an acknowledgment that the national power under the coinage authority of the Constitution is not involved in these cases (p. 46-48). We are concerned, not with gold as money or a commodity, but with gold mining.

However, there seem to be hints in the petitioner's brief that there is something noxious about gold. The brief seems to liken it to liquor or beer, quotes passages which use such terms as "peculiar" and "noxious" and speaks of the petitioner's use of their property as "detrimental to the public interest" (p. 33-36). But we cannot believe that the Government, which itself has purchased all the gold produced in the United States for more than two decades, would argue that the metal itself is noxious.

Moreover, gold mining in the United States and Alaska has made contributions the importance of which should not be minimized.

As to the largest of the gold mines affected by L-208, the Court of Claims found (Finding 66, R. 114):

> "The working conditions at Homestake and the living conditions in the communities surrounding Homestake in 1942 were superior to those at the nonferrous metal mines to which the Government sought to transfer the Homestake miners. Homestake employees enjoyed free medical and hospital services, group insurance, pensions, recreational facilities, and many of the older miners owned their own homes."

In a memorandum dated September 9, 1942, which was sent by the Chief of the Miscellaneous Minerals Branch of the WPB to the Deputy Director General for Industry Operations (Finding 27, R. 85-90), the dependence on the gold mines of the "old established mine employees", of the communities and of some of the states was pointed out[57] (R. 87-88). As to the communities and employees the memorandum said (R. 88):

> "Losses in county and municipal taxes will be felt much more severely by the communities in the vicinity of the mines. In this respect, shutting down mining operations is not comparable with shutting down other industrial operations in communities where enterprise is diversified; in the West it is generally true that the mine is the sole major source of income for local communities. For example, it has been reported that the Homestake Mining Company pays 65 percent of the local com-

---

[57] The petitioner's Appendix A quotes a 9-line paragraph from this memorandum (p. 98), but makes no reference to the paragraphs quoted above or to a statement in the memorandum of the purpose of the proposed shutdown of the gold mines (see Appendix A, hereto, p. 15-18).

munity taxes and 50 percent of the county taxes; that the wage earners and those servicing them pay the balance largely from the $4,500,000 in annual wages paid by the company. At least 19,000 people, the population of the county, are directly or indirectly dependent upon its operation.

For reasons stated in the last paragraph, hardships faced by old established mine employees will be severe. There is virtually no possibility of converting the facilities at the mines to war work."

The Court of Claims found (Finding 50, R. 106-107) that on and prior to October 8, 1942, "officials of WPB who were responsible for the issuance of L-208 knew"

"* * * (7) that in many instances the communities in the vicinity of gold mines were entirely dependent upon the operation of the mines for their continued prosperity; (8) that the deeper mines were likely to deteriorate and become flooded if closed down, and that many operators would not be able to afford the cost of keeping their mines safe and accessible or their machinery, equipment and buildings in repair during a long period of unproductivity."

As to Lead, South Dakota, and that state, the Court found (R. 115-116):

"71. The closing of the Homestake mine pursuant to Order L-208 had far-reaching and drastic repercussions in the city of Lead and the surrounding communities. The population declined sharply, more than 750 homes and apartments were left vacant and boarded up, and 36 business establishments which had served the communities were left vacant.

72. In the years immediately prior to the issuance of Order L-208, the State of South Dakota received about $1,000,000 per year, or approximately ten per cent of its annual revenues, from Homestake. The State was deprived of this source of revenue by the order closing the gold mines."

Of course, operators of gold mines contributed many millions a year in income taxes to the Federal Government (cf. R. 1233).

Nevertheless, within the Government there was some hostility to the mining of gold and a belief in some quarters that "a reduction in gold mining should be envisaged for the post-war period" (R. 1176). Whether, and if so to what extent, that feeling contributed to the forces which resulted in the issuance of Order L-208, it is impossible to tell. Certainly neither the WPB nor the President adopted the policy that there should be a reduction in gold mining in the postwar-period.

Nor did either determine that gold mining was a public evil.

F. The Court of Claims found as a fact that Order L-208 was not a regulation.

In the petition for certiorari this Court was told that these cases presented "an issue of unusual constitutional importance in the twilight zone between a non-compensable regulation and compensable takings" (p. 7).

It is perfectly clear that L-208 was ***not*** a regulation, and the Court of Claims so found as a fact.

While L-208 recited that there was "a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of the gold mines", it was not the purpose of Order L-208 to deal with any such alleged shortage. The only real purpose of the Order was to close down the non-essential mines, throw the hardrock miners on the labor market and try to maneuver them to the nonferrous metal mines. Furthermore, the Order was not reasonably adapted to function as a critical materials regulation.

What we have just said is abundantly supported by the Findings of Fact of the Court of Claims, particularly Findings 46, 47, 48, 49, 50 and 51 (R. 105-107).

The fundamental issue between the majority of the Court of Claims, on the one hand, and Chief Judge Jones, on the other hand, was whether the only real purpose of Order L-208 was to close the gold mines so as to maneuver hardrock labor to the nonferrous metal mines and the Order was not a critical materials measure at all, as the majority held, or whether the direction in paragraph (b) (1) of the Order that the mines be closed down should "be considered as mere surplusage" and the balance of the Order sustained as a valid critical materials regulation, as the Chief Judge thought. This becomes entirely clear on an analysis of Chief Judge JONES' dissenting opinion (R. 58-61) and a comparison of the views expressed by the Chief Judge with those in the majority opinion (R. 12-45).

Judge LARAMORE wrote (R. 61):

> *"The majority opinion points out that L-208 was not an allocation order, as it purported to be, but rather was clearly an order closing gold mines deemed nonessential to the war effort;* i.e., those mines whose gold production in dollar value exceeded 30 percent of their total production."

Judge LARAMORE's opinion, read as a whole, shows that he agreed with the majority that "L-208 was not an allocation order, as it purported to be", so that there was in effect, therefore, a 4-to-1 vote that L-208 was not an allocation order: and that vote was consistent with the Findings of Fact agreed upon by the majority.

We submit that *it was a question of fact—predominantly, if not exclusively—whether or not L-208 was an allocation order; that that question of fact was decided against the petitioner by the Court of Claims; and the Findings of the Court of Claims are abundantly supported by the evidence.* If there were any doubt that it was primarily, if not exclusively, a question of fact whether L-208 was "an allocation order", that doubt would be resolved by a read-

ing of the petitioner's brief, which is an attempt to retry the facts in the hope of establishing that the Order was an allocation order.

V

THE CAMOUFLAGE OF ORDER L-208 CANNOT AVAIL THE PETITIONER AND DID NOT CONVERT A TAKING INTO A REGULATION.

If Order L-208 had set forth the purpose and intent of the Order frankly in the preamble and the citation of authorities, and had omitted the superfluous references in paragraphs (b)(2) and (b)(3) to "any material, facility or equipment", it would have been entirely clear that there was a taking under the Order and the Government would presumably not have contested the right of the respondents to just compensation.

The preamble and other features of Order L-208 were camouflage.

We have already dealt so fully with the only real purpose of Order L-208, and with the camouflage in the Order (the preamble, paragraphs (b)(2) and (b)(3), and the citation of authority), that it would be an imposition on the Court to go over the same ground again (see above, p. 13-18, 30-34; Appendix A, p. 33-68).

While the Court of Claims did not use any such expressions as "camouflage", "pretext" or "window dressing", its Findings could have only one meaning even without the confirmation provided by the Court's opinions (see above, p. 30-34). The opinions point up the only conclusion which can be drawn from the Findings.

We have just quoted, at page 96, the portion of the opinion of Judge LARAMORE, dissenting, which shows that there was no doubt in the minds of any of the Judges of the Court of Claims as to what was meant by the decision

of the majority, i.e., that Order L-208 was not what "it purported to be".

Moreover, the petitioner's brief expressly concedes *that the Court of Claims concluded "that L-208 was not devised for the purpose of conserving or allocating materials"* (p. 53). This concession is, of course, tantamount to an acknowledgment that the Court of Claims found that L-208 was not devised for the purpose for which the preamble said that it was devised.

That Court had previously pointed out that the respondents had "a most difficult burden" to sustain in proving the allegations of their petitions. *Idaho Maryland Mines Corp.* v. *United States* (1952) 122 C. Cls. 670, 689. And certainly it was no light task to establish that the preamble and other provisions of an Order of the importance of L-208 were camouflage. But that is exactly what the respondents did establish.

In saying that the Order was camouflaged, we have not the remotest idea of reflecting on the patriotism, integrity, character or personal motives of the Chairman or any members of the WPB, or any of the others in authority, such as General Somervell, who made their influence felt.

It is unnecessary to try to decide what consideration was given to the preamble and the camouflage features of Order L-208. The question is not *why* they were included in the Order, but *whether* they are to serve successfully as camouflage.

The camouflage of the Order cannot succeed.

The petitioner says (p. 61) that "it is settled that if executive action is justified by a lawful purpose, it is not rendered unlawful by the motive of those responsible for the action even if that motive were otherwise illegal" and that "the motives of WPB in issuing the order were

proper ones". This contention has no relevancy. The judgment of the Court of Claims is based on the conclusion that Order L-208 was issued for "a lawful purpose"—in order to take the respondents' property in the hope that hardrock miners would seek and obtain employment in the nonferrous metal mines. It has not been held, and the respondents did not argue, that the Order was "unlawful".

Certainly the Court of Claims was not bound by the statement of the WPB, in the preamble of L-208, that the Order was being issued because of "a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines". The Court was not required to accept as a fact what the evidence before it showed conclusively was not the fact.

Throughout this litigation the Government has recognized that there was a justiciable issue as to the purpose of the Order.[58]

An inquiry into the purpose of the Order is not an inquiry into motives, in the sense that anyone is trying

---

[58] The Commissioner made a finding that, while the dominant purpose of L-208 was "the releasing of mine labor", another purpose was "as stated in the preamble" (R. 7-8). The respondents objected to so much of the finding as set forth that one of the purposes of the Order was "as stated in the preamble that the fulfillment of the requirements for the defense of the United States had created a shortage in the supply of critical materials which had been used in the maintenance and operation of gold mines" (Appendix A, p. 34). The Government was satisfied with the Commissioner's finding as to the purposes of the Order, and the Defendant's Exceptions and Brief, filed November 5, 1954, contained a long narrative at the conclusion of which the Commissioner's finding was quoted with evident satisfaction (p. 380-405). There was no contention that the Court of Claims had no power to determine the purpose of the Order.

In the petition for certiorari the statement of the questions presented started by assuming that the Order had two purposes, of which one was that stated in the preamble and the other the labor purpose (p. 2). In the petitioner's brief on the merits the statement of the question presented starts with the assumption that the Order had four purposes (see above, p. 61-62).

to disclose any secret or personal considerations which motivated those who were responsible for Order L-208. The questions decided by the Court of Claims were simply these: *What was Order L-208 intended to do? What did it in fact do?*

An inquiry as to the purpose (or purposes) of Order L-208 is obviously proper because the Order on its face raises the issue which was stated in the petition for certiorari, i.e., whether it provides for a non-compensable regulation or a compensable taking (p. 7). Paragraph (b)(1) reads like a taking. The same thing is true of paragraphs (b)(2) and (b)(3) except perhaps for the references therein to "any material, facility, or equipment". On the other hand, the preamble, the references in paragraphs (b)(2) and (b)(3) to "any material, facility, or equipment" and the citation of authorities are mentioned in support of the view that the Order was "an allocation order". Chief Judge JONES, who concluded that the Order was an allocation order, reached that conclusion only as a result of treating (b)(1) as surplusage and misreading (b)(2) and (b)(3) (see Appendix A, p. 42). If it was necessary for the Chief Judge to go that far to reach the conclusion that the Order was an allocation order, it certainly was permissible to show, and for the Court of Claims to find as a fact, that it was not an allocation order.

It is unnecessary to make any extended argument in support of the proposition that *the use of camouflage in a preamble or elsewhere in an order which effects a taking cannot deprive the order of the character of a taking or defeat a claim for just compensation.* This Court, and the judiciary of this country generally, have consistently respected the division of powers which our Constitution commands and have been most careful to be sure that no inquiry as to the purpose of any Executive action shall result in an infringement on the prerogatives of the Executive. But the Fifth Amendment commands that if prop-

erty be taken by the Executive just compensation be paid. There is no need of argument to establish the correctness of what the Court of Claims said in denying the motion for a rehearing (R. 145), that the *Government cannot "escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a 'priorities order' or an 'allocation order'".*

VI

ORDER L-208 WAS NOT WELL ADAPTED TO MANEUVER HARD-ROCK MINERS TO THE NONFERROUS METAL MINES AND WAS A PRACTICAL FAILURE.

The petitioner's brief says that the Court of Claims held "that the issuance of L-208 in order to divert manpower to essential nonferrous mines was, in effect, ill-conceived, unwise and unsuccessful" (p. 53). That is a fair summary of the Court's Findings on this subject.

We have already quoted the ultimate Findings of the Court of Claims (see above, p. 38-39), and the subject is covered in detail at pages 68-92 of Appendix A hereto.

The WPB acted "without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines" (Finding 51, R. 107). There was an almost incredible statistical confusion until correct statistics were finally obtained seven days before the Order was issued, and then the correct statistics were apparently disregarded (Appendix A, p. 70-73). A basic defect of L-208 as a manpower measure was that it was not "directed at the known reasons for the shortage of underground workers in the nonferrous metal mines, i.e., low wages, bad working and living conditions, and the refusal of Selective Service to defer miners" (Finding 50, R. 107). Many of the hard-rock miners were "middle-aged men with families who

owned their own homes and would not leave their communities if any alternative were possible" (Finding 50, R. 107; see also Finding 47, R. 106). Consequently they could not be "maneuvered" to distant nonferrous metal mines (see above, p. 19-20, 37-39).

When the Under Secretary of War announced the issuance of L-208 to the President of the Homestake Mining Company, which is located at Lead, South Dakota, his telegram spoke of copper and molybdenum and solicited assistance in getting the gold miners at Lead, South Dakota, to go to "the Anaconda copper mine at Butte, Montana, and the Climax Molybdenum mine at Climax, Colorado, both about 500 miles from the Homestake mine" (Appendix A, p. 32; Finding 60, R. 115). The difficulties in "maneuvering" the miners from Lead doubtless included not only the distances to Butte and Climax, but the altitude at Climax, the highest mine in North America, which is about 11,000 feet above sea level. Fifty-one Homestake employees accepted employment at Climax but 41 stayed less than six months and only 6 remained as long as one year (Finding 69, R. 115).

As to all workers referred to Climax from all of the gold mines, Dr. Wilbur A. Nelson's Report of April 30, 1943 set forth (Plaintiff's Exhibit 52, R. 545, 1352, 1353-1354):

> "The Climax Molybdenum Company had 125 workers from the gold mines, referred to them, and at present, according to Mr. Coulter of that company, have only 10 of these workers on their payroll. They had 60 workers from the gold mines come to their mine. Six of them failed to pass the physical examination, and 44 of them have since then quit working for this company."

Doubt as to the wisdom of the close down of the gold mines was expressed within the WPB before L-208 was

issued (Appendix A, p. 74-75, 78). When the Vice Chairman of WPB finally obtained the correct statistical data, he urged further study, saying that a close down "will produce very serious economic dislocations, and the total possible gain in men is a small figure" (Finding 38, R. 99).

But the die was cast. At least five times[59] between September 15 and October 6 the Army or the War Department spoke up in no uncertain terms, not to make sure that the correct facts were ascertained or that there was an analysis of the objections to the close down made within the WPB, but only to express impatience, to demand action, and finally at the October 6 meeting of the WPB to say that "failure to stop gold production immediately would be inexcusable" (see above, p. 22-26).

Actually only about 100 hardrock miners went from the gold mines to the nonferrous metal mines and remained there for more than a year (Finding 47, R. 106). The petitioner's contention, that the Finding of the Court of Claims on this point was arbitrary, is frivolous (Appendix A, p. 91).

It was no fault of the respondents that more impressive results were not obtained. The respondents did what they could to further the objective of the Order (Finding 56, R. 112; Plaintiff's Exhibit 99; R. 438, 1495, 1496-1497). The Order was a practical failure because it was "ill-conceived".

The petitioner's brief suggests that it is irrelevant "that, as an instrument for diverting manpower to nonferrous metal mines, L-208 failed of its purpose" (p. 65).

We wish to make it unmistakably clear that in our view the respondents' right to compensation is in no way de-

---

[59] Finding 30, R. 93; Finding 36, R. 98; Finding 39, R. 99; Finding 40, R. 99-100; Finding 41, R. 101.

pendent upon the showing that Order L-208 failed of its labor purpose. Indeed, if the Order had succeeded in bringing about a large increase in the number of hardrock miners and a proportionate increase in the production of the needed nonferrous metals, the benefits which the Government derived from the Order would have been that much greater and its reluctance to compensate the respondents for the taking of their property might perhaps not be so great. However, we do not agree that it is immaterial that L-208 was "ill-conceived, unwise and unsuccessful".

In the first place, the evidence and the Findings completely dispose of the bold assertions in the petitioner's brief that the Order was issued "on the basis of repeated and careful studies, and after other expedients had been tried and had failed" (p. 16, 25). The *only* careful study of the situation was undertaken on October 1, 1942, seven days before the Order was issued; it showed that the number of hardrock miners in the gold mines which would be closed down was approximately 896,[60] as compared with the assertion by the representative of the WPB's Labor Division on October 1, 1942 "that there were between 10,000 and 12,000 men who were then employed in the gold mines" and the unexplained statement by the Under Secretaries of War and the Navy on October 5, 1942 that there "were two thousand to three thousand hard-rock miners engaged in gold mining". The smaller of the two figures given by the representative of the WPB's Labor Division was more than *eleven times* the correct figure. It is fantastic to assert, in the face of the record on this and many other points, that the WPB acted "on the basis of repeated and careful studies".

---

[60] Of whom about 300 would be needed for standby maintenance, so that only about 600 would be available if "all could be induced to go into other mines" (Finding 37, R. 98-99). Actually, as appears from Findings 47 and 52, quoted above, only about 100 hardrock miners went into nonferrous mines and remained there for a year or more.

The petitioner is not content with its reference to "repeated and careful studies", but sponsors a broad endorsement of L-208 (p. 56):

> "Viewed, as it must, in a wartime context, there can be small room for doubt as to the necessity and justification for L-208."

Certainly the Findings of Fact of the Court of Claims dispose of the petitioner's endorsement of the Order.

Moreover, those Findings point up a feature of L-208 which should not be overlooked. *The Order represented the first and only time in the history of this country when the Executive has taken dominion and control of a business activity and closed it down in order to throw labor on the market in the hope of channelling that labor to other employment. It was a practical failure for the reason that such a method of trying to "maneuver" men was ill-conceived and unlikely to be successful.* It was particularly unlikely in the case of the hardrock gold miners because of the special factors which are referred to in the Findings of the Court of Claims. But even if those factors had not been present, the question would certainly arise as to the soundness of trying to recruit skilled employees as was done by L-208. *It cannot be doubted that the taking of the respondents' property under L-208 was a unique and regrettable episode, most unlikely ever to be repeated.*

VII

THE GOVERNMENT CANNOT ESCAPE ITS OBLIGATION TO PAY COMPENSATION ON THE GROUND THAT THERE WAS A LACK OF AUTHORITY TO TAKE THE RESPONDENTS' PROPERTY.

The petitioner's Point II is that "There was no intention, or authority, on the part of WPB to take the respondents' property or business" (p. 69-71). The dissenters below expressed views on that subject quite differ-

ent from those advanced by the petitioner. We will discuss both the arguments made by the petitioner and the views expressed by the dissenters below.

The Government raised no question as to the authority for the Order until more than 4 years after the respondents' actions were started.

It was not until after the decision of the Court of Claims in the respondents' favor on February 20, 1956 that the Government first raised, in its motion for a new trial, a question as to the authority for Order L-208.

The respondents' actions had been pending for more than four years: motions to dismiss had been denied; testimony had been taken over a period of more than four months; the Commissioner's Report had been issued; exceptions and briefs thereto had been filed; argument had been had before the Court of Claims; supplemental briefs had been filed; and the Court's decision had been handed down.

The Court below said in denying the Government's motion for a new trial (R. 145, italics in the original):

> "It should be noted that this is the *first* occasion in this lengthy litigation on which the Government has taken the position that it lacked authority to take plaintiffs' [respondents'] property. • • • It would seem that as a defense 'lack of authority to take', if there was any such lack of authority, which we think there was not, should have been raised and supported at an earlier stage."

What Mr. Justice HOLMES said for this Court in *International Paper Co.* v. *United States* (1931) 282 U. S. 399, 406, is particularly apt:

> "*The Government has urged different defenses with varying energy at different stages of the case. The latest to be pressed is that it does not appear that the action of the Secretary [of War] was au-*

thorized by Congress. We shall give scant consideration to such a repudiation of responsibility. The Secretary of War in the name of the President, with the power of the country behind him, in critical time of war, requisitioned what was needed and got it. Nobody doubts, we presume, that, if any technical defect of authority had been pointed out it would have been remedied at once. *The Government exercised its power in the interest of the country in an important matter, without difficulty, so far as appears, until the time comes to pay for what it has had. The doubt is rather late.* We shall accept as sufficient answer the reference of the petitioner to the National Defense Act * * * [39 Stat. 166, 213], giving the President in time of war power to place an obligatory order with any corporation for such product as may be required, which is of the kind usually produced by such corporation."

In the brief of the Government in *Youngstown Sheet & Tube Co.* v. *Sawyer* (1952) 343 U. S. 579, this statement by Mr. Justice HOLMES was cited as authority for the proposition that the Government could not change its position that the order in *Sawyer* was valid. The Government's brief in *Sawyer* said (p. 70-71):

"A further word should also be said as to the practical probabilities of plaintiffs' not having a remedy in the Court of Claims. Government counsel have assured them and the courts that, if an injunction is not issued, no objection will be raised to the Court of Claims' jurisdiction on the ground that the taking was invalid. *The Pewee case shows that this is not an idle promise, but established Government policy.* It is certainly not to the plaintiffs' interest to raise the point of validity in the Court of Claims. Their sole fear is that future Government counsel will make such a defense or that present counsel will change their position. But if that should happen, the courts have a ready answer in the pungent

words of Mr. Justice HOLMES in *International Paper Co.* v. *United States*, 282 U. S. 399, 406 * * *."

We will now discuss the arguments advanced in the petitioner's Point II, and also what was said in the dissenting opinions below.

A. The arguments advanced in the petitioner's Point II are plainly untenable.

The petitioner's Argument relates to (1) the asserted intent of the WPB not to take the respondents' property and (2) the extent to which the President delegated his authority to the WPB. The brief does not contain any discussion of the authority of the President, although it acknowledges that he approved L-208 (petitioner's brief, p. 21, 55).

The WPB clearly intended to do just what it did— take the respondents' property rights. The fact that it purported to act under its allocation authority is immaterial in determining the legal effect of its action.

The petitioner contends that the "WPB never had any intention to 'take' respondents' property or business for public use"; that the "WPB was acting solely under the allocation authority it possessed, by delegation from the President, under the Second War Powers Act", and that it was functioning solely in the field of "regulation, not of eminent domain"; and that the Court below "so recognized in its opinion on rehearing (R. 143)" (p. 69).

None of these contentions is sound.

The WPB certainly intended to do what in fact it did. And as we have shown, what it did amounted to a taking under the Fifth Amendment.

The petitioner's wish to avoid the constitutional effects of what the WPB did cannot change the character or consequences of its actions.

There is no finding below as to what powers the WPB thought that it was exercising when it issued L-208. The Government adduced no evidence on that subject. The record shows that in May, 1943 claims for compensation by the operators of the nonessential mines were expected. On May 24, 1943, Edward H. Rott, Deputy Administrator of L-208, wrote in a report to the Administrator (Plaintiff's Exhibit 13, R, 857, 1292, 1300):

> "The magnitude of the effect of this order is very great, with but extremely limited accomplishment. *The losses entailed by all mines through forced closing under Order L-208, promptly became potential claims for post war adjustment.* Those claims are cumulative."

The Court below did not find, and we cannot say, that Mr. Rott's memorandum of May 24, 1943 establishes that the WPB expected claims for compensation when it issued L-208. The record does not show whether or not it expected claims on the ground that the Order effected a taking. But there is no evidence that it was advised that claims on that ground could not be sustained.

The Government's brief relies on what appears on the face of L-208, particularly the preamble (petitioner's brief, p. 58-61). But the preamble was a camouflage (see above, p. 30-34, 97-98).

The argument that the WPB was acting solely under its allocation powers and functioning solely in the field of "regulation" is equally untenable. The WPB *purported* to act under its allocation authority but in fact and in law its action constituted a taking.

The petitioner's contention is reminiscent of that advanced by the Government in *United States* v. *Pewee Coal Co.* (1951) 341 U. S. 114, where the coal mines were seized

pursuant to the President's Executive Order dated May 1, 1943. The order there cited no specific statutory authority but relied generally upon the powers of the President as Chief Executive and as Commander-in-Chief. The Government contended that since the President did not purport to act under Title II of the Second War Powers Act (56 Stat. 176, 177), the "limited take-over of the coal mines for a restricted purpose" could not be deemed an exercise of the Government's eminent domain power.[61] None of the members of this Court agreed with that contention.

Nor did the Court of Claims conclude that the WPB was "functioning solely in the field of regulation", as the petitioner seems to suggest (p. 69). In its opinion on the Government's motion for a new trial, the Court below did point out that it had not held that the "WPB purported or intended to exercise any of its several requisitioning powers" and had held that the WPB purported to act

---

[61] The Government's argument was as follows (brief of the Government in *United States* v. *Pewee Coal Co.*, p. 42-43):

> "Further evidence that the executive branch did not view the limited take-over of the coal mines for a restricted purpose as in the nature of a Fifth Amendment taking is the failure to rely on any federal statute implementing the eminent domain power. At the time of the 'seizure', Title II of the Second War Powers Act (56 Stat. 176, 177) was in effect, empowering the departments and agencies of the Government, upon authorization by the President, 'to acquire by condemnation, any real property, temporary use thereof, or other interest therein * * * that shall be deemed necessary, for military, naval, or other war purposes.' This statute authorized temporary takings of 'interests in realty normally purchased by private persons.' *United States* v. *Westinghouse*, 339 U. S. 261, 262. Nevertheless, the President's authorization to take possession of the coal mines nowhere invoked this or any other statute pertaining to the exercise of the Government's eminent domain power, but, rather, relied generally upon his powers 'as President of the United States and Commander-in-Chief of the Army and Navy.' (R. 10)."

under its allocation powers (R. 143). It went on to say, however (R. 145):

> "The court held that what WPB said it was doing and what it in fact and law did, were two different things and that the Government could not escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a 'priorities order' or an 'allocation order'."

The petitioner's brief does not cite the relevant statutes and in Point II of its brief no reference is made to the admitted fact that Order L-208 was issued "with the approval and at the urging of the War Department, and was approved by the President".

As to the "authority" for the taking, the petitioner's brief considers only "the allocation authority [the WPB] possessed, by delegation from the President, under the Second War Powers Act" (p. 69). The petitioner would treat as decisive the WPB's citation in Order L-208 of the authority for the Order (R. 104-105). But that citation of authority was merely one of the trappings of the Order, designed to make the Order appear as an allocation Order (see above, p. 30-34, 97-98).

It is immaterial what powers were delegated by the President to the WPB. The petitioner's brief says (p. 21):

> "L-208 was issued upon the unanimous recommendation of the War Production Board, with the approval and at the urging of the War Department, and was approved by the President."

And at page 55:

> "The decision to issue L-208 was made upon the unanimous recommendation of the WPB (R. 101) and with the approval and at the urging of the War Department (R. 99, 101). Upon its issuance, L-208 was, in effect, approved by the President (R. 107)."

Since the President approved L-208, the action of the WPB must be regarded as duly authorized unless it is established that the President had no power to authorize the taking of the respondents' property. The petitioner's brief says nothing whatever about the authority of the President.

The discussion of the statutes in the petitioner's brief is most incomplete and uninformative.

Under the heading "Statutes and Regulations Involved" at pages 3-4, the only statutory provision cited in connection with what happened in 1942 is the last sentence of Section 2(a)(2) of **Title III** of the Second War Powers Act, 56 Stat. 176, 177, which will be found at the end of Appendix C to this brief (p. 11). While that sentence from Title III of the Second War Powers Act is quoted at page 3 of the petitioner's brief, it is not discussed in the Point in the brief relating to the WPB's authority except for the naked statement at page 69 already quoted.

The petitioner's brief discusses three statutes, Section 9 of the Selective Service and Training Act of September 16, 1940, the Act of October 10, 1940 and the Act of October 16, 1941, and argues that "the particular property that respondents claim has been taken—*viz*, the right to mine gold—does not fall within the terms of these acts" (p. 70). No reference whatever is made to the other statutes which were quoted in the Appendix to the respondents' brief in opposition to certiorari, and which are quoted again in Appendix C to this brief and discussed below (p. 114-120), including particularly **Title II (not Title III)** of the Second War Powers Act.

The final paragraph in the petitioner's Argument (p. 70-71) seems to relate solely to the formal delegation of authority to the WPB, and thus the approval of the War Department and the President's approval and ratification of Order L-208 are again disregarded.

On page 70 of the petitioner's brief five cases are cited in connection with the proposition that "In absence of the legal authority to take or requisition, it is clear that the Government may not be held liable if a taking occurs." None of the cases concerned a wartime taking effected by an agency of the President, which was approved and ratified by the President. They are discussed below (p. 122-125).

B. On no theory can the Government escape its obligation to pay compensation on the ground that Order L-208 was unauthorized.

Judge LITTLETON discussed the authority for Order L-208 at length in his opinion for the Court below (R. 35-43).

Judge LARAMORE expressed the opinion "that the President lacked[62] the constitutional power and statutory authority to close these mines and, therefore, the unauthorized closing could and should have been enjoined" (R. 61).

Chief Judge JONES said (R. 60):

> "The President had neither the constitutional power nor the statutory authority to close the mines directly. It is probable that as a legal matter the enforcement of that part of the order which directed the closing of the mines could have been enjoined. However, in wartime that is not a very practical remedy because it puts any individual or company in the position of hindering the war effort."

Thus to some extent the Chief Judge agreed with Judge LARAMORE, although he thought that in wartime a suit for an injunction "is not a very practical remedy".

---

[62] This word appears as "lack" in the record (R. 61). It was correctly given as "lacked" in Appendix A to the petition for certiorari (p. 50).

Statutes and Executive Orders.

Appendices C and D set forth, fully or in pertinent part, the statutes and Executive Orders which are relevant in considering the powers of the President with respect to critical materials, manpower and the taking of property, and the extent to which the President's powers had been formally delegated to the WPB by October 8, 1942.

The range of the President's powers with respect to critical materials and the taking of property of all kinds was very broad, and the Court below was correct in saying (R. 41):

> "By October 1942, Congress had conferred upon the President authority to requisition, place mandatory orders for, or take for title or for use, any real or personal property or interests therein which he deemed necessary to successfully prosecute the war. These statutes left the determination of war necessity to the absolute discretion of the President, but they required the payment of just compensation for any property taken or used. Congress also authorized the President to take possession of factories or other business establishments and to operate them if it was deemed by him to be in the interests of the national defense to do so."

The principal statutes which the Court evidently had in mind are the following:

(a) Section 120, National Defense Act of 1916, 39 Stat. 213 (Appendix C, p. 1);

(b) The Act of March 4, 1917, 39 Stat. 1192 (Appendix C, p. 2);

(c) Title II, Second War Powers Act, approved March 27, 1942, 56 Stat. 177 (Appendix C, p. 9).

Section 120 of the National Defense Act of 1916 authorized the President to place mandatory orders with a company for any product or material of the kind usually

produced or capable of being produced by such company and to take over the company's plant upon its refusal to comply with such an order (Appendix C, p. 1).[63] This statute was held to afford sufficient authority for the World War I taking involved in *International Paper Co.* v. *United States* (1931), 282 U. S. 399, 406, discussed above at pages 106-107.

The Act of March 4, 1917 authorized the President to "requisition and take over for use or operation by the Government any factory, or any part thereof" and the word "factory" was defined to include "any factory, workshop, engine works, building used for manufacture, assembling, construction, or any process, and any shipyard or dockyard" (Appendix C, p. 2). This authorized the President to "requisition and take over for use and operation by the Government" any of the respondents' installations on the surface which were required in the production of refined gold.

Title II of the Second War Powers Act authorized the "Secretary of War, the Secretary of the Navy, or *any* other officer, *board,* commission, or governmental corporation *authorized by the President" to acquire "any real property, temporary use thereof, or other interest therein, * * * that shall be deemed necessary, for military, naval, or other war purposes"* (Appendix C, p. 9). It is difficult to imagine more comprehensive language covering all manner of interests in real property.

The Court below correctly held "that L-208 by prohibiting the carrying on of otherwise lawful mining operations placed a servitude on the plaintiffs' profitable or

---

[63] Section 9 of the Selective Training and Service Act of 1940, 54 Stat. 892 (Appendix C, p. 3), which is referred to in the petitioner's brief (p. 69-70), was substantially identical with Section 120, National Defense Act of 1916, except that it authorized the President to act through the head of the War Department or the head of the Navy Department. The powers under both statutes were specifically delegated to the WPB (Executive Orders Nos. 8629, 9024, 9040, Appendix D, p. 1-2, 8-9, 9-10).

beneficial use of their mines'' and that that ''amounted to a temporary taking of that property right'' (see above, p. 71-76).

L-208 and the respondents' obedience to the Order had exactly the same effect as if the respondents had granted the Government a negative easement over their mines by agreeing not to operate them so long as L-208 was in effect. What the Government got by the Order was clearly ''an interest'' in real property. Indeed, while L-208 was in effect the Government's interest in the respondents' mines was much greater than the respondents' interest in them. The Government's interest in the mines enabled it to keep them idle, except for necessary standby operations. The respondents had only the privilege of continuing, at their own expense, ''minimum maintenance to keep the mines dewatered and in standby condition'' (Finding 41, R. 101; Finding 43, R. 102-103).

When the Government acquired a servitude over the respondents' mines, it did so for a ''war purpose'' within the meaning of Title II of the Second War Powers Act. True, the purpose was not that stated in the preamble of the Order. It was, nevertheless, a war purpose, i.e., to obtain the discharge of the hardrock miners so that at least some of them could be maneuvered to the nonferrous metal mines where they would produce critical materials. The Government cannot escape liability because L-208 was not well adapted to accomplish that war purpose, or because its accomplishments were disappointing (see above, p. 103).

Title II specifically mentioned several alternative methods of taking an interest in real property: (1) purchase, (2) donation, (3) other means of transfer, and (4) condemnation (Appendix C, p. 9).

Manifestly, the statute had two objectives: *first*, to enable the Government to obtain whatever the President might consider necessary in the war effort, and, *second*, to insure that those whose property was taken (and not

donated) would receive either an agreed price for the property or judicially determined compensation.

As to the first purpose of the statute, the legislative history is clear. At 88 Cong. Rec. 1645 (February 25, 1942) Representative Hobbs, a sponsor of the statute, explained its provisions:

> "Mr. Keefe. Will the gentleman address himself to the provisions of title II, especially lines 16 and 17? I am not quite sure that I understand the gentleman's position as to exactly what that language means where it states that the Government may acquire by condemnation any real property, the temporary use thereof, or other interest therein.
>
> "What is contemplated in the event the Government seeks to condemn the temporary use of real estate or personal property or seeks to condemn some undefined, illusory other interest therein? What is meant by the language of that statute, so that we shall know what we are voting for? I confess to be ignorant on that.
>
> "Mr. Hobbs. I think the language is so strong as to make the gentleman's question one that should be answered, but I have not the time in which to do it. *I will say this, that as far as that goes, and its scope is almost unlimited, in the face of this national emergency and toward the winning of the war, we are willing for our Government to take any rights that they may need for the prosecution of this war.* If under your land there be underlying deposits of tin, the Government ought to have the right to take it. *If there be any other mineral rights, any other water rights, or any rights at all that are necessary for the winning of this war, then the Government ought to have the power to take such rights.*"

In considering the scope and effect of Title II, it is, of course, fitting to bear in mind the principle which was summarized by John W. Davis in his argument for the petitioner in *International Paper Co.* v. *United States* (1931) 282 U. S. 399, 401:

> "The extent of a statutory authorization is not to be narrowly or unnecessarily restricted, where the circumstances warrant giving to the words used a wider scope, in order fully to carry out the purpose of the legislation. This is particularly true of a wartime authorization granted to the President as commander-in-chief of the armed forces, or to an agency of the Government acting in the interests of the national defense. *Manufacturers' Land & Imp. Co.* v. *Emergency Fleet Corp.*, 264 U. S. 250, 255."

The decision cited by Mr. Davis, *Manufacturers Land & Improvement Co.* v. *United States Shipping Board Emergency Fleet Corp.* (1923) 264 U. S. 250, 255, is an apt example of the spirit evidenced by the courts in interpreting legislation relating to war powers which is "intended to be susceptible of practical application in varying situations". Pertinent decisions of lower courts are *In re Inland Waterways, Inc.* (D. C., D. Minn., Fifth Division, 1943) 49 F. Supp. 675, 677; *Brown* v. *Bernstein et al.* (D. C., M. D. Penn., 1943) 49 F. Supp. 728, 731-732; *United States* v. *Russell-Taylor, Inc.* (D. C., E. D. Mich. S. D., 1946) 64 F. Supp. 748, 752.

There being no doubt as to the President's powers under Title II of the Second War Powers Act, it is unnecessary to consider the scope of his powers as Commander-in-Chief during a war. See *United States* v. *McFarland* (C. C. A. 4, 1926) 15 F. 2d 823, 826; *Alpirn* v. *Huffman* (D. C. Neb. 1943) 49 F. Supp. 337, 340-341; *In re Inland Waterways* (D. C. Minn. 1943), 49 F. Supp. 675, 677. Cf. *Youngstown Sheet & Tube Co.* v. *Sawyer* (1952) 343 U. S. 579, 611-613.

As to the second objective of the statute, which was to insure that those whose property was taken would receive either an agreed price or judicially determined compensation, unless they donated the property,

it is true that the WPB did not follow one of the procedures prescribed by the statute. But it is the respondents, not the Government, who have a standing to complain on that account. By Order L-208 the Government was in fact able to take the respondents' property even though the WPB did not follow one of the prescribed procedures. The Government got what it wanted (see above, p. 85). Because the WPB did not follow one of the prescribed procedures, the respondents were left to recover their compensation by a suit against the Government instead of obtaining either an agreed price or just compensation fixed in a condemnation proceeding. Only the respondents can complain of that.

If the WPB, by authority of the President, had agreed with the owners of the gold mines that the mines should be shut down and that the Government should pay compensation to be calculated under an agreed formula, Title II would have been followed strictly and there could be no complaint on the part of either the Government or the respondents; there would have been a "purchase" of an interest in the mines, expressly contemplated by the statute, and both the Government and the respondents would have been properly protected. The WPB's action in taking the respondents' property without providing compensation for the respondents *at the time of the taking* cannot relieve the Government of the responsibility of paying just compensation later.

Hurley v. *Kincaid* (1932) 285 U. S. 95 establishes that the Government is liable for a taking, if one is authorized, even though it does not follow the procedure provided in the statute authorizing the taking. That was a suit by a landowner to enjoin the Government, the Secretary of War, the Chief of Engineers and the Mississippi River Commission from carrying out a flood control plan which the plaintiff claimed constituted a taking of his property. The Mississippi River Flood Control Act, enacted by Congress in 1928

(45 Stat. 534), authorized the Government agents involved to condemn property needed for the execution of the plan. The plaintiff contended, however, that the Government agents were acting illegally since they had not brought condemnation proceedings to take over his property. In denying the injunction sought by the plaintiff, this Court said (p. 104):

> "If that which has been done, or is contemplated, does constitute such a taking, the complainant can recover just compensation under the Tucker Act in an action at law as upon an implied contract, since the validity of the Act and the authority of the defendants are conceded. *United States* v. *Great Falls Mfg. Co.*, 112 U. S. 645, 658; *Great Falls Mfg. Co.* v. *Attorney General*, 124 U. S. 581, 600; *Tempel* v. *United States*, 248 U. S. 121, 129; *Marion & Rye Valley Ry. Co.* v. *United States*, 270 U. S. 280, 283. The compensation which he may obtain in such a proceeding will be the same as that which he might have been awarded had the defendants instituted the condemnation proceedings which it is contended the statute requires. Nor is it material to inquire now whether the statute does so require. For even if the defendants are acting illegally, under the Act, in threatening to proceed without first acquiring flowage rights over the complainant's lands, the illegality, on complainant's own contention, is confined to the failure to compensate him for the taking, and affords no basis for an injunction if such compensation may be procured in an action at law."

No question survives as to the formal delegation of the President's powers to the WPB, since the action of the WPB in issuing Order L-208 was approved and ratified by the President.

We have already quoted at page 111 above the acknowledgments in the petitioner's brief that Order L-208 was "approved by the President".

The WPB itself was an arm of the Executive Office of the President, established within the Office for Emergency Management (Appendix D, p. 8).

Whether or not the President knew of the decision to issue the Order at the time when that decision was made—and it seems hardly conceivable that he did not—the issuance of the Order was vigorously called to the President's attention on October 10, 1942, two days after the Order was issued, by 21 United States Senators from 12 gold-producing Western States in a detailed written protest (Finding 52, R. 107-111). The protest pointed out the many hardships the Order would entail. It emphasized the negligible benefits which the Order could be expected to achieve as a labor measure and contrasted those benefits with the injuries which the Order would impose. It drew attention to the fact that Great Britain was stimulating the production of more gold in South Africa and that the Canadian Government was doing the same thing in Canada. It concluded by saying (R. 110-111):

> "We respectfully bring this matter to your attention with the request that you stay the order made by the War Production Board affecting the gold mine operations of the United States, at least until the whole subject of marshalling of manpower and the allocation of labor may be considered, and the vital questions involved, concluded; thus that the gold mining industry of the United States may not be subjected to unwarranted and unusual hardship and injury which may not eventually be considered necessary, and which may not be equitably borne by other industries."

The President's disposition of the protest of the 21 Senators was succinctly stated by former Senator Gurney of South Dakota, who was one of the 21: they "got turned down" (R. 526).

The petitioner's brief twice acknowledges that the President's rejection of the protest constituted an approval of the Order[64] (p. 21, 55).

The cases cited by the petitioner do not support its contention that the Government can escape liability.

Hooe v. *United States* (1910) 218 U. S. 332, involved a claim by a landlord for the rental of premises which were used by the Civil Service Commission. The statute which provided for quarters for the Commission put a *specific limit* on the rental and the Congress had refused to increase the appropriation for the rental although requested to do so. The landlord knew of the limitation which had been imposed by Congress This Court pointed out that an attempt had been made to bind the Government "to pay a sum in excess of that *limited by Congress*" (p. 334).

In *United States* v. *North American Co.* (1920) 253 U. S. 330, an Army General, acting on his own authority, seized the plaintiff's property in Alaska. His action was later approved by the Secretary of War, who had the statutory authority to take the property for an Army post: The question presented which involved the statute of limitations, was when the plaintiff's claim accrued. The Court held that there was no compensable taking until the General's action was approved by the Secretary of War and that the running of the statute of limitations started at that time.

---

[64] In view of the explicit acknowledgments in the petitioner's brief that the President approved L-208, it is unnecessary to consider the legal effect under Title II of the Second War Powers Act, of the showing, and the acknowledgments by the petitioner (p. 21, 55), that the Under Secretary of War, acting on behalf of the Secretary, urged that the Order be issued. However, under Title II of the Second War Powers Act the Secretary of War had the same authority as a "board • • • authorized by the President" (Appendix C, p. 9).

United States v. *Goltra* (1941) 312 U. S. 203, involved the repossession by the Chief of the Inland and Coastwise Waterways Service, on orders from the Acting Secretary of War, of some tugboats and barges which had been leased by the United States to Goltra, who sued under a special jurisdictional act. The principal question decided by this Court related to the amount of the judgment entered by the Court of Claims, which included interest. This Court held that the seizure of the tugboats and steel barges was an unauthorized tortious act and that the special jurisdictional act should not be construed as providing for interest. While the opinion in *Goltra* contains some rather broad language, *Goltra* purported to follow *Hooe* and *North American Co.*, and we do not think it can be reasonably construed as supporting a rule of immunity anything like as broad as that suggested by the petitioner.

In *Mitchell* v. *Harmony* (1851) 13 How. 115, the plaintiff, a trader and merchant, accompanied the United States Army forces in their invasion of Mexico during the Mexican War. The plaintiff tried to leave the expedition but the Army officer in charge seized the plaintiff's property and used his wagons for the transport of Army property. Subsequently the plaintiff's wagons were captured and destroyed by the enemy and the plaintiff brought a suit against the Army officer individually. At the trial in the lower Court the jury determined that the defendant officer had not acted on behalf of the United States and, thus, that he occupied the status of a trespasser. This Court said, however (p. 133):

> "There are, without doubt, occasions in which private property may lawfully be taken possession of or destroyed to prevent it from falling into the hands of the public enemy; and also where a military officer, charged with a particular duty, may impress private property into the public service or take it for public use. Unquestionably, in such cases, the

> government is bound to make full compensation to the owner; but the officer is not a trespasser."

In *Youngstown Sheet & Tube Co.* v. *Sawyer* (1952), 343 U. S. 579, the Court merely said (p. 585):

> "Prior cases in this Court have cast doubt on the right to recover in the Court of Claims on account of properties unlawfully taken by government officials for public use as these properties were alleged to have been. See *e.g., Hooe* v. *United States,* 218 U. S. 322, 335-336; *United States* v. *North American Co.,* 253 U. S. 330, 333. But see *Larson* v. *Domestic & Foreign Corp.,* 337 U. S. 682, 701-702."

The President's seizure of the steel plants during a wage dispute in *Sawyer* was effected in the face of unequivocal Congressional rejection of a proposed amendment to the Labor Management Relations Act of 1947 (the Taft-Hartley Act) which would have authorized seizure as a means of settling labor disputes during an emergency (343 U. S. at p. 586, 598-602). In that respect, *Sawyer* is analagous to *Hooe,* for in both cases the taking violated limitations or prohibitions imposed by Congress expressly or by clear implication. Finally in *Sawyer,* as Mr. Justice FRANKFURTER stated in his concurring opinion, "reliance on the powers [of the President] that flow from declared war has been commendably disclaimed by the Solicitor General" (*id.* at p. 613).

Here, on the other hand, during the height of the War Order L-208 was issued with the unanimous concurrence of the WPB, an agency of the President, at the instance and with the approval of the War Department, and shortly after its issuance it was approved by the President himself. In other words, the full power of the Chief Executive and of the highest military authorities during wartime was brought to bear in order to close down the operations of a limited

number of concerns, the owners of "nonessential" gold mines. The WPB acted under color of authority, and not in defiance of any specific statutory prohibition or restriction. Under such circumstances, the Government has no standing to contend that the taking was unauthorized and that the Government is not liable for that reason.

In any event, as we have shown (p. 115-120), under Title II of the Second War Powers Act the President had ample statutory authority to take any interest in real property deemed necessary "for military, naval, other war purposes".

The Congressional waiver by the Special Jurisdictional Act of July 14, 1952 of any issue as to the authority for Order L-208.

The Special Jurisdictional Act of July 14, 1952 has been quoted at page 2 above.

We set forth at pages 130-146 below the bases for the view that the Special Jurisdictional Act constituted an acknowledgment of liability on the part of the Government to claimants who suffered losses as a result of the issuance of the Order. If this Court were to find it unnecessary (as the Court of Claims did), or should be unwilling, to adopt that view of the Special Jurisdictional Act, it would still be true that the Act was intended to, and did, waive any possible defense as to the authority for L-208. Both the wording of the Act and its legislative history support this conclusion.

The Act speaks of "the closing or curtailment or prevention of operations of [a gold mine or gold placer operation] as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof". The Act thus expressly treats the Order as having had *an effective life*. Its wording is wholly inconsistent with the view that the respondents might be denied compensation on the ground that the Order was unauthorized.

This interpretation of the wording of the Act is fortified by the two identical Senate and House Committee Reports, discussed at pages 142-146 below, one of which is in the record as Plaintiff's Exhibit 178 (R. 855, 1559-1572). They evidence the conviction of the Committees that Order L-208 "failed completely to make any substantial contribution to the war effort and inflicted ruinous costs on the gold mining industry" (R. 1560), and that "the least that can be done is to allow those persons affected by Order L-208 their day in court for such recompense as may seem justified" (R. 1570).

Moreover, the Reports said that: "The issuance of the Order was based upon dubious if not nonexistent authority" (R. 1560). Manifestly the Committees and the Congress considered any doubt as to the authority for the Order to be an additional reason for the Court of Claims to award compensation to those whose mines were summarily shut down, not a reason against awards of compensation. There is not a word in the Committee Reports, one of which takes upon eleven pages of the record (exclusive of the Appendix to the Report), suggesting that the Committees and the Congress intended to allow the Government to question the authority for the Order. Everything in the Committee Reports indicates the contrary.

Stubbs v. *U. S.* (1937) 86 C. Cls. 152, discussed at pages 135-136 below, is in point. By the special act in that case jurisdiction was "conferred upon the Court of Claims of the United States to hear, determine and render judgment" upon the claims of the plaintiffs "for any losses and damages sustained by" the plaintiffs arising "by virtue of any acts, or actions, of any and all officers and employees of the United States in carrying out or in connection with the extension of the limits of Mount McKinley National Park after the 19th day of March, 1932". The Court held that that language eliminated any issues as to whether or not the acts of any of the officers and employees were authorized (p. 160-161).

The grounds for holding that the Act of July 14, 1952 eliminated any issue as to the authority for Order L-208 are considerably stronger than the grounds for the decision in *Stubbs* that the special act in that case precluded any objection that the actions of the Government officers were "unwarranted or unnecessary" or "in the nature of torts".

Even if specific statutory authority for the taking were not established, the respondents would be entitled to compensation under the circumstances presented in this case.

The suggestion that the respondents should have sought an injunction is unrealistic.

Judge LARAMORE's dissenting opinion below says "the President lacked the constitutional power and statutory authority to close these mines and, therefore, the unauthorized closing could and should have been enjoined", citing *Youngstown Sheet & Tube Co.* v. *Sawyer* (1952) 343 U. S. 579 (R. 61).

While Chief Judge JONES also felt that the President did not have the power or the authority "to close the mines directly," his approach to the subject was more qualified. He pointed out that "in wartime [an action for an injunction] is not a very practical remedy because it puts any individual or company in the position of hindering the war effort" (R. 60).

The conclusions reached by both dissenting Judges were based on the premise that the President did not have the power to authorize the taking of the respondents' property. We have shown that this is not the fact—that, as the Court below held, the President had the power to authorize the taking of any sort of property he deemed necessary to the war effort (see above, p. 114-120).

Moreover, we submit that whenever there is a taking in wartime by authority of the Chief Executive, under such

circumstances as were present in these cases, there should be compensation under the Fifth Amendment whether or not a post-war analysis establishes specific statutory authority for the taking. Otherwise private property can be taken with impunity without just compensation. For it is not a practical view of things to say that in wartime one whose property is taken under an order like L-208 under such circumstances can resist an agency of the Chief Executive (after an appeal made directly to the Chief Executive has been turned down) or can successfully maintain an injunction action to establish that the purpose of the order which was stated in its preamble was not its real purpose.

In a footnote to his opinion in *Hurley* v. *Kincaid*, Mr. Justice BRANDEIS said (285 U. S. at 104, Note 3):

> "Even where the remedy at law is less clear and adequate, where large public interests are concerned and the issuance of an injunction may seriously embarrass the accomplishment of important governmental ends, a court of equity acts with caution and only upon clear showing that its intervention is necessary in order to prevent an irreparable injury."

Assuming *arguendo* that the President lacked specific statutory authority to take the respondents' property by Order L-208, it is clear that the obstacles which would have confronted counsel for the respondents if they had instituted an injunction action during the War would have been insurmountable.

Such an action would have had no prospect of success unless the plaintiff was able to establish, not only that the President had no authority to take the respondents' property, but also what these respondents eventually did establish: (1) that Order L-208 was not what it purported to be, and what the Government still asserts that it was, a proper exercise by the WPB of regulatory powers

over critical materials such as was involved in *St. Regis Paper Co.* v. *United States* (1948), 110 C. Cls. 271, cert. den. 335 U. S. 815, and (2) that the Order involved a direct taking of the respondents' property in the hope that it "would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines" (R. 107).

Documents which would have been needed were classified (R. 1562).[65] The difficulties in interviewing witnesses and assembling documentary and oral evidence during wartime can be imagined. If one makes the unrealistic assumption that a well prepared action for an injunction could have been tried before L-208 was revoked on June 30, 1945, how long would have elapsed before an injunction order was entered? The history of this litigation suggests the answer.

Viewed realistically, the argument that the respondents should have sought an injunction to restrain the enforcement of Order L-208 is tantamount to saying if the President had acted without specific statutory authority in taking the respondents' property, the respondents would have been at all times without a practical remedy.

We submit that that would not be consistent with what this Court said in *Larson* v. *Domestic & Foreign Corp.* (1949), 337 U. S. 682, 704, footnote omitted:

---

[65] Examples are Plaintiff's Exhibit 10 (R. 1278-1288) from which there are extensive quotations in Finding 8 (R. 66); Plaintiff's Exhibit 45 (R. 1335-1338) which is quoted in part in Finding 24 (R. 80); Plaintiff's Exhibit 87 (R. 1460) which is quoted in part in Finding 34 (R. 96-97); Plaintiff's Exhibit 25 (R. 1321) which is quoted in Finding 39 (R. 99); Plaintiff's Exhibit 26 (R. 1321-1322) which is quoted in Finding 40 (R. 99-100); and Plaintiff's Exhibit 1 (R. 1163-1254), a paragraph from which is quoted in Finding 52 (R. 111).

The originals or copies of these exhibits, as marked, show on their face that they were classified, and that in each case the classification was not cancelled until March 12, 1946 or later. Except for Plaintiff's Exhibit 1, this does not appear on the copies of the exhibits as printed.

"For, it is one thing to provide a method by which a citizen may be compensated for a wrong done to him by the Government. . It is a far different matter to permit a court to exercise its compulsive powers to restrain the Government from acting, or to compel it to act. There are the strongest reasons of public policy for the rule that such relief cannot be had against the sovereign. The Government, as representative of the community as a whole, cannot be stopped in its tracks by any plaintiff who presents a disputed question of property or contract right. As was early recognized, 'The inference of the Courts with the performance of the ordinary duties of the executive departments of the government, would be productive of nothing but mischief. . . .'

"'There are limits, of course. Under our constitutional system, certain rights are protected against governmental action and if such rights are infringed by the actions of officers of the Government, it is proper that the courts have the power to grant relief against those actions. But in the absence of a claim of constitutional limitation, the necessity of permitting the Government to carry out its functions unhampered by direct judicial intervention outweighs the possible disadvantage to the citizen in being relegated to the recovery of money damages after the event.'"

VIII

UNDER THE SPECIAL JURISDICTIONAL ACT OF JULY 14, 1952 THE GOVERNMENT IS LIABLE TO A GOLD MINE OWNER WHICH ESTABLISHES THAT IT INCURRED LOSSES BECAUSE IT WAS PREVENTED BY ORDER L-208 FROM PRODUCING AND SELLING GOLD.

In the Court of Claims the respondents contended that even if it were not established that Order L-208 effected a compensable taking, the Special Jurisdictional Act of July 14, 1952 (66 Stat. 605) conferred on the Court of Claims jurisdiction to render judgment for any losses which re-

sulted from the issuance of L-208 (R. 13).[66] The Court of Claims found that the respondents had established a compensable taking and accordingly concluded that "it is unnecessary to discuss the various contentions relative to" the Special Jurisdictional Act (R. 58).

The petitioner's brief says (p. 44, Note 29):

> "Respondents unsuccessfully urged in the Court of Claims that this Act was a mandate from Congress to the court to award compensation wherever it was proved that losses were incurred as a result of L-208."

That would seem to imply that the Court of Claims decided against the respondents as to the Special Jurisdictional Act. It did not. As already stated, the Court found that it was unnecessary to pass on the contentions of the parties relating to the Act (R. 58).

We quote again the provisions of the Act (66 Stat. 605):

> "AN ACT
>
> Granting jurisdiction to the Court of Claims to hear, determine and render judgment upon certain claims.
>
> Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,
>
> That the United States Court of Claims be, and hereby is, given jurisdiction to hear, determine, and render judgment, notwithstanding any statute of limitations, laches, or lapse of time, on the claim of any owner or operator of a gold mine or gold placer operation for losses incurred allegedly because of

[66] Recovery under the Special Jurisdictional Act might be for a lesser amount than for a taking, since the claim for a taking bears interest, *Phelps* v. *United States* (1927) 274 U. S. 341, while the claim under the Special Jurisdictional Act may not. *Tillson* v. *United States* (1879) 10 Otto 43, 47; *United States* v. *Thayer-West Point Hotel Co.* (1947) 329 U. S. 585, 590.

the closing or curtailment or prevention of operations of such mine or placer operation as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof: *Provided;* That actions on such claims shall be brought within one year from the date this Act becomes effective."

The issues presented by claims based on Order L-208, at the time when the Special Jurisdictional Act was passed.

At the time when the Act of July 14, 1952 was enacted actions were pending on several claims based on Order L-208 and it was known that there were many other owners or operators of gold mines who believed that they had claims against the Government.

All of the claims presented two issues and some of them presented a third:

First: Did the claimant suffer as a result of Order L-208?

Second: If the claimant suffered as a result of Order L-208, was there any liability on the part of the Government?

Third: Was the claim barred by the statute of limitations?

As to *First*, the Act of July 14, 1952 required a gold mine owner or operator who claimed to have suffered from Order L-208 to show that the claimant incurred losses as a result of those provisions of the Order which prevented further production from the claimant's mine. The Act did not contain an admission of liability applicable to all owners or operators of gold mines when Order L-208 was issued. For example, an owner who had shut down a mine before October 8, 1942 because of a shortage of materials or labor,[67] or which would have had to shut down in

[67] As in the case of Alabama-California Gold Mines Company, one of the plaintiffs below (R. 136).

October, 1942 even if Order L-208 had never been issued, and who could not have resumed operations before June 30, 1945 in any event, would presumably be unable to show that it had "losses incurred * * * as a result of the restrictions imposed by War Production Board Limitation Order L-208". The Act contemplated that there should be an adjudication whether Order L-208 was the competent producing cause of a loss allegedly incurred by a claimant.

As to *Third,* the Act removed the bar of the applicable statute of limitations as to any claim on which an action was brought within one year from the effective date of the Act.

There is no dispute about the effect of the Act on issues *First* and *Third.* The Act did not affect *First* and it disposed of *Third.*

As to *Second,* the respondents' contention is that by the Act a liability on the part of the Government was admitted —or created—as to each owner or operator of a gold mine which proved that it incurred a loss because it was prevented by Order L-208 from producing and selling gold.

The decisions interpreting comparable Special Jurisdictional Acts.

On several occasions it has been held that a Special Jurisdictional Act similar to that of July 14, 1952 was intended to admit, or if necessary to create, a liability on the part of the Government. In some instances the decision was based primarily on the wording of the act, in others largely on the setting in which the act was adopted and the legislative history of the act, and in others on a combination of both the language of the act and the legislative history. Before analyzing the language of the Act of July 14, 1952 and reviewing its legislative history, we will refer briefly to certain decisions which passed on questions similar to those presented in this case.

In *Creech, et al.* v. *United States* (1944) 102 C. Cls. 301, 302-303, cert. den. 325 U. S. 870, the Court had before it a Special Jurisdictional Act reading as follows:

> "That *jurisdiction is hereby conferred upon the Court of Claims of the United States to hear, determine, and render judgment* upon the claims of * * *; C. E. Thomas; * * *; R. Y. Creech; * * *; Roscoe Lee Braddock; * * *; or other persons engaged in farming on Kreamer, Torry, or Ritta Islands, in Lake Okeechobee, *for damage to or loss of crops alleged to have resulted* from the construction of levees along the Caloosahatchee River and Lake Okeechobee drainage areas in Palm Beach County, Florida, by the Corps of Engineers, War Department, and from high waters caused thereby: *Provided,* That suits hereunder shall be instituted within one year from the enactment of this Act."

The phraseology of the italicized provisions was substantially identical with the phraseology of the comparable provisions of the Act of July 14, 1952. In *Creech* the burden of the plaintiffs' contention was that a levee constructed by the Government caused wind tides to back up against the levee, thereby flooding the islands on which the plaintiffs' farms were located. In the opinion of the Court of Claims, rendered by Judge LITTLETON, it was first pointed out (p. 323) that the plaintiffs had no claim for compensation under the Fifth Amendment, because "whatever damage plaintiffs sustained as a result of the Government work was consequential and the result of authorized action of the Government".

Proceeding to a consideration of the special act, Judge LITTLETON's opinion said (p. 323):

> "* * * This act had a purpose, and its history and language indicate that such purpose was to confer jurisdiction and authority upon the court to render judgment for the amount of damage to or loss of

> crops if it should be established by proof that such damage or loss in fact and in law 'resulted from the construction of levees * * * and high waters caused thereby.' In other words, the damages which may be allowed are to be determined according to the usual principles of legal cause and legal liability. The act does not concede liability, and plaintiffs do not so contend."

The Court of Claims found that no damage suffered by the plaintiffs in *Creech* had been caused by the Government's erection of the levee and consequently no recovery was allowed. However, the Court's interpretation of the Special Jurisdictional Act involved in *Creech*, under which there would have been a recovery if damage or loss had been shown, is directly in point.

In *Stubbs* v. *United States* (1937) 86 C. Cls. 152, the Court had before it an act conferring jurisdiction to hear, determine and render judgment upon a claim "for any losses and damages sustained by Duke E. Stubbs and Elizabeth S. Stubbs in the silver fox farming and trading post business, or other business and occupation, conducted by them, or either of them, at McKinley Park, Alaska, arising out of the extension of the limits of the Mount McKinley National Park by an Act of Congress approved on the 19th day of March 1932 (47 Stat. 68), and/or by virtue of any acts, or actions, of any and all officers and employees of the United States in carrying out or in connection with the extension of the limits of Mount McKinley National Park after the 19th day of March 1932:". In interpreting the special act in that case the Court said (p. 160-161):

> "The evidence leaves no doubt that the plaintiffs sustained heavy losses and damages as a result of the extension of the limits of Mount McKinley Park which were unavoidable and also sustained very considerable loss and damage by reason of unwarranted or unnecessary acts of the defendant's officers or employees in connection with this extension.

> *Most of the acts complained of are such that ordinarily would afford no basis for a cause of action* and some of the acts, especially those of the officers or employees of the Government, were in the nature of torts, but *any objection that might arise on account of their nature is precluded by the act of Congress under which the case comes before us.*"

Other cases in which the Court of Claims construed comparable special jurisdictional acts as admitting or creating a liability are:

> *Carroll* v. *District of Columbia* (1887) 22 C. Cls. 104;
> *Radel Oyster Co.* v. *United States* (1934) 78 C. Cls. 816;
> *Edwards* v. *United States* (1934) 79 C. Cls. 436;
> *Norfolk Southern Railroad Company* v. *United States* (1942) 96 C. Cls. 357.

The decisions of the Court of Claims under the River and Harbor Act of 1935 (49 Stat. 1028, 1049; 28 U. S. C. (1946 Ed.) 250 (a)) also throw light on the proper interpretation of the Act of July 14, 1952. *Schroeder Besse Oyster Co.* v. *United States* (1942) 95 C. Cls. 729; *H. J. Lewis Oyster Co.* v. *United States* (1952) 123 C. Cls. 358. The Court there construed the following provisions of the River and Harbor Act:

> "That the Court of Claims shall have jurisdiction to hear and determine claims for damages to oyster growers upon private or leased lands or bottoms arising from dredging operations and use of other machinery and equipment in making such improvements: *Provided*, That suits shall be instituted within one year after such operations shall have terminated."

In *Schroeder Besse Oyster Co.* v. *United States* (1942) 95 C. Cls. 729, which was followed in *H. J. Lewis Oyster Co.*

v. *United States* (1952) 123 C. Cls. 358, the Court said (95 C. Cls. at p. 738):

> "Under the terms of this act the Government has not only given plaintiff the right to sue for damages but it admits its liability for all damages resulting to oyster growers from 'dredging operations and use of other machinery and equipment' for making such improvements.
>
> It is not necessary under the terms of this act to prove negligence in the operation of any instrumentality of the Government but simply to show by the preponderance of the evidence that the plaintiff was an oyster grower who was damaged as a result of dredging operations and the use of machinery and equipment in making the improvements."

The foregoing cases and others cited later show that Congress has frequently used language similar to that employed in the Act of July 14, 1952, to admit, or if necessary to create, a liability. Other Acts have not been similarly construed. The Court of Claims has generally followed the canon of construction which was announced in *Braden* v. *United States* (1880) 16 C. Cls. 389, 411:

> "* * * in each case the court will, from the language of the act, and from the nature of the case, and from the surrounding circumstances, endeavor to ascertain and carry out the legislative intent."

In this instance the language of the Act of July 14, 1952 and its legislative history are consistent with each other and establish that the Act of July 14, 1952 did not have the limited effect of merely lifting the bar of any statute of limitations but confirmed a liability of the Government to any owner or operator of a gold mine or gold placer operation which might be determined by this Court to have incurred losses as a result of Order L-208.

The language of the Act of July 14, 1952.

The intent of the Special Jurisdictional Act of July 14, 1952 is indicated by certain features of the Act:

1. It contains a grant of jurisdiction to render judgment for losses incurred.
2. It does not purport merely to remove the bar of the applicable statute of limitations.
3. It does not disclaim an admission of liability.

The Act contains a grant of jurisdiction to render judgment for losses incurred.

When the Court of Claims is not authorized to render a judgment on the basis of a prescribed showing, it is said to lack *jurisdiction* to enter such a judgment. In *St. Regis Paper Co.* v. *United States* (1948) 110 C. Cls. 271, cert. den. 335 U. S. 815, in which it was held that the plaintiff could not recover damages sustained as a result of the issuance of an Order of the WPB because the plaintiff was unable to establish that the Order resulted in a "taking" under the Fifth Amendment, the Court concluded its opinion by saying (p. 279):

> "This is a case of actual hardship. The damages are both real and substantial. But in the light of the decisions of the Supreme Court, the Tucker Act, and the established rules of law, this court does not have *jurisdiction* to grant the relief sought."

Before the enactment of the Act of July 14, 1952 the gold mine owners were required to prove a compensable taking of their property in order to bring their cases within the jurisdiction of the Court of Claims. However, the Act of July 14, 1952 conferred a *new jurisdiction* on the Court of Claims to render judgment whether or not the claimants could prove a taking compensable under the Fifth Amendment.

By the Act of July 14, 1952 the Court of Claims was

> "* * * given *jurisdiction to hear, determine, and render judgment* * * * on the claim of any owner

> or operator of a gold mine * * * for losses incurred allegedly because of the closing or curtailment or prevention of operations of such mine * * * as a result of the restrictions imposed by War Production Board Limitation Order L-208 during the effective life thereof * * *".

The grant of jurisdiction in the Act indicates that it was the intention of the Congress to require no more than a showing that the plaintiffs incurred losses as a result of the issuance of Order L-208.

If the Congress had intended to have a right of recovery depend upon a showing that there was a "taking," it would presumably have referred in the Act to a "taking".[68] The *Idaho Maryland* opinion spoke of a "taking", not of "losses incurred" as a result of the issuance of the Order; the Act of July 14, 1952 was adopted shortly after the *Idaho Maryland* opinion and the Committee Reports incorporated the *Idaho Maryland* opinion in full, as we show later in our review of the legislative history. Yet, instead of referring to a "taking", as the *Idaho Maryland* opinion did, the Congress granted the Court of Claims jurisdiction to render judgment for "losses incurred" as a result of the issuance of the Order.

The Act does not purport merely to remove the bar of the applicable statute of limitations.

If the Congress had intended merely to extend the time to file claims, it would presumably have indicated that intent in the title and also in the text. Another Act passed by the same Congress and approved on July 17, 1952—just three days after the passage of the Special Jurisdictional

---

[68] Compare Private Law 1015, Ch. 934, 66 Stat. A209, quoted on the next page, where Congress authorized suits "by all persons who claim that their property, easements, rights in land, mineral interests, rights of ingress and egress, or other rights or interests were *taken* and not paid for."

Act with which we are concerned—affords an example of the type of title and text which are suitable where Congress intends only to extend time for filing certain claims (Private Law 1015, Ch. 934, 66 Stat. A209):

"AN ACT

To extend the time for filing claims on behalf of certain persons, and for other purposes.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That notwithstanding any statute of limitations or lapse of time, suits may be instituted within one year after the enactment of this Act, in the appropriate United States district court, under the provisions of subsection (a)(2) of section 1346, title 28, United States Code, or in the United States Court of Claims, in accordance with the provisions of section 1491, title 28, United States Code, by all persons who claim that their property, easements, rights in land, mineral interests, rights of ingress and egress, or other rights or interests were taken and not paid for by, or as a result of, the construction of the Denison Dam or the impounding of the waters of Lake Texoma: *Provided,* That any such claim shall be barred forever unless suit thereon is instituted within one year from the date of enactment of this Act: *Provided further,* That nothing in this Act shall be construed to create any liability against the United States not existing prior to the enactment of this Act."

It will be noted that in the Act of July 17, 1952:

1. The title stated that the purpose of the Act was to extend the time for filing claims.

2. The Act conferred no new jurisdiction but simply provided for suits in the District Court or the Court of Claims.

3. It was provided that the recovery should depend upon whether property or other rights or interests "were taken and not paid for".

4. It was further provided specifically that the Act should not create a liability which did not exist prior to its enactment.

None of these four features will be found in the Act of July 14, 1952.

The Special Jurisdictional Act of July 14, 1952 does not disclaim an admission of liability.

A great many Special Jurisdictional Acts have been construed as creating causes of action which did not exist before the Acts were passed.[69]

It has now become the common practice, if the Congress does not intend to admit or create a liability, to include in the Act a proviso expressly so stating. For example, the 82nd Congress, which enacted the Act of July 14, 1952,

also passed eight Special Jurisdictional Acts containing a proviso disclaiming any admission of liability.[70] One of the eight was was Private Law 1015, which we have just quoted in full.

While the absence of such a proviso would not alone establish an intent to admit or create a liability, it is highly significant when considered in connection with other features of the Act of July 14, 1952 and its legislative history.

The legislative history of the Act, including the Committee Reports.

The Act was introduced as S. 3195 and favorably reported by the Senate Committee on the Judiciary on May 28, 1952 (Senate Report 1605). The bill passed the Senate without debate on June 2, 1952 (Congressional Record, Volume 98, p. 6322). It was transmitted to the House of Representatives on June 3, 1952 (Congressional Record, Volume 98, p. 6482), and favorably reported by the House Committee on the Judiciary on June 19, 1952 (House Report No. 2220). It was passed by the House without debate on July 2, 1952 (Congressional Record, Volume 98, p. 8920, 8931),[71] and approved by the President on July 14, 1952.

[71] When the bill was called on the House calendar for the first time, Representative Ford had the bill placed at the foot of the calendar so that he might have "some further explanation of this legislation" (p. 8920). On the second call of the bill, Representative Ford stated "that the objection I have has been overcome" and withdrew his reservation (p. 8931). The bill then passed the House without objection.

It follows that the significant legislative history will be found in the Senate and House Committee Reports. They are identical. The Report of the Senate Committee on the Judiciary, dated May 28, 1952, is Plaintiff's Exhibit 178 (R. 855, 1559-1572).

We have quoted pertinent portions of that Report above at pages 40-42, but we refer to the Report in its entirety.

The two Reports indicate that the Committee determined that compensation should be awarded to those who could establish that they incurred losses as a result of the issuance of the Order. They do not read as if the intent of the statute was merely to remove the bar of the applicable statute of limitations.

The petitioner's brief attempts to dispose of the Act of July 14, 1952 by the bald assertion that the Act "shows on its face that it is nothing more than a Congressional waiver of the statute of limitations or the defense of laches which would otherwise be applicable" (p. 44, Note 29). The only authority cited by the petitioner for this assertion consists of two sentences from the Report of the Senate Committee, which comprises 11 printed pages of the record (R. 1559-1572).

If the Committees which sponsored the Act of July 14, 1952 had intended only to lift the bar of the applicable statute of limitations, it would have been completely adequate for them to point out that the *Oro Fino* decision, which was handed down on October 2, 1950, had been widely interpreted as making it futile to assert any claims based on Order L-208; that nevertheless some owners and operators of gold mines had actions pending before the Court of Claims; that the *Idaho Maryland* opinion of May 6, 1952 indicated that judgments for owners and operators of gold mines would be entered if they could establish "takings" that were compensable under the Fifth Amendment; and that fairness required that owners and operators

who had failed to file suits should not be prejudiced. In other words, each of the reports would have told the whole story if it had contained the preliminary paragraph (R. 1559), the short explanation of the purpose (R. 1559), and the first, third, fourth, fifth and sixth paragraphs under the heading "Statement" (R. 1559-1561). Such a Report would have taken up less than 3 pages of the record.

Instead, the Senate Committee filed a Report which takes up 11 pages of the record, exclusive of the appended copy of the *Idaho Maryland* opinion. Of the 11 pages, over 9 pages, starting with the sixth paragraph under the heading "Statement" (R. 1561), would seem out of place in the Report if the Committee had not intended that there should be compensation for losses incurred as a result of the issuance of Order L-208 even if it could not be established that there was a "taking" compensable under the Fifth Amendment.

As already stated, the House Committee's Report was identical.

By adopting the earlier Subcommittee Report from which we have quoted at pages 41-42 above, the Senate and House Committees approved of vigorous characterizations of Order L-208 and of the following conclusions quoted in the Committee Reports (R. 1562, 1570):

> "The order completely failed to accomplish its purpose, or any purpose whatever, and inflicted irreparable and unjustified loss on the gold-mining industry. Your committee believes that this order inflicted a sacrifice on the gold-mining industry which the Federal Government in common fairness should try to relieve."
>
> * * * * *
>
> "The conclusion further has been reached that the order should have provided a mechanism for compensation and that, as such was not provided, the Congress should so provide, even while realizing that much of the loss and damage is irreparable."

The pertinent part of the last paragraph of the two Committee Reports reads as follows (R. 1570):

> "The committee has carefully studied the facts relating to the situation that arose as a result of the proclamation of the War Production Board Limitation Order L-208 and is convinced that the gold mining industry was dealt with in a fashion which merits the consideration of the court in the adjudication of the losses which may have been occasioned by this order. The Idaho Maryland Mines Corp. decision is ample evidence of the fact that the least that can be done is to allow those persons affected by Order L-208 their day in court for such recompense as may seem justified."

It will be observed that in stating their respective conclusions the Senate and House Committees made no reference to the Statute of Limitations and made no reference to a "taking". The Committees said that there should be an *"adjudication of the losses which may have been occasioned by this order"*. This implied that the Committees intended the same kind of an adjudication which was called for in *Creech* v. *United States* and *Stubbs* v. *United States*, just discussed, i.e., an adjudication whether the losses were caused by Order L-208.

The Committees also said that "the least that can be done is to allow those persons affected by Order L-208 their day in court *for such recompense as may seem justified.*"

In its brief below the petitioner sought to treat the latter statement as though the two Reports had said only that "the least that can be done is to allow those persons affected by Order L-208 their day in court". The Committees' statement that those affected by Order L-208 were to be allowed "their day in court for such recompense as may seem justified" followed clear indications throughout the Reports of the Committees that recompense would be

justified if a causal connection was shown between losses and Order L-208.

The decision that judgments should be rendered for losses incurred was natural in view of the basic conclusion of the Reports that the summary shut-down of the gold mines without compensation could not be justified.

Conclusion as to the Act of July 14, 1952.

The text of the Act and the legislative history confirm that it was not intended merely to remove the bar of the applicable statute of limitations, but constituted an admission of liability for such losses as are determined to have been caused by Order L-208.

The respondents established liability on the part of the Government by proving that the issuance of Order L-208 prevented them from operating mines which they could have continued to operate but for the issuance of the Order.[72]

APPENDIX A

The Background, Purpose, Provisions and Effects of Order L-208.

Appendix A to the petitioner's brief, which is entitled "History and Background of Limitation Order L-208", purports to deal with the background and origin of the Order, its purpose and its effects.

In this Appendix we will treat with the background, purpose, provisions and effects of the Order in the following sequence:

I. The background and origin of the Order (p. 2-33). This will cover largely the same ground as pages 73-104 of the petitioner's Appendix A and also a number of things which are not mentioned by the petitioner.

II. The purpose of the Order (p. 34-39). This will review Finding 46 of the Court of Claims and the support therefor.

III. The provisions of Order L-208 (p. 40-45).

IV. The inadaptability of the Order to serve as a priorities or allocation order relating to critical materials (p. 45-68). This will consider both (1) the reasons why the Order was not adapted to serve as a priorities or allocation order relating to critical materials and (2) the Findings and evidence that it did not function as such. Among other things, it will cover the same ground as pages 104-107 of the petitioner's Appendix A.

V. The practical failure of the Order to serve the purpose for which it was issued: the transfer of a substantial number of hardrock miners to the nonferrous metal mines (p. 68-92). This will review (1) the Court's Findings and the evidence as to the reasons why the Order could not be expected to accomplish its purpose and (2) the Findings and evidence that it was a practical failure.

Preliminary.

The terminology of Order L-208, of the amendments thereof (petitioner's brief, p. 111-125) and of the peti-

tioner's brief may be somewhat confusing. Order L-208 refers in various places to "critical materials"; "any material, facility or equipment"; "machinery and equipment"; "any material or equipment"; "material"; and "materials". The amendment of November 19, 1942 repeated all of these as they were used in Order L-208, and also had a provision relating to "machinery or equipment". The terminology of the amendment of August 31, 1943 followed that of the amendment of November 19, 1942.

As we read the Order and the amendments (see below, p. 40-45):

The words "critical materials" or "materials" did not include "machinery or equipment".

"Machinery and equipment" were embraced by the words "facility or equipment".

Those are the senses in which the words are used herein.

I

The background and origin of Order L-208

The opening section of the petitioner's Appendix A (p. 73-79) deals with the War Production Board, its creation, powers and procedures.

With the petitioner's description of the War Production Board and its "P", "M" and "L" Orders (p. 75-79), we have little fault to find[1] until we reach the last paragraph (p. 78-79), which lists "L" Orders limiting the production

[1] Executive Order 9024 gave authority to "the Chairman of the War Production Board, with the advice and assistance of the members of the Board" (Appendix D, p. 8). Technically, therefore, Order L-208 was the action of the Chairman of the WPB. However, the issuance of the Order was "agreed" upon at the WPB meeting of October 6, 1942 (Findings 41, 42; R. 100-102) and it would not seem to make any practical difference whether the Order is looked upon as an act of the Chairman or as an act of the Board. The petitioner's brief treats the Order throughout as the act of the Board and does not mention the provision of Executive Order 9024 which we have quoted.

of various end products manufactured with critical materials and then at the end of the list puts Order L-208 as if it were the same kind of order (p. 78-79).

By thus trying to link Order L-208 with "L" Orders relating to such end products, the petitioner attempts to support the assertion in the brief that "L-208 is but one of approximately 350 similar L orders and one of thousands of L, M, P and other type orders issued by the WPB and the OPM (Office of Production Management) during the course of the war, resulting in severe financial losses to innumerable businesses" (p. 40). This sentence is to be found in part of an argument that allowance of compensation for losses of the type imposed by Order L-208 "would impose an incalculable and staggering financial burden on the nation" (p. 42).

There is no similarity between Order L-208 and the "L" orders referred to in the petitioner's Appendix A at pages 78-79. The latter were directed against the production of end products which necessarily required the use of critical materials and such "L" orders were true regulations of the use of critical materials. None of them contained a directive such as that in Order L-208 that "each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine" (Finding 43, R. 102).

Moreover, the "L" orders to which the petitioner refers were actually intended to conserve critical materials. Their prohibitory provisions were designed to accomplish that objective. As the Court of Claims found, Order L-208 was not intended to conserve critical materials; its purpose was to shut down the gold mines (see below, p. 34-39).

The Reports of the Judiciary Committees of the House and the Senate said later:[2]

---

[2] See pages 40-42 of the main body of this brief.

"No similar order was issued against any other segment of American industry".

Finding 3 of the Court of Claims contains the following paragraphs (R. 63; see also R. 32-33):

> "The 'L' orders were usually issued to prohibit or curtail the manufacture of end products containing critical materials, continued production of which would have necessarily consumed such critical materials. Sometimes an additional purpose of such 'L' orders was to accomplish the conversion of scarce manufacturing facilities to war production.
>
> " 'L' orders were issued prohibiting or limiting the production of end products such as office machinery, furniture, bicycles, stoves, refrigerators, laundry equipment, automobiles, and other products. In most instances a prohibition against the production of a product resulted in the facilities being transferred to war production. Thus, the automobile industry's facilities were largely converted to war purposes although some of the facilities may have become inoperative because of a lack of adaptability to other purposes or to war production."

While referring (p. 78) to the page of the record at which these paragraphs of Finding 3 appear, the petitioner's brief in no way suggests that there was a Finding of Fact on this subject and particularly fails to mention that, as the Court of Claims found, "in most instances a prohibition against the production of a product resulted in the facilities being transferred to war production".

Nor, of course, does the petitioner acknowledge the difference between the purpose of the L orders mentioned in Finding 3 and Order L-208: that the former were intended to conserve critical materials, and that the latter was not issued for that purpose at all but rather to shut

down the gold mines so as to "maneuver our manpower" to the nonferrous metal mines (see below, p. 31).

The "L" orders mentioned in Finding 3 are discussed at pages 28-29 in the main body of this brief.

The continuation of the policy of avoiding unnecessary dislocations in the civilian economy.

Appendix A to the petitioner's brief might be thought to imply that the Government's policies during the War were hostile to nonessential industries generally. That was not at all the case.

Finding 10, which refers to the issuance on December 18, 1941 of Preference Rating Order P-100, says in part (R. 72-73):

> "The stated purpose of Order P-100 was to effectuate the policy of SPAB[3] in maintaining governmental, charitable and industrial property located in the United States, its territories and possession, upon an adequate operating basis, without expansion or improvement of facilities except where duly authorized or approved. Industries coming within the terms of Order P-100 were entitled to an A-10 Preference Rating (the lowest rating used) for their maintenance, repair and operating supplies.
>
> "*P-100 represented a continuation of SPAB's policy of granting some preference rating for maintenance, repair and operating supplies to industries in general without regard to essentiality in the war program, and this policy prevailed throughout the war. This policy was designed to avoid unnecessary dislocations in the civilian economy.*"

[3] The Supply, Priorities and Allocations Board, whose functions and powers were later transferred to the WPB (R. 62).

The progressively more stringent priority regulations between July, 1941, and March, 1942, which eliminated the potential acquisition by the gold mines of critical materials, supplies and equipment.

The first order by a Government agency cited in the Findings (Finding 5, R. 65) and mentioned in the petitioner's Appendix A (p. 79) is Preference Rating Order P-23, which was issued on July 29, 1941.

There are twelve subsequent Findings relating to priority regulations that affected the gold mines (R. 65-75). They end with the second paragraph of Finding 17, which reads (R. 74-75):

> "The gold mines excluded by the above amendments to Order P-56 were reduced to the same priority position as that of the least essential industries in the United States, i.e., they were entitled only to an A-10 preference rating for the acquisition of maintenance, repair and operating supplies under Order P-100. They were excluded from obtaining any critical materials which might have been needed by any of the nonferrous metal mines or by any other industry deemed by WPB to be more essential. While it was possible for gold mines excluded from any benefits under P-56 to apply for equipment under the general repair order P-100, the demand for desired equipment was so far above available supply that the possibility of the gold mines obtaining any was remote. *Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment.*"

The petitioner's Appendix A devotes almost twelve pages to the period between July 29, 1941 and March 2,

1942 (p. 79-90) and ends by repeating almost verbatim the sentences which we have just quoted (p. 89-90).

The situation which existed on March 2, 1942 continued unaltered:* the potential acquisition by the gold mines of critical materials, supplies and equipment had been virtually eliminated. The Court of Claims found that when the WPB issued Order L-208 it knew that such was the case. Finding 50 reads in part (R. 106-107):

> "50. *On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L-208 knew (1) that existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users;* * * *"

We do not know why counsel for the petitioner elected to devote twelve pages of the petitioner's Appendix A to the details of the steps by which the potential acquisition of critical materials and equipment by the gold mines was eliminated unless it was thought that the presentation of this mass of subordinate detail would lend credit to more important and more vulnerable sections of the Appendix.

However, we observe one important feature of the narrative in the petitioner's Appendix A (p. 79-91) and the summary thereof in the petitioner's Statement (p. 5-8). An attempt is made to create the impression that from January, 1942 until the issuance of Order L-208 in October, 1942 there was a continuity of the purpose or purposes of the WPB in connection with the gold mines. That attempt is particularly evident at page 91, where it is distinctly implied that in the spring and summer of 1942 the

---

* In May, 1942, there was an amendment of one of the priority orders, which is referred to in Finding 17 (R. 74) and in the petitioner's brief (p. 90-91), but, as the petitioner says, it "effected no practical change".

manpower problem and the priorities problem operated together to produce the shut-down of the "nonessential" gold mines. That is not at all true.[5]

What actually happened can be readily ascertained by reading the Findings of Fact covering the period from July 29, 1941 through March 2, 1942 (Findings 5-17; R. 65-75) and then reading the Findings that follow.

By March 2, 1942 the critical materials problem was solved, so far as the gold mines were concerned. In July 1942 a new and distinct problem emerged, involving the shortage of miners in the copper and other nonferrous metal mines.

In the petition for certiorari, the petitioner informed the Court (p. 4-5):

---

[5] It is logical to divide the story of the background and origin of L-208 at the point where the objectives of the progressively more stringent priority regulations had been accomplished—March 2, 1942, the date given in Finding 17 (R. 74-75). That is the division which the petitioner made in the petition for certiorari (p. 3-7).

A new part of the story commences in July 1942, when it was first suggested that production of gold "should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines which are essential to the war effort" (Finding 19, R. 76; Petitioner's Appendix A, p. 92).

The petitioner's Appendix A has a heading *"Regulations Adversely Affecting the Gold Mining Industry Prior to Limitation Order L-208"* (p. 79) under which the petitioner deals with the period between May 1941 and December 18, 1941. The Appendix then has a new heading, *"The Evolution of Limitation Order L-208"*, under which the Appendix purports to tell a consecutive story running from January 1942 to the time when Order L-208 was issued and thereafter (p. 86-110). Under the heading *"The Evolution of Limitation Order L-208"*, there are six pages which deal with the successful efforts to eliminate the potential acquisition by the gold mines of critical materials, supplies and equipment that culminated in March 1942 (p. 86-91).

Thus the petitioner abandoned a logical division of its narrative, which it had made in the petition for certiorari, and attempted to create the erroneous impression that there was a continuity of the purpose or purposes of the WPB, with relation to the gold mines, from January, 1942 until L-208 was issued on October 8, 1942.

> "Thus, by granting the lowest possible priority rating in a market where supplies were exceedingly scarce, *the War Production Board had effectively eliminated the possibility of acquisition by the gold mines of critical materials or supplies.*"

Before leaving the period during which the priorities problem was solved, so far as the gold mines were concerned, and proceeding to a review of the later period during which the WPB was persuaded to shut down the gold mines in order to bring about a transfer of underground hardrock miners to the copper and other nonferrous metal mines, we should mention some of the documents quoted in the petitioner's Appendix A at pages 82-87.

At page 82 the petitioner quotes from a memorandum submitted on November 18, 1941 to the SPAB by Mr. Donald Nelson, who was Chairman of the WPB when Order L-208 was issued (Finding 8, R. 66). The most important sentences in the quotation, relating to the consumption of critical materials by the gold mines, are these:

> "It is to be emphasized that *from a consumption of scarce materials standpoint, this whole issue is a minor one.* Only about $7,000,000 of equipment, not including a lesser amount for repairs and maintenance, is involved annually at a maximum. Such importance as the issue possesses is largely political."

This comment by Mr. Nelson was made on November 18, 1941, several months before the progressively more stringent priority regulations had virtually eliminated the potential acquisition of critical materials, supplies and equipment by the gold mines. His characterization of the issue as "a minor one" before it was solved should be contrasted with the repeated suggestions in the petitioner's

brief that seven months after the issue had been solved it remained of major importance.[6]

The period from July, 1942, through October, 1942.

The period from July, 1942, when the Labor Division of the War Production Board, officials of the War Department and the War Manpower Commission were all becom-

---

[6] Our other comments are less important.

At page 85, the petitioner's Appendix A quotes from a memorandum of the Chairman of the Board of Governors of the Federal Reserve System, dated December 16, 1941, in which the Chairman said (Finding 9, R. 70):

> "Since new gold output is largely unnecessary and diverts materials, machinery, and labor from production of war supplies, I strongly favor curtailing it so far as is practicable through the priorities system. I would suggest that no machinery be allowed to foreign mines for the expansion of gold output; and that machinery and supplies for the maintenance and repair of gold mines should be restricted to the minimum consonant with the principles adopted by the Supply Priorities and Allocation Board for other nondefense industries."

It will be noted that the Chairman made two suggestions: (1) "that no machinery be allowed to foreign mines for the expansion of gold output" and (2) that materials and supplies for the maintenance and repair of domestic gold mines should be further restricted. His suggestion with respect to foreign gold mines was not followed; throughout the War "critical materials, machinery and equipment subject to allocation and control by the WPB were shipped in substantial quantities to foreign countries for use in their gold mining industry" (Finding 49, R. 106). On the other hand, further restrictions on the domestic mines were applied and "insured that the gold mines would not receive any critical materials needed by more essential users" (Finding 50, R. 107).

At pages 86-87 the petitioner quotes from a letter to the Chairman of the War Production Board written on January 20, 1942 by Wilbur Nelson, Administrator of the Mining Branch of the WPB. Mr. Nelson's letter said that he was speaking "particularly with reference to foreign mines outside of North and South America (e.g., South Africa)" (R. 1178). That portion of the letter is omitted by the petitioner.

ing concerned about the shortage of miners in the non-ferrous metal mines, until shortly after Order L-208 was issued on October 8, 1942, is covered by Findings 18-52 (R. 75-111) and may well be subdivided into two parts.

In the Findings relating to the period from the beginning of July through September 15, 1942, there are some mentions of the conservation or allocation of critical materials, although those Findings leave no doubt that the manpower purpose of the proposed closing of the gold mines was so dominant even at that time as virtually to exclude anything else (Findings 18-31, R. 75-95). *In the voluminous Findings covering the events during the period between September 17 and October 10, 1942, both inclusive, which set forth the significant documents of that period, including the minutes of the WPB meeting at which the issuance of L-208 was agreed upon (Findings 32-45, 52; R. 96-105, 107-111), there is no reference whatever to the conservation or allocation of critical materials except in the wording of Order L-208 (Finding 43, R. 102-105).*

July, 1942 through September 15, 1942

Findings 18-31, covering the period from the beginning of July, 1942 through September 15, 1942 are quite voluminous (R. 75-95). Some portions of them are particularly pertinent on the question as to the effectiveness of Order L-208 as a manpower measure and especially relevant in considering the assertions in the petitioner's brief that the WPB acted "on the basis of repeated and careful studies" (p. 16, 25). At this juncture, however, we will discuss Findings 18-31 primarily in connection with the issue as to the purpose of Order L-208.

On July 8, 1942 a War Department Committee recommended to the WPB that (Finding 19, R. 76):

> "2. *Production of gold,* with the exception of required amounts of essential silicious gold ores, *should be curtailed by an order of the War Production Board to free labor which is urgently needed in the nonferrous mines* which are essential to the war effort."

This recommendation was the first specific proposal of a curtailment of the operation of the gold mines to "free labor which is urgently needed in the nonferrous mines".

On July 4, 1942 the Priorities Branch of the Labor Production Division of the WPB had sent a memorandum to the Director of Operations of the War Manpower Commission which concluded as follows (Finding 20, R. 76-78):[7]

> "Steps should be taken to remedy the critical labor situation in nonferrous metal mining, including arrangements for the transfer of miners from gold and silver mining to copper, lead, zinc, tungsten, chrome, and molybdenum mining. This can be done through curtailment of gold and silver production, but it would be necessary to make sure that the workers released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast. It has been customary for metal miners in the mountain states to move considerable distances with the opening and closing of mines and ordinary turnover."

The plan to camouflage a gold mine closing order as a War Production Board regulation of critical materials apparently had its beginning in a memorandum sent on

---

[7] The petitioner's brief summarizes (p. 93) statements made in this memorandum about the number of employees of the "15 largest producers of gold in seven Western states". We refer later (p. 72-73) to what the Court of Claims found as to these statements.

July 9, 1942 by the General Counsel of the War Manpower Commission to a member of his staff (Finding 21, R. 78; petitioner's brief, p. 94):

> "At a meeting of the War Manpower Commission yesterday, the following problem was referred to this office.
>
> "General McSherry [Director of Operations of WMC] wishes to secure the release of men employed in the gold mining industry for transfer to the copper mining industry. Concededly the War Manpower Commission cannot accomplish this result directly. May the result be accomplished (1) by the War Production Board refusing to the gold mine operators critical materials used in their operations thus compelling the closing of the mines; (2) may the Chairman of the War Manpower Commission direct the War Production Board to take that action?
>
> "The specific situation suggested is simply illustrative of the general problem in this field."

Finding 22 starts with the following (R. 78):

> *"The proposal for closing the gold mines in order to divert their miners to nonferrous metal mines was gaining momentum in August 1942."*

The petitioner's brief says merely (p. 94): "By August 1942, the proposed curtailment of nonessential gold mines was gaining momentum". The brief does not mention that there is a Finding and the words *"in order to divert their miners to nonferrous metal mines"* are simply omitted.

Finding 23 starts with the following (R. 79):

> "Late in August 1942, Guy N. Bjorge, General Manager of plaintiff Homestake Mining Company, the largest gold-mining company in the United States, learned that consideration was being given by the Government to *a proposal to close domestic gold mines in order to divert their miners to the nonferrous metal mines.*"

The Finding then tells of the trip made by Mr. Bjorge to Washington for conferences with the WPB.

The petitioner's brief says (p. 94-95):

> "Later in August, the General Manager of the Homestake Mining Company conferred with several officials of the WPB and expressed his opposition to the closing of the mines, basically for the same reason as that given by Wilbur Nelson."

Thus the petitioner makes no reference to the fact that Mr. Bjorge had learned that consideration was being given by the Government to "a proposal to close domestic gold mines in order to divert their miners to the nonferrous metal mines."

Finding 24, more than a page long, covers a significant correspondence between Senator McCarran of Nevada and Donald Nelson, Chairman of the WPB (R. 80-81). The Finding states that on August 26 Senator McCarran wrote Chairman Nelson "setting forth various reasons why he believed the proposed closing of the gold mines would not accomplish its purpose of obtaining any considerable number of miners for the nonferrous metal mines" and the Finding cites some of the reasons which the Senator gave. The Finding also quotes part of Chairman Nelson's answer of September 1, which accepted Senator McCarran's assumption that the purpose of the proposed closing of the gold mines was to obtain miners for the nonferrous metal mines, and, among other things, said (R. 81):

> "We quite agree that no legal power exists today by which workers may be forced to transfer to other mines. This accentuates the mine labor problem which faces us today."

All that the petitioner's Appendix A says on this subject is that Senator McCarran "in a letter to Donald Nelson set forth his reasons why the curtailment of gold mining,

operations would not be effective for the purpose of obtaining any considerable number of miners for the nonferrous mines" (p. 95).

On September 1, 1942 the War Production Board had a meeting covered by Finding 25 (R. 81-84). This Finding contains extensive quotations from the minutes of the meeting. The petitioner's brief incorporates major portions of the quotations which are in the Finding (p. 95-98). However, if the Finding (R. 81-84) and the petitioner's quotations (p. 95-98) are laid side by side, it will be found that the petitioner has omitted four paragraphs which are in the Finding. We do not contend that the petitioner's omission of these four paragraphs has resulted in a distorted picture of what took place at the WPB meeting of September 1, but the picture is incomplete without them.[8]

On September 4, 1942 a direction was given that an order shutting down the gold mines be drafted by the Miscellaneous Minerals Branch of the WPB (Finding 26, R. 84-85).

Finding 27 covers a long memorandum sent on Septem- 9, 1942, by R. J. Lund, Chief of the Miscellaneous Minerals Branch of the WPB, to the Deputy Director General for Industry Operations of the WPB when transmitting to him a draft of the shutdown order. This memorandum takes up more than five pages of the record (R. 85-90). The treatment of the memorandum in the petitioner's Appendix is astounding.

---

[8] The first omitted paragraph set forth the purpose of the meeting, which was to hear a report of the Labor Production Division and the Copper Branch "on the Manpower problem in the nonferrous metals industries" (R. 81). The next two omitted paragraphs gave reasons for the shortage of miners in the nonferrous metal mines (R. 82); they afford support for Findings 47 and 50 (R. 106, 107). The fourth omitted paragraph included a statement by the Chairman of the WPB that the WPB "must take an active and leading role in assuring an adequate supply of copper" (R. 83-84).

The second paragraph of the memorandum says (R. 85):

> *"It was understood that the purpose of the order was to make mining labor now producing gold available to copper and other strategic nonferrous metal mines. This end can be attained by WPB only through its authority to control materials."*

This simple and explicit statement of the purpose of L-208 is not referred to anywhere in the petitioner's brief.

The petitioner's Appendix makes a few generalizations about the contents of the Memorandum and then quotes a 9-line paragraph under the heading "Critical materials saved" (p. 98, R. 87). The impression is created that the quoted paragraph was one of the most important parts, if not the most important part, of the memorandum. That is emphatically not true.

When the Chief of the Miscellaneous Minerals Branch prepared the memorandum, he undertook to treat therein with eight subjects (followed by a "Concluding Statement"), the discussion of which takes up almost five pages of the record. "Critical materials saved" constituted subject (6).

It will be immediately apparent that, by omitting the paragraph in the memorandum which set forth the purpose of the proposed closing of the gold mines and emphasizing the 9-line mention of critical materials, the petitioner has presented a distorted picture.[9] Indeed, that is so apparent that further mention of Mr. Lund's memorandum of September 9, 1942 would hardly seem worthwhile were it not the fact that in all of Findings 18-42 (in which the con-

---

[9] The seventh subject was "Effect on economy of states and communities" (see the main body of this brief, p. 53, 93-94). There is four times as much in the memorandum about the adverse effect of a shutdown of the gold mines on communities and states as there is about critical materials, but the petitioner's brief does not mention the former.

temporary documents are set forth), covering the period between the beginning of July, 1942 and the decision on October 6, 1942 to close the gold mines, there are only three suggestions that the shutdown of the gold mines might be even incidentally effective to conserve critical materials and one of the three is the quoted paragraph of the memorandum of September 9, 1942. So we will examine that paragraph to see whether it could reasonably have influenced the thinking in the WPB when it was issued on September 9.

It reads (R. 87):

> "Sizable amounts of critical materials will be saved in closing these gold mines. Estimates as to total current consumption of such materials are not available but the general order of magnitude of such consumption is indicated by the fact that in 1939 gold mines in the United States (excluding Alaska) spent about $17,000,000 on supplies and materials, $2,000,000 for fuel and about $5,000,000 for purchased electric energy."

The paragraph completely disregards the fact that six months before "progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment" (Finding 17, R. 75).

Even if there had been no effective priorities regulations, the expenditure by gold mines of $17,000,000 on "supplies and materials" in 1939 would have been no indication of the amount of critical materials which the gold mines surviving in October 1942 would acquire or use if they were not shut down. The term "supplies and materials" includes all kinds of supplies and materials, whether critical or not. By the fall of 1942 gold mining had already declined drastically under the pressure of manpower shortages and materials restrictions and 1939 statistics were long out of date

(Appendix C to Plaintiff's Exhibit 1, R. 149, 1163, 1244A). Many mines producing gold would not be shut down as "nonessential," as they produced substantial amounts of critical materials. In the case of the mines which were closed down, "supplies and materials" would have to be consumed to keep the mines from flooding and in other permitted maintenance operations.

It is not reasonable to suppose that this casual paragraph in the long memorandum of September 9, 1942, influenced the thinking of the WPB.

The next document referred to in the petitioner's Appendix A (p. 98-99) is a memorandum which an assistant to the Deputy Director General for Industry Operations sent to the Chairman of the WPB on September 11, 1942 with "a copy of the proposed curtailment order on gold" (Finding 28, R. 90-91). The draft order is Defendant's Exhibit 46 (R. 962, 1594-1597). It differs vitally from Order L-208 as finally issued; among other things, it did not contain the key paragraph of Order L-208 (Finding 43, R. 102):

> "(1) On and after the issuance date of this order, each operator of a nonessential [gold] mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine."

Attached to the memorandum which accompanied the draft order was a draft of an SEC-4, from which the petitioner quotes (R. 1595). The SEC-4 form was used for brief explanations of WPB orders (see e.g. Plaintiff's Exhibit 74, R. 383, 1438A; Defendant's Exhibit 2, R. 1574A-1574B; Defendant's Exhibit 3, R. 479, 1574C-1574D, 1575). The petitioner's brief quotes a paragraph from the draft SEC-4 which accompanied the draft order of September 11, 1942 and refers to the draft SEC-4 as if it were a finalized document (p. 98-99). It was not. It was simply a draft prepared by an assistant to the Deputy Director General for

Industry Operations and it was not used. A draft statement prepared by an assistant on September 11, which was rejected, certainly has little significance in considering the purpose of an order which was issued on October 8. Interestingly enough, Order L-208 itself was not accompanied by any "brief summary of action recommended", called for by the SEC-4, except this: "That attached order be issued by the Director General for Operations". No explanation was given. This appears from Defendant's Exhibit 2 (R. 1574A-1574B).

Finding 29 (R. 91-92) quotes from a memorandum which was presumably written about September 11, 1942, although it is not known when it was written or who wrote it. While the petitioner's brief does not quote this memorandum in full, its quotation of an excerpt is a fair one (p. 99).

The first sentence of the petitioner's quotation reads:

> "The basic purpose of this curtailment of gold mining is, of course, to free manpower for the mining of essential minerals, particularly nonferrous metals such as copper, zinc and lead."

The last sentence is this:

> "Besides diverting manpower to essential industries, this order, when in effect, will also conserve some materials and supplies used in gold mining, such as mercury, drill steel, etc."

For whatever it may be worth, it thus appears that whoever wrote the memorandum knew at the time when it was written that "the basic purpose" of the proposed curtailment of gold mining was what the Court of Claims later found was the only real purpose (see p. 34-39 below), "to free manpower for essential mining", but the writer thought that the shutdown of the mines "would also conserve *some* materials and supplies used in gold mining, such as mercury, drill steel, etc."

Finding 30 sets forth that on September 15, 1942 there was a meeting of the Inter-Departmental Committee on Non-Ferrous Metals and the Finding contains rather full quotations from the minutes of that meeting (R. 93-94). This meeting and Finding are not mentioned by the petitioner at all.

It would unduly lengthen this appendix to quote Finding 30 in full, but we will quote three consecutive paragraphs:

> *"Mr. Harbison [Army representative] expressed some concern over the delay in issuing the gold order. He outlined the steps that various agencies had taken to meet the manpower shortage in nonferrous metal mines, and pointed out that the transfer of gold miners to essential mining was being held up by the lack of a gold curtailment order.* He pointed out that the U. S. Employment Service had been unable to obtain many[10] recruits at Rapid City, South Dakota, because the gold mines had not been closed down, although Anaconda Copper Mining Company had agreed to pay transportation costs. *He made it clear that the War Department was impatient at the delay.*
>
> "Mr. Lester of the War Manpower Commission asked that his organization be kept informed of what mines would be affected by the directive, in order that representatives of the Employment Service might be on the spot beforehand.
>
> "In this connection, since *the primary purpose of the order was to free manpower rather than to curtail materials,* Mr. Lipkowitz suggested that an advisory committee be established with representatives from Labor Production Division and War Manpower Commission."

This meeting of September 15 was the first occasion mentioned in a Finding when the Army (through the Services of Supply) or the War Department, engaged in what

---

[10] The Finding reads "obtained any" (R. 93). That is a typographical error; the Exhibit contains the wording given above, "obtain many" (Plaintiff's Exhibit 82; R. 1456).

the petitioner calls "urging" (p. 21, 55) and the Court of Claims called "pressure" (R. 18). There were later occasions, more significant and more dramatic, on October 2, October 5 and October 6, which are mentioned below.

Finding 31 relates to a memorandum submitted to Chairman Nelson of the WPB by Mr. Morris Creditor, Special Assistant to the Chairman on September 15, 1942 (R. 94-95; Plaintiff's Exhibit 21, R. 400, 1313-1314). This memorandum raised a number of pregnant questions. The petitioner's Appendix A does not mention it at all. It is worth quoting in full:

> "I have reviewed the proposed limitation order for the gold mining industry and I wish to raise certain points as to the soundness of such an order.
>
> "You will recall that we received a letter from Senator Gurney on August 31 in which he set forth the harmful effects that such an order would have on the economy of the State of South Dakota. In your reply you stated in effect that we were confronted with the manpower problem and something had to be done to overcome the losses of production which are being experienced in the mining of copper and other strategic materials through the shortage of experienced miners.
>
> "In the preamble of the limitation order no mention is made of manpower requirements. It simply states that the order is made necessary because of the shortage in the supply of critical materials which are used in the maintenance and operations of gold mines.
>
> "It would seem to me that if the order is based on the premise of critical materials alone, the question might be raised as to why such an order would not apply to materials being sent by this country to other gold mines in Canada, South America, and South Africa.
>
> "If the main purpose of this order is to divert miners from the gold mining industry to copper and

other mining industries, it seems to me that there is no assurance that this order would accomplish the desired results. As Gustav Peck pointed out to you in his memorandum of September 9, it would be too bad to close the Homestake Mine, for instance, without the assurance that most of the miners will continue to practice their trades in the copper mines.

"Would it not be more practical to accomplish the purposes by a freeze order similar to that which is now in effect for workers in the copper mines and the lumber industry. This may be more drastic but, on the other hand, may give better assurance that the miners in the gold mines would eventually find their way into the copper mines. Consideration might also be given to the idea of having the Army give indefinite furloughs to Service men who in the past were engaged in the mining of non-ferrous materials.

"Even aside from the possible dissipation of these skilled miners into other occupations, there is question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally, will be stuck in Alaska. Where are they expected to go?

"I am sure that a great deal of thought has been given to the proposed limitation order on gold mining, but unless there is a high degree of assurance that the main purpose will be accomplished; namely, the diversion of these miners to the non-ferrous mines, I feel it is important to weigh the adverse effects it might have in other directions.

"Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries."

September 17, 1942 through October 12, 1942

The Findings covering the period from September 17, 1942 through October 6, 1942, the date of the WPB meeting when it was formally agreed to issue L-208, contain no reference whatever to priorities or the allocation of critical materials. On the other hand they contain pervasive and dominant references to mine labor, particularly hardrock miners (Findings 32-42, R. 96-102). Nor is there any reference to priorities or the allocation of critical materials in the Findings covering the period subsequent to October 6, 1942 except those relating to the wording of Order L-208 itself.

On September 17, 1942 a memorandum was issued, quoted in Finding 32 (R. 96), which related to the procedure to be followed in the clearance of the shutdown Order. The memorandum sheds no light on the purpose of the Order.

On September 25, 1942, representatives of the branches of the WPB which were concerned with mineral production passed a resolution urging that representatives of the gold mining companies be called to Washington to discuss the proposed gold order so that:

> "A. Where possible, existing organizations may be utilized for important mining operations, or prospective operations, necessary in the war effort.
>
> "B. Labor, and especially experienced miners, can be made available to the mining industry, rather than lost to vital metal production."

This meeting, covered by Finding 33 (R. 96), which is not mentioned in the petitioner's Appendix A, is important because it led to the meeting of October 1, 1942 at which

representatives of the gold mining industry met with WPB officials and others. The October 1 meeting is referred to in some detail later and we show that the petitioner's Appendix A makes only an extraordinarily brief and cryptic reference to it.

On September 25, 1942, Vice Chairman Batt of the WPB sent a memorandum to the Director General for Industry Operations of the WPB, two paragraphs of which are quoted in Finding 34 (R. 96). The second of those two paragraphs reads as follows:

> "It seems to me imperative that we very carefully word our press release so that the predominant objective, namely of releasing less essential labor for more essential requirements, shall be clearly evident. And I particularly direct the attention of those who have to do with this matter at this point."

This significant statement by the Vice Chairman of the WPB is not mentioned anywhere by the petitioner.

On September 30, 1942 a conference was held at the office of Vice Chairman Batt of the WPB, covered by Finding 35 (R. 97). All that the petitioner says about this conference is that "Senators McCarran and Gurney and Representatives Case and Englebright * * * voiced the hardships that would be imposed on the inhabitants of gold mining communities and the detrimental effect on morale if the order were issued" (p. 100). The petitioner completely omits two significant sentences in Finding 35 (R. 97):

> "The WPB representatives, except Wilbur Nelson, countered with statements emphasizing the need for labor in copper mines. Some discussion arose as to the number of gold mine employees who would be released by such a closing order."

Those sentences show, as does every Finding relating to the period from September 17 through October 12, that

everyone knew that the purpose of the proposed shut-down order was to release miners for the copper mines.

On October 1, 1942, a meeting was held in Washington (Finding 36, R. 97-98) which, as the petitioner says (p. 100), was "attended by WPB officials, representatives of the gold mining industry, the War Department, the War Manpower Commission and Senator Gurney and Representatives Case and Englebright." So far as appears, this was the only meeting at which the gold mining industry was afforded an opportunity to make any representations to the WPB about its proposed action. The meeting lasted "for approximately five hours" (R. 97). The Finding which relates to it takes up more than a full page of the record.

The outstanding feature of the long, detailed Finding relating to this five-hour meeting is that it indicates throughout that the purpose of the proposed order was to shut down the gold mines in the hope of transferring the "released labor to the copper mines".

After setting forth who called the meeting and who was there, the Finding says (R. 98):

> "At the opening of the meeting Mr. Batt [the Vice Chairman of the WPB] stated that he had brought the gold mine operators to Washington to tell them that *a decision had been made to close the gold mines in order to transfer the released labor to the copper mines.*"

A vigorous controversy developed at the meeting as to (1) the number of hardrock miners and muckers[11] who would actually be released by a closing order, and (2) whether

---

[11] The references in the record to "hardrock miners", "hardrock miners and muckers" and "miners and muckers" all mean the same thing. They refer to underground miners in the gold mines, which are hardrock mines (see p. 70-71 below).

the released miners and muckers would go to the copper and other nonferrous metal mines. There was an open division within the WPB as to the possible effectiveness of the proposed order; several men in the WPB doubted that it would be effective (R. 98). On the other hand, the representative of the Army "spoke strongly in support of a closing order" (*id.*). Late in the meeting Dr. Wilbur A. Nelson, who was the Chief of the Mining Branch of the WPB (Finding 23, R. 79), "undertook to determine how many miners and muckers would actually be released by a closing order" (R. 98).

All that the petitioner's Appendix A says about this vastly important meeting is that: "Arguments for and against the order were advanced, and its possible effectiveness as a partial solution to the manpower problem was questioned" (p. 100). Certainly that is a pretty bald effort to slide over a most significant Finding, which is highly pertinent on the issue as to the purpose of Order L-208 and in addition is most relevant in connection with the petitioner's argument that the WPB acted "on the basis of repeated and careful studies" (p. 16, 25).

The study undertaken by Dr. Wilbur A. Nelson of the WPB on October 1 was the *first* as to the number of hard-rock miners and muckers who would be released by a closing order and it is to be contrasted with previous unsupported and usually ambiguous assertions (see below, p. 80-81). This *first study* was undertaken at the close of a meeting which the Vice Chairman of the WPB had opened by announcing that *a decision had already been made "to close the gold mines in order to transfer the released labor to the copper mines"* (R. 98).

On October 1 Mr. Batt, Vice Chairman of the WPB, sent a memorandum to Donald Nelson, the Chairman, saying:

> "The more I study the gold mining situation, the more uncertain I am as to the form which a restriction of operations should take. *Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure.* If the question comes up in your press conference, I would suggest that you refer to the need for miners and the lack of need for gold, and say that the matter is being studied from all angles."

Mr. Batt's memorandum is covered by Finding No. 38 (R. 99). It is not mentioned by the petitioner anywhere.

On October 2 the Under Secretary of War sent Mr. Batt the following letter (Finding 39, R. 99):

> "I hope that prompt and effective action will be taken with regard to gold mining. I need not call your attention to the urgent need for more miners in the production of copper and other nonferrous metals as you know the situation as well as I do. The longer the delay in shutting down gold mining, the further off will be the relief of the copper shortage. The matter has hung fire for some time, and I trust that there will be no further delay.
>
> "If it is thought best to have the order approved by the War Department and the Navy Department, I will be glad to give the War Department's approval, and I believe that Mr. Forrestal will do the same for the Navy."

The next day, October 3, Dr. Wilbur Nelson reported to the Vice Chairman of the WPB that there were only 896 hardrock miners and muckers among the employees of the gold mining companies which would be affected by the proposed Order, and that since approximately 300 would be needed for maintenance if there were a shutdown, the closing of the mines "would make available *only about 600 miners and muckers for other mining enterprises 'pro-*

vided they [could] all be induced to go into other mines' " (Finding 37, R. 98-99).[12]

This estimated maximum of 600 can be contrasted with the wildly inaccurate or inapplicable figures which had previously been advanced (see below, p. 80-81). Moreover, *there were many factors, known at the time to the WPB and set forth in Finding 50, which could be expected to keep all but a small percentage of the 600 from transferring to the nonferrous metal mines* (Finding 50, R. 106-107).

Nevertheless, the forces which led to the issuance of Order L-208 continued to gather momentum.

On October 5 the Under Secretaries of War and the Navy sent the following memorandum to the Chairman of the WPB (Finding 40, R. 99-100), which the petitioner quotes (p. 101):

> "The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production. These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.

---

[12] The third line on R. 99 is a misprint; it repeats the twelfth line in Finding 35 (R. 97). The following should be substituted:

"order. His report concluded that if all the gold mines and"

The correct text of the Finding will be found at p. 83 of the Appendix to the petition for certiorari.

> The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided."

As already noted, it had previously been determined that a shutdown of the gold mines "would make available only about 600 miners and muckers for other mining enterprises, 'provided they [could] all be induced to go into other mines'" (R. 99). At the trial, counsel for the Government made no effort to show the origin of the Under Secretaries' statement that there were "two thousand to three thousand hard-rock miners engaged in gold mining".

On October 6, 1942 a WPB meeting was held at which the formal decision to issue Order L-208 was reached (Finding 41, p. 100-101). Pertinent portions of the minutes of the meeting are set forth in the petitioner's Appendix A (p. 101-103). There are three significant things about the meeting:

First, there is no reference in the minutes to the acquisition or consumption by the gold mines of any critical materials or to any desire on the part of the WPB or the Army to requisition or allocate any critical materials, machinery or equipment already owned by the gold mines.

Second, the WPB apparently accepted Dr. Wilbur Nelson's figures that at that time there were only 896 hardrock miners and muckers in the gold mines which would be closed down and that approximately 300 of them would be needed for maintenance and other necessary work, so that only about 600 would be available if they could all be induced to go into other mines (Finding 37, R. 98-99; Finding 41, R. 100). There is no reference in the minutes to the very large difference between Dr. Nelson's figures and the figures given on October 5 by the two Under Secretaries.

Third, General Somervell, who was Commanding General of the Services of Supply of the War Department (R. 1466), made a statement for the Army (R. 101):

> "*General Somervell stated that* because of the critical shortage of copper, which is drastically curtailing ammunition production, the Army has taken the unusual precedent of furloughing 4,000 soldiers to work in the copper mines and that, under these conditions, *failure to stop gold production immediately would be inexcusable.*"

Later the WPB's own Policy Analysis and Records Branch Office said (Plaintiff's Exhibit 1, R. 149, 1163, 1218, *italics in the original*):

> "*General Somervell's position, however, amounted almost to an ultimatum, which permitted no alternatives.*"

The action agreed upon, as set forth in the minutes of the meeting, was that (R. 101):

> "'An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition.'"

Order L-208 was actually issued on October 8, 1942 (R. 102).

On October 7, 1942, even before Order L-208 was issued, Chairman McNutt of the War Manpower Commission issued a directive intended to channel any person who "ceased to be employed as a production or maintenance worker in connection with gold mining" into "work in essential nonferrous metal mining, milling, smelting, and refining activities" (Finding 44, R. 105). This Finding is not referred to in the petitioner's brief.

The petitioner's brief also omits mention of Finding 45 (R. 105), which relates to the issuance immediately after October 8, 1942 of a statement by the Chairman of the War Manpower Commission and the Chairman of the WPB "appealing to all workers in gold mines to transfer to non-

ferrous metal mines and not to other war industries". In this joint statement these officials were most explicit in their characterization of the objective of Order L-208. Among other things, they said (Plaintiff's Exhibit 34, R. 430, 1323):

> "To meet our war production program with respect to these [non-ferrous] metals, *it becomes necessary now to maneuver our manpower so that less essential mining can be diverted to vitally important operations. With this as our objective it has been determined that all gold mining shall be discontinued at the earliest possible moment.*"

On October 10, 1942, 21 United States Senators from 12 gold-producing Western States sent a long written detailed protest to the President (Finding 52, R. 107-111), in which it was stated that the making of the Order "is supported by the theory that the labor employed in these gold mines will go into mines of copper or lead or zinc" (R. 109). Seven paragraphs of the protest, taking up a full page of the record, were then devoted to an effort to convince the President that only a small number of hardrock gold miners could be expected to go into the copper, lead and zinc mines (*id.*). The protest concluded with the following paragraph (R. 110-111):

> "We respectfully bring this matter to your attention with the request that you stay the order made by the War Production Board affecting the gold mine operations of the United States, at least until the whole subject of marshalling of manpower and the allocation of labor may be considered, and the vital questions involved, concluded; thus that the gold mining industry of the United States may not be subjected to unwarranted and unusual hardship and injury which may not eventually be considered necessary, and which may not be equitably borne by other industries."

The 21 Senators clearly understood that the purpose of Order L-208 was to channel miners and muckers into the nonferrous metal mines (R. 109).

The Government's brief recognizes that the President's rejection of the Senators' protest and request for a stay constituted an approval of the Order by the President (p. 21, 55).

There is additional documentary evidence which is not covered by Findings or referred to in the petitioner's brief:

On October 10, 1942, the Under Secretary of War sent the President of the Homestake Mining Company a telegram reading as follows (Plaintiff's Exhibit 132, R. 612-613, 1516):

> "FACED WITH A SERIOUS SHORTAGE OF COPPER AND MOLYBDENUM FOR OUR ARMAMENT PROGRAM STOP THE WAR PRODUCTION BOARD HAS ORDERED THE CLOSING OF GOLD MINES TO PROVIDE ADDITIONAL TRAINED LABOR FOR THE NON FERROUS METAL MINES STOP THE SECRETARY OF WAR HAS ALSO TAKEN THE UNPRECEDENTED ACTION OF FURLOUGHING MINERS IN MILITARY SERVICE STOP I HAVE DIRECTED IMMEDIATE ACTION TO BRING OFFICIALS OF THE WAR DEPARTMENT AND OF THE ANACONDA COPPER MINING CO IN COOPERATION WITH YOUR LOCAL MANAGEMENT AT LEAD COMMA SODAK STOP I AM ASKING YOU TO TAKE THE LEADERSHIP IN EFFECTIVE (*SIC*) THE QUICKEST AND LEAST DISTURBING TRANSFER OF WORKERS FROM THE NATIONS GOLD MINES TO NONFERROUS MINES STOP I WILL APPRECIATE PROMPT MEASURES ON YOUR PART TO INSURE FULL COOPERATION OF YOUR LOCAL MANAGEMENT AT LEAD STOP.

The Under Secretary's statement that the War Production Board had ordered "the closing of gold mines *to provide additional trained labor for the nonferrous metal mines*" was certainly the statement of one who knew why the WPB had acted. For, not only was the Under Secretary at the

WPB meeting at which Order L-208 was agreed upon (Plaintiff's Exhibit 92, R. 426, 1466), but, as the petitioner's brief says (p. 21, 55), the WPB had acted "at the urging of the War Department".

On October 11, 1942, General Somervell, who (with the Under Secretary of War) had represented the War Department at the October 6 meeting of the WPB (Plaintiff's Exhibit 92, R. 426, 1466), wrote to Senator Gurney a letter, in which the concluding paragraph read as follows (Plaintiff's Exhibit 127, R. 520, 1510-1511):

> "In the light of the facts set forth above, I know that you will understand why the War Department feels that military necessity demands the immediate curtailment of the gold mines. *The gold mining industry has been singled for curtailment only because it constitutes the most readily available pool of 'hard rock' miners who are so urgently needed to further the war effort.*"

The second sentence of this paragraph is a notably succinct statement of what happened. The gold mining industry was *singled out.* It was singled out for *one reason only.* That reason was that the War Department wanted *hardrock miners for the nonferrous metal mines.*

On October 12, 1942, the Chief of Staff of the Army wrote to Senator Gurney a letter in which he said, among other things (Plaintiff's Exhibit 128, R. 523, 1511-1512):

> "It is my understanding that *the War Production Board has ruled that the gold mining industry be closed down in the hopes that this action will release experienced mine labor for employment in the mining of the basic strategic materials essential to our war production program.* I am sure that this action was taken only after careful consideration of all the factors involved."

II

The purpose of Order L-208

The most important issue considered by the Court of Claims was whether the real purpose of Order L-208 was to close down nonessential gold mines in order to effect a transfer of mine labor to the nonferrous metal mines, or whether the Order was intended to regulate the allocation and use of critical materials, machinery and equipment.

The Commissioner made a Finding consisting of three sentences. The respondents objected to the second and third sentences and they were rejected by the Court (R. 7-8, 105-106):[13]

> "The dominant consideration by Chairman Donald Nelson[14] of WPB in the issuance of Limitation Order L-208 was the releasing of mine labor from the gold mines for employment in mines that were producing other metals, such as copper, which were in short supply and urgently needed in the war program. [Another consideration in the issuance of the order was as stated in the preamble that the fulfillment of requirements for the defense of the United States had created a shortage in the supply of critical materials which had been used in the maintenance and operation of gold mines.
>
> Both objectives were in some measure accomplished with the closing of the plaintiffs' gold mines pursuant to the order.]"

The sentences which the Court of Claims rejected are underlined in the quotation.

---

[13] The Commissioner's Finding was numbered 44. The Court's Finding is numbered 46.

[14] It will be recalled that Executive Order 9024 gave authority to the Chairman. See Note 1 above.

The Court of Claims thus expressly found that "The dominant consideration" was the releasing of mine labor and expressly rejected the Commissioner's view with respect to critical materials.

The word "dominant" is defined in Webster's International Dictionary (Second Ed.) as follows:

> "1. Having the ruling or controlling influence; prevailing; predominant. * * *"

As we show below, there cannot be the slightest question that when the Court spoke of "The dominant consideration", and excluded any reference to any other consideration, it meant that the Order had only one real purpose, the releasing of mine labor.

The petitioner's brief concedes that "*a* dominant consideration underlying its issuance was the release and expected diversion of labor from the gold mines to nonferrous metal mines" (p. 11). It says later that "the diversion of manpower to essential mines was *a* motivating factor in the issuance of L-208" (p. 60). These changes of the word ***"the"*** to the word ***"a"*** are hardly accidental. The petitioner has simply tried to reinstate the Commissioner's finding, without stating what the Court's Finding was or even indicating that the Court made a Finding as to the purpose of the Order.

There can be no doubt as to what the Court meant when it referred to *"The dominant consideration"*. The Court said in its opinion (R. 19):

> "The record establishes that no one having anything to do with the issuance of L-208 believed that it was devised or intended to be devised for the purpose of conserving critical materials, equipment or supplies, inasmuch as existing preference orders

had solved that problem in connection with the gold mines.

* * * * *

"The record establishes that the purpose and intent of WPB in issuing L-208 was to deprive the gold mine owners and operators of the right to use their properties in the only way they could be beneficially used, i.e., to mine and sell gold for a profit, and that this was done in the unfounded hope that the underground workers thus deprived of their employment in the gold mines might seek employment in the nonferrous metal mines."

In denying the motion for a rehearing the Court restated its original holdings (R. 145):

"The court held that what WPB said it was doing and what it in fact and law did, were two different things and that the Government could not escape the obligation of paying just compensation for what it had the authority to take and in fact took, simply by calling its action of taking a 'priorities order' or an 'allocation order'."

If there were any question as to the meaning of the words "The dominant consideration" in the lower Court's Finding 46, this Court can resort to the lower Court's opinion to determine the meaning of the Finding.[15]

Although Judge LARAMORE dissented, he agreed with the majority as to the purpose of the Order. He said (R. 61):

"The majority opinion points out that L-208 was not an allocation order, as it purported to be, but rather was clearly an order closing gold mines deemed nonessential to the war effort; i.e., those mines whose gold production in dollar value exceeded 30 percent of their total production."

---

[15] See pages 64-65 in the main body of this brief.

Moreover, the petitioner itself agrees that the Court of Claims concluded "that L-208 was not devised for the purpose of conserving or allocating materials" (p. 53).

Nevertheless, the petitioner's argument is an attack on the Findings of Fact of the Court of Claims, although not stated to be such. If the petitioner has any right to challenge those Findings, which is doubtful for the reasons pointed out at pages 58-60 of the main body of this brief, it may challenge them only on the ground "that there is a lack of substantial evidence to sustain a finding of fact; that an ultimate finding or findings are not sustained by the findings of evidentiary or primary facts; or that there is a failure to make any fiinding of fact on a material issue" (see the main body of this brief at p. 63-64).

The Findings of evidentiary or primary facts pertain largely to documentary evidence. The petitioner does not assert that any of the Findings, whether or not relating to documents, is not supported by substantial evidence. And it would be preposterous to assert that the Findings of evidentiary and primary facts do not sustain the Court's ultimate Finding, No. 46, as to the purpose of the Order.

Indeed, the record heretofore summarized in this Appendix, particularly the portions thereof pertaining to the period from September 17, 1942 to October 12, 1942, can lead to only one reasonable conclusion: that the purpose of the Order, which was issued at the instance of the Army and the War Department, was the purpose that was stated at the time by the Army and the War Department in the Under Secretary of War's telegram of October 10 and General Somervell's letter of October 11. They were the spokesmen for the War Department and the Army in the crucial memoranda which are quoted in Findings 39 and 40 (R. 99-100) and at the WPB meeting of October 6 where

General Somervell said that "failure to stop gold production immediately would be inexcusable" (Finding 41, R. 100-101).

No one can read the documentary record of the October days and have any question as to what happened (see above, p. 25-33). The Vice Chairman of the WPB began the month with serious misgivings about the proposed closing of the gold mines (Finding 38, R. 99). But a strong memorandum was sent to the Vice Chairman on October 2 by the Under Secretary of War (Finding 39, R. 99). It was followed by a still stronger one on October 5, signed by the two Under Secretaries (Finding 40, R. 99-100). Both the Under Secretary of War and the Commanding General of the Services of Supply of the Army were at the October 6 meeting, at which General Somervell said that "failure to stop gold production immediately would be inexcusable" (Findings 41, 42; R. 100-102). Following the issuance of Order L-208, there were the Under Secretary's telegram, General Somervell's letter and the letter of the Chief of Staff (see above, p. 32-33).

Moreover, immediately after the issuance of L-208 Chairman Nelson of the WPB himself announced that the objective of the Order was "to maneuver our manpower so that less essential mining can be diverted to vitally important operations" (see above, p. 30-31).

If there had been any real intent to have Order L-208 serve as a priorities or allocation order, the Government would surely have called as witnesses several of the many men who had to do with Order L-208 at the top level and who were still alive at the time of the hearing before the Commissioner. The only top level official called by the Government was General Somervell, and nothing he said tended to cast any doubt on the correctness of the Finding of the Court of Claims (Finding 46, R. 105-106). On the

contrary, his testimony affords additional support for the Finding.[16]

The Government's failure to call any of the other top level men speaks for itself.[17]

The one top level witness whom the Government did call, General Somervell, said nothing to impeach the shortest and best statement of the purpose of Order L-208, which had been made by him in his letter of October 12 (Plaintiff's Exhibit 127, R. 520, 1510-1511):

> "The gold mining industry has been singled for curtailment only because it constitutes the most readily available pool of 'hard rock' miners who are so urgently needed to further the war effort."

---

[16] He testified on direct examination (R. 1134-1135):

> "Q. General Somervell, do you recall at any time during the war having the question of gold mining come to your attention?
>
> A. Yes, it was widely discussed at one stage of the game.
>
> Q. Can you fix the approximate date when it came to your attention?
>
> A. I think it was in 1942.
>
> Q. Can you recall how it came to your attention?
>
> A. No, I don't. The matter was widely discussed, as I said, with our staff, and most likely with the General Staff and with the WPB.
>
> Q. What were the—in what connection did it come to your attention, the question of gold mining?
>
> A. The shortage of miners needed for critical materials, particularly copper."

[17] The Commissioner charged the Government with "breaking faith with the court", because it did not produce Vice Chairman Batt as a witness (R. 1144). Counsel for the Government considered the charge unwarranted (R. 1146) and we do not ask this Court to find that it was justified. We bring up the subject merely to point out that the matter of having as witnesses men who had to do with L-208 at the top level was raised at the hearing and that counsel for the Government called no one other than General Somervell.

III

The provisions of Order L-208.

On analysis, it will be found that

1. The key paragraph of Order L-208, paragraph (b)(1), which directed the shutdown of nonessential mines, was implemented by paragraphs (b)(2) and (b)(3), which prohibited the acquisition, consumption or use of *any* materials, facilities or equipment in specified mining activities.

2. No direction in the Order related to *critical* materials.

3. The preamble to the Order, which did speak of critical materials, was the conventional "L" order preamble.

4. The references in paragraphs (b)(2), (b)(3) and (c) to "material" were presumably intended to give superficial support to the impression, which the preamble was designed to create, that Order L-208 was a true regulation of critical materials.

The key paragraph of Order L-208 was paragraph (b)(1), which read (R. 102):

> "On and after the issuance date of this order, each operator of a nonessential[18] mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine."

It was implemented by paragraph (i), which provided (R. 104):

---

[18] Order L-208 defined a "nonessential mine" as a mining enterprise, whether lode or placer, in which gold was produced, unless the operator held a serial number under Preference Rating Order P-56 (R. 102). After March 2, 1942, serial numbers were not granted to gold mines unless they produced substantial amounts of critical materials (Finding 17, R. 74).

"(i) *Violations.* Any person who willfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance."

No other "L" order contained a provision like the "close down" directive in paragraph (b)(1), which deprived the owners of the nonessential mines of the only beneficial use which could be made of them (R. 19).

Paragraph (b)(2) provided (R. 102):

"In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment *to break any new ore or to proceed with any development work or any new operations* in or about such mine."

Thus paragraph (b)(2) implemented the broad directive in paragraph (b)(1) by putting a 7-day deadline on *any extension* of mining operations.

Paragraph (b)(3) provided (R. 102-103):

"In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment *to remove any ore or waste* from such mine, either above or below ground, *or to conduct any other operations in or about such mine*, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible."

Thus paragraph (b)(3) implemented the close down provision of (b)(1) by putting a 60-day deadline on the continuance of *all mining activities, other than necessary maintenance.*

The close down action "agreed" upon at the October 6 meeting of the WPB was set forth in the minutes as follows (R. 101):

> "An order shall be issued by the War Production Board stopping all nonessential domestic gold mining operations within 60 days and thereafter permitting only minimum maintenance to keep mines dewatered and in standby condition."

Paragraph (b)(3) of L-208 was simply a more detailed statement of this.

Chief Judge JONES said that paragraphs (b)(2) and (b)(3) "forbade the use of *critical* materials in nonessential industry", that "they would have produced the closing down of the mines whether or not paragraph (b)(1) had been included" and that paragraph (b)(1) should "be construed as mere surplusage" (R. 58-59). That view reflects a misunderstanding of the Order and disregards its purpose.

In the light of the direction in paragraph (b)(1) that the affected gold mines "close down", nothing whatever was added to Order L-208 by the provisions in paragraphs (b)(2) and (b)(3) prohibiting the consumption, acquisition or use of "*any* material, facility, or equipment" *in the conduct of the operations of the mines* thus ordered to be closed down. The only significance of the provisions of paragraphs (b)(2) and (b)(3) lies in the 7-day and 60-day deadlines imposed by their terms on the mining activities therein specified which would have required the continued use of mine labor.

Paragraphs (b)(2) and (b)(3) did not relate to "*critical* materials" as Chief Judge JONES supposed. The refer-

ences therein were to "*any* material, facility, or equipment", whether needed in the war effort or not. The prohibitions of the acquisition, consumption or use of "*any* material, facility, or equipment" in any of the several mining activities mentioned in (b)(2) and (b)(3) were obviously adopted as a device to make L-208 superficially similar to an order relating to the acquisition, consumption and use of critical materials. The fact is that the Order contained no mention of critical materials except in the preamble.

Moreover, as we point out in more detail later (p. 50-52), paragraph (b)(3) shows that the provisions of the Order relating to the use of "any material, facility or equipment" contemplated that the owners of the nonessential mines would keep their materials, facilities and equipment for use when gold mining was resumed. The Court below said (R. 34):

> "Any actual conservation intended and brought about by that part of L-208 which prohibited the use of the gold mine owners' equipment and machinery for the mining of gold was for the purpose of conserving that equipment and machinery for future use by the nonessential gold mines in the production of nonessential gold."

Judge LITTLETON's opinion for the Court below contains a realistic analysis of the Order, particularly paragraphs (b)(2) and (b)(3) (R. 44-45):

> "*The real substance and intent of the order was embodied in the prohibition directed at the continued operation of the gold mines. The so-called limitation on the gold mine owners' use of the equipment and supplies and facilities which they owned was not intended to make those items available to the Government or to the war effort but was expressly included in the order to insure that they would not be used*

> *in the mining of gold, and was part and parcel of the express order to cease doing business.''*

Paragraph (c), which was not mentioned by Chief Judge JONES, related to the application of preference ratings "to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine" (R. 103). This provision of the Order was clearly surplusage since the gold mines had already been denied access to critical materials (Finding 17, R. 74-75; Finding 50, R. 106-107).

The preamble of the Order read (R. 102):

> "The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and or export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

This was the conventional "L" order preamble[19] and it tended to give L-208 the appearance of an "L" Order. It was camouflage, since the critical materials problem had been solved seven months before, so far as the gold mines were concerned, and the WPB knew that such was the case (Finding 17, R. 75; Finding 48, R. 106; Finding 50, R. 106-107; see above, p. 6-9; see below, p. 45-46).

The impression intended to be created by the preamble, that L-208 was a true regulation of critical materials, received superficial support from the references in paragraphs (b)(2), (b)(3) and (c) to "material". However, an analysis of those paragraphs would disclose that they

---

[19] See, e.g., L-58, 7 F. R. 1856; L-64, 7 F. R. 2454; L-71, 7 F. R. 2392; L-79, 7 F. R. 2867; L-85, 7 F. R. 2722; L-116, 7 F. R. 3475; L-120, 7 F. R. 5119; L-136, 7 F. R. 4477; L-150, 7 F. R. 4482; L-157, 7 F. R. 5557.

did not relate to critical materials. Order L-208 was imperfectly camouflaged.

It will be recalled that on September 15, 1942, Mr. Morris Creditor, Special Assistant to the Chairman of the WPB, wrote to the Chairman about the preamble of a draft of the Order which was under discussion at the time (Finding 31, R. 94-95; see above, p. 21-22). That draft of the Order did not contain the "close down" direction which was in Order L-208 as issued, but the preamble of the draft order was identical with that of Order L-208 (Defendant's Exhibit 46; R. 962, 1594, 1595-1597). Mr. Creditor said (R. 95):

> "Actually, only a small amount of critical materials is used in gold mining. Hence, if it is contemplated to issue the order in its present form, the preamble should give the real reason; which is to divert this labor to more necessary industries."

This straightforward recommendation was not adopted.

The Court below held that "what WPB said it was doing and what it in fact and law did, were two different things" and that the Government could not escape liability "simply by calling its action of taking a 'priorities order' or an 'allocation order'" (R. 145).

There can be no question that L-208 was camouflaged. The Government has offered no explanation of the reason for the camouflage, but instead has persevered in the attempt to make L-208 seem like a true "L" order, designed to conserve and allocate critical materials.

IV

The inadaptability of the Order to serve as a priorities or allocation order relating to critical materials, machinery or equipment.

There are only two ways in which a priorities or allocation order could serve any function: (1) to prohibit or

control the movement of critical materials, machinery or equipment *to* the gold mines—that is to say, to prohibit or control the acquisition of critical materials by the gold mines—or (2) to bring about the movement of critical materials, machinery or equipment *from* the gold mines.

The Court below analyzed Order L-208 on both these points.

Acquisitions by the gold mines.

We have noted at pages 41-43 of this Appendix that paragraphs (b)(2) and (b)(3) related to the acquisition of "*any* material, facility, or equipment"; that paragraph (c) referred to the acquisition of "*any* material or equipment"; and that none of those paragraphs was intended to control use or allocation of *critical* materials. They merely implemented the "close down" directive in paragraph (b)(1).

If the paragraphs had referred to critical materials, they would have been surplusage, because the purpose of the Order was to shut down the gold mines to "maneuver our manpower" (R. 1323) and there was no need for any further restriction on the acquisition of critical materials by the gold mines (see above, p. 33-44).

The second paragraph of Finding No. 17 is decisive on this point (R. 74-75). We repeat the last sentence of that paragraph (R. 75):

> "Thus, by March 2, 1942, a series of progressively more stringent priority regulations had succeeded in virtually eliminating the potential acquisition by the gold mines of critical materials, supplies and equipment."

Finding 48 says further (R. 106):

> "Although the preamble to the order stated that it was issued to conserve critical materials, supplies and equipment needed for defense and in short supply, the only part of the order itself which attempted to effect such a conservation was that part which prohibited the gold mines from acquiring such materials, and that acquisition had already been effectively curtailed and in large part cut off by existing priority orders (finding 17)."

Finally, Finding 50 starts with the following (R. 106-107):

> "50. On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of L-208 knew (1) that existing priority orders insured that the gold mines would not receive any critical materials needed by more essential users; * * *"

The Statement in the petitioner's brief (p. 7) gives a good part of Finding 17 without quoting or summarizing the last sentence which we have quoted above. However, the substance of that sentence is given, without reference to the Finding, in the petitioner's Appendix A (p. 90) and it must be safe to assume that the petitioner does not challenge the Finding. The petitioner does not refer to, much less challenge, the portions of Findings 48 and 50 which we have quoted.

Nevertheless, we find in the petitioner's Summary of the Argument a most extraordinary statement (p. 22):

> "And L-208 prohibited the consumption of material, facilities, and equipment by nonessential mines. By these devices, demand upon manufacturers and suppliers of mining supplies was thereby reduced; demand was thus brought more nearly in line with supply and facilities, manpower and equipment were released for the production of products essential to the war effort. In these respects, L-208 was a typical exercise of the allocation authority of WPB."

And at page 59 the petitioner says:

> "By its terms, L-208 prohibited the acquisition of new material essential to maintenance and operation. The demand for such material was thereby reduced, thus bringing demand more nearly in line with supply.[40]

---

[40] "• • • Through the L orders the Board took direct action to cut down on the authorized demand for materials for the purpose of bringing that demand somewhere near the available supply of materials. And this was precisely what had to be done, for to make it possible for a system of materials allocation to work it was essential to lop off the excess demand for materials. This the Board did by banning the manufacture of nonessential products. • • •" *Industrial Mobilization For War, op cit.*, page 309."

The argument that by Order L-208 "the demand upon manufacturers and suppliers of mining supplies was thereby reduced" and that "demand was thus brought more nearly in line with supply" is a sort of disassociated concept bearing no relation to the Findings or the facts. The potential demand for critical materials had already been eliminated. It accomplished nothing, so far as critical materials are concerned, to prohibit the acquisition of *any* material, whether needed in the war effort or not.

The ultimate is reached in the brief when the contention is made that "L-208 was a typical exercise of the allocation authority of the WPB" (see above, p. 2-5).

Movement of critical materials, machinery or equipment from the gold mines.

If the gold mines which were shut down by Order L-208 had had critical materials, machinery or equipment for which there was a real need, the logical step for the Gov-

ernment would have been to requisition them. That would have insured their movement to the places where they were needed.

The Government did not requisition materials, machinery or equipment from the gold mines, either at the time when Order L-208 was issued or later. The petitioner's brief emphasizes this when it argues that there was no taking (p. 20).

As to the respondent Homestake Mining Company, the Court found[20] (Finding 65, R. 114):

> "At no time did WPB requisition or order Homestake to surrender or transfer any of its supplies, equipment or machinery, nor did it make any inquiries regarding the amount, nature or availability of Homestake's supplies, equipment and machinery, although the Board was furnished with an inventory of supplies on hand and other information relating to equipment and machinery."

As to the terms of the order, Finding 48 includes the following (R. 106):

> "That part of the order which prohibited the use by the gold mines of the supplies, materials and equipment and facilities they owned and had on hand did nothing to assure that those materials, etc., would be available for use by more essential industries or by the Government."

The Court of Claims obviously considered it most significant that materials, supplies and equipment in the gold mines were never requisitioned. The Court said, in its opinion (R. 19):

> "Although WPB had full power to requisition any large inventories of supplies, materials, and equip-

[20] The Homestake mine was much the largest mine shut down (R. 95). No evidence was offered that anything was requistioned from other mines.

ment owned by the gold mines, or to authorize more essential users of such materials to place mandatory orders with the gold mines, no such power was ever exercised."

And at R. 27:

> "The record establishes that the Government did not intend to, nor did it ever, requisition any of this personal property or direct the mine owners to sell it to anyone else. From the language of the order itself and from the circumstances surrounding its promulgation, it is apparent that its only purpose was to deprive the gold mine owners and operators of their right to make use of their mining properties."

And at R. 32:

> "Insofar as L-208 prohibited the mine owners from using any of the materials, supplies, equipment, machinery and facilities owned by them and on hand, that prohibition allocated nothing, i.e., it distributed nothing because the order contained nothing which required the gold mine owners to sell those items to the more essential users."

Finally, at R. 45:

> "The so-called limitation on the gold mine owners' use of the equipment and supplies and facilities which they owned was not intended to make those items available to the Government or to the war effort but was expressly included in the order to insure that they would not be used in the mining of gold, and was part and parcel of the express order to cease doing business."

* * * * *

Order L-208 expressly permitted the closed gold mines to "acquire, consume, or use any material, facility, or equipment * * * to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair,

and its access and development workings safe and accessible" (Finding 43, R. 102-103). This provision of the Order was not changed by either of the amendments on which the petitioner now relies (petitioner's brief, p. 115, 119). The theory of the Order, throughout, was that any closed mining enterprise would be kept in suitable condition for the prompt resumption of operations when permitted.

It will be recalled that when the estimate was made by Dr. Wilbur Nelson, Chief of the Mining Branch, of the number of hardrock miners who would be "released" by the closing of the mines, it was assumed that men could be kept to keep the mines "on a stand-by basis" (Finding 37, R. 99). And the minutes of the October 6, 1942 meeting of the WPB show that the WPB contemplated that there would be "standby operations" (Finding 41, R. 100).

Moreover, paragraph (b)(3), in permitting the use of any material, facility or equipment in the maintenance of respondents' properties, was intended to conserve such equipment and materials only for future use in gold mining. As the Court below said in its opinion (*italics in original,* R. 33-34):

> "L-208 made specific provision for the gold mine operators to preserve their own critical machinery and equipment so that they, i.e., the nonessential owners, would have that equipment and machinery in good condition for use in gold mining when the limitation order was finally lifted.
>
> "Paragraph (b)(3) of L-208 provided that no gold mine operator might acquire, consume or use any critical material, facility or equipment *except to the minimum amount necessary to maintain the gold mine's buildings, machinery and equipment in repair and its access and development workings safe and accessible.* Paragraph (c) of the order authorized the Director General for Operations of WPB to assign such preference ratings as

might be required to gold mine operators to enable them to obtain the minimum amount of critical materials necessary to maintain their nonessential mines on the basis set forth in subparagraph (b)(3), i. e., to keep their machinery and equipment in repair, *inter alia.*

"The above makes it quite clear that the 'conservation' brought about by L-208 with respect to the mining machinery and equipment owned by the mine operators was not the usual conservation purpose of a limitation order of WPB, i. e., conservation so that the equipment, machinery and materials owned by a manufacturer of nonessential products might be converted to the manufacture of essential end products either by the owner or by some manufacturer of an essential end product. Any actual conservation intended and brought about by that part of L-208 which prohibited the use of the gold mine owners' equipment and machinery for the mining of gold was for the purpose of conserving that equipment and machinery for future use by the nonessential gold mines in the production of nonessential gold."

In short, when the WPB issued L-208 it did not have in mind the permanent stoppage of gold mining as a result of which used machinery and equipment would be thrown on the market—it had in mind a temporary cessation of mining operations with the used machinery and equipment remaining, at least for the most part, right where it was.

The failure of the WPB to requisition any of the materials, machinery and equipment confirms this view of L-208. The WPB intended that, at least in the main, the gold mines would keep what they had. Any trickle from the mines was bound to be incidental and haphazard.

Chief Judge JONES of the Court of Claims took exception to the emphasis which the majority gave to the failure of the Government to requisition the materials, machinery and equipment. He said (R. 59):

"The majority concludes that those operators who had critical materials on hand are entitled to recover for the time that these materials would have allowed them to continue operation. In this respect the court seems to rely mostly on its conclusion that in so far as L-208 prohibited the use of critical materials on hand, it was arbitrary. The court bases this conclusion in turn primarily on the fact that the Government took no affirmative steps to allocate the materials 'away from' the gold mine operators into more essential uses.

We do not think this was necessary under the circumstances. If indeed these materials were critical, then it is natural to expect that, under the operation of supply and demand, such materials would find their way into essential uses. In fact it would have been wholly impracticable in a great national emergency for any agency of government to allocate and assign every bolt, nut, and piece of critical materials."

The fact that it would not have been practicable to requisition "*every* bolt, nut, and piece of critical materials" does not detract from the significance of the fact that *nothing* was requisitioned. If the need for critical materials, machinery or equipment had been a real factor in the issuance of L-208, at least *some* of the things which the closed gold mines had would have been requisitioned.

* * * * *

In considering what incidental effects Order L-208 may have had, in the absence of any requisitioning, it is necessary to distinguish between (1) critical materials, and (2) used mining machinery and equipment (see above, p. 1-2).

As to critical materials, Chief Judge JONES argued that some critical materials were sure to be sold by the gold mines and that they were bound to find their way into the hands of essential industries (R. 59). The Chief Judge did not suggest that there is any evidence in the record as

to what incidental and haphazard effects L-208 may thus have had in diverting critical materials to essential industries.

The discussion of critical materials in the petitioner's brief is most ambiguous, because it fails to distinguish between (1) critical materials, and (2) "used mining equipment and machinery" (p. 61-69). Under the heading "*Results*" it refers to "used mining equipment and machinery" as "material" (p. 61). However, in a footnote it is admitted that (p. 64, Note 45):

> "Neither the record nor the history of L-208 reflects data on the quantum or value of war material other than machinery and equipment which may have been channeled from idle inventories of L-208 mines into essential war enterprises."

The footnote then goes on to quote the statement by Chief Judge JONES to which we have just referred.

In short, there is nothing in the record on which to base even a guess as to the amount of critical materials which may have trickled from the closed mines to essential industries. Order L-208 was not intended to divert critical materials to more essential industries and there is no basis for an assumption that it had any significant effect in that connection.

As to used machinery and equipment, the petitioner says that "as a result of L-208, a reservoir of used mining equipment and machinery estimated to exceed $75,000,000 became available for transfer to other mining activities and other enterprises of wartime value" (p. 22, 61). The original source of this estimate is a report by Edward H. Rott, dated May 23, 1943, entitled "Report on Gold Mine Order L-208" (Plaintiff's Exhibit 13, R. 857, 964, 1292-1301). The estimate included not only what was "normally recognized as essentially mining equipment" but also "tractors, draglines and trucks" (R. 1301).

The petitioner says (p. 61) that "This material was 'pitifully short of requirements' (R. 1777)". But there is no page 1777 in the record; we have not been able to find what is quoted; and we do not know what the statement means.

The petitioner then says that "as of November 19, 1942, when L-208 was first amended, this material was moving into channels leading into essential work at the rate of $82,600 per week" and that by April and May of 1943 "this transfer of material accelerated to the rate of $100,000 per week" (p. 61-62). The original source of these statements is also Mr. Rott's report of May 23, 1943 (R. 1301).

The petitioner next projects the $100,000 a week figure over the period to June 30, 1945, when Order L-208 was revoked, and on the basis of the projection the petitioner asserts that it is "a fair approximation that equipment of over $12,000,000 in used value ultimately found its way from the nonessential gold mines into essential operations" (p. 62). The petitioner's brief then devotes almost three pages to comments on this asserted accomplishment of Order L-208 (p. 62-65).

Of course, the projection of the $100,000 per week figure from May 24, 1943 to June 30, 1945 is the rankest sort of arbitrary assumption with respect to a matter on which it was certainly possible for the petitioner to obtain competent evidence.

Moreover, it would be plainly wrong to give Order L-208 all of the credit for whatever movement of machinery and equipment from the gold mines took place. The report of Edward H. Rott, the original source of all the petitioner's figures, with respect to equipment transferred from the gold mines, said (R. 1301-1302):

> "However, very little of this was transferred from the three principal operators from which manpower was released by the order. How rapidly this equip-

ment would have moved into strategic metal production if Order L-208 had not been issued is pure speculation, but we know it was under way. How much of the millions in used equipment still idle will remain so, cannot be estimated. This would largely be dependent on the length of the war."

In this entire discussion of the "reservoir of used mining equipment and machinery estimated to exceed $75,000,000" which is asserted to have become "available for transfer to other mining activities and other enterprises of wartime value" (p. 22, 61-62), the petitioner has simply incorporated in its brief as statements of fact the substance of proposed findings which the petitioner asked both the Commissioner of the Court of Claims and the Court of Claims itself to make and which both declined to make after considering the objections thereto made by the respondent Homestake Mining Company. We quote in a footnote the Government's proposed findings of fact Nos. 48 and 49 as submitted to the Commissioner.[21]

---

[21] "48. Upon the issuance of L-208 and the closing of the gold mines, over $75 million worth of mining equipment previously used in gold mines, became available for other uses and this equipment, as well as idle inventories of material, began to move into channels leading to essential war effort usage. Such transfers appreciably accelerated strategic metal development although because of inadequate data and numerous variable factors, the degree of this acceleration was not and is not determinable.

The consumption of critical materials and supplies by the gold mines for repair, maintenance, and operating supplies was terminated. Purchases of materials and supplies, already reduced heavily by priority restrictions, were almost completely eliminated. (Pltfs'. Ex. 13A).

49. Strategic materials and supplies, the total value of which was estimated in 1943 at amounts from $10,000,000 to $20,000,000, were released from expected consumption by the gold mines closed by L-208. Approximately $1,500,000 in equipment was transferred from the gold mines to essential nonferrous mines in the first few months after the issuance of L-208. These transfers accelerated strategic metal development (Deft's. Exs. 50 and 51; Pltfs'. Exs. 13A, 52 and 125)."

If that footnote is laid beside the discussion at pages 61-62 in the petitioner's brief (and the summary at p. 22), it will be seen that they are substantially the same. The respondent Homestake Mining Company made detailed and specific objections to the defendant's proposed findings 48 and 49 (Objections of Plaintiff Homestake to the Findings of Fact Proposed by Defendant, p. 97-102) and the Commissioner declined to make the requested findings.

In the Defendant's Exceptions and Brief filed November 5, 1954 with the Court of Claims, the petitioner tried to have the Court of Claims make the same Findings which the Commissioner had declined to make (p. 360-361). The respondent Homestake Mining Company objected in its Reply Brief dated December 20, 1954 (p. 521-522, 548-553) and the Court refused to make the requested Findings.

We cannot think that it is in order for us further to lengthen this brief by discussing in detail for the third time the proposed findings which the Commissioner and the Court of Claims were both asked to make and declined to make—the substance of which is now embodied in the petitioner's brief as if they had been made.

If it was the petitioner's purpose to make an argument about the "reservoir of used mining machinery and equipment", the petitioner's contention should have been that the Court of Claims had failed to make a Finding of Fact on a material issue (see the main body of this brief, p. 58-60, 63-64), and in that connection the petitioner should certainly have referred to the objections which were made before the Commissioner and the Court of Claims to the findings which the petitioner proposed.

The majority of the Court of Claims was not impressed by the incidental, speculative and haphazard consequences of L-208 which were disclosed by the record. The majority opinion said (R. 32):

> "The fact that occasional voluntary sales of idle gold mining machinery were made to some more essential mines does not give to that part of L-208 prohibiting the owners from using those items to mine gold the character of an allocation order; it merely emphasizes the fact that those items were not 'taken.'"

As Judge LITTLETON indicated for the Court below (R. 19, 27), if machinery and equipment used by the gold mines were needed by the nonferrous metal mines, they could have been requisitioned.

* * * * *

The petitioner contends that the Court below fell into error because it did not consider the effects of Priorities Regulation 13 and the amendments of Order L-208 which were made on November 19, 1942 and August 31, 1943. Mention is made *specifically* of Regulation 13 and of one or the other of the two amendments in at least at twelve places in the petitioner's brief (p. 10-11, 14 [Note 9], 16, 20-21, 22, 25, 50-53, 59, 60, 61, 104-107, 114-125), not including many places where they are referred to by implication without specific mention. Indeed, the petitioner's assumptions with respect to Regulation 13 and the two amendments pervade the petitioner's presentation of the alleged facts and its argument to such an extent that it would be most drastic surgery to eliminate them.

The petitioner's position with respect to Regulation 13 and the two amendments is extraordinary, to say the least.

In the first place, Priorities Regulation 13 and the amendment of Order L-208 on August 31, 1943 were not even made a part of the record in the Court below. A memorandum summarizing the amendment of November 19, 1942 is in the record (Defendants' Exhibit 3, at R. 1574C, 1574D and 1575), but there was no suggestion when the memorandum was introduced (R. 478-479) that it was of

any importance and a reading of the memorandum would not have indicated that it was.

In the Defendants' Exceptions and Brief in the Court of Claims, filed November 5, 1954, comprising 148 pages, there was no reference to Priorities Regulation 13 or to either of the two amendments.

Yet the petitioner makes this astonishing statement (p. 14, Note 9):

> "In this connection, it is appropriate to note that, although the record discloses references to the November 19 amendment to L-208 (R. 479-482; 1574 C-D, 1575), neither the findings of the Court of Claims nor its opinions make any reference to the November 19 and 25,[22] 1942 and August 31, 1943 amendments to L-208."

This certainly implies that the Court below was at fault in not taking notice of the amendments of Order L-208 and in not including any references thereto in its Findings. Why should the Court have been expected to do so, since no reference was made to either of them in the Commissioner's Findings, in the Defendants' Exceptions and Briefs or on the oral argument, and one was not even in the record?

The petitioner's repeated references to Priorities Regulation 13 and the amendments would suggest that the alleged error of the Court below with respect thereto was a major factor in its decision. The petitioner's brief summarizes the decision of the Court of Claims in such a way (p. 13-14) as to prepare the ground for a bold assertion at page 20 that the "decision of the Court of Claims that L-208 results in a 'taking' rests largely upon the mistaken belief that L-208 placed no restriction upon the disposition of idle

---

[22] Note 6 in the petitioner's brief, at page 10, explains that the amendment of November 25, 1942 merely changed the time within which the inventory of equipment and machinery was to be submitted to the WPB.

material and equipment by operators of nonessential mines subject to L-208."

If the Court below had made a major error on a point of fact—an error resulting from an ignorance about, or failure to consider, Orders printed in the Federal Register —the Government could, and should, have called the error to the Court's attention on its motion for a new trial. On that motion the Government made no reference to the alleged errors of fact to which it now gives such prominence (R. 142-147).

The only reasonable explanation is that the able and experienced counsel for the Government before the Court of Claims did not believe that the error of fact, if there was one, was of any significance.

The petitioner's petition for certiorari did not fairly cover anything to do with the two amendments of L-208 (see the main body of this brief, p. 60-62). Apparently counsel for the petitioner decided after the writ was granted to try to bolster the petitioner's case by arguments and speculation relating to the amendments.

Let us now consider the alleged error with which the petitioner now charges the Court. It related to the restrictions on sales by the closed gold mines. Order L-208 placed no restrictions on such sales. Nor did any other order which was called to the attention of the Court.

The only restrictions which existed on October 8, 1942, and for more than a month thereafter, were in Priorities Regulation 13. As already stated, Priorities Regulation 13 is not in the record and was not referred to below. Nor is the text of it given in the petitioner's brief.

The petitioner's summary of Priorities Regulation 13 ends with the following sentence (p. 52):

> "Thus, it is clear that only as to material other than war material were the mine operators free to do as they liked with material and equipment idled

by L-208; on the other hand, war material was subject to rigid WPB control."

This appears quite certainly to be a seriously incorrect statement.[23] Priorities Regulation 13 governed "special sales of idle or excess materials." 7 Fed. Reg. 5167-5173. The definition of a "special sale" expressly excepted "A sale of any tool, machinery, or other assembled commercial, industrial, production, agricultural, or household equipment." Hence, Priorities Regulation 13 did not restrict the sale of what the WPB later called "machinery and equipment".

It is true that the sale of "war material" was subject to the Regulation. In the sentence which we have just quoted from the petitioner's brief, the petitioner uses the term as though it were a generic term descriptive of all items needed for the war effort. In fact the term "war material" was a term defined in Priorities Regulation 13 to relate only to a list of what might be loosely described as "raw materials", contained in a schedule annexed to the Regulation. Furthermore, the Regulation contained exceptions in addition to that already mentioned and it also provided for several categories of "permitted special sales" of "war material", including sales to five different classes of buyers.

By citing an estimate made by the Homestake Mining Company of its requirements of various metals in 1942 (p. 52, Note 33) the petitioner apparently attempts to give the impression that Homestake had a substantial inventory of the "war material" referred to in Priorities Regulation 13 and that sales of such material would have been controlled by the Regulation. There is no basis for such an impres-

[23] While the quoted sentence is very involved, we read it as saying that the mine operators were not free to do as they liked with machinery. They were, since Priorities Regulation 13 did not regulate the sale of machinery.

sion. First of all, the figures quoted in Note 33 reflect a computation of the amount of base materials contained in various types of "equipment and repair parts and supplies" required by Homestake. To the extent that such "equipment and repair parts and supplies" fell into the category of a "tool, machinery, or other assembled commercial, industrial, production, agricultural or household equipment", sales of such items would have been expressly excepted from the Regulation. Furthermore, much the largest figure in Note 33 reflects a typographical error; the "8,453 tons fabricated iron and steel" should be "845.3 tons", a decimal having been omitted. The "80 (*sic*) tons mercury" should be "80 flasks of mercury".[24]

It is hard to imagine a more complete lack of evidence than there is as to the extent, if any, that Priorities Regulation 13 restricted sales by the gold mines after October 8, 1942. The only thing that appears quite certain is the Regulation did not restrict their freedom to sell, to whomever they pleased, machinery and equipment.

On November 19, 1942, Order L-208 was amended so as to restrict the sale of "any machinery or equipment of the types listed in Schedule A to Preference Rating Order P-56 which has been used in a nonessential mine".

As already stated, a memorandum summarizing the amendment of November 19, 1942 was introduced into the record below as Defendant's Exhibit 3 (R. 478-479, 1574C, 1574D, 1575). When it was introduced (R. 478-479), there was no intimation that it was of any importance. The absence of any such intimation did not, of course, restrict the right of counsel to the Government to treat the Exhibit as important in their briefs, exceptions and argument in the Court of Claims. However, we have found no evidence

[24] The explanations given above with regard to the figures quoted in Note 33 of the petitioner's brief appear at transcript pages 1616-1617 in a portion of the record which was not printed.

that the amendment was *ever* mentioned in anything that was submitted to the Commissioner or to the Court of Claims and we are certain that it was not mentioned on the oral argument.

The gist of the pertinent part of the memorandum (Defendants' Exhibit 3)[25] may be summarized thus:

> "The nonessential gold mines have been closed. Now that that has happened, their operators *'may wish to sell'* critical mining machinery or equipment. The amendment is intended to control any such sales so that they will go to more essential rather than less essential mines."

The memorandum realistically treated the closing of the "nonessential" gold mines as an accomplished fact. It undertook to deal only with a consequence of that fact. It related only to any machinery and equipment which the owners of the lode gold mines might wish to sell. No attempt was made to require them to sell anything, or to requisition anything.

The memorandum explaining the amendment did not suggest that the purpose of L-208 was to channel mining machinery or equipment into more essential mines and that through inadvertence appropriate provisions had been

---

[25] The full text of the pertinent part of the memorandum reads:

> "2. A provision freezing the machinery in nonessential mines. Operators of closed gold mines may wish to sell critical mining machinery or equipment. This should be controlled so that it will go to more essential rather than less essential mines. The proposed new paragraph freezes such machinery and equipment, but does not tie up small and standard operating supply items. Provision is made to have operators report promptly to the Mining Branch a description of all frozen machinery and equipment. The Mining Branch is setting up a unit to help in the speedy disposal of such machinery and equipment as the operator *may wish to sell*. The complete list will be available in case it becomes essential at a later date to requisition the other machinery and equipment."

omitted. The amendment merely dealt routinely with an incidental consequence of the closure of the gold mines.

The memorandum explaining the amendment gave no indication that it had any special significance, the witness through whom it was offered did not suggest that it had, and it was never treated as of any significance by the Government before the Commissioner or the Court of Claims.

The amendment of August 31, 1943 (petitioner's brief, p. 118-125) is not in the record and was not referred to in any way before the Commissioner or the Court of Claims, either in writing or orally. The petitioner does not attempt to explain why the August 31, 1943 amendment was called for.

Even after the two amendments L-208 did not requisition anything or require the operators of the gold mines to sell anything.

In the light of the foregoing, two questions can be asked: What error, if any, did the Court below make? If the Court made any error, how significant is it?

The petitioner's brief quotes five statements in the Court's opinion (p. 50-51) which it characterizes as "demonstrably inaccurate." These statements refer to two very different things: (1) the absence of any requisitioning by the Government, and (2) the freedom of the owners of the gold mines to sell critical materials, equipment and facilities "to anyone they pleased."

The Court's statements about the absence of any requisitioning of critical materials, machinery or equipment were indisputably correct.

The Court's statements as to the effect of Order L-208 on the freedom of the owners of the gold mines to sell critical materials, machinery or equipment to "anyone they pleased" were also correct of the Order as issued (Finding 43, R. 102-105). Any restriction which had been previously imposed by Priorities Regulation No. 13 was apparently not

regarded as significant by counsel for the Government and was not called to the Court's attention. The restrictions imposed by the amendments of L-208 on November 19, 1942 and August 31, 1943, which were similarly not called to the Court's attention, did not make the Court's summary of the provisions of Order L-208, as issued, "inaccurate."

The petitioner would not seem to have any standing to contend that the Court of Claims would have been compelled to reach a different conclusion if counsel for the petitioner had called the amendments of November 19, 1942 and August 31, 1943 to its attention. In any event, it is clear that the two amendments have no legal significance.

The amendment of November 19 could not change the character of what was done on October 8. If there were a convincing showing that on October 8 the WPB issued Order L-208 with the intention of channelling machinery and equipment into the nonferrous metals mines and inadvertently omitted the provision which was added on November 19, a different case might be presented. But that is not what happened.

If there was a taking on October 8 through the issuance of Order L-208 for the purpose of maneuvering gold mine labor to the nonferrous metal mines, it certainly did not end on November 19 because of the issuance of the amendment, which merely undertook to deal routinely with one of the incidental consequences of the taking.

What we have said about the amendment of November 19, 1942 clearly applies also to that of August 31, 1943.

* * * * *

At pages 104-107 the petitioner's brief deals extensively with a meeting of the WPB held on June 15, 1943, at which the WPB determined that Order L-208 should be continued.

Although there was a major issue before the Commissioner and the Court of Claims as to the purpose of the

original issuance of Order L-208 (see above, p. 34-39), there was no issue below as to the purpose of the WPB in continuing the Order after it had taken the step of closing down the mines. The Commissioner made no finding on that subject; the Government's 24 pages of Exceptions to the Commission's Report (p. 350-373) contained no reference to the decision of the WPB on June 15, 1943 not to revoke the Order and the Court of Claims made no Finding.

If an issue had been raised below as to the reason why the Order was not revoked in June, 1943, it would have been pertinent to consider the Report, dated May 24, 1943, of Edward H. Rott, the Deputy Administrator of L-208 (Plaintiff's Exhibit 13, R. 857, 964, 1292-1311).

Mr. Rott thought that L-208 was a mistake; he said (R. 1300):

> "The magnitude of the effect of this order is very great, with but extremely limited accomplishment. The losses entailed by all mines through forced closing under Order L-208, promptly became potential claims for post war adjustment. Those claims are cumulative."

However, he thought that it was better policy not to acknowledge the mistake, and he opposed a revocation of the Order for that reason (R. 1304):

> "The general effect of the Order has been to antagonize the individual and the communities dependent on gold mining, and caused large losses to the operators. To repeal it would not calm the situation, but would stir up increased resentment from the many who have lost their liv-lihood (*sic*), relinquished leases, forfeited equity in equipment, or sold equipment in anticipation of no further need for the duration."

Since there was no issue below as to the reason why L-208 was not revoked in June, 1943, the mat .ial on pages

104-107 of the petitioner's brief could be pertinent only on the question whether the Order was a practical failure. Apparently, therefore, the petitioner has devoted three pages of its brief to the June 15, 1943 meeting (including two pages of quotation from the minutes of the meeting) in an effort to bring before the Court the statistics quoted at that meeting in support of the proposition that Order L-208 had been responsible for an increase in the production of nonferrous metals, for transfers of essential equipment and for the conservation of critical materials. However, *the minutes of the WPB meeting of June 15, 1943 (Defendant's Exhibit 51, R. 1605) were not received in evidence as proof of the figures contained therein.* The Defendant's Exhibits 49, 50 and 51 (R. 1599, 1601 and 1605) were all objected to by counsel for the respondent Homestake Mining Company on the ground that those Exhibits were not competent proof of the facts related and the figures set forth in them, and all three were received only for limited purposes (R. 963-966). The minutes of the WPB meeting of June 15, 1943 were received in evidence for the limited purpose of showing "the action taken by the Board and the discussion within the Board pertaining to the possible revocation of the Order" (R. 966).

Furthermore, the substance of many of the "facts" reported to the WPB at the June 1943 meeting, or conclusions sought to be drawn from them, were embodied in proposed findings of fact which the petitioner asked both the Commissioner of the Court of Claims and the Court of Claims itself to make. Both the Commissioner and the Court declined to make such findings on considering the objections thereto made by the respondent, Homestake Mining Company.[26] The petitioner does not now make any

---

[26] Compare the material at page 105 of the petitioner's brief with petitioner's proposed findings Nos. 48 and 49 quoted above at page 56.

With respect to the estimate made at the WPB meeting that the

contention that the Court of Claims erred in failing to make the findings which it proposed. Instead the petitioner has attempted to embody the substance of its rejected findings in its brief by quoting, without qualification, from a document which was received in evidence for only a limited purpose.

V

The practical failure of Order L-208 to serve the purpose for which it was issued: the transfer of a substantial number of hardrock miners to the nonferrous metal mines.

As to the results of Order L-208, the Committees of the Congress concluded that (Plaintiff's Exhibit 178, R. 855, 1559, 1562):

---

closing of the gold mines had resulted in a net gain in the 1943 output of nonferrous metals and had also resulted in transferring gold miners to "other war industries" (see petitioner's brief, p. 105) it is pertinent to note that this material is substantially similar to the petitioner's proposed finding, No. 52 in the Court below. That proposed finding read:

> "A result of the issuance of L-208 was the transfer of workers in the gold mines to other non-ferrous mines and to war industries. The degree of this transfer is not determinable because of inadequate statistics and numerous variable factors which precluded a definite calculation. However, L-208 was effective in that the transfers which occurred appreciably accelerated the mining of critical metals and were beneficial in respect to labor shortages in other war industries (Tr. 1496, 1503-1511, 1524-1527, 1553-1554; Pltfs'. Exs. 13A and 125)."

Actually the estimate that there had been a net gain in the production of nonferrous metals was predicated on the assumption that 500 hard-rock miners had transferred to the nonferrous metal mines (Defendant's Exhibit 50, R. 1604) and, in retrospect, the report of the WPB Policy Analysis and Records Branch concluded that (Plaintiff's Exhibit 1, R. 149, 1163, 1231):

> "* * * since the number of gold miners actually re-employed was negligible, their contribution in increased production of copper, lead, zinc, etc., was likewise small, and probably was counterbalanced by the loss of such metals as are normally produced as by-products of gold mining."

> "The net results of the order in accomplishing its avowed primary purpose of channeling manpower to 'essential' mines were negligible."

The Findings of the Court of Claims are in accord with this conclusion of the Congressional Committees, and they are abundantly supported by the evidence.

The Findings also set forth in detail their reasons why, as the Court of Claims found (Finding 51, R. 107), there was no "justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines".

The summary of the facts in the petition for certiorari.

The story of L-208 was told quite fairly in the petition for certiorari.

After explaining that by March 2, 1942 "the War Production Board had effectively eliminated the possibility of acquisition by the gold mines of critical materials or supplies", the petition said (p. 5):[27]

> "In the summer of 1942, *the Labor Division of the War Production Board became concerned with the problem of an acute shortage of hardrock or underground miners in the vital non-ferrous copper mines.* The primary reasons for this shortage were the draft, and the migration of workers out of the mine fields because of higher wages and better working conditions in other war industries. Accordingly, it was suggested to the War Production Board that, if the gold mines were closed, the unemployed miners would probably be diverted to copper mining, thereby alleviating a shortage which severely threatened the national war effort. In this connection, it was

[27] In quoting from the petition for certiorari we have omitted the citations to the pages of the Appendix to the petition which contained the Findings of the Court of Claims.

> recognized that there was no authority to require the miners to transfer to industries in which their services were more urgently required; and further that the workers thus made available by the closing of the gold mines might very well go to work in the West Coast war plants instead of in the non-ferrous copper mines."

The petition then summarized the provisions of the Order and told about its results as follows (p. 6):

> "Notwithstanding the Order, *only an insignificant number of hardrock miners actually transferred to the copper mines.* Eventually, the acute labor shortage in the copper mines was alleviated by the Army's granting of furloughs to four thousand men for work in the copper mines—an action the Army had not been willing to institute so long as the gold mines continued in operation."

It is hard to conceive of a more radical change of position than is to be found in the treatment of this subject in the petitioner's brief.

The pertinent statistics relate to hardrock miners employed by gold mines which did not produce substantial quantities of critical materials and hence were closed down by Order L-208.

The shortage which was responsible for Order L-208 was a shortage of miners and muckers, referred to in the record as "hardrock miners" (Finding 20, R. 77; Finding 47, R. 106; Finding 51, R. 107). Muckers are the men who remove the broken ore or muck. The term "miners" was sometimes used to cover muckers as well as miners who break the ore; sometimes there are references in the record to "miners and muckers" (Finding 36, R. 98) or to "hardrock miners and muckers" (Finding 37, R. 98). The men who work lode gold mines underground are called "hard-

rock miners" because the gold is "mainly [in] narrow quartz veins in hard rock" (R. 1206).

The ultimate Findings of the Court of Claims, that the shortgage was one of hardrock miners (not of mine employees generally), are fully supported by evidentiary Findings. When the representatives of the gold mining industry met with the WPB on October 1, 1942, Dr. Wilbur A. Nelson, the Chief of the Mining Branch, undertook to ascertain, and on October 3 he reported as to, the number of "hardrock miners and muckers" who were employed by the gold mining companies (Findings 36, 37; R. 98-99). When the two Under Secretaries sent their memorandum of October 5, 1942, they spoke of "hard-rock miners engaged in gold mining" (Finding 40, R. 99-100). The minutes of the October 6 meeting of the WPB referred to the number of "hard-rock miners", although giving other statistics also (Finding 41, R. 100). General Somervell's letter of October 11, 1942 said that (Plaintiff's Exhibit 127, R. 520, 1510-1511):

> "The gold mining industry has been singled for curtailment only because it constitutes the most readily available pool of 'hard rock' miners who are so urgently needed to further the war effort."

It follows that statistics about mining company employees (including employees in the mills, offices and other installations on the surface), as distinguished from hard-rock miners (miners and muckers), were and are meaningless and confusing.

Another source of confusion, which the petitioner has perpetuated, involved the use of figures relating to all mining companies that produce gold, whether they were shut down by Order L-208 or not. The great copper mines produce large amounts of gold and other mines which are exploited primarily for gold produce significant amounts

of lead, copper or zinc (Findings 20, 25; R. 77, 83). The only pertinent statistics are those that relate to the gold mines which did not produce "substantial quantities of critical materials" (Finding 17, R. 74-75) and which were shut down by Order L-208.

Both of these two kinds of confusion affected the first statistics that were cited by a Division of the WPB. Finding 20 reads in part (R. 76-77):

> "On July 4, 1942, the Acting Chief of the Priorities Branch of the Labor Production Division [of the WPB] sent a memorandum to the Director of Operations of the War Manpower Commission who was also in charge of the Labor Supply functions of WMC at that time. The memorandum pointed out the acute labor shortage in the nonferrous metal mining industry and observed that the 15 largest producers of gold in seven Western States had some 6,700 employees; that the gold mines of these producers were sometimes located in the vicinity of nonferrous metal mines and that in some cases one company would own both a gold mine and a nonferrous metal mine in an area. The statistics upon which the above figures were based were as of 1941, and were later found not to represent the situation in the summer of 1942, because the gold mines, as well as the nonferrous metal mines, had been losing workers to the war industries and the draft. *The 6,700 figure employed in the memorandum represented employees of all kinds, including clerical employees, and no figure was given of the number of hardrock miners which were the type of employee needed in the nonferrous metal mines. In speaking of the '15 largest producers of gold in seven Western States', the memorandum did not point out that several of such gold producers also produced nonferrous metals in substantial quantities and therefore would not be classified as gold mines for the purpose of any anticipated action.*"

The petitioner's brief gives, almost verbatim, the sentences which we have not italicized (p. 93).[28] Then in a footnote the petitioner says that "The 6,700 figure appearing in the memorandum represented employees of all kinds and no figure was given as to the number of hard-rock miners—the type of employees most needed in the nonferrous metal mines." (Note 15). By inserting the word "*most*" the petitioner has changed the sense of the Finding, which was that "hardrock miners * * * were *the* type of employees needed in the nonferrous metal mines". Furthermore, the petitioner has completely omitted the italicized portion of the Finding which pointed out that "the 15 largest producers of gold in seven Western States" included mines that "produced nonferrous metals in substantial quantities and therefore would not be classified as gold mines for the purpose of any anticipated action."

The only significant statistics relate to the hardrock miners employed by the gold mines which were shut down.

The Court of Claims was right in finding that "in issuing L-208 WPB acted without any justifiable anticipation that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines."

The WPB acted under pressure from the War Department, in disregard of the only study of the number of hardrock miners in the gold mines which were shut down and oblivious to the factors which would keep more than a small percentage of the released miners from transferring to the nonferrous metal mines.

The Court of Claims found (Finding 51, R. 107):

"It is reasonable to conclude that in issuing L-208 WPB acted without any justifiable anticipation

[28] The last sentence not italicized is given by the petitioner in its footnote 15.

> that the order would bring about the transfer of more than an insignificant number of hardrock miners to the nonferrous metal mines."

In citing the abundant support for this Finding, we will review the period from the beginning of July, 1942 to the issuance of Order L-208 on October 8, 1942, with particular reference to the Findings that are pertinent in considering the audacious assertion in the petitioner's brief that the WPB acted "on the basis of repeated and careful studies" (p. 16, 25).

It will be recalled that the shortage of miners in the nonferrous metal mines had become acute by early July, 1942. Finding 18 sets forth the reasons for the shortage (R. 75):

> "The reasons for the poor production of nonferrous metals were found to be (1) the out-migration of workers in the nonferrous mines to other war industries offering higher wages and better working conditions, (2) drafting of the workers for the armed services by Selective Service, (3) excessive labor turnover within the industry, (4) low morale of the workers, (5) the short workweek in the mines, and (6) the lack of an organized and effective program of recruitment of workers for this industry."

On July 4, 1942 the Labor Production Division of the WPB prepared the confused memorandum about the labor shortage in the nonferrous metal mines which we have already discussed (see above, p. 72-73).

On August 14, 1942, Dr. Wilbur A. Nelson, Chief of the Mining Branch of the WPB, stated in a memorandum (Finding 22, R. 79):

> "The present critical situation developed when copper, lead, zinc, mercury and other miners left their jobs and went to the West Coast on shipbuild-

ing and on aircraft jobs, and into the mountain areas in new war industries work.

If we close down the gold mines while these same opportunities are available for work at substantially high rates of pay in other war industries, the miners will not move to a copper, lead or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast.

Logic dictates this, for when a copper miner at Butte is willing to leave his home and go to the coast, I am sure that a gold miner, living in the excellent living conditions at Lead, is not going to leave his family and stop at Butte if he could go to the west coast."

Late in August, 1942, Mr. Guy N. Bjorge, the Gener. Manager of the Homestake Mining Company conferred with several officials of the WPB and (Finding 23, R. 79-80):

> "In the course of these conferences Mr. Bjorge furnished figures as to the small number of men who might be obtained for work in the copper mines by such order. He pointed out that many men had already left the Homestake Mine in 1942 for the same reasons that men had left the copper mines, mainly to accept employment at West Coast aircraft factories and shipyards. Mr. Bjorge also pointed out that the miners remaining at Homestake were an older, more stable class of men, a large percentage of whom were home owners, and asserted his belief that it was improbable that they would leave their homes for the poor housing facilities and undesirable working conditions at the nonferrous metal mines."

On August 26, 1942, Senator McCarran of Nevada wrote a letter to the Chairman of the WPB setting forth various reasons why he believed the proposed closing of the gold

mines would not accomplish its purpose of obtaining any considerable number of miners for the nonferrous metal mines (Finding 24, R. 80). Senator McCarran wrote, *inter alia:*

> "In the first place, the transfer of necessary labor from closed gold and silver mines to mines producing copper, lead, zinc, etc., would be negligible, due to the fact that very few operations exist today where only gold and silver are mined, and in these districts (mainly, the Homestake Mining activity in South Dakota and the Mother Lode Mining district in California), the number of men who could be so transferred is small. Many of the usual workers have joined the armed forces; many are familiar only with the routines of this type of mining and cannot be successfully transplanted. Thus little good would result and great hardships would be inflicted upon affected families and communities.
>
> Secondly, there is no rule or procedure by which such workers could be legally forced to transfer to other mines. The labor that would be denied employment by reason of the shutting down of the mines producing gold and silver would most likely go to the places where they would receive higher wages than are paid in mines."

On September 1, 1942, the WPB held a meeting, the minutes of which show that Mr. R. J. Lund, Chief of the Miscellaneous Minerals Branch (Finding 27, R. 85), reported that there was "general agreement that the higher wages paid to workers in competing occupations in other industries are the prime factor causing the out-migration of labor from the [nonferrous] mines and mills" (Finding 25, R. 82). Mr. Lund gave some supporting detail (*id.*).

At the same meeting, Mr. H. O. King, Chief of the Copper Branch of the WPB (Finding 22, R. 78) made a statement that an order had "been prepared to prohibit

the use of materials in nonessential gold mines, which may free about 8,000 workers" (R. 83). There is no explanation as to where the figure came from or what was meant by the word "workers".

On September 9, 1942, Mr. R. J. Lund, Chief of the Miscellaneous Minerals Branch, submitted to the Deputy Director General of Operations a memorandum, which has already been discussed at pages 15-18 (Finding 27, R. 85-90). In that memorandum he said (R. 86):

> "Based on 1941 data, latest available from the Bureau of Mines, approximately 12,400 employees in lode gold mines will be thrown out of work by the order. Incomplete data indicate that about 70 percent of this labor is employed underground."

He then gave the geographic distribution of most of the 12,400 employees.

The use of 1941 figures made this part of Mr. Lund's memorandum worthless. That will be immediately apparent from an examination of the graph which is Appendix C to Plaintiff's Exhibit 1 and which shows the sharp decline in gold mining after 1941 (R. 1244A).

On September 15, 1942, the Interdepartmental Committee on Non-Ferrous Metals met and (Finding 30, R. 93):

> "Mr. Harbison [Army representative] expressed some concern over the delay in issuing the gold order. * * * He made it clear that the War Department was impatient at the delay."

The War Department was already "impatient at the delay", although there had not yet been anything which remotely approached a careful effort to find out how many hardrock miners would be "released" or to make an estimate of the percentage of those who might be induced to go to the nonferrous metal mines.

On September 15, 1942, Mr. Morris Creditor, Special Assistant to Chairman Nelson of the WPB, wrote his memorandum to the Chairman, which has already been quoted and in which he said (Finding 31, R. 95):

> "Even aside from the possible dissipation of these skilled miners into other occupations, there is a question whether the closing of all the gold mines will release any relatively large number of workers. As I understand it, in the case of Homestake Mine the proposed order would affect only about 450 miners. This is the largest gold mine and has from a third to a half of all the miners to be released. The Alaska-Juneau miners, incidentally, will be stuck in Alaska. Where are they expected to go?"

On September 30, 1942 there was a conference at Mr. Batt's office, which has already been referred to (see above, p. 24-25). At the conference: "Some discussion arose as to the number of gold mine employees who would be released by such a closing order" (Finding 35, R. 97). The Finding does not indicate that there was anything except discussion.

On October 1, 1942, the gold mining industry had its first opportunity to protest against the proposed L-208. Much of the Finding about the conference at the WPB on that date, which has already been mentioned (see above, p. 25-26), relates to the number of miners who would be affected by a close down of the gold mines and as to the prospects that they would move to the nonferrous metal mines (Finding 36, R. 97-98):

> "At the opening of the meeting Mr. Batt stated that he had brought the gold mine operators to Washington to tell them that a decision had been made to close the gold mines in order to transfer the released labor to the copper mines. In justification of such an order, Mr. Lipkowitz of WPB's Labor

Division stated that there were between 10,000 and 12,000 men who were then employed in the gold mines. The gold mine owners immediately protested that the figures stated were completely inaccurate; that the gold mines had already lost their most active men who had either gone to the shipyards and aircraft plants on the West Coast or had been drafted into the Armed forces; that the miners remaining in the gold mines were settled residents of their communities and that it was doubtful that they would move away to work in the copper mines if the gold mines were closed.

"In response to General McSherry's statement that the need for underground workers in the copper mines was urgent, Mr. Bjorge of Homestake pointed out that it was unreasonable to hope that gold miners would accept the jobs which the nonferrous metal miners were already leaving for more desirable employment, and that it was more likely to expect that miners forced to leave Homestake would go to the same type of more desirable jobs to which the copper miners were going.

* * * * * *

Late in the meeting, Wilbur A. Nelson undertook to determine how many miners and muckers would actually be released by a closing order."

The conference on October 1, which lasted for approximately five hours (Finding 36, R. 97), evidently made an impression on Vice Chairman Batt of the WPB. For on that very day he sent a memorandum to the Chairman of the WPB, saying (Finding 38, R. 99):

> *"Complete closing without exceptions will produce very serious economic dislocations, and the total possible gain in men is a small figure."*

However, the next day, October 2, the Under Secretary of War sent Mr. Batt a strong letter urging the closing of the gold mines (Finding 39, R. 99). He said:

> "The matter has hung fire for some time, and I trust that there will be no further delay."

The following day, October 3, Dr. Wilbur A. Nelson, Chief of the Mining Branch of the WPB (R. 66), made his report to Mr. Batt (Finding 37, R. 98, 99):

> "He reported that while there were 3,270 workers employed by gold mining companies at that time, only 896 of them were hardrock miners and muckers. He further reported that approximately 300 of these men would be needed to maintain the buildings, machinery and equipment in repair, and the access and development workings safe and accessible as provided for under the proposed order. His report concluded that if all the gold mines and dredges in the United States were put on a stand-by basis, it would make available only about 600 miners and muckers for other mining enterprises 'provided they [could] all be induced to go into other mines.'".

This was the *first* attempt to find out in any systematic way the *maximum* number of hardrock miners and muckers who would be thrown out of work by the close down order, some of whom might be expected to gravitate to the non-ferrous metal mines.

Dr. Nelson's figure, 896, is to be contrasted with the "6,700 employees" of "the 15 largest producers of gold in seven Western States" previously mentioned (see above, p. 72-3); with the reference made by Mr. H. O. King on September 1, 1942 to "about 8,000 workers" (see above, p. 76-77); with the statement in Mr. Lund's memorandum of September 9 that, based on 1941 data, there were about "12,400 employees in lode gold mines", of whom "about 70 percent" were said to be employed underground (see above, p. 77); and with the statement made by Mr. Lipkowitz at the October 1 meeting "that there were between

10,000 and 12,000 men who were then employed in the gold mines" (see above, p. 78-79).

But Dr. Nelson's study did not influence the course of events. Indeed, his study did not even slow down the momentum towards a shutdown of the gold mines which had developed when wildly inaccurate and confusing figures were being tossed about.

For on October 5, 1942, the Under Secretaries of War and the Navy sent their memorandum, which we quote again because it is so pertinent to the subject we are now discussing (Finding 40, R. 99-100):

> "The case of gold mining presents sharply the question whether we mean business or not in doing everything possible to push war production.
>
> *There are two thousand to three thousand hard-rock miners engaged in gold mining, now of no use in war production.* These men could help out substantially in relieving the labor shortage in copper mining. They will not help out in copper mining so long as gold mining is carried on.
>
> The present situation in production of copper, due to shortage in the supply of miners, is so alarming that the Army is about to furlough soldiers to go back to work on mining of copper. This is a hard step for the Army to take. But the effect of this step and others will not give complete relief if nothing is done to transfer gold miners to copper mining.
>
> *The matter has hung fire for some time. We deem it of the utmost importance that prompt action be taken and that half measures be avoided.*"

There is nothing in the record to suggest the origin of the estimate that there were from "two thousand to three thousand hard-rock miners engaged in gold mining", which was the stated basis for the equivalent of a direction to the WPB to issue Order L-208. Evidently it was

realized that the earlier estimates were worthless and the Under Secretaries did not purport to accept them.

At the WPB meeting of October 6, 1942, at which the issuance of Order L-208 was agreed upon Vice Chairman Batt reported that (Finding 41, R. 100):

> *"On conferring with Brigadier General McSherry of the War Manpower Commission and representatives of the gold mining companies, it had been found that at present the gold mining industry employs 3,270 workers; 750 are engaged in dredging and only 896 are hard-rock miners."*

Apparently both the WPB and the War Manpower Commission accepted Dr. Wilbur Nelson's figures.[29]

With a mere 896 hardrock miners in the gold mines which would be closed down, only about 600 would be available for other occupations, since approximately 300 would be needed for standby maintenance (Finding 37, R. 98, 99).

Furthermore, there was no reasonable prospect that a large percentage of the 600 would find their way to the nonferrous metal mines. The reasons why the prospects were poor have already been adverted to (see above, p. 73-76). The Court of Claims found (Finding 50, R. 106-107).[30]

> "50. On and prior to October 8, 1942, officials of WPB who were responsible for the issuance of

---

[29] Reference was also made to the release of other Homestake "workers":

> "Loss of labor to the Services and to war industries, and higher costs have already sharply curtailed operations of all domestic mines except Homestake. Homestake's labor force has dropped from a peak of slightly over 2,000 workers to 1,876, including lumbermen and machine shop workers. If Homestake were shut down except for standby operations, all but 500 of these workers could be released for work elsewhere."

[30] The omitted portions of this Finding relate to other subjects and have been quoted elsewhere.

> L-208 knew * * * * * (2) that the closing of the gold mines would release only a small number of hardrock miners and helpers; (3) that no agency of the Government had the power to compel these men to accept employment in the nonferrous metal mines; (4) that in all likelihood unemployed gold miners would accept employment in shipbuilding, aircraft and construction industries rather than go to work in the nonferrous metal mines where wages were low and working and living conditions poor; (5) that L-208 was not in fact directed at the known reasons for the shortage of underground workers in the nonferrous metal mines, i.e., low wages, bad working and living conditions, and the refusal of Selective Service to defer miners; (6) that a substantial number of the employees of the gold mines were middle-aged men with families who owned their own homes and would not leave their communities if any alternative were possible; * * * *

That is what the record shows. Yet the petitioner's brief says twice that the WPB acted "on the basis of repeated and careful studies" (p. 16, 25)!

The results of L-208 in transferring hardrock miners to the nonferrous metal mines were negligible.

The Court of Claims found (Finding 47, R. 106):

> "47. The closing of the gold mines did very little to relieve the manpower shortage in the nonferrous metal mines because (1) a relatively small number of the type of workers needed in those mines, i.e., hardrock miners, were released (finding 37); (2) a number of these men were required to remain in the gold mines to keep them in safe condition; (3) the older and more settled experienced miners remained in their home communities doing what they could to make a living or remaining idle; (4) most of the younger hardrock miners released sought employ-

ment in the better paying war industries, construction projects, or were drafted in the armed services. *Approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year.*"

Finding 52 contains an excerpt from the Report which was made in May, 1944 by the Policy Analysis and Records Branch of the WPB (R. 111):

> "It is generally agreed by the WPB divisions concerned with mining activities that a very small percentage of the released gold mine workers actually were employed by other mines. A majority of them probably went into work of greater value to the war effort than gold mining, such as lumbering, agriculture, construction, shipbuilding, aircraft manufacture;[96] but the fact remains that the primary justification for closing the gold mines was to get labor for the production of the strategic metals. Wilbur Nelson, Arthur S. Knoizen, present Director of the Mining Division, and F. H. Hayes, Chief of the Primary Production Branch of the Copper Division, concur in the statement that the number of gold mine workers who went into other mines and remained there for a year or more was not over 100.[97]

---

[96] A partial analysis based on the records of the Social Security Board, indicates that the released gold mine workers went into a wide variety of occupations, including in addition to those mentioned in the text, coal mining, steel working, communications, transportation, and many others; they scattered, in short, through a fair cross-section of American industry. Letter, John J. Vorson, Director, Bureau of Old Age and Survivors Insurance, Social Security Board, to Stacy May, October 22, 1943.

[97] Wilbur Nelson and Arthur S. Knoizen, in interviews with the writer, March 7, 1944; F. H. Hayes, in an interview with writer, March 4, 1944."

The petitioner's brief says that "the success or failure of L-208, as an instrument for the diversion of manpower, remains a debatable question, difficult to resolve because of the understandably inconclusive information available with respect to the post-L-208 migrations of gold mine workers" (p. 65). It should not be debatable in this Court, because it was debated and decided in the Court of Claims and it would be preposterous to say that the Findings of the Court of Claims are not supported by substantial evidence.

The petitioner's brief now says that, "whether the limited finding of the Court of Claims is accepted, the incontrovertible fact is that the manpower displaced by L-208 did not disappear from the face of the earth, but in part moved to essential nonferrous mines, as WPB hoped, and to essential enterprises (R. 1230-1231) just as WPB anticipated" (p. 68, footnote omitted; see also p. 2). The petitioner's present position is radically different from the position which the petitioner took in the petition for certiorari.

In the petition for certiorari this Court was correctly told that the problem involved "an acute shortage of hardrock or underground miners in the vital non-ferrous copper mines" (p. 5) and that (p. 6):

> "Notwithstanding the Order, only an insignificant number of hardrock miners actually transferred to the copper mines. Eventually, the acute labor shortage in the copper mines was alleviated by the Army's granting of furloughs to four thousand men for work in the copper mines—an action the Army had not been willing to institute so long as the gold mines continued in operation."

Thus, the Court was told two very important things: *first*, that the Order was a practical failure and, *second*, that the Order was the result of the insistence of the Army

that it be issued if the Army was going to grant furloughs to miners.

We do not know what the petitioner means when it now refers to "the limited finding of the Court of Claims" (p. 68). We do not look upon the Findings of the Court of Claims (of which there were several) as "limited" except in the sense that all findings are necessarily limited. The Court of Claims made ample Findings which are ignored by the petitioner except for its reference (p. 67) to the portion of Finding 47 which stated that "approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year".

It is true that when the gold miners were thrown out of work by L-208 they "did not disappear from the face of the earth", although in Lead, South Dakota, it might have been supposed that they had, since "more than 750 homes and apartments were left vacant and boarded up, and 36 business establishments which had served the communities were left vacant" (Finding 71, R. 115-116).

The petitioner's statement (p. 68) that the displaced miners "in part moved to essential nonferrous mines, as WPB hoped, and to essential enterprises (R. 1230-1231)[31] just as WPB anticipated," is not followed by a reference to any part of the record which supports the implication that the WPB threw the gold miners out of work in anticipation that a significant portion of them would move to essential industries other than nonferrous mines.

Earlier in the brief, and in a more prominent place (p. 8-9), the petitioner says that Order L-208 was issued "upon the expectation that a sizable number of the laborers released by a further restriction of the gold industry would be diverted to the nonferrous metal mines *as well as other*

[31] The citation here is to the paragraph of the Report of the Policy Analysis and Records Branch of the WPB which we have quoted at p. 84 above.

essential industries (R. 86-87, 92)". The record affords no support for the petitioner's implication that L-208 was issued with a view to having gold miners diverted to essential industries other than nonferrous metal mines. At both places cited by the petitioner the references are to *specific* nonferrous metal mines[32] and to *other* nonferrous metal mines,[33] not to essential industries other than nonferrous metal mines.

On the contrary, the record establishes quite clearly that the WPB did not want to have the trained underground gold miners, thrown out of work by the Order, go to work in essential businesses other than nonferrous metal mines.[34]

---

[32] Copper at R. 87 and copper, lead and zinc at R. 92.

[33] The reference at R. 87 is to "other nonferrous metal mines", while that at R. 92 is to "mercury, molybdenum, tungsten, vanadium, chromium, manganese, etc."

[34] The memorandum, dated July 4, 1942, of the Acting Chief of the Priorities Branch of the Labor Production Division of the WPB, quoted at page 12 above, said that "it would be necessary to make sure that the workers released went into nonferrous metal mining and did not go into war plants in the vicinity or on the West Coast" (Finding 20, R. 77-78).

The memorandum dated August 14, 1942 of Dr. Wilbur A. Nelson, Chief of the Mining Branch, quoted at pages 74-75 above, expressed great concern that the miners "will not move to a copper, lead, or zinc mine but will do just as their predecessors have done, move on to other more fruitful jobs on the coast" (Finding 22, R. 79).

On September 15, 1942 Mr. Morris Creditor, Special Assistant to Chairman Nelson of the WPB, wrote a memorandum (quoted in full at p. 21-22) in which he expressed concern over "the possible dissipation of these skilled miners into other occupations" (Finding 31, R. 95).

Before L-208 was issued, the Chairman of the War Manpower Commission issued a directive on October 7, 1942, the purpose of which was to try to have all of the miners who would be thrown out of work by L-208 go to "essential nonferrous metal mining, milling, smelting, and refining activities" (Finding 44, R. 105).

Immediately after L-208 was issued, Chairman Nelson of the WPB and Chairman McNutt of the War Manpower Commission issued a statement "appealing to all workers in gold mines to transfer to nonferrous metal mines and *not to other war industries*" (Finding 45, R. 105).

In discussing the alleged accomplishments of L-208 the petitioner relies largely on a report made by the United States Employment Service (USES) on November 5, 1942 (Plaintiff's Exhibit 99; R. 438, 1495-1497). Much the largest part of that report relates to "the great Homestake mine". The petitioner ignores completely two long Findings which cover what happened at the Homestake mine (Findings 68, 69; R. 114-115). By comparing those Findings with the statements in the petitioner's brief which are based on the USES report, it will be found that the words "gold mine workers" and "workers", as used in the petitioner's brief, include personnel who were not even in the mining department of the Homestake mine, and that of the men in the mining department less than half were miners.

At page 66 the petitioner's brief sets forth certain points on which, it is asserted, "the Vice-Chairman of WPB was advised," and the figures are certainly superficially impressive—especially the assertion that as a result of L-208 "11,000 tons of copper, 4,000 tons of zinc, 2,400 tons of lead, 13,000 units of tungsten, and 6,000,000 pounds of molybdenum were added to the annual production of these metals". The advice cited by the petitioner was contained in a report made by Mr. Edward T. Dickinson, Jr., Executive Director, Planning Committee, dated April 22, 1943 (Plaintiff's Exhibit 125, R. 456, 1503-1504). The portions of that report cited by the petitioner were literally torn to shreds in a memorandum prepared by Dr. Wilbur A. Nelson, Chief of the Mining Branch, dated April 30, 1943 (Plaintiff's Exhibit 52, R. 454, 1352-1356). For example, with respect to the assertion that "6,000,000 pounds of molybdenum were added to the annual production", Mr. Nelson's memorandum said (R. 1355-1356, emphasis in the original):

> "The 6,000,000 pounds of additional molybdenum to be produced by workers from the gold mines was based on the figure of 125 workers from the gold mines working at Climax, whereas only ten such men are working at this mine at the present time. This would reduce this estimate from 6,000,000 pounds to a few thousand pounds of additional molybdenum. The 6,000,000 pounds of additional molybdenum which it is stated will be produced by the workers from the gold mines in 1943 is an absurd figure, as it represents 15% of the annual production of Climax, and such variation would be impossible. Actually the mine production at Climax for the first three months of 1943 is *10%* below the last quarter of 1942."

The next document referred to by the petitioner is a report which was transmitted on May 26, 1943 to Mr. Knoizen, the Director, Mining Division, WPB, and Administrator of L-208 (p. 66-67). The report itself, which was dated May 24, 1943, was made by Edward H. Rott (Plaintiff's Exhibit 13, R. 857, 1292-1311). The petitioner gives some statistics which will be found in a table at R. 1299 (p. 66-67). It was explicitly stipulated that the "statistics, figures, and so on" in Mr. Rott's report "are not proof of those facts" (R. 964). On the other hand, there was no restriction on the admissibility of Mr. Rott's expression of over-all judgment (R. 1300):

> "The magnitude of the effect of this order is very great, with but extremely limited accomplishment. The losses entailed by all mines through forced closing under Order L-208, promptly became potential claims for post war adjustment. Those claims are cumulative."

The petitioner's brief next attempts to distort the whole picture by suggesting that (1) there was a conflict between

Dr. Wilbur Nelson, who was Chief of the Mining Branch of the WPB in 1942 and 1943, and everyone else, including the USES and the War Manpower Commission (WMC) and (2) that the conflict related, among other things, to whether or not the statistics should be limited to "underground miners and muckers" (p. 67-68).

The suggestion that Dr. Nelson was in conflict with everyone else is as far from the fact as could be imagined. The report made in May, 1944 by the Policy Analysis and Records Branch of the WPB shows that those who concurred in the statement that "the number of gold mine workers who went into other mines and remained there for a year or more was not over 100" included not only Dr. Nelson but Arthur S. Knoizen, who on May 26, 1943 was the Director of the Mining Division and Administrator of Order L-208 and is mentioned at page 66 in the petitioner's brief, and also F. H. Hayes, the Chief of the Primary Production Branch of the Copper Division (Finding 52, R. 111).

The petitioner is quite correct in stating that there was and is a conflict between the statistics which related to underground miners and muckers and those which related to employees of gold mining companies generally. We referred to that conflict above and established that the only pertinent statistics are those which related to "hardrock miners and muckers" (p. 70-73).

The petitioner says (p. 67-68):

> "If L-208 is to be judged by the number of gold miners transferred to essential mines and other enterprises, the court's finding, confined as it is to 'hardrock miners' who remained in the nonferrous metal mines for a year, is arbitrary on its face (R. 994-995) and affords no sound basis for a conclusion as to the effectiveness of L-208 as a measure for diverting manpower to essential wartime enterprises."

It would be preposterous to say that the Court of Claims erred in confining its Findings to "hardrock miners" (see above, p. 70-73).

It would be plainly wrong to say that the Court of Claims' Findings were "confined" to the last sentence of Finding 47 that "approximately 100 hardrock miners are known to have gone to work in the nonferrous metal mines and to have remained there for a year". Finding 47 (R. 106), Finding 50 (R. 106-107), Finding 51 (R. 107), and the last paragraph of Finding 52 (R. 111), read together, establish the practical failure of the effort to "maneuver our manpower" to the nonferrous metal mines by Order L-208.

The petitioner asserts that the action of the Court of Claims in emphasizing the small number of hardrock miners "who remained in the nonferrous metal mines for a year" was arbitrary. *That was the test used in the report made in May, 1944 by the Policy Analysis and Records Branch of the WPB itself, and concurred in by Dr. Nelson, Mr. Knoizen and Mr. Hayes, all of whom have been identified* (*R. 111*). It did not accomplish much to have trained gold miners obtain transient employment in the nonferrous metal mines.

The only authority cited in support of the characterization of the Court of Claims as arbitrary is Mr. Samuel Lipkowitz, who testified for the Government at R. 994-995 (p. 67). It is absurd to advance Mr. Lipkowitz's theories as a basis for the assertion that the Court below was arbitrary, as will be evident from his testimony (R. 994-995). Mr. Lipkowitz was the man who, at the October 1, 1942, meeting when the gold mining industry had its hearing, "stated that there were between 10,000 and 12,000 men who were then employed in the gold mines", a truly fantastic example of statistical confusion (see above, p. 78-79).

The substance of the matter is that the petitioner shrinks from the task of trying to establish that L-208 accomplished its purpose of maneuvering a significant number of hardrock miners to the nonferrous metal mines. What the petitioner seeks to do is to establish something entirely different, viz., that by L-208 many men and women were thrown out of work; that they "did not disappear from the face of the earth"; and that, since a war was on, some of them must have obtained employment in essential enterprises. Although that may be true, it is certainly irrelevant in considering the judgment of the Court below and a very weak defense of L-208.

APPENDIX B

Text of Order L-208

LIMITATION ORDER L-208

The fulfillment of requirements for the defense of the United States has created a shortage in the supply of critical materials for defense, for private account and for export which are used in the maintenance and operation of gold mines; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense.

SECTION 3093.1—LIMITATION ORDER L-208

(a) *Definitions.* For the purposes of this order, "nonessential mine" means any mining enterprise in which gold is produced, whether lode or placer, located in the United States, its territories or possessions, unless the operator of such mining enterprise is the holder of a serial number for such enterprise which has been issued under Preference Rating Order P-56.

(b) *Restrictions upon production.*

(1) On and after the issuance date of this order, each operator of a nonessential mine shall immediately take all steps as may be necessary to close down, and shall close down, in the shortest possible time, the operations of such mine.

(2) In no event on or after 7 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to break any new ore or to proceed with any development work or any new operations in or about such mine.

(3) In no event on or after 60 days from the issuance date of this order shall any operator of a nonessential mine acquire, consume, or use any material, facility, or equipment to remove any ore or waste from such mine, either above or below

ground, or to conduct any other operations in or about such mine, except to the minimum amount necessary to maintain its buildings, machinery, and equipment in repair, and its access and development workings safe and accessible.

(4) The provisions of this order shall not apply to any lode mine which produced 1200 tons or less of commercial ore in the year 1941, provided the rate of production of such mine, after the issuance date of this order, shall not exceed 100 tons per month, nor to any placer mine which treated less than 1000 cubic yards of material in the year 1941, provided that the rate of treatment of such placer mine, after the issuance date of this order, shall not exceed 100 cubic yards per month.

(5) Nothing contained in this order shall limit or prohibit the use or operation of the mill, machine shop, or other facilities of a nonessential mine in the manufacture of articles to be delivered pursuant to orders bearing a preference rating of A-1-k or higher, or in milling ores for the holder of a serial number under Preference Rating Order P-56.

(c) *Restrictions on application of preference ratings.* No person shall apply any preference rating, whether heretofore or hereafter assigned, to acquire any material or equipment for consumption or use in the operation, maintenance, or repair of a nonessential mine, except with the express permission of the Director General for Operations issued after application made to the Mining Branch, War Production Board.

(d) *Assignment of preference ratings.* The Director General for Operations, upon receiving an application in accordance with paragraph (c) above, may assign such preference ratings as may be required to obtain the minimum amount of material necessary

to maintain such nonessential mine on the basis set forth in subparagraph (b)(3) above.

(e) *Records.* All persons affected by this order shall keep and preserve, for not less than two years, accurate and complete records concerning inventory, acquisition, consumption, and use of materials, and production of ore.

(f) *Reports.* All persons affected by this order shall execute and file with the War Production Board such reports and questionnaires as said Board shall from time to time prescribe.

(g) *Audit and inspection.* All records required to be kept by this order shall, upon request, be submitted to audit and inspection by duly authorized representatives of the War Production Board.

(h) *Communications.* All reports to be filed, appeals, and other communications concerning this order should be addressed to:

War Production Board
Mining Branch
Washington, D. C. Ref: L-208

(i) *Violations.* Any person who wilfully violates any provision of this order, or who, in connection with this order, wilfully conceals a material fact or furnishes false information to any department or agency of the United States, is guilty of a crime, and upon conviction may be punished by fine or imprisonment. In addition, any such person may be prohibited from making or obtaining further deliveries of, or from processing or using, material under priority control and may be deprived of priorities assistance.

(j) *Appeal.* Any person affected by this order who considers that compliance therewith would work an exceptional and unreasonable hardship upon him may appeal to the War Production Board, by letter, in triplicate, setting forth the pertinent facts and the

reason he considers he is entitled to relief. The Director General for Operations may thereupon take such action as he deems appropriate.

(k) *Applicability of Priorities Regulations.* This order and all transactions affected thereby are subject to all applicable provisions of the Priorities Regulations of the War Production Board, as amended from time to time.

(P. D. Reg. 1, as amended, 6 F. R. 6680; W. P. B. Reg. 1, 7 F. R. 561; E. O. 9024, 7 F. R. 329; E. O. 9040, 7 F. R. 527; E. O. 9125, 7 F. R. 2719; sec. 2 (a), Pub. Law 671, 76th Cong., as amended by Pub. Laws 89 and 507, 77th Cong.)

Issued this 8th day of October, 1942.

ERNEST KANZLER
Director General for Operations

APPENDIX C

The Statutes

(In chronological order)

1. Section 120 of the National Defense Act of 1916, 39 Stat. 213, pertinent provisions.

"The President, in time of war or when war is imminent, is empowered, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement, to place an order with any individual, firm, association, company, corporation, or organized manufacturing industry for such product or material as may be required, and which is of the nature and kind usually produced or capable of being produced by such individual, firm, company, association, corporation, or organized manufacturing industry.

"Compliance with all such orders for products or material shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof and shall take precedence over all other orders and contracts theretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any plant equipped for the manufacture of arms or ammunition, or parts of ammunition, or any necessary supplies or equipment for the Army, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any manufacturing plant, which, in the opinion of the Secretary of War shall be capable of being readily transformed into a plant for the manufacture of arms or ammunition, or parts thereof, or other necessary supplies or equipment, who shall refuse to give to the United States such preference in the matter of the execution of orders, or who shall refuse to manufacture the kind, quantity, or quality of arms or ammunition, or

the parts thereof, or any necessary supplies or equipment, as ordered by the Secretary of War, or who shall refuse to furnish such arms, ammunitions, or parts of ammunition, or other supplies or equipment, at a reasonable price as determined by the Secretary of War, then, and in either such case, the President, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement herein provided for, is hereby authorized to take immediate possession of any such plant or plants, and through the Ordnance Department of the United States Army, to manufacture therein in time of war, or when war shall be imminent, such product or material as may be required, and any individual, firm, company, association, or corporation, or organized manufacturing industry, or the responsible head or heads thereof, failing to comply with the provisions of this section shall be deemed guilty of a felony, and upon conviction shall be punished by imprisonment for not more than three years and by a fine not exceeding $50,000.

"The compensation to be paid to any individual, firm, company, association, corporation, or organized manufacturing industry for its products or material, or as rental for use of any manufacturing plant while used by the United States, shall be fair and just."

2. The Act of March 4, 1917, 39 Stat. 1192, pertinent provisions.

"(a) That the word 'person' as used in paragraphs (b), (c), next hereafter shall include any individual, trustee, firm, association, company, or corporation. The word 'ship' shall include any boat, vessel, submarine, or any form of aircraft, and the parts thereof. The words 'war material' shall include arms, armament, ammunition, stores, supplies, and equipment for ships and airplanes, and everything required for or in connection with the production, thereof. The word 'factory' shall include any factory, workshop, engine works, building used for manufacture, assembling, construction, or any process, and any shipyard or dockyard. The words 'United States' shall include the Canal Zone and

all territory and waters, continental and insular, subject to the jurisdiction of the United States.

"(b) That in time of war * * * the President is hereby authorized and empowered, in addition to all other existing provisions of law:

* * * * * *

"FOURTH. To requisition and take over for use or operation by the Government any factory, or any part thereof without taking possession of the entire factory, whether the United States has or has not any contract or agreement with the owner or occupier of such factory.

"(d)[1] That whenever the United States shall cancel or modify any contract, make use of, assume, occupy, requisition, or take over any factory or part thereof, or any ships or war material, in accordance with the provisions of paragraph (b), it shall make just compensation therefor, to be determined by the President, and if the amount thereof so determined by the President is unsatisfactory to the person entitled to receive the same, such person shall be paid fifty per centum of the amount so determined by the President and shall be entitled to sue the United States to recover such further sum as added to said fifty per centum shall make up such amount as will be just compensation therefor, in the manner provided for by section twenty-four, paragraph twenty, and section one hundred and forty-five of the Judicial Code."

3. Section 9 of the Selective Training and Service Act of 1940, 54 Stat. 892.

"The President is empowered, through the head of the War Department or the Navy Department of the Government, in addition to the present authorized methods of purchase or procurement, to place an order with any individual, firm, association, company, corporation, or organized manufacturing industry for such product or material

[1] This should be "(c)".

as may be required, and which is of the nature and kind usually produced or capable of being produced by such individual, firm, company, association, corporation, or organized manufacturing industry.

"Compliance with all such orders for products or material shall be obligatory on any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof and shall take precedence over all other orders and contracts theretofore placed with such individual, firm, company, association, corporation, or organized manufacturing industry, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any plant equipped for the manufacture of arms or ammunition or parts of ammunition, or any necessary supplies or equipment for the Army or Navy, and any individual, firm, association, company, corporation, or organized manufacturing industry or the responsible head or heads thereof owning or operating any manufacturing plant, which, in the opinion of the Secretary of War or the Secretary of the Navy shall be capable of being readily transformed into a plant for the manufacture of arms or ammunition, or parts thereof, or other necessary supplies or equipment, who shall refuse to give to the United States such preference in the matter of the execution of orders, or who shall refuse to manufacture the kind, quantity, or quality of arms or ammunition, or the parts thereof, or any necessary supplies or equipment, as ordered by the Secretary of War or the Secretary of the Navy, or who shall refuse to furnish such arms, ammunition, or parts of ammunition, or other supplies or equipment, at a reasonable price as determined by the Secretary of War or the Secretary of the Navy, as the case may be, then, and in either such case, the President, through the head of the War or Navy Departments of the Government, in addition to the present authorized methods of purchase or procurement, is hereby authorized to take immediate possession of any such plant or plants, and through the appropriate branch, bureau, or department of

the Army or Navy to manufacture therein such product or material as may be required, and any individual, firm, company, association, or corporation, or organized manufacturing industry, or the responsible head or heads thereof, failing to comply with the provisions of this section shall be deemed guilty of a felony, and upon conviction shall be punished by imprisonment for not more than three years and a fine not exceeding $50,000.

"The compensation to be paid to any individual, firm, company, association, corporation, or organized manufacturing industry for its products or material, or as rental for use of any manufacturing plant while used by the United States, shall be fair and just: *Provided*, That nothing herein shall be deemed to render inapplicable existing State or Federal laws concerning the health, safety, security, and employment standards of the employees in such plant.

"The first and second provisos in section 8(b) of the Act entitled 'An Act to expedite national defense, and for other purposes', approved June 28, 1940 (Public Act Numbered 671, Seventy-sixth Congress), are hereby repealed."

4. The Act of October 10, 1940, 54 Stat. 1090.

"That whenever the President determines that it is necessary in the interest of national defense to requisition and take over for the use or operation by the United States or in its interest any military or naval equipment or munitions, or component parts thereof, or machinery, tools, or materials, or supplies necessary for the manufacture, servicing, or operation thereof, ordered, manufactured, procured, or possessed for export purposes, the exportation of which has been denied in accordance with the provisions of section 6 of the Act approved July 2, 1940 (Public, Numbered 703, Seventy-sixth Congress), he is hereby authorized and empowered to requisition and take over for the said use or operation by the United States, or in its interest, any of the foregoing articles or materials, and to sell or otherwise dispose of any such articles or materials, or any portion thereof, to a person or a corporation of the United States whenever he shall determine such action to be in the public interest. Any moneys received by the

United States as the proceeds of any such sale or other disposition of any such articles or materials or any portion thereof shall be deposited to the credit of that appropriation out of which was paid the cost to the Government of the property thus sold or disposed of, and the same shall immediately become available for the purposes named in the original appropriation: *Provided, however,* That nothing in this section shall modify or repeal section 14 of Public Law Numbered 671, 76th Congress, approved June 28, 1940.

"Sec. 2. Whenever the President shall requisition and take over any article or material pursuant to the provisions of this Act, the owner thereof shall be paid as compensation therefor such sum as the President shall determine to be fair and just. If any such owner is unwilling to accept, as full and complete compensation for such article or material, the sum so determined by the President, such owner shall be paid 50 per centum of the sum so determined by the President and shall be entitled to sue the United States for such additional sum as, when added to the sum already received by such owner, such owner may consider fair and just compensation for such article or material, in the manner provided by sections 41 (20) and 250, title 28, of the Code of Laws of the United States of America: *Provided,* That recovery shall be confined to the fair market value of such article or material, without any allowance for prospective profits, punitive or other damages.

"Sec. 3. The authority granted in this Act shall terminate June 30, 1942, unless the Congress shall otherwise provide."[2]

5. The Act of October 16, 1941 (sometimes called the Requisitioning Act), 55 Stat. 742.

"That whenever the President, during the national emergency declared by the President on May 27, 1941, but not later than June 30, 1943, determines that (1) the use

---

[2] Such authority was extended to June 30, 1945, 56 Stat. 468, 58 Stat. 625.

of any military or naval equipment, supplies, or munitions, or component parts thereof, or machinery, tools, or materials necessary for the manufacture, servicing, or operation of such equipment, supplies, or munitions is needed for the defense of the United States; (2) such need is immediate and impending and such as will not admit of delay or resort to any other source of supply; and (3) all other means of obtaining the use of such property for the defense of the United States upon fair and reasonable terms have been exhausted, he is authorized to requisition such property for the defense of the United States upon the payment of fair and just compensation for such property to be determined as hereinafter provided, and to dispose of such property in such manner as he may determine is necessary for the defense of the United States. The President shall determine the amount of the fair and just compensation to be paid for any property requisitioned and taken over pursuant to this Act and the fair value of any property returned under section 2 of this Act, but each such determination shall be made on the basis of the fair market value of the property at the time it is requisitioned or returned, as the case may be.[3] If, upon any such requisition of property, the person entitled to receive the amount so determined by the President as the fair and just compensation for the property is unwilling to accept the same as full and complete compensation for such property he shall be paid 50 per centum of such amount and shall be entitled to sue the United States in the Court of Claims or in any district court of the United States in the manner provided by sections 24 (20) and 145

---

[3] This sentence was amended by Title VI of the Second War Powers Act, 56 Stat. 181, so as to read as follows:

> "The President shall determine the amount of the fair and just compensation to be paid for any property requisitioned and taken over pursuant to this Act and the fair value of any property returned under section 2 of this Act, but each such determination shall be made as of the time it is requisitioned or returned, as the case may be, in accordance with the provision for just compensation in the fifth amendment of the Constitution of the United States."

of the Judicial Code (U. S. C., 1934 ed., title 28, secs. 41 (20) and 250) for an additional amount which, when added to the amount so paid to him, he considers to be fair and just compensation for such property. Such courts shall also have power to determine in an appropriate proceeding any questions that may arise with respect to the amount of the fair value to be paid upon the return of any property under section 2 of this Act, regardless of the amount in controversy in any such proceeding.

"Nothing contained in this Act shall be construed—

(1) to authorize the requisitioning or require the registration of any firearms possessed by any individual for his personal protection or sport (and the possession of which is not prohibited or the registration of which is not required by existing law),

(2) to impair or infringe in any manner the right of any individual to keep and bear arms, or

(3) to authorize the requisitioning of any machinery or equipment which is in actual use in connection with any operating factory or business and which is necessary to the operation of such factory or business.

"Sec. 2. Wherever the President determines that property acquired under this Act and retained is no longer needed for the defense of the United States, he shall, if the original owner desires the property and pays the fair value thereof, return such property to the owner; but, in any event, property so acquired and retained shall, if the owner desires the property and pays the fair value thereof, be returned to the owner not later than December 31, 1943.

"Sec. 3. The President from time to time, but not less frequently than once every six months, shall transmit to the Congress a report of operations under this Act.[4]

---

[4] This subsection (3) was deleted by the Act of March 27, 1942, 56 Stat. 181.

"Sec. 4. The President may issue such rules and regulations and require such information as may be necessary and proper to carry out the provisions of this Act, and he may exercise any power or authority conferred on him by this Act through such department, agency, board, or officer as he shall direct or appoint."

6. Title II of the Second War Powers Act, approved March 27, 1942, 56 Stat. 177.

"Sec. 201. The Act of July 2, 1917 (40 Stat. 241), entitled 'An Act to authorize condemnation proceedings of lands for military purposes', as amended, is hereby amended by adding at the end thereof the following section:

'Sec. 2. The Secretary of War, the Secretary of the Navy, or any other officer, board, commission, or governmental corporation authorized by the President, may acquire by purchase, donation, or other means of transfer, or may cause proceedings to be instituted in any court having jurisdiction of such proceedings, to acquire by condemnation, any real property, temporary use thereof, or other interest therein, together with any personal property located thereon or used therewith, that shall be deemed necessary, for military, naval, or other war purposes, such proceedings to be in accordance with the Act of August 1, 1888 (25 Stat. 357), or any other applicable Federal statute, and may dispose of such property or interest therein by sale, lease, or otherwise, in accordance with section 1 (b) of the Act of July 2, 1940 (54 Stat. 712). Upon or after the filing of the condemnation petition, immediate possession may be taken and the property may be occupied, used, and improved for the purposes of this Act, notwithstanding any other law. Property acquired by purchase, donation, or other means of transfer may be occupied, used, and improved, for the purposes of this section prior to the approval of title by the Attorney General as required by section 355 of the Revised Statutes, as amended.' "

7. Title III of the Second War Powers Act, 56 Stat. 178, pertinent provisions.

"Sec. 301. Subsection (a) of section 2 of the Act of June 28, 1940 (54 Stat. 676), entitled 'An Act to expedite national defense, and for other purposes', as amended by the Act of May 31, 1941 (Public Law Numbered 89, Seventy-seventh Congress), is hereby amended to read as follows:

'Sec. 2. (a) (1) That whenever deemed by the President of the United States to be in the best interests of the national defense during the national emergency declared by the President on September 8, 1939, to exist, the Secretary of the Navy is hereby authorized to negotiate contracts for the acquisition, construction, repair, or alteration of complete naval vessels or aircraft, or any portion thereof, including plans, spare parts, and equipment therefor, that have been or may be authorized, and also for machine tools and other similar equipment, with or without advertising or competitive bidding upon determination that the price is fair and reasonable. Deliveries of material under all orders placed pursuant to the authority of this paragraph and all other naval contracts or orders and deliveries of material under all Army contracts or orders shall, in the discretion of the President, take priority over all deliveries for private account or for export: * * *'

'(2) Deliveries of material to which priority may be assigned pursuant to paragraph (1) shall include, in addition to deliveries of material under contracts or orders of the Army or Navy, deliveries of material under—

'(A) Contracts or orders for the government of any country whose defense the President deems vital to the defense of the United States under the terms of the Act of March 11, 1941, entitled "An Act to promote the defense of the United States";

'(B) Contracts or orders which the President shall deem necessary or appropriate to promote the defense of the United States;

'(C) Subcontracts or suborders which the President shall deem necessary or appropriate to the fulfillment of any contract or order as specified in this subsection (a).

Deliveries under any contract or order specified in this subsection (a) may be assigned priority over deliveries under any other contract or order; and the President may require acceptance of and performance under such contracts or orders in preference to other contracts or orders for the purpose of assuring such priority. Whenever the President is satisfied that the fulfillment of requirements for the defense of the United States will result in a shortage in the supply of any material or of any facilities for defense or for private account or for export, the President may allocate such material or facilities in such manner, upon such conditions and to such extent as he shall deem necessary or appropriate in the public interest and to promote the national defense."

APPENDIX D

The Executive Orders

(In chronological order)

1. Executive Order No. 8629, dated January 7, 1941, 6 Fed. Reg. 191, pertinent provisions.

"ESTABLISHING THE OFFICE OF PRODUCTION MANAGEMENT IN THE EXECUTIVE OFFICE OF THE PRESIDENT AND DEFINING ITS FUNCTIONS AND DUTIES.

"1. There shall be in the Office for Emergency Management of the Executive Office of the President, an Office of Production Management which shall consist of (1) a Director General, and (2) an Associate Director General, each to be appointed by the President, (3) The Secretary of War, and (4) the Secretary of the Navy.

* * * * * *

"2. With such advice and assistance as it may require from other departments and agencies of the Federal Government, and subject to such regulations or directions as the President may from time to time prescribe, and subject further to the general policy that the Departments of War and Navy and other departments and agencies of the Government will be utilized to the maximum extent compatible with efficiency, the Office of Production Management shall:

a. Formulate and execute in the public interest all measures needful and appropriate in order (1) to increase, accelerate, and regulate the production and supply of materials, articles and equipment and the provision of emergency plant facilities and services required for the national defense, and (2) to insure effective coordination of those activities of the several departments, corporations, and other agencies of the Government which are directly concerned therewith.

b. Survey, analyze, and summarize for purposes of coordination the stated requirements of the War and Navy and other departments and agencies of the Government, and of foreign governments for materials, articles, and equipment needed for defense.

c. Advise with respect to the plans and schedules of the various departments and agencies for the purchase of materials, articles, and equipment required for defense, to coordinate the placement of major defense orders and contracts and to keep informed of the progress of the various programs of production and supply.

d. Plan and take all lawful steps necessary to assure the provision of an adequate supply of raw materials essential to the production of finished products needed for defense.

e. Formulate plans for the mobilization for defense of the production facilities of the Nation, and to take all lawful action necessary to carry out such plans.

f. Determine the adequacy of existing production facilities and to assure their maximum use; and, when necessary, to stimulate and plan the creation of such additional facilities and sources of production and supply as may be essential to increase and expedite defense production.

* * * * *

h. Perform the functions and exercise the authorities vested in the President by Section 9 of the Selective Training and Service Act of 1940.

* * * * *

"5. There shall be within the Office of Production Management a Priorities Board composed of six members. A chairman and three other members shall be appointed or designated by the President; the Director General and Associate Director General shall be members, ex officio. The Priorities Board shall serve as an advisory body and from time to time as may be required by the Office of Production Management, shall make findings and submit recommendations with respect to the establishment of priorities, the placing of mandatory orders, the assignment of preference ratings, the allocation of deliveries, and other related matters. In making its findings and recommendations, the Priorities Board shall take into account general social and economic considerations and the effect the proposed actions would have upon the civilian population."

* * * * *

2. Executive Order No. 8875, dated August 28, 1941, 6 Fed. Reg. 4483, pertinent provisions.

"DELEGATION AND COORDINATION OF PRIORITY AUTHORITY

"1. The Office of Production Management, in addition to the responsibilities and duties described in paragraph 2 of Executive Order No. 8629 of January 7, 1941, is authorized and directed to discharge and perform the following responsibilities and duties, subject to such policies or regulations as the Supply Priorities and Allocations Board, hereinafter described, may from time to time determine:

a. Serve as the coordinating center for the execution of the powers and activities of the several departments and agencies relating to priorities; in this connection, review, clear, and approve for execution all requests or proposals originating from other Federal agencies, private industry, or other sources for priority action with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel, and other commodities; issue or provide for the issuance of all priority orders, warrants, certificates, or ratings with respect to the supply, production, transmission, or transportation of materials, articles, power, fuel, and other commodities; and, with reference to specific priority authorities vested by law in established departments and agencies of the Government certify to such departments and agencies, when the Office of Production Management deems such action necessary to national defense, that preferential treatment is essential for certain materials, commodities, facilities, or services.

* * * * *

"2. The Office of Production Management may exercise the powers, authorities, or discretion conferred upon it by this Order through such officials and in such manner as it may determine, subject to such policies or regulations as the Supply Priorities and Allocations Board may from time to time determine.

"3. In order to assure unity of policy and coordinated consideration of all relevant factors involved in the supply

and allocation of materials and commodities among the various phases of the defense program and competing civilian demands, there is hereby established within the office for Emergency Management a Supply Priorities and Allocations Board. The Board shall consist of the Director General and Associate Director General of the Office of Production Management, the Secretary of War, the Secretary of the Navy, the Special Assistant to the President supervising the defense aid program, the Administrator of the Office of Price Administration, and the Chairman of the Economic Defense Board. The Chairman of the Supply Priorities and Allocations Board shall be designated by the President from among the members of the Board. The President shall also appoint an Executive Director of the Board, who will preside in the absence of the Chairman.

• • • • •

"5. Consistent with the basic defense policies of the President, the Supply Priorities and Allocations Board shall:

a. Determine the total requirements of materials and commodities needed respectively for defense, civilian, and all other purposes; establish policies for the fulfillment of such requirements, and, where necessary, make recommendations to the President relative thereto.

b. Determine policies and make regulations governing allocations and priorities with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel, and other commodities among military, economic defense, defense aid, civilian, and other major demands of the total defense program.

"6. The Office of Production Management through its Division of Priorities or any other of its divisions or subdivisions shall formulate general plans and programs providing for allocations and priorities with respect to the procurement, production, transmission, or transportation of materials, articles, power, fuel, and other commodities among military requirements, economic defense needs, total

civilian demands, defense aid needs, and other major elements of the total defense program. Such general plans and programs shall be submitted to the Supply Priorities and Allocations Board for approval or modification.

3. Executive Order No. 8942, dated November 19, 1941, 6 Fed. Reg. 5909, pertinent provisions.

"PROVIDING FOR THE ADMINISTRATION OF THE REQUISITIONING OF PROPERTY REQUIRED FOR NATIONAL DEFENSE.

"By virtue of the authority vested in me by the Constitution and the statutes of the United States, and particularly by the Act of October 10, 1940, entitled 'An Act to Authorize the President to requisition certain articles and materials for the use of the United States, and for other purposes,' and the Act of October 16, 1941, entitled 'An Act to authorize the President of the United States to requisition property required for the defense of the United States' (hereinafter referred to as the Acts), and in order to provide for the effective administration of the requisitioning of property required for the defense of the United States, it is hereby ordered:

"1. The Office of Production Management, in addition to the responsibilities and duties described in Executive Order No. 8629 of January 7, 1941, and Executive Order No. 8875 of August 28, 1941, shall, except as may otherwise be provided hereinafter, exercise the powers and authorities conferred upon the President by the Acts.

"2. Whenever the Office of Production Management determines, in accordance with the provisions of the Acts, the necessity for requisitioning property, that Office may:

a. requisition and dispose of such property on its own account; or

b. provide for the requisitioning and disposition of such property through the Department of War, the Department of the Navy, or any other department or agency of

the Government authorized to engage in the procurement of property of the type subject to requisition under the Acts.

"3. Whenever requested by the Office of Production Management, any department or agency of the Government is hereby authorized to requisition and dispose of property in accordance with the provisions of the Acts and to make available to the Office of Production Management such personnel, including officers of the armed services, as may be necessary to enable that Office to carry out its functions under this Order. The United States Marshals also are hereby authorized and directed, when requested by, and in accordance with directions of the Office of Production Management or the head of any department or agency of the Government authorized to requisition property pursuant to this Order, to requisition and dispose of property.

"4. The Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Agriculture, the Chairman of the United States Maritime Commission, the Executive Director of the Economic Defense Board, or the head of such other agency as the President may from time to time designate, may initiate action for the requisitioning of property by submitting proposals for the requisitioning and disposal of such property to the Office of Production Management, whenever he determines that:

a. such property is of the type which may be requisitioned under either of the Acts;

b. with respect to proposals for requisitioning property under the Act of October 16, 1941:

(1) the use of such property is needed for the defense of the United States,

(2) such need is immediate and impending and such as will not admit of delay or resort to any other source of supply,

(3) all other means of obtaining the use of such property for the defense of the United States upon fair and reasonable terms have been exhausted,

(4) if the property to be requisitioned is machinery or equipment, such machinery or equipment is not in actual use in connection with any operating factory or business or is not necessary to the operation of such factory or business, and

(5) the property to be requisitioned is not a firearm possessed by an individual for his personal protection or sport, the possession of which is not prohibited by existing law;

c. with respect to proposals to requisition property under the Act of October 10, 1940, there exists a necessity for requisitioning the property in accordance with the provisions of section 1 of the Act.

The head of any department or agency acting pursuant to the provisions of this paragraph shall be authorized to requisition and dispose of such property, provided that the Office of Production Management determines that the proposed requisitioning and disposal of such property is consistent with the priorities and allocations program and the general production and supply plan of the Office of Production Management.

"5. The Office of Production Management or the head of any department or agency which requisitions property pursuant to this Order shall determine the amount of the fair and just compensation to be paid for any property requisitioned pursuant to the Acts, and the fair value of any property returned in accordance with section 2 of the Act of October 16, 1941."

4. Executive Order No. 9024, dated January 16, 1942, 7 Fed. Reg. 329, pertinent provisions.

"ESTABLISHING THE WAR PRODUCTION BOARD IN THE EXECUTIVE OFFICE OF THE PRESIDENT AND DEFINING ITS FUNCTIONS AND DUTIES.

"1. There is established within the Office for Emergency Management of the Executive Office of the President a War Production Board, hereinafter referred to as the Board. The Board shall consist of a Chairman, to be appointed by the President, the Secretary of War, the Secretary of the Navy, the Federal Loan Administrator, the Director General and the Associate Director General of the Office of Production Management, the Administrator of the Office of Price Administration, the Chairman of the Board of Economic Warfare, and the Special Assistant to the President supervising the defense aid program.

"2. The Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall:

a. Exercise general direction over the war procurement and production program.

b. Determine the policies, plans, procedures, and methods of the several Federal departments, establishments, and agencies in respect to war procurement and production, including purchasing, contracting, specifications, and construction; and including conversion, requisitioning, plant expansion, and the financing thereof; and issue such directives in respect thereto as he may deem necessary or appropriate.

c. Perform the functions and exercise the powers vested in the Supply Priorities and Allocations Board by Executive Order No. 8875 of August 28, 1941.

* * * * * *

"3. Federal departments, establishments, and agencies shall comply with the policies, plans, methods and procedures in respect to war procurement and production as

determined by the Chairman; and shall furnish to the Chairman such information relating to war procurement and production as he may deem necessary for the performance of his duties.

* * * * *

"5. The Chairman may exercise the powers, authority, and discretion conferred upon him by this Order through such officials or agencies and in such manner as he may determine; and his decisions shall be final.

* * * * *

"7. The Supply Priorities and Allocations Board established by the Executive Order of August 28, 1941 is hereby abolished, and its personnel, records and property transferred to the Board. The Executive Orders No. 8629 of January 7, 1941, No. 8875 of August 28, 1941, No. 8891 of September 4, 1941, No. 8942 of November 19, 1941, No. 9001 of December 27, 1941 and No. 9023 of January 14, 1942 are hereby amended accordingly, and any provisions of these or other pertinent Executive Orders conflicting with this Order are hereby superseded."

5. Executive Order No. 9040, dated January 24, 1942, 7 Fed. Reg. 527, pertinent provisions.

"DEFINING ADDITIONAL FUNCTIONS AND DUTIES OF THE WAR PRODUCTION BOARD.

"1. In addition to the responsibilities and duties described in paragraph 2 of Executive Order No. 9024 of January 16, 1942, the Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall:

a. Perform the functions and exercise the powers heretofore vested in the Office of Production Management.

b. Perform the functions and exercise the powers vested in the Supply, Priorities and Allocations Board by Executive Order No. 8942 of November 19, 1941.

c. Perform the functions and exercise the authority vested in the President by Section 120 of the National Defense Act of 1916 (39 Stat. 213).

* * * * * *

"4. The Office of Production Management, established by Executive Order No. 8629 of January 7, 1941 is abolished and its personnel, records, property and funds are transferred to the War Production Board.

"5. Executive Order No. 8629 of January 7, 1941 is rescinded and Executive Order No. 9024 of January 16, 1942 and any other Executive Orders, the provisions of which are inconsistent with the provisions of this order, are amended accordingly."

6. Executive Order No. 9125, dated April 7, 1942, 7 Fed. Reg. 2719, pertinent provisions.

"DEFINING ADDITIONAL FUNCTIONS, DUTIES AND POWERS OF THE WAR PRODUCTION BOARD AND THE OFFICE OF PRICE ADMINISTRATION.

"1. In addition to the responsibilities and duties described in Executive Order No. 9024, of January 16, 1942, and in Executive Order No. 9040 of January 24, 1942, the Chairman of the War Production Board, with the advice and assistance of the members of the Board, shall perform the additional functions and duties, and exercise the additional powers, authority and discretion conferred upon the President of the United States by Title III of the Second War Powers Act 1942.

"2. The Chairman of the War Production Board may perform the functions and duties, and exercise the powers, authority, and discretion conferred upon him by this or any other order through such officials or agencies, including the Office of Price Administration (created by the Act of January 30, 1942, Pub. Law 421, 77th Cong., 2d Sess.), and in such manner as he may determine. In any and all such cases the decision of the Chairman of the War Production Board shall be final."

7. Executive Order No. 9138, dated April 17, 1942, 7 Fed. Reg. 2919, pertinent provisions.

"PROVIDING FURTHER FOR THE ADMINISTRATION OF THE REQUISITIONING OF PROPERTY REQUIRED FOR THE PROSECUTION OF THE WAR.

"1. In addition to the authority conferred upon the Chairman of the War Production Board and the heads of certain departments and agencies by Executive Order No. 8942 of November 19, 1941, and Executive Order No. 9040 of January 24, 1942, such officials shall exercise in the manner provided in such Executive orders the authority conferred by Title VI of the Second War Powers Act, 1942,[1] except that the determination described in paragraph 4 b (4) of Executive Order No. 8942 shall not be required.

"2. Paragraph 4 b (4) of Executive Order No. 8942 of November 19, 1941, is hereby revoked."
